The engagement which took place at Yamaga on the 18th instant was of a very desperate character. Lieut-General Nodzu commanded the Imperialists and Kirino the rebels. At the commencement of the engagement the latter placed himself at the head of a body of the insurgents and led a most determined attack on a portion of the Imperial force, in which great bravery was displayed and many of the Imperialists cut down. Such was the impetuosity of the attack that Nodzu drew off his forces about eight *cho*, and although the advantage lay with Kirino the latter thought it more prudent not to follow up his retiring opponents, but likewise retired from the battlefield to a more secure position.

A Notification from the Prime Minister making known that *Jugoi* Ôyama Tsunayoshi, the late Governor of Kagoshima *ken*, has been deprived of both his rank and office, and an official announcement of the appointment of Kawaji, the Superintendent of Police, to the rank of Lieut.-General in the Army, have appeared in the *Hôchi Shimbun.*

Saigo has encamped in the grounds of the temple of Kasuga, which is only about 26 *cho* from Kumamoto.

From the *Hochi Shimbun.*

A report from Kiôto announces that Kuroda is now in Kagoshima at the head of a force of two thousand men. He is to return to Kiôto in company with Shimadzu Saburo and his son.

The office of the *Gaimusho*, which since the late fire has occupied a part of the buildings belonging to the Department of Public Works, will be removed to Hamagoten during this month.

From the *Nichi Nichi Shimbun.*

Dr. Subzend, (?) a surgeon in the Russian Navy, has applied to the Government for permission to attend in the field the wounded of the Imperial forces. A reply has been sent that his services would be accepted, subject to the approval of the Chief of the Medical Staff.

From the *Akébono Shimbun.*

A telegram from Kawamura sent to the Army Department at 5.30 p.m. on the 20th instant is to the following effect:—"The Imperialists have attacked Uyeki and set fire to the town. The conflict is now raging. The fortresses on both sides of the town have not yet been captured. I have been ordered by Yamagata to proceed immediately to Minaminoseki."

Okubo, the Minister of Home Affairs, who had hitherto been staying in Osaka, went to Kiôto on the 15th instant.

Some forty men at Ôsu, in the Ehime *ken*, have been arrested on having been discovered sending ammunition to the rebels.

We hear that many *samurai* of Ishikawa *ken* (Kaga) have left their homes, and it is supposed that they are about to join the rebels.

From the *Mainichi Shimbun.*

A telegram which was sent by the Governor of Nagasaki at 11.45 p.m. on the 19th instant, states that the Imperial forces, consisting of troops and police, landed at Suguchi-mura. They found that there were only three companies of the rebel forces at Hinagu who fled without making any resistance. At 3 p.m. the Imperialists advanced as far as Yashiro and found that the *samurai* of that place were loyal, and from them it was discovered that the rebels were using most of their power in defending Tawarazaka, having but a very slight force for the protection of the neighbourhood of Yashiro. To-morrow it is intended to advance to Miyabara and Sakai-machi.

Friday, 23*rd.*

Being favoured with splendid weather, the Rowing Club mustered in force yesterday afternoon and opened the rowing season very successfully.

It would seem, strange to say, as if the mercantile community did not care to discuss or listen to discussion upon the silver currency question, as there were not sufficient members at the Chamber of Commerce Meeting yesterday to form a quorum, and consequently an adjournment was made.

The *Loudoun Castle* arrived at Hongkong on the 19th instant, and left for Shanghai on the following day.

From the *Chôya Shimbun.*

According to an order received by telegraph from the temporary residence of the Emperor, it is hereby made known that Iwamura Michitoshi, a judge of the fourth rank, has been appointed to the office of Governor of Kagoshima *ken.*

IWAKURA TOMOMI,
Udaijin.

March 21st, 1877.

H. I. H. Higashi Fushimi-no-Miya, now on active service, has been promoted from the rank of Major-General to that of Lieut.-General.

We hear that Katsu-Awa, the Ex-Minister of Marine, received some private orders from the Government concerning the present Satsuma affair, with which, however, Mr. Katsu declined to comply.

From the *Akébono Shimbun.*

A telegram from Konoha on the 20th instant announces that on that day the Imperialists, after taking Tawarazaka, advanced beyond Uyeki and intended to make their way into Kumamoto, preparations for which purpose were actively being made. The headquarters of the Imperialists have been removed to Uyeki, to which place the 1st Division and the Commissariat Staff have proceeded. As soon as communication is opened with the garrison, abundant supplies can be sent there.

From the *Nichi Nichi Shimbun.*

A telegram which was sent by some officers of the police force at 6 p.m. on the 20th instant, announces that at 5 p.m. on the 18th instant the Imperialists advanced in three bodies towards the Futaye mountain pass, Kandô and Kurokawa, and a very sharp engagement resulted, but the fortifications of the insurgents could not be taken.

A telegram was received from Kawaji, the Superintendent of Police, announcing that he intended to start for Nagasaki at midnight on the 20th instant.

From the *Hôchi Shimbun.*

The troops in Tôkiô at the present time number in all 2,500 men.

Saturday, 24*th.*

The M. M. Co.'s steamer *Menzaleh*, with French mails on board to the 14th February, was to leave Hongkong at 7 o'clock this morning.

From the *Nichi Nichi Shimbun.*

The following is the Mikado's message to Shimadzu Saburo:—

"The rebels of Kagoshima have forced their way into Kumamoto *ken*, unlawfully opposed the Imperial forces, and created great disturbance. I have therefore already given an order for an expedition against them, of which Arisugawa *Nihon-shinnô* has been appointed the Commander-in-Chief. You, Hisamitsu (Saburo), have performed great and meritorious service for the country, and thereby gained my thorough confidence. I accordingly send Yanagiwara Chikamitsu, a member of the *Genro-In*, to you as my Special Envoy, to convey to you my desires. Be therefore loyal."

Beppu Shinsuke, Yamano-uchi Hanzaimon (who is a younger brother of Kirino) and Kônô Chugo, who were all prominent men in the rebel army and noted for their bravery, have been killed.

From the *Hôchi Shimbun.*

A telegram which was sent from Kiôto at 11 a.m. on the 22nd instant announces that the Imperialists have captured Yamaga and are pursuing the insurgents who are fleeing towards Waifu.

Oyama Tsunayoshi, the ex-Governor of Kagoshima *ken*, arrived at Tôkiô on the 22nd instant and was immediately confined in the jail within the grounds of the Department of Justice.

Her Majesty the Empress has kindly given a large quantity of lint for the use of the wounded men who have been conveyed from the seat of war to Kobe.

From the *Chôya Shimbun.*

On the 22nd instant the head-quarters of the Commander-in-Chief of the Imperial forces were removed from Kurume to Minami-no-seki.

A telegram received yesterday morning announces that the Imperialists have taken possession of Yamaga and advanced about twenty *chô* beyond that place.

REVIEW OF THE JAPAN SILK TRADE FROM 1874 TO 1877.

WE now continue our review of the Japan Silk Trade which appeared in our issue of the 10th instant.

State of the Warehouses in London on 31st December, 1876.

CHINA, CANTON, JAPAN AND BENGAL SILKS.

	1875,	1876,
Total deliveries for the year...Bales	53,220	53,300
Sold stock ... ... „	12,088	23,290
Unsold stock... ... ... „	20,556	9,113
Total Stock ... ... „	32,644	32,403

JAPAN SILKS ALONE.

Stock on 1st January ... ...Bales	5,520	4,779
Imports from Jan. to Dec. ... „	5,800	9,649
Total supply for the year ... „	11,320	14,428
Deliveries from Jan. to Dec.... „	6,541	7,551
Stock on 31st December ... „	4,779	6,877
Sold Stock do. ... ...Bales	2,145	4,892
Unsold stock do. ... ... „	2,634	1,985
Total stock do. ... ... „	4,779	6,877

In these figures alone we can read that in 1876, if importers were relieved of their stocks of Japan silks to a much greater extent than in 1875, that it had been effected by speculation; that, notwithstanding a large increase in imports and the scarcity of European silks, the increase in deliveries was only 1,010 bales, which in itself is no evidence of increased consumption; that taken as a whole, the stock of Asiatic silks was at the end of the year very much the same as it was at the end of 1875. We look in vain for an equally clear statement of the position of Japan or any other silk on the Continent, and this "lacune" suggests a remark of paramount importance. The French merchants have undertaken to remove from England the control of the trade in Asiatic silks. In so far as the import o those silks in Lyons has vastly increased, they have succeeded in their undertaking; but in their endeavour to introduce in the French the organisation of the English market, they have failed. This failure has revealed the danger of placing a great silk market under the immediate influence of the manufacturing interest, and it has been one of the causes of the bad trading of which the year 1876 affords a doubly conspicuous example. It must, however, be noticed that there has been recently created in Lyons a Syndicate by the members of which wealth, ability and enterprise are well represented. Such men cannot fail to perceive that either Lyons must be made a safer market or London must regain its lost supremacy. Will they prove equal to the solution of a dilemma in which so many vital interests are involved?

The questions raised by the failure of the European crop were thus: 1st. To what extent had production been reduced? What was to be the total supply for the ensuing season? 2nd. In what measure could the relative value of fine and full sized silks be raised; in other words, what scale of prices was henceforth to keep the balance equal between production and consumption?

1. It might reasonably be taken as granted that in two highly governed countries like France and Italy, where silk is one of the great sources of national wealth, the statistics of production and consumption are all but perfect. How far however they are from being even tolerably reliable was proved on the best evidence in the last "Congrès bacologique" held in Milan.* Let us take for instance the crop of Italy. A well known writer Mr. de Vecchi estimated it at 2,606,000 kilo of silk for 1875. Disputed on plausible arguments, this figure is brought down by another writer to 1,800,000 kilo. Later on, Mr. de Vecchi himself gives for the other production of the same year a fresh estimate of 3,073,000 kilo.† What are we to believe? The fact is that the true basis of the estimate of a crop is the combined weight and quality of cocoons; but in no country has a true knowledge of that aggregate weight and quality been hitherto attainable. The case, however, is not so helpless as it seems at first sight to be. There are not wanting indirect means of guessing the result of a crop. In almost every locality some intelligent observer will have noticed the quantity of seed put to hatch, of leaf consumed, of labour hired, the space occupied in each house by the "chambrées" etc. From such indications and from the daily gossip of the place he will infer that the crop is so much more or less per cent. than the previous one which is still fresh in every silk-grower's memory, and his conclusions, which soon find their way from private into public correspondence, serve as a basis for general statistics. Well, as early as July or August, the silk merchant at home could determine two of the main factors in the establishment of prices, viz., the comparative scarcity of silk taken as a whole and the altered proportion between the full and the fine sized descriptions. He could not anticipate, no one could anticipate, that this country would export 22,000 bales; but he must have been informed that the Japanese crop had been an unusually large one, and he knew that scarcity in Europe was sure to stimulate exports from the East. Unfortunately, the computation of old stocks was, owing to the deplorable state of statistics on the Continent, attended with the greatest difficulties.

However, the total quantity of silk which each centre of production was to supply to the mannfacturers of Europe and the United States could, (within 10 to 15 per cent. in respect of fine sized silks) then be reckoned as follows:

Bales 112 lbs. or 50 kilo.

From Shanghai.	For 1875-76.		For 1876-77.	
China, Shanghai,....full sized	70,350	—	72,000	—
„ Canton .....full sized	17,500	87,850	23,000	95,000
Italy .....fine sized	—	36,000	—	12,000
France.....fine sized	—	14,700	—	1,500
Japan .....fine sized	8,164	—	13,200	—
„ .....full sized	5,436	13,600	8,800	22,000
Bengal.....fine sized	—	7,000	—	5,000
The Levant‡ .....full sized	700	—	500	—
„ .....fine sized	14,300	15.000	9,500	10,000

* See the *Moniteur des Soies*, 21st October, 1876.

† See the *Moniteur des Soies*, 22nd April, 6th May and 16th December, 1876.

‡ This estimate includes the cocoons which are imported in Marseilles from the Levant and Spain to be converted into fine silks by French and Italian reelers. Our classification of silks is, as we are well aware, an extremely crude one. Suffice it to say that by fine sized we understand all raws from 10 to 16d.; by full sized all raws from 17d. upwards.

2.—Like the fall of a heavy body in calm water, the disaster of the last crop produced a great commotion in the inner circles of the trade, that is to say among producers, merchants, manufacturers and the great purveyors of consumption ; but upon the distant deep masses of consumers, upon those who buy silk fabrics by the yard it had no more effect, it no more moved them, than the capture of Peking by a foreign army in 1860 moved the countless populations of the Chinese Empire. The great wave of rumour died before reaching them. The secret of consumption lies in tastes and incomes which are far beyond the reach of argumentation and would, if argued with, resist persuasion ; of the purchasing power of individuals or of classes we may guess the lowest and the highest rate, but the true average under any given circumstances baffles calculation. In the present instance, one broad fact stood before the silk merchant who had to make up his mind about the safe limit of prices :—

The average price of Hanks No. 2 had been		*European transactions in raw and thrown Silks had been*
In 1872-73.....26s. 9d., fr. 75	...	9 to 10 millions kilo.
In 1873-74.....24s. 0d., fr. 67	...	10 to 11 ,, ,,
In 1874-75.....18s. 3d., fr. 51	...	11 to 12 ,, ,,
In 1875-76.....15s. 9d., fr. 44	...	12 to 13 ,, ,,

Between increasing consumption and failing prices the correlation was obvious. Well, by raising the rates of 1875-76 in proportion to the deficiency of supplies for 1876-77, that is to say by making fine raws 60 per cent. dearer, consumption would undoubtedly be curtailed ; but that increase in prices would after all only bring them a little under the level of 1872-73, when Italian raws 10/12d., 2nd order averaged fr. 95 and No. 2 Hanks fr. 75. Beyond that, any further advance was unsafe not only because the peace of Europe was threatened, but because manufacturers and consumers would look upon it as temporary, and make every sacrifice to wait till the crop of 1877 decided whether it was to be maintained or not. Of the prospects of that crop thus much was discernible as early as in June or July : In 1876 the silk-worms had been killed not by the old epidemic the "Pebrine," but by famine or by the "Flacherie," a disease which is caused in wet weather by incipient fermentation in the mulberry leaf. Nor did that disaster necessarily imply a scarcity of silk-worms' eggs for the following season. For good healthy cocoons of European breed the seed makers had paid as much as fr. 15 to 20 per kilo, whilst the silk reelers could only afford to pay fr. 6.25 ; and, in France especially, enough had been spared of such cocoons to procure an adequate supply of seed for the crop of 1877. It was known, besides, in Europe as early as August or September that Japan was to export 1,000,000 or 1,200,000 cards, against 727,000 in 1875. Seed might be dearer, but silk growers would set to work under better auspices than they had done in 1876. Bad weather had destroyed the crop of 1876. It was a mere accident ; fair weather might bring abundance and moderate prices in 1877.

Such considerations as above were urged here ; § they were urged at home with much greater authority ; but it was in vain, and what happened was something like the introduction of universal suffrage in the government of the silk trade.

For the result we refer our readers to Table D which may be commented on as follows: Speculators have been disappointed by manufacturers, and consumption has disappointed both. The rise in prices at home has allowed profitable sales of old stocks and fresh imports between May and September. The extreme rates which were in Japan the consequence of that rise, have entailed heavy losses on the shippers who have been compelled to realise ; whether those who can afford to hold will have the same fate remains an open question. We may add, without exceeding the limits of the present review, that the reaction which commenced at home in October last was checked in December, but resumed its course in January, and as we are writing (March 24th) still continues. Hanks No. 2 have now receded to the price they had attained at the end of July last, viz : 26s. 6d., fr. 74. This value is the rational consequence of the scarcity of fine sized silks.

The lowest and the highest point reached in the course of 1876 are as follows :

	Lyons Quotations 31*st March.*	30*th Sept.*	*Increase.*
Italian raws, 2nd order ..	fr. 56	fr. 118	110 %
Brutia.....	,, 60	,, 117	95 %
Hanks No. 2	,, 42	,, 102	150 %
Tsatlee, all round.....	,, 41	,, 81	97 %
Kahing ,, ...	,, 38	,, 71	87 %
Italian organzines, 22/ 24/ 26d. }	,, 72	,, 122	70 %

If we consider consumption as the ultimate arbiter of operations in Japan silks, and compare their results before and after the year 1870 ; if, setting apart the peculiar conditions of the American market, we come to look for the causes which during the last six years modified the tastes and contracted the incomes of consumers, we are brought face to face with the Franco-German war, which by so many direct and indirect means reduced the wealth of Europe, and in its far reaching consequences affected the fortunes of this country.

§ See Japan Mail 25th July and 25th September, 1875. In our article on "The value of Silk," our estimate of the total decrease in the supply of fine sized silks was (under the classification adopted in the present review) 52 per cent. The price which seemed to us likely to keep the balance equal between production and consumption was 27/6, fr. 76 for Hanks No. 1 and 2.

SPIRIT OF THE JAPANESE PRESS.

The Situation.

Nichi Nichi Shimbun, March 16th, 1877.

Men who propose to themselves to discuss modern politics must observe the course of actual events, divine future probabilities, and posses sufficient courage not to be startled by events. Eyes however are not sufficient for the former task, nor mere intelligence for the latter. Unless a man has sufficient courage to preserve his equanimity, and can consider vicissitudes of the moment as having no practical existence, he is unfit to take part in the discussion. We have undertaken to perform the function of eyes and ears for the public, and are the intermediaries by whom the public is enabled to observe the course of actual events and perceive the probabilities of the future. Who would do this if writers for the press did not? We proceed therefore to set forth the observations which we have been able to make, for the public to peruse.

Looking back on the past, one remarks that after the suppression of the Saga, Kumamoto and Hagi insurrections, the eyes of the public were turned with expectancy of what would be the conduct of firstly Kagoshima, secondly Kochi, then Inshiu, Bizen, the "School Club" *(Gakko Ren)* of Kumamoto, and the remaining *shizoku* of Saga. And accordingly the first to revolt have been the Satsuma rebels, the centre of whose military movements is the country round Kumamoto. Eighteen or nineteen battalions of Government troops are swarming into their limits, and taking up an offensive position, while the rebel forces, occupying hilly ground are acting on the defensive. The alternate successes and defeats of either side have daily appeared in our columns. Yamaga, Tabaruzaka and Kichijigoyé are easy to defend and difficult to attack. The Imperial forces, however, are bound to raise the siege of Kumamoto. This necessity has made them willing to endure combats of no ordinary intensity in order to take the rebel positions. They had already almost captured the rebel earthworks at Tabaruzaka and Kichijigoyé, but were suddenly repulsed by the rebels, and lost them again, in fact in the fierce battle of the eleventh. Some have gone so far as to blame the Imperial forces for having neglected their defences, because after having taken the place, they lost it again, but our telegram states that the rebels came on with the speed of lightning before the Imperial forces had time to reconstruct the earthworks, from which we must conclude that they lost them before they had well obtained possession. In short, the fact is that they failed in the earthworks, and cannot therefore be accused of having lost any place which was in their hands. According to a telegram of the 14th, a hundred policemen armed with swords cut their way into the midst of the rebels, and recovered three of the said earthworks; amongst these police are a considerable number who formerly belonged to the corps of marines disbanded last year, and who have been regularly drilled. The present disturbances have rendered it advisable to arm them with rifles, and to send them to preserve order at the theatre of operations. Before hostilities commenced the rebels despised the troops of the garrison as straw-dolls, but they are now rather frightened, saying "that most of the police were originally *shizoku*, and understand the art of fencing so that they must be somewhat looked after." Now that this exploit has been performed it may fairly be said that the fears of the rebels were justified. But from our point of view, we cannot help feeling disinclined to believe that the position of Tabaruzaka could be taken by a mere handful of policemen unsupported. Beyond a doubt Imperial troops made an advance in force, and diving through them appeared on the rear of the rebel earthworks. To sum up, the Imperial forces are acting on the offensive and advancing a certain amount every day. This can be seen from the fact that they have pressed back the rebels to the south of Tabaruzaka, that the head-quarters of military councillor have been moved to Takasé, and that the Prince Commanding in Chief had advanced to Kurumé.

The fortress of Kumamoto remains as it was, completely surrounded, without giving any signs of yielding. If what we hear is true, about a thousand Kumamoto *shizoku* had at one time leagued themselves with the rebel forces (this number is taken from telegrams despatched at the time when the advance on Kumamoto was made, but we have since heard that it did not exceed five or six hundred), and asked at Kawajiri that the attack on the garrison should be entrusted to them. They said that the castle was strongly fortified and difficult to take, and that secret stratagems must be resorted to, which would require a certain expenditure of time to put in action. To this replied Fuchibe and other rebel officers, when they heard that time must be spent over it, that it was a slow way of proceeding (*i.e.* by strategy); that peasant troops were not to be feared, and that a single kick would send the whole place tumbling. They refused therefore to entrust the attack of the castle to the Kumamoto *shizoku*, who began to be discontented, and seeing on the one hand the overweening confidence of the rebels in their own powers, and the formidable array of the Imperial forces, they are now gradually deserting from the rebels. The insurrection of last year in Kumamoto was entirely the work of the *Jimpû Ren* (Divine-Blast Club), and the strength of the dissatisfied *shizoku* of Kumamoto lies in the "School Club" (*Gakkô Ren*). For this reason many persons who interested themselves in politics expected that if even the Satsuma men rebelled, this party would certainly join them, and no one can affect to be surprised that it should have turned out thus. To judge from the state of things in Saga, it would appear that the spirit of Eto Shimpei still survives among the *shizoku*, in spite of their failure a few years back, but for all that they did not act on the occasion of the Kumamoto and Akizuki disturbances. Some time ago a certain Ishii, who had been a *daisakuan* of the Saga prefecture, and a certain Tokuhisa, who had been a surpernumary official of the 8th order in the Sa-In at the time of the failure of the party which advocated war with Corea, escaped to Satsuma where they secretly combined with discontented men from other prefectures who betook themselves to that part of the country, under the name of the "Band of Assembled Crows" *(Ugô Tai)*, of which combination they became the leaders. When the present disturbances broke out, they secretly returned to Saga, and sowed dissension. Some four or five hundred fresh-blooded young fellows were thus prepared for an outbreak, but the police were quickly on their track, and arrested the two men. The latter, having watched for an opportunity, succeeded in escaping and reaching the rebel lines. Upon this there ensued diversity of opinion among the four or five hundred young fellows, and before they had taken a resolution in favour of either the right or the wrong course, Councillor Kusuda and other eminent men made great efforts, and brought them to reason, so that there are at this moment no signs of a disposition to violence on their part. It is said however that if they were to hear that Minami-no-seki had been taken from the Imperial forces, the influence of Mr. Kusuda and the others would be insufficient to keep them quiet. But just now the Imperial forces are advancing, and there does not seem to be the remotest possibility of Minami-no-seki being taken from them. And even if they were to make a disturbance, being, as they are, without a settled plan of operations, they would not be formidable. From all this it would appear that no anxiety is to be felt on the side of Saga.

Returning back again, and casting a glance north-westwards, Shônai, as every one knows, has ever since the Restoration, maintained the closest relations with Kagoshima, and on the present outbreak taking place, its conduct seemed somewhat peculiar. A detachment was at once sent from the garrison at Sendai, and Mr. Funakoshi of the Ministry of the Interior (representing the prefect Mr. Mishima, who is lying ill at Yedo) was sent thither. It is said that he has set to work and has summoned before him Matsudaira, a former *Sanji*, Sugeno, a former *Gon Sangi*, Yamagashi, a former supernumerary official of the 8th order and others, and is engaged in trying them. From this it can be seen that the Shônai *shizoku* will not be able to do anything.

The *shizoku* of Tottori and Okayama, formerly under the jurisdiction of the Ikeda family and its cadets, ranks among the great class. At the time of the reformed wars of the Restoration, they were behind the age, and distinguished themselves nowhere. The public were indignant at the *shizoku* of these two districts for being so slothful on this occasion, and many suspected them of disloyalty. During the last two or three years a certain Sugiyama, at Okayama (called the "Eloquent"), has frequently visited Yedo and held conversations with men in high positions; and according to reports which have recently reached us this gentleman has given undoubted proofs of his steadfast loyalty. With respect to Tottori, there is no one there who occupies the position of a popular leader, and there is nothing to be feared from the general feeling. Besides the Imperial army has established a divisional camp there, and the disputes between the *shizoku* of the head and cadet families has gradually decreased any community of feeling between them. From which it may be concluded that there is no cause for anxiety with regard to Inshiu and Bizen.

As regards the condition of affairs at Kochi, it would seem that several parties exist, among whom there is a strong feeling of rivalry and mutual jealousy. The late Councillor Mr. Hagaki is really down there. He and Soyejima are the only men now out of office who once held high positions in the government, but Mr. Soyejima is a man who, though he has distinguished himself in the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

walks of peace, is not known to be a military genius. Mr. Hagaki distinguished himself as leader of the Kochi troops at the time of the subjugation of the East (in 1868-9), and some share of military capacity may have remained to him in these days even, which has led some persons to attribute to him certain ideas, seeing that Eto, Mayebara and Saigo have rebelled one after the other. But these are persons who are unacquainted with him. In connection with the present disturbance he has said that Saigo could easily be beaten by any one, and that if after all he should be successful, and defeat the Imperial troops, he, Hagaki, would march forth and rout him in one morning, on condition that the Government should consent to establish a representative assembly. From which we may conclude that there is no reason for anxiety about Kochi.

State of the Yamagata *Ken* (Shonai.)

(*Hôchi Shimbun*, March 16th, 1877.)

It is reported that the people of the former *Shônai Han* are not pleased with the councils of this Government. The reason of this is as follows. Owing to difficulties between the officials and the people there, officers from the *In* and *Shô* have for the space of four years back proceeded thither to make investigation into the affair; and at the termination of these enquiries there was opened a special Court during the month of August last year, when the investigation was conducted by Kojima, a 5th rank *Hanji*, and the records of the evidence fully drawn up. But although over 200 days have passed since that time, no decision has yet been given, and there are consequently many people who give vent to their suspicions, although these are utterly groundless, that bribery is at work.

Among the *shizoku* of the former *Shônai Han*, over 3,000 men have the most implicit belief in Saigo. The able-bodied amongst these men number about 1,000. At the present moment the really bigotted party does not amount to 200 men, while those who are firm in their allegiance to the Government are so few as to be easily counted up. Those who keep neutral and wait events are numerous. They have about 2,000 rifles, of which 400 are breech-loaders. Their ammunition amounts to about four or five thousand *K'wammé* in weight, 33,333 to 41,666 lbs. part being Japanese gun-powder. At Inari-mura, one *ri* distant from Tsurugaöka, there are two godowns in which ammunition is stored. Recently, in order that this might be used in the cutting of roadways, directions came from the *Kencho* to have it delivered up, but it is said that one Beniya Shigezô, of Kusuriyu-Kôri in Tsurugaöka, refused to hand it over, saying that it was his private property. Ever since the news came that Saigo and Kirino had grasped the baton and that Saigo and others had been deprived of their official rank, the influence of the same has become more plainly evident, and it is reported that the bigotted party hold secret meetings daily in the tilled lands at the village of Shirita.

On the 28th February a resident of the village of Yebishima, named Yamaguchi Saburôbei, who used to hold the office of Head Retainer of the former *Chiji*, assembled together at his house the former *Sanji* Matsudaira Chikayoshi, the *Gon-sanji* Sugé Sanéhidé, the 7th class official Matsumiya Nagayoshi, the *Dai-sakan* Wada Mitsumori, the 8th class official Yamagishi Sadabumi, the *Gon-chu-sakan* Toda Motoshi, the *Shô-sakan* Ikeda Tamô, and a present 5th class official of the Yamagata *ken* named Ujiye Naöatsu, who retired from his post in the month of February, and also three or four other persons whose names are unknown,—who all discussed some subject or other. The town is said to wear a very dull appearance, but whether this be a mistake, or not, on the part of our informant we know not: those people doing brisk business are said to be tailors of foreign clothing, and sword-hilt winders. The dealers in singlets and drawers have sold all their stock. Of the *shizoku* of the former Matsuminé *Han* some 700, counting both old and young, are in the same state as those of Tsurugaöka. It is reported that owing to their firearms being insufficient, they are collecting together matchlocks. Although we do not credit, and cannot guarantee the truth of the above reports, still for some unknown reason or other, the *Chiusa* Yamaji Motoharu and the *Shôsa* Ônuma Wataru, with some troops, have proceeded to the *ken* in question from the Miyagi garrison. Again, the Head of the Military Court, Mr. Sakamoto, has also proceeded to Tsurugaöka upon some unknown Government busines,, in order, as is said, to make certain explanations. The *Kenrei*, Mr. Mishima, being ill, is now in Yedo undergoing treatment, Mr. Funakoshi acting in his stead, but Mr. Mishima, in spite of his illness, came back to Yamagata on the 8th of March, and we hear that on the following day,—the 9th,—a written summons was sent to Matsudaira Chikayoshi. 800 police have likewise been selected, and police have come up from Yedo also: they practice drill, and 1,000 rifles have been lent them by the War Department. Although nothing is known as to what the plans of the Government may be, still the minds of the people are disturbed, on the grounds that something will be set on foot in connection with the affairs of Tsurugaöka.

BRITISH CONSULAR TRADE REPORT FOR NIIGATA FOR 1876.

British Consulate,
Niigata, 15th February, 1876.

Sir,—In reporting on the trade of this place for the past year I am in the somewhat anomalous position of having no ostensible British trade to report upon. No British ships have visited this Port during 1876, and no British merchants have ever settled here. Whatever trade is done in which British interests are concerned is done by merchants of other nationality, or consists of the still more indirect trade in British manufactures done by native merchants. In this report, however, while giving such particulars of the general trade of the past year as I have been able to obtain, I propose to give also, what will be of more interest, and, I believe, of much more importance, a general outline of the trade of this port since its opening to foreign commerce, in 1869, together with a review of the resources of the district and of the prospects which this place presents.

Trade and Commerce.—With the exception of the trade done in articles of foreign manufacture which are brought by foreign merchants from Yokohama, and in produce destined by them for the foreign market, the trade of Niigata may be described as being purely a domestic one. I enclose tables of the imports and exports by steamers, all under the Japanese flag and regret that owing to their being no longer official record taken of the imports and exports in junks, I am unable to complete the view of the trade of the port for the past year by giving tables of these as well. I enclose, however, a statement compiled from private sources of the import of some staple articles, in junks.

On these tables the fewest remarks will suffice. The kerosine oil imported by steamer was for the use of the works connected with the Sado mines. American oil is not now, and has been only in the smallest quantities, imported for use in this Province. Choice and special Japanese teas are imported here from other parts of Japan. The copper exported was from Kusagura mine, but does not comprise the total out-turn of the mine. Besides the small quantity of Echigo petroleum exported by steamer, some small shipments have also been made by junk, but the quantities are not ascertainable by me. In consequence of an anticipated scarcity of rice, owing to the inundations in 1875, rice was imported here in the early party of last year,—an occurrence which, I believe, is not known to have happened before within the memory of Japanese living. About 70,000 piculs of new rice were exported by junk in October and November.

I now pass to the subject of the general trade for the past eight years, and enclose tables showing the total imports and exports, as far as I can ascertain them, of each year, in all classes of vessels. I add two tables giving a comparative view of the amount and value of certain staples imported, and of rice exported, in each of these years.

These tables, as appears to me, sufficiently demonstrate the existence at this place of a trade of some value, subject, indeed, to occasional great fluctuations, but exhibiting in the long run considerable consistency, more especially in some of the articles specified. The falling off of trade in certain years can be traced with considerable certainty to deficient rice harvests,—rice being, as you are aware the chief article of production and export. It would appear from these tables that the average annual import trade of this port amounts to $1,687,819, and the average export to $1,334,901,—or, in all, an annual trade of $3,022,720. Amongst the most interesting results shown by these tables, however, is the constancy of certain staple articles of import of foreign production or manufacture. It would appear that about 3,000 piculs of nailrod iron are annually imported for consumption here, 18,000 or 19,000 piculs of sugar, and from 3,500 to 5,000 piculs of raw cotton. It would be useful if I could add to these tables an account of the cotton yarn and other cotton manufactures brought into this Province, but the quantities of such brought by sea are so small in comparison with what are brought overland from Yedo, that by stating the former only I should give a totally false idea of the consumption of these articles in this neighbourhood,—and, unfortunately, I am unable to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

give an exact account of the latter. Of foreign cotton yarn, however, it may safely be estimated that from 4,000 to 6,000 piculs are annually brought into this Province. Among the other cotton manufactures may be mentioned shirtings, T.-cloths, Turkey-reds, drills, cotton velvets, Victoria lawns, and among wollens and mixture, Orleans, blankets, mousselines de laine, and cloth.

The last table shows an average export, in ordinary years, of nearly 400,000 piculs of rice through this port. This rice is shipped chiefly to Osaka, and the island of Yezo, but also partly to other places in Japan. The cause of its not yet having become an article of export to foreign countries is probably, partly, the deficient mode of packing, but, chiefly, the difficulties under which intercourse by sea labors here. Part of the export rice of this Province is shipped from other junk ports on the coast.

A branch of the Japanese Fourth National Bank is established here, and affords improved facilities to merchants in the matter of exchanges on Yedo and Yokohama.

Shipping and Navigation.—I enclose a table showing the number and tonnage of all classes of merchant ships and vessels entering this port since the date of its opening to foreign trade. From this you will observe that no vessels, except Japanese, have visited this port during the past year. Such carrying trade as in previous years was shared to a small extent by foreign shipping has now fallen entirely to the Mitsubishi Steam Ship Company. Seeing that the trade was always a coasting trade, in which a domestic company probably ought to be able to serve the public better than casual foreign ships, I do not look upon this as a matter for regret. It must be confessed, however, that the Japanese Company which has undertaken to keep up steam communication with this Port might render their service much more efficient, and, I believe, at the same time more remunerative, by the observance of regularity in the movements of their steamers, and by giving a wide publicity to the notice of their intended movements. It is difficulty to believe that the steamers visiting this port during the past year can have paid their expenses by the freight obtained,—even allowing that they have carried some cargo to and from other ports on the north-west coast, besides Niigata. Their rates of freight also, are excessively high. In order to compete successfully with the overland carriage of light merchandize,—such as foreign cotton goods, and tea, not to speak of silk, which has never gone by sea,—between their district and Yokohama, it will be necessary for the Company not merely to ensure regularity in the movement of their vessels, but to adopt a rate of freight which shall be less than the cost of overland transport. During the past year a few of the steamers have made communication between this port and Hiogo on the one side, and Hakodate on the other, connecting at the latter port with the steamers plying beween it and Yokohama. On this coast these steamers thus also make communication with Shimonoseki, Tsuruga, and Fuseki, in Etchiu, on the south-west; and with Funakawa, in Akita, on north-east. It is to be hoped that the enterprise will be continued during the coming seasen, and that under improved conditions it will be more successful than in the past.

I may, however, be allowed to mention here a valuable suggestion which has, I believe, been made, that the most effectual method probably of securing the trade of Niigata would be by running a steamer of light enough draft to enter this river in its present state, and of good steaming powers, between this port and Hakodate, connecting there with the Yokohama steamer. Such a steamer could also run further than Niigata, say as far as Tsuruga and thus afford a connection, were the route from Tsuruga by the Biwa Lake found efficient, with the Railway at Kiôto. At all events a steamer such as I have described could run at all seasons of the year, and would not be subjected to the danger of lying in this exposed anchorage.

A further observation which an inspection of the table under consideration suggests is, with regard to the junk trade, that while the number of junks has on the whole been tending to increase, the junk tonnage has been constantly decreasing. From the comparative table of imports and exports it will be observed that the value of the trade in junks has not, however, shown a corresponding decrease. It would thus seem that about the same value of trade has been of late years carried in junks of an aggregate less tonnage, as was in previous years carried in junks of an aggregate greater tonnage. It has been suggested that this is owing to the fact of smaller junks being found more suitable for crossing the bar at the mouth of the river. The explanation is plausible, but I am not prepared to admit it as certain. The total tonnage of the port has on the whole decreased, from 1870 downwards.

The harbor of Niigata remains in a state equally inconvenient for shipping as that in which it was at the date of the opening of the port. The landing-place at the Custom House, constructed the year the port was opened, is now silted up, so as to be entirely useless, and no landing-place has as yet been constructed. There is a steam-lighter, or rather two steam-lighters provided for the shipping and discharge of merchandize. One of these vessels, the one put together at Ebisuminato, in 1870-71, of fifty tons burden, is fairly well suited as a boat for the purpose intended, but its steaming power is at present so feeble as to render its use in anything but calm weather, hazardous, This, however, can be remedied. The other vessel, formerly a passenger boat, seems to be of too light construction to be serviceable as a lighter, and in fact has hardly, if ever, been employed as such.

A new temporary light-tower has lately been erected near the mouth of the river, the old one having become unserviceable. The depth of the main bar passage, which is continually shifting, is taken twice a year. On the 10th January, ultimo, the water in the river being low, the depth of this passage was found to be seven and a half feet, and its breath over 120 feet.

The arrangement for the use of Ebisuminato as a subsidiary port for the landing and shipping of cargo for and from Niigata, has not proved a success. Although fairly well protected from the prevailing stormy winds in the Autumn and winter, the bay of Ebisuminato has been, on account of the swell which breaks on the beach, found unsuitable for the landing and shipping of cargo precisely in such weather as renders impossible the landing and shipping of cargo at Niigata itself. No doubt this difficulty might be overcome by deepening the passage into the lake at the back of the town,as is provided in Article IV. of the arrangements for the settlement of foreigners at Niigata and Ebisuminato. But in view of the incovenience and expense of transporting merchandize between Ebisuminato and this place, those most interested in the trade have uniformly been averse to such an arrangement, and I think experience has now sufficiently shown that it would be preferable to lay out any expenditure which may be incurred for facilitating trade at this port on the improvement of the arrangements for shipping at Niigata itself, rather than on carrying out those parts of the arrangements just mentioned which refer to Ebisuminato.

I enclose a return (Table No. 8) showing the number of junks, of fifty *koku* burden and upwards, built at ports in this Province during the years 1873-75. Niigata itself is the chief seat of this industry, but the return also includes junks built at Imamachi and other junk ports on the coast.

From the return enclosed the general importance of Niigata as a place of domestic shipping trade may be inferred. Its owes its existence, indeed, in the first instance, to its being a port, and it has long been the chief seat of this trade on this coast. Its junks now keep up constant intercourse, except for about a couple of months in winter, with all the ports on the north-west coast, as well as a regular trade with the ports of the island of Yezo on the one hand, and Osaka on the other.

Agriculture, Mines, Population and Industries, etc.—I enclose a table (No. 9) showing the estimated amount of the annual production of some staple article in localities in this district, as also the quantity of land within the Niigata *ken* under rice, under wheat, barley and other crops, and under tea. I add a sketch map of the chief part of the Province of Echigo, which, with the slight exception of the district round Tsugawa, is included in the Niigata *ken*. In this map I have endeavored to indicate the chief localities where the articles which I shall now refer to are produced. I may also state here, in explanation of the map, that where the name only of a mineral is written it is to be understood that it is either unworked, or virtually so.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Rice, as is well known, is the chief crop of this district. The estimated production given in the table, namely, 3,300,000 piculs may be looked upon as a safe average. Of this, some 600,000 piculs are, in ordinary years, available for export. The production has been stated at considerably above this figure in some years. The crop is, however, from time to time liable to be partially destroyed by floods, as was the case in 1875. The crop of last year was over the average,—a circumstance which is confidently expected to produce a revival of the domestic trade of this port during the coming season. Of the other grain crops, and pulse, a much smaller quantity is usually available for export. Rice is regularly exported also from Shonai, in Uzen, and other districts on this coast.

Of the Tea produced in this province it is estimated that a little less than 2,000 piculs finds its way to Yedo and Yokohama, partly through the medium of foreign merchants here, and partly through the hands of Japanese dealers. Choice teas are not produced in this part of Japan. The teas of Echigo rank from common to fine and finest. Tea being a light article is frequently sent from this part of Japan overland to Yedo. The tea of Murakami finds its way to Niigata by junk from Senami,—and is then sent to Yokohama or Yedo either by steamer or overland. I visited Murakami last year, and was shown over the principal plantations by the tea growers. The plants, I was informed, are mostly from fifty to one hundred years old,—although tea has been grown there for a much longer period. A good many, however, have been planted within the last twenty years, and the cultivation is annually being extended. The plants are all low, seldom exceeding a foot and a half in height. About three thousand hands are employed in the cultivation and preparation of the tea, in and about the town of Murakami. The leaves are picked generally five times a year. They are the better for the plants being protected during the winter by straw coverings although this is not universally done. The process of preparing the leaf seems very similar to that followed in the more important tea districts of the South. A number of years ago some experienced tea workers were brought from the Uji district, in Yamashiro, for the purpose of assisting in the preparation of the leaf, and the result has been a marked improvement since that time.

These remarks apply, with slights variation, to the districts of Muramatsu and Niitsu, at both of which places the tea cultivation has been extended, and the preparation of the leaf improved of late years. The tea growers of Kurokawa also seem desirous of bringing their tea into notice. Many of the plants there are from fifty years old, and numerous younger ones are also to be seen. I am informed, however that there is something objectionable in the flavor of the Kurokawa tea, which is attributed by some to the contiguity of the petroleum wells to the tea plantations. At Shibata considerable attention has been paid to the planting of tea since about five or six years ago.

Tea is also grown in Etchiu and Kaga, in quantity sufficient for export to other places. The amount produced has been stated at between 4,000 and 5,000 piculs.

The silks of Horinoüchi, Tochiwo, and other places, find their way overland to Yokohama as Shinshiu silk. Some years ago there was a movement among the silk growers of this Province to create a name for Echigo silk, but it appears to have been given up, the Echigo growers being content, it seems, that their silk should find, when made up into hanks like Shinshiu, a ready market in Yokohama. The silks of the Murakami part of Echigo probably go by Yonezawa, and will thus come into the market as Oshiu silks. It is estimated that about 500 piculs of Echigo silk annually go to Yokohama. A silk filature was established at Gosen the year before last, and has since then been in use in the preparation of silk for the foreign market.

The silks of Yonezawa and other districts bordering on Echigo are well known. Silk is also grown in Etchiu and Kaga,—Komatsu been best spoken of—but the amount raised in Kaga does not appear to be large. That of Etchiu has been stated at over 400 piculs.

Of the other agricultural products of this Province, which are available for export from here, may be mentioned hemps, fruit, rapeseed and Japanese indigo. Tabacco is grown pretty extensively in several districts in the Yamagata *Ken*

The mineral resources of this part of Japan appear to be varied and extensive. I have endeavored to make a close estimate of the annual production of Copper and some other minerals in Echigo, Akita, etc. The total value of the present yield of the mines is not indeed very great, but considering the recent date at which improved methods have been adopted at the more productive mines, and the extremely primitive methods followed at others,—where these are worked at all—there can, I think, be little doubt as to the possibility of a large development of these resources.

The copper mine at Kusagura, in this Province, has lately become the property of the ex-Daimio of Soma. The produce of this mine is easily brought to this port by water carriage from Tsugawa, and has usually, but not always, been so. I understand that a better road has lately been made between the mine and the river, above Tsugawa, and that the prospects of the mine are good.

The Akita copper does not come to this port. It is shipped at Funakawa in the steamers which I have mentioned, and taken to Yedo or Yokohama. The copper produced in Sado is merely a by-product of the gold and silver ore. The Akita mines, which also produce gold, silver and lead, are, like the Sado mines, worked on Government account.

Copper, there can be little or no doubt, exists in large quantities in this part of Japan. In some places in this Province copper veins are worked, in a very imperfect manner, by the peasants of the localities where they are situated. The want of capital, however, and the imperfect methods followed, are fatal barriers to the success of this industry.

The principal gold and silver mines of this part of Japan are the well known Sado mines. Some account of these, and of the Akita mines, and their prospects, in the form of notes on the Catalogue of Articles sent by Japan to the Philadelphia Exhibition, has lately been published, and it seems hardly necessary to repeat similar information here. I may state, however, that the work of re-opening the Sado mines has been prosecuted with great energy during the past year, and very satisfactory results have already been obtained. Should the same rate of progress be maintained, it is anticipated that in two years more the mines will be in full operation,—a result which, if attained, will rather exceed previous anticipation. The works are under the immediate superintendence of a German mining engineer, who is assisted by an English miner. The new reduction works, consisting of amalgamation, concentration and smelting have been in successful operation during the past year,—with the exception of the smelting, which could not be continued for much more than a trial for want of a flux. From the present year, however, a continual supply of this is certain. The direction of this department of the works was, until lately, under the superintendence of an American metallurgist. An English mechanical engineer is also employed in the management of the foundry, blacksmith's, carpenters' and mechanics' shops, where the small pieces of machinery required in connexion with the works are made, and repairs of all kinds executed.

Owing to the non-completion of the smelting works there was last year a large quantity of ore on hand. This is being worked up, while the gradual development of the mines themselves is going on. Owing to the same cause, of course the actual out-turn of metals has not been great. The figures for the now current year will no doubt show a very material improvement, but those for the year 1875-6 only reached the extremely moderate amount of 35 catties of gold, valued at $13,700, and 13½ piculs of silver, valued at $37,472. For the same period the Akita mines give an out-turn of 63 catties of gold, valued at $23,790, and 47.80 piculs of silver, valued at $122,167.

A considerable development has of late taken place in the production of Petroleum in this Province. The chief places where it is found at present are, in the western parts of the Province, at Tateno near Takada, where there are about fifty-six wells of from 300 to 600 feet in depth. This is the purest oil, 100 parts of crude oil producing 90 of refined. Next to this group come the wells of Matsunoyama, numbering about sixty, also of from 300

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to 600 feet in depth. Here 100 parts of the crude oil give about 85 refined. Near Miyohoji there are about twenty-five wells, producing an oil of somewhat less purity than that of the oil of Matsunoyama. Towards the eastern parts of the Province, oil is found near Niitsu, at Kusodzu and Kanadzu. The wells of Kusodzu, from which place the oil took its original name among the Japanese,—are, however, at present not worked. Those at Kanadzu consist merely of a few trenches, two or three feet in depth, and if there is but little oil produced here, the cost of its production is only that of collecting it. It seems, indeed, to ooze out naturally in some the paddy fields. At Kurokawa there are about one hundred wells, of from 60 to 120 feet in depth. The crude oil only gives about fifty per cent. of refined, and consequently this oil has hardly been able to compete with the oil produced in the western parts of the Province.

The purification of the oil is in some cases effected near the wells. Nagaöka is also a considerable seat of this industry and emporium for the oil, water carriage from there to Niigata, and other parts of the Province, being convenient. Some of the oil is refined in Niigata. The process employed, however, being in most cases simply dry distillation, leaves the oil still imperfectly refined. The best sorts, nevertheless, in a good lamp, burn with a clear and steady flame, and there seems to be little doubt that when properly refined the oil will equal the best American oil. At present the oil is extensively used throughout the district, to the pratical exclusion of American oil, and small quantities of it have also been exported to other places. To say the least of it, this product is worthy of further attention.

Petroleum is also found in Akita. The best information which I have obtained on the subject gives the production of one locality for a year at about 47,000 gallons of impure oil, producing over 11,000 gallons of refined oil. The oil has, however, been found and is worked at several other places in the Yamagata *Ken*. In Shinshiu also petroleum has been struck. The daily production there has been given at 350 gallons of crude oil.

The existence of coal is known of in various localities in this district. The only seam, however, from which any but the smallest quantities of coal have yet been taken is that at Akatani. I visited this mine last year, and found that originally the coal had been struck by opening an adit on the side of the hill, at some height above the one from which the coal is now taken. The coal from the upper one having, however, been found to be inferior, the present adit was opened, and the coal has been worked through it for, I think, over two years. It is about six feet in height, by about the same in breath, and runs horizontally into the hill, striking the coal, I should judge, about thirty or forty feet from the entrance. The gallery afterwards branches off in different directions, extending some hundred feet, with coal above, below, and on either side. Only in one direction did I find that a gallery had been run beyond the seam, and this gallery, I was informed, had been extended for the purpose of making a shaft to ventilate the mine. An engineer who visited the mine in 1874 has described the coal as having been found till then to consist of two rich seams of brown coal, parallel to each other, and of a thickness of about twenty feet. The coal, he says, belongs to the later tertiary formation.

The mine is worked by private enterprise, but on the most limited scale. I was informed that at present coal is taken out only to supply such orders as are received. It is carried from the mine on coolies' shoulders to the village of Akatani, some two miles off, where it is put on horses and carried to Shibata. From Shibata it reaches Niigata by boat, being sold here at about twenty-five cents per picul. This coal burns to a fine ash, and leaves no cinder. It is used at the works in connexion with the Sado mines, and for domestic purposes in Niigata. The mode of carriage from the mine, as well as the limited scale on which it is worked, are no doubt the causes of its too high price. By opening up a good road to the mine, however, and improving that between Akatani and where the stream passing Shibata becomes navigable, or, perhaps still better, by the construction of a tramway from the mine to the stream, the cost of the coal here might be much reduced. In the prospect of increased steam navigation on this coast, it seems of importance that the working of so promising a seam of coal should not be overlooked.

Coal is known to exist in several other localities in Echigo, and it still possible that a workable seam may be discovered in even a more favorable position than that at Akatani. The coal found some years ago in Sado turned out to be unsuitable for a steam coal.

The *Ken*, or Prefecture, of Niigata now comprises the whole of the province of Echigo, with the exception of the district around Tsugawa, to which I have already referred, and includes also the Island of Sado. The registered population of the part of the *Ken* on the mainland is 1,388,812 inhabitants, and of the Island of Sado 104,764, making a total population of 1,493,576. These form 292,809 households. The land tax, stated in rice, of the part of the *Ken* in Echigo, previous to the late conversion of this revenue into a money equivalent, amounted, in an average year, to about 436.000 *koku*, equal to, say, 1,090,000 piculs. The town of Niigata itself contains 34,394 registered inhabitants, forming 9,207 households. To these must be added probably 2,000 or 3,000 persons, to obtain the actual number of people in the town and harbor at a given time. Being the centre of the administration of a populous district, there are always in this place a much greater number of persons not on the register of the town than there are of persons borne on the register who are absent from it. The population of the town may thus be set down as little short of 40,000. Besides being the seat of the *Kenrei*, or Prefect, Niigata is also the centre of the judicial administration of the *Ken*, and the seat of the chief Law Courts. It has also several schools, including a school for English, where there are at present about 150 pupils under the instruction of English and American masters. Niigata also possesses a Government Hospital, attended by a European doctor.

Besides Niigata, there are in this Province some twenty-three or more towns with a population ranging from 3,000 to 30,000 inhabitants, the chief being Takada, Shibata, Nagaöka, and Murakami, and probably about an equal number of from 1,000 to 3,000 inhabitants.

Besides the industries already mentioned, the manufacture of cotton goods is carried on at the towns of Mitsuké, Kameda, Nagaöka, Shiroué, Soué, Yoshida and Ono, in this Province. Cottons are made in several localities in Etchiu and Kaga. The cotton and yarn used at these latter places, besides what may be produced on the spot, is brought chiefly by sea from Yokohama or Osaka.

Silk goods are made at Gosen and Tochiwo in this province. The light hempen cloth, called *chijimi*, is made at Ojiya. Cutlery and hardware, including iron nails, for export to other parts of Japan, are manufactured at Tsubamé, and elsewhere. This industry may owe its existence here to the cheapness of charcoal. Lacquerware, in some quantity, but usually of common quality, is made in the district, particularly in Aidzu. *Saké* and soy are extensively manufactured. The pottery of this province is inferior. The ware known as Kutani, made in Kaga, is well known.

Public Works, Internal Communication, etc.—Within the last few years the town of Niigata has been materially improved by the rectification and widening of the canals, and the re-making of the streets. A piece of ground at the upper part of the town has been cleared and laid out as a public garden. The streets are lighted throughout, with over 300 lamps, in which the petroleum of the district is used. It may also be noted here that in other towns of the Province there is a total of over four hundred street lamps, of the same description, maintained. The Law Courts and Schools have been built here within the past year or two, and last year a new Post Office was erected. Under the new postal system communication with other places is much improved. Letters reach this place from Yokohama or Yedo in three days in summer, and in from four to six days in winter. The arrangements of the Post Office, however, might without much difficulty be still further improved, so as to secure even a more prompt postal service. I understand that the connexion of Niigata with the telegraph system of Japan will this summer be completed. The route to be followed from Takasaki is what is known as the Shinshiu route. The

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

telegraph will thus enter this Province by way of Takada, and thence follow the coast road to Niigata.

Although the main streets of the town now compare favourably with those of most Japanese towns, unfortunately the improvement has not yet extended to the roads throughout the district. It is to be hoped that something may be done towards an improvement in this matter. The most important road is clearly the one leading to Takasaki and Yedo, by either the Mikuni or Shimidzu pass. This is the post road to Yedo, and the most important route for the transport of goods overland. If the project for an early extension of the railway, from Yedo to Takasaki, is carried out, it would, together with the improvement of the road just mentioned, greatly facilitate overland communication with this place.

No doubt the excellent water communication between Niigata and most of the important localities in this Province renders the want of good roads less felt than it would otherwise be. The river Shinanogawa is navigable as far as Muikamachi, about seventy-five miles from Niigata, on its right upper branch, and, on its left or main branch, as far as Midzusawa, above Tokamachi, about the same distance from Niigata, and again from Otaki, in Shinshiu, upwards to Matsushiro, a further distance of about forty miles. An extensive goods traffic is thus carried on by water. Five small passenger steamers also ply on the river. Two vessels, of thirty-two and nineteen tons respectively, keep up daily communication between Niigata and Nagaöka, a distance of about forty miles; one of twenty-nine tons, with Sanjo; and two of still smaller dimensions with Tsubame. By the Agano-kawa the goods traffic with Niigata is carried in river boats as far as Tsugawa, a distance of over thirty-five miles. On the smaller streams towards Shibata and elsewhere boats of a smaller class are continually plying.

The cutting near Teradomari, undertaken some years ago for the purpose of letting off the surplus water of the Shinanogawa in floods, has, as you are aware, been entirely abandoned. A heavy expenditure, it is understood, was sunk on this work. Although an extended survey of the river was made some time ago, no effective measures have yet been taken to prevent the destructive inundations which occur from time to time, as, for example, in 1875. There is some propect, however, of these necessary works being taken in hand this year.

Prospects of the Port.—I think that from the returns which I have enclosed it is sufficiently evident that a domestic trade of considerable importance is carried on through this port, chiefly in junks, but to a small extent also in steamers. It appears, further, that there is a constant, if not very large demand here for certain staples of foreign import, and that this demand is met partly by supplies brought by sea, but, in the case of light goods, partly also by supplies brought overland,—and that for some way over a laborious mountain road,—from Yedo, a distance of about 220 miles. A considerable coast trade in exports, principally in rice, but also some other articles of foreign export, is carried on. There is besides excellent means of water communication between this port and the greater part of the populous district lying immediately behind it.

Since the opening of the port, however, no direct foreign trade has arisen here. The small coast trade, which was for a year or two carried on in foreign bottoms, has entirely ceased; and the same trade, in Japanese steamers is small, and was last year utterly out of proportion to the number of steamers engaged in it. I have further pointed out some of the difficulties under which shipping labors here, and they are otherwise well known. The arrangements to supplement the deficiences of Niigata as a port, by the use of Ebisuminato as a subsidiary harbor, have not proved a success, and seem impracticable. There appear, therefore, to be in fact, only two alternatives to choose between as regard this place;—either it must be admitted to be unsuitable as a place for foreign trade, or some means must be found to render it a practicable port for foreign vessels. The smallness of the foreign interests at present represented here seems almost out of proportion to the expenses of keeping up the machinery of an open port.

The improvement of the harbour of Niigata is a subject which has been so often referred to, that I almost owe an apology for bringing it up here again. The choice, however, as appears to me, lies between some measure of this sort, and one of two things,—either abandoning Niigata as the open Port on the West Coast, or allowing it to continue an almost nominal existence as such.

Extensive surveys have, as you are aware, been made of the Shinanogawa, from Nagaöka down to and including the mouth of the river, at this port, and the bar. I understand also that the engineers who have made such surveys have pronounced the deepening of the water on the bar, so as to allow ships to come into the river a feasible, and even comparatively easy undertaking, from an engineering point of view. Assuming such to be the case,—and it is not for me either to affirm or deny it—there remains only the economical question:—Would the expenditure involved in carrying out such a scheme be justified by the increased advantages thence accruing to this Province, in the first instance, but also to the long extent of seaboard on this coast which would then find in this port a convenient emporium both for foreign and domestic trade? The advantage to the present junk trade of this port is obvious, and the question, I am aware, is viewed with interest by native merchants and others in this place. The advantage which would accrue to the agricultural and other interests, by the opening up of a more ready outlet for produce, especially for rice, requires little reflection to see. The port would then also afford, what it does not do now, a centre of foreign trade, and market for the supply of imports, for the districts extending from at least the important province of Kaga and Etchiu, on the one hand, to Uzen and Ugo, on the other. The inland districts of Yonezawa and Aidzu, which on the first opening of this port seemed inclined to bring produce here, but do not do so now, would also be again attracted to this as by far their nearest port.

In view of the large revenue at present derived from this Province, but a small portion of which is expended in this part of the country, it seems worthy of the consideration of the Japanese Government whether an outlay, if not extravagant, on a work thus intimately affecting the whole district, would not be financially justifiable, and would not more than repay itself by the increased agricultural and commercial prosperity of the district. The carrying out of any project for the extension of a railway to this part of Japan must of necessity be a matter still a long way in the future:—but in no case is it antagonistic to a scheme for the creation of a harbor here. On the contrary, it seems to me that the former project presupposes the existence of a harbor here, as one of the conditions of its complete success, its object being to provide a means of communication with all the districts lying on this coast, and not with Echigo alone.

Such being some of the considerations bearing on the question of the formation of a harbor here, from the point of view from which it must be looked at, as a matter of public expenditure, if it should be found, either from engineering or financial considerations, to be impracticable or unjustifiable, I confess I think it were well to recognize the fact that Niigata does not fulfil the purpose for which it was opened, namely to supply a port for foreign trade on this coast.

On the 31st December last there were, exclusive of children, twenty-one foreign residents, ten of whom were British subjects, living in this Consular district. Of these, eighteen were in Niigata, and three in Sado. Of the former only three, all Germans, making two firms, are engaged in regular trade, the other residents being, for the most part, either in Government employment, or missionaries.

I have the honor to be,

Sir,

Your most obedient

humble servant,

(Signed) JAMES TROUP.

Sir HARRY S. PARKES, K.C.B.

JAPANESE TALES.

HOW THE BEARS TREATED HACHISUKE AND WHAT FOLLOWED THEREUPON.

A Tale with a Moral.

Many years ago, whilst the world yet was young and men led such uneventful lives that the slightest deviation from their customary round was an epoch to be remembered; when their heads for want of better furniture were filled with fancies quaint and wild as the gloomy hills and valleys where they lived; ere the mineral oil had come to pale the feeble glimmer of the cresset, and turn the darkness of the night—when all good folks should be abed—to daylight, and multiply the pallid scholars, and help to raise the intellectual faculties above the animal,—in such a time, when the country people by reason of their simple natures were said to be on better terms with the brute creation than they are at present, there lived in Hida, hard by the village of Takeyama, an honest farmer—though the adjective is not insisted upon by the historian—whose name was Hachisuke.

A happy man, as men go, was Hachisuke, for the gods had sent him by a loving wife, two children—a girl of thirteen summers, and a boy of four—to bear him company in the long, long winter days when the snow lay thick upon the ground, as it did in those bleak regions for full three dreary months. So thickly indeed, that the hoe perforce stood rusting behind the barn door, and the husbandman had nought to do, but pass his days beside his charcoal fire, longing for the cheerful sun to come in force, and the pleasant south-west wind to blow, and thaw the imprisoned soil into verdure once again.

Against these days of forced imprisonment the thrifty country folks had learned to lay up in early autumn, good store of that year's rice, and radish, and dried and salted fish and soy and suchlike, the better to endure the siege of winter; but from some unknown cause or other, in the memorable year when the events here chronicled took place, Hachisuke had postponed his usual trip to Takayama for supplies until the North Wind had asserted its supremacy over every other wind that blows, and had even flung a flake or two of snow in at his kitchen door, just to warn him, as it were, to be up and doing or perhaps he'd be too late.

So Hachisuke bestirred himself at last in right good earnest, and started off forthwith upon his lonely mountain walk. He had not gone far, however, before the grey sky darkened and the snow, from being a sprinkle, began to fall continuously. At first it lay but lightly upon his road, but by degrees it thickened and hung about the trees and bushes, and changed the features of the landscape and blotted out the pathway, insomuch that he found it hard to keep the proper course. Then to make things worse, the wind began to sweep around him in angry gusts and fill his eyes and mouth with downy flakes, and so confuse him that he lost his way at last. Fiercer and fiercer blew the blast, and heavier fell the silent snow, until poor Hachisuke's straw rain coat and great round hat, with a tuft atop, were so thickly covered that he looked for all the world like a walking *ishidoro* or stone lantern. Presently he found himself knee deep in drifts, and the light of day forsaking him, and the storm so thick that he could neither see to advance nor yet retrace his steps. And now his heart began to die away within him, for well he knew that to pass a night upon the mountain was almost certain death. He remembered in his anguish how an unexpected snow-fall such as this had robbed a good wife, in his hamlet, of her husband not so many years ago, and changed her little ones to orphans. So on he struggled manfully, each moment getting further from the track, and filled with gloomy thoughts about his wife and children, till quite worn out at last with his exertions, and overcome by a strange drowsiness he stumbled, and regained his feet, then struggled on a little further, and then fell upon his face again, this time to rise no more. Bravely had the poor fellow faced his difficulties, but the formidable odds he fought aginst had been too much for him.

But when did fortune turn her back upon the brave? Had Hachisuke given in before compelled to, he might have died where he had fallen, and no one been a bit the wiser, until returning spring had thawed the snow and laid his body on the grass, to be discovered by such chance straggler as might pass that way. As it was, however, his perseverance had carried him to where a huge she bear was tramping homeward, and by placing him athwart her path, had taken the best possible means to attract her attention.

It is likely that, at the present time,—since bears, indeed have learnt to hug, and otherwise misconduct themselves,—a man's relations would not have cause to thank their stars that he had fallen in with such queer company; but it was otherwise in the venerable days when Hachisuke lived, for to his chance encounter with the bear he owed his life.

For attracted by the farmer's prostrate form the ponderous brute delayed her awkward march, the better to determine what it was that lay so still and motionless before her. Nor was she long in making up her mind, apparently, for having turned it over once or twice, and sniffed at it and otherwise examined it, by some mental process which, for want of a better designation we call instinct, she came to the conclusion that there lingered somewhere in the innermost recesses of the chilled and helpless human being underneath her, a feebly smouldering vital spark, which left untended would assuredly become extinguished, but which care and kindness, perchance, might nurse once more into a flame. So flinging it gently across her shaggy back—for despite her ungainly exterior she had a kindly disposition—she trotted off to her cave amongst the rocks, and in no long time deposited it before her two young cubs, who, filled with that curiosity which is natural in bears of such a tender age, bestowed upon it an amount of attention which might have been considered inconvenient, not to say impertinent, by Hachisuke had he been in posses ion of his senses.

As it was however, Hachisuke knew as little of what was going on around him as the *sugi* trees before the entrance to the cave. For he betrayed no signs of life, until by dint of licking him all over, and lying on either side of him to lend him of their warmth, the bears were at length rewarded for their trouble by seeing consciousness return, and his eyes once more unclose upon a world which, but for their exertions, he had left for ever. Nor was the prospect which met at length his troubled gaze, one likely to promote an unmixed joy at his deliverance from the painless dissolution of a frozen sleep. For it cannot be disputed, that there are few things in this world more likely to upset a man, and make him take a gloomy view of life, than to see in front of him when first he wakes up from a lengthened trance, a huge she bear squatted on her haunches, and taking stock of him, it might be said, with her head upon one side and her bloodshot-eyes half closed—as is the manner of your true art critic—whilst from asthma, may be, or hunger, for all he knows to the coutrary, her breath is short and her sides are heaving, and her great red tongue, depending to her breast, is agitated like a scarlet petticoat hung in a breeze.

Nor are his impressions likely to receive a more cheerful colouring, to find—when he fain would rest his eyes on some less disturbing sight—on either side, in active flattery of his parent, a younger bear as closely imitating his superior as his genius permits him

For many minutes, afraid to stir for fear of precipitating a fate which seemed inevitable, Hachisuke lay quite motionless, but by degrees the silence, broken only by the panting of the bears, becoming intolerable, he made shift to erect himself upon his knees, as well as his fright and state of weakness permitted him, and proffer thanks to his preservers for all the kindness they were at in rescuing him. Reassured by finding that they all returned the salutations which he made them with the best grace they could command, he began to pluck up heart a little. And when the discovery broke upon him that the grimaces visible on each countenance in place of being demonstrations of hostility were really meant to do duty for winning smiles, he felt and completely at his ease, and conscious of no other feeling toward them but that of overwhelming gratitude for the saving of his life.

As the annual snow fall had fairly set in now, and he saw no prospect of escape, it soon became evident that he would have to pass this winter where he was. Nor would this have been much of a trial to a hardy fellow like himself, perhaps, if he was able to see from whence the food necessary for his sustenance during the long inactive period before him, was to be procured.

Original from UNIVERSITY OF CALIFORNIA

He had greatly misjudged the bears, however, if he fancied that they took the trouble to rescue him from one kind of death, only that he might die of another more lingering and wretched than the first. For anticipating his wants, one of them very politely presented his paw to him about dinner time, and made signs to him to lick it.

Now either because he misunderstood the kind intention of the bear or had no stomach for that sort of food he at first declined the obliging offer, but seeing, as time went on, that the bears performed this ceremony at stated intervals themselves, and with great apparent satisfaction, he began to think that there was more in it than appeared upon the surface. So, being soon consumed with hunger and without the wherewithal to satisfy it otherwise, he was at last constrained to make trial of the paw, and found to his great joy his pangs alleviated and his appetite, however ravenous before, to have disappeared completely soon after he had partaken of the viands.

In such wise did the winter slowly pass away, until the spring returning, and the snow having thawed sufficiently to allow of his making out his whereabouts, Hachisuke not unnaturally became impatient to depart and rejoin his family. To his leaving them the bears made no objection, as became such well bred bears, but they testified so much regret at parting with him that he was moved to tears, and felt as lonely and uncomfortable when he had said good-bye, as if he were separating from his dearest friends for ever.

Having made his way homeward as expeditiously as melting snow and swollen torrents permitted, he found his wife, as he expected, lamenting him as dead, and in the very act of arranging with certain friends the formation of a party to start the following day in search of his remains.

Great was the rejoicing over his return, as may readily be imagined, and the news that he had come back spread like wild fire round the hamlet. Neighbours and acquaintances gathered in from all sides to see him, and hear the tale of his escape, and innumerable were the congratulations, and many the exclamations of wonder and surprise, when he told them of his handsome treatment by the bears.

It was hardly to be expected that a narrative so strange could be listened to without exciting curiosity amongst the hearers, and engendering a desire to learn the whereabouts of the bears' retreat. But Hachisuke steadfastly refused to disclose the secret, and even declined to entertain the liberal offers of certain hunters of the district who were willing to pay considerable sums for the information. These latter, having found that their repeated entreaties had no avail and that his gratitude remained proof against temptation, at last abandoned their attempts upon it and went away.

If Hachisuki's gratitude, however, like a noble metal submitted to assay, had proved its quality, this tale had never been written, or had its nature not been tried at all, it is likely that it would have deceived even himself, and passed into a proverb. For many a seeming virtue gets credit for the real thing, until by some chance test its pinchbeck nature is discovered to the world. Adversity was the touchstone which showed that Hachisuki's sense of benefits received was nothing but a base alloy. As long as things went well with him he had no thought of treachery. But when hard times came, the offers of the hunters which he had so lightly rejected were remembered with regret, and the greed of gain, by brooding thereupon, got such possession of his heart, that in an evil moment for all concerned he determined to give up his friends to destruction. So sending for the hunters one evening he informed them of his project, and accounted for his conduct by saying, that although naturally anxious to protect as much as possible the brutes who had been so kind to him, he was nevertheless persuaded that he could be of but little use to them, inasmuch as the vigorous search which had been instituted since he had told his story, and the assistance rendered therein by the country people, would assuredly end with the discovery of the bears and their despatch, in which case—and here was of course the rub—the profits which they brought would be divided amongst the finders only, and he would not be entitled to claim a share. In this the hunters readily concurred, and united in assuring him that they had every prospect of finding out the cave in a very few days, and that if he wished to benefit by the discovery he had better make up his mind to assist them.

Upon the stipulation that he was to have half the proceeds, to purchase therewith a neighbouring farm—on which he had laid longing eyes—an agreement was formally drawn up and signed, whereby he pledged himself to kill the bears without giving the hunters any further trouble, and the unholy bargain was completed with a cup of wine.

So in furtherance of his design he had a *botan mochi*, or kind of cake, prepared next day, and having placed it in a box, set off alone to see his friends. He was not long in finding them, nor had he any trouble in inducing them to eat his cake, after which, with many signs of mutual good will and friendship, he parted from them.

Having by such insidious means laid the foundation of a taste for pastry in the bears, and convinced them of his friendliness and honesty of purpose, after fifty days had passed he visited them again.

On this occasion, as on the previous one, he was the bearer of a cake, with the difference, however, that the present one was poisoned. The unsuspecting bears received their visitor with transports, and ate his fatal gift with every demonstration of gratitude and appreciation, after which they accompanied him half way home, and manifesting much regret at being obliged to separate, they bid him an affectionate farewell.

It is not related how Hachisuke slept that night, but notwithstanding what his dreams may have been, it is quite certain that they did not prevent his accompanying the hunters—whom he had summoned overnight—at daybreak next morning to the cave. Having entered first he found the old bear stretched in death across the opening, and somewhat further on the young ones. Nor could he—murderer though he was—refrain from tears at the sight nor help apostrophising the remains, with reasons for their murder. The hunters, however who had nothing unusual upon their conscience, were not delayed by any sentimental scruples, but speedily fell to and flayed their victims, and cut up the carcases and departed with their spoils.

Being now enabled to possess himself of the land he so much coveted, Hachisuke lived contentedly for several months, pursuing diligently his calling the while, and living frugally enough to permit of his purchasing an ox, which, to a person in his condition, was a property of no little value.

Now it came to pass that upon the anniversary of the day when bearing the poisoned cake in his hand, and hiding treachery in his heart, he had visited the bears, he found himself at early daybreak trudging along beside his ox to the village of Takayama, to deliver a load of barley to a merchant of that place who had bought it of him.

And whilst her lord is absent on this errand, his better half, seizing hold of Father Time by his scanty forelock,—as becomes a good and thrifty house-wife—takes her seat before her loom, and plies her shuttle with such diligence as is only manifested by those who look upon the labour of making material for their husbands' garments as truly one of love. But though she works this day with accustomed zeal she seems preoccupied and ill at ease; her face is clouded with an anxious look not often seen therein, and the cheerful song with which she is wont to lighten the monotony of her employment is silent.

She's strangely irritable too; small trifles seem to put her out. The breaking of a thread, or a false throw of the shuttle is enough to call an angry exclamation to the lips. Even the sound made by her daughter chopping *daikun* on the bench outside the kitchen door distresses her so much, that she calls out in no gentle tones, "for heaven's sake" to "make less noise." And presently, to make things worse, the little boy begins to cry, and the girl unable to pursue her work for his interference, is constrained at last to ask her mother to use her influence to keep him quiet.

Scarce knowing what she says, her thread being in a tangle and her whole soul lost in its confusion, she angrily desires the girl to "cut the brat's nose off" if he won't cease troubling her. On hearing this the girl makes what's intended for a harmless demonstration with the knife, but alas! the blade is so loosely fastened in the wooden handle that it unexpectedly flies out,

Original from UNIVERSITY OF CALIFORNIA

and inflicts a gash upon his throat so deep and fatal, that before his mother—who, attracted by his sister's cries, has run to see what is the matter—can reach him, he expires.

Beside herself with fright and anger the unhappy and distracted woman forthwith vents all her rage upon the girl, and ends by striking her upon the head so violently, that the billet of wood with which she inflicts the chastisement is broken in her hand, and the wretched child falls dead before her. Overcome now with horror and remorse at the frightful turn events have taken the mother shrieks for help, and none arriving, faints with terror.

When consciousness returned and she saw her children lying dead before her, Hachisuke's wife, like one demented, raved and tore her hair at first, but presently a copious flood of tears coming to her relief she grew calmer, and was able to turn her thoughts to the course which it now behoved her to pursue. To face her husband with the two dead bodies in the house, and have to avow herself their murderess, she felt to be impossible, so she determined to take her own life too, and by that means escape the vengeance which she knew would be her due.

Taking up the corpses of the children, therefore, she laid them side by side before the altar shelf, and having covered them decently with a quilt, she went out into the ox's stable and hanged herself.

In the meantime, whilst all these shocking scenes were being enacted at his house, Hachisuke having sold his barley well, and received the money, set out from Takayama upon his return journey, happy and light-hearted at having made a famous bargain, and not a little elevated, it must be confessed, from sundry cups of wine, to which, in the exuberance of his spirits, he had treated himself. Merrily he jogged along upon his devious way, laughing boisterously at times, and ever and anon stopping to refresh himself from a little keg of *saké* which he carried dangling from his waist by a string, for the day was sultry and the road along which he toiled a dusty one,—two potent factors in the production of an intolerable thirst. Overcome at length by heat—and perhaps too frequent applications to the keg—he became uncertain of his way, and determined, therefore, like a prudent tippler, to sleep off his debauch before proceeding further. With that intention accordingly he tied his beast up to a tree and having selected a shady spot he laid him down and disposed himself for slumber.

The sun was declining when he awoke, and the effects of his potations had quite passed off, but he felt chilly and dispirited, and unable to get rid of the recollection of a hideous dream which had visited him whilst he slept. In it the bears had come and glared upon him with ferocious eyes, and growled at him, and torn him. In vain he tried to sing or shout, his voice refused to obey him, so he hurried on shuddering and in silence, a prey to gloomy and disturbing thoughts.

Anxious to reach home ere nightfall he continued to press forward as quickly as his ox's pace allowed him. A presentement of coming evil lay heavy on his heart which he hoped the well-known sounds of home and the voices of his wife and children would quickly dissipate. But the house is strangely silent when he reaches it. There's no one stirring and it looks deserted. What ho! there, is everyone abed? No answer. It was never so before. What can it mean?

Trembling like a man in ague, and with a grim foreboding of he knows not what, he makes haste to house his ox and explore the mystery of the silent house.

But an intruder is in the ox's stall, a hideous and unwarrantable intruder, with a swollen purple visage and great goggling eyes, who moves not nor makes a sign, and yet who so affects, with these ghastly protruding eye balls, the patient beast, that it snorts again with fear, and will not budge beyond the door.

Ten thousand plagues upon it for a stubborn beast, is it too, bent on driving him to madness? Go in it must and shall. But Hachisuke's blows have a different effect to what he calculated on, for appalled by the thing before it, and infuriated by the ill usage which would make it enter where it dares not, the ox turns round and gores to death its master.

Moral:—Never be unfaithful to friends who have helped you in distress

Correspondence.

To the Editor of the "Japan Weekly Mail."

Sir,—As we have had no opportunity of discussing in a public meeting the proposition "that it is desirable that "there should be in this Port, a Silver currency among "foreign merchants, which shall circulate in the interior "of the country," I ask the aid of your columns in ventilating this question. In support of the proposition, I would submit the following consideration.

The foreign town of Yokohama may be said to have become the centre—the heart, of the trade of Japan. Eighteen years ago the trade of this country virtually circulated only within the bounds of her own shores. She consumed her own Silk, Tea, Cotton, and Tobacco, and asked little or nothing of the products of Manchester, Bradford and Paris. Now all is changed. She exports her Silk, and supplies its place with the Imports from foreign countries. She has pushed the cultivation of her Tea and general produce, and with the proceeds buys up the Shirtings and Yarns which Yokohama supplies. Her own centres of trade have been hooked on to as it were, and absorbed in, the foreign centres—this Port in particular. Such being the case then, it seems to be a first consideration that there should be a ***standard*** measure of value for the produce sold and goods bought which shall be known and recognized between buyers and sellers:—that the whole system of circulation should beat in unison with the centre, if a healthy vitality is to be maintained.

But how does the case stand? The Mexican Dollar is the standard of value in the foreign town of Yokohama. Accounts are kept, and transactions arranged in this alone. But it is not recognized half a mile from our door. Between us and up-country merchants who have sent down their produce for sale is a barrier of exchange,—very much, doubtless, to the edification of the whole race of shroffs and money brokers, but impeding trade, introducing an unfair element of uncertainty into all transactions, and mulcting the producer of no small part of his lawful returns.

We have a notable illustration of this position in what occurred during the last six months of 1876.

There was an exceptionally good silk crop, and the prices realized for it were exceptionally high. A good harvest of all things makes the people of a country prosperous, and the events of last autumn should have introduced general wealth throughout the silk districts, and placed trade on a better footing for long to come.—

According to the returns of our Chamber of Commerce, we bought from the Japanese during last half year, produce to the value of about 17 million dollars, and it was all paid for, with the most trifling exceptions, in Mexican dollars.

Now what *ought* to have become of this large sum?

a. A certain portion would go to pay the native dealers of Yokohama their commissions, charges and profits.

b. A certain portion would be returned at once to the foreign merchant in payment for imports.

c. The remainder and largest portion ought to have returned to the districts from which the produce had come, gone back to the producer, carrying wealth and prosperity to the districts of production, and coming back in due time in a healthful flow to buy imports in Yokohama.

But this last and major portion *could not* circulate up country: it was dammed up in the native town of Yokohama, and could be made available for the interior only as it could be exchanged into another currency, the native currency of Japan, *yen* and *yen-satzu*. And notwithstanding that confessedly there is in circulation an excessive supply of (inconvertible) paper, the native currency at hand was inadequate to deal with the large supply of dollars.

As a consequence it gradually rose in value, until in August it touched 7½ per cent. premium, or to put it the other way, dollars went to a discount of more than 8 per cent. That is, for every hundred dollars we paid for our silk, the silkman received only 92½ cents. The rapid fluctuations which followed, tended to aggravate the disorder: within a few weeks we find the depreciation is only 3

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

per cent. and then again speedily increased to 7 and 8 per cent. Now I maintain that a condition of things like this is monstrous. Here are two silver coins, exactly the same weight for weight, fineness for fineness, to a tittle. (We need not here enter upon the subject of the varying difference in value between *satz* and *yen*). One happens to be called a *yen*, the other a dollar. Both circulate in Yokohama, but one only in the native town, the other only in the foreign town. And yet here are times when 92½ *yen* will be exchangeable for 100 dollars, and if we come on to last February, we complete the grotesque absurdity of the picture when we find that it then required 105 *yen* to buy 100 dollars.

Truly our commercial relations with the native merchants partake rather of the character of an advanced form of barter, than of civilized dealings on a monetary basis.

And if this condition of things is absurd, equally is it baneful to legitimate trade. Only the class which thrives on the losses of others, or those whose natural element is gambling, can desire its perpetuation.

We have here, it is very evident, the up-country producer mulcted of a heavy percentage of his returns, and that in an altogether illegitimate way. This is both unfair and prejudicial to all concerned. But we have what may be termed a still greater evil, in the disorganization introduced into the machinery of commerce. An accumulation of dollars in Yokohama which are useless to the up-country owner in that form, and which can only be made available by discounting them at a ruinous rate, induces purchases of foreign imports in excess of demand, and sellers as well as buyers are sure to have to rue the results. Let us turn again to last Autumn and recall what then actually occurred. A considerable activity in imports, with advance in prices, was developed during September, and for a few weeks business seemed extremely satisfactory, while a general hope was fostered that at length trade was restored to a healthy position. On one occasion, as many will remember, some important fancy goods advanced ten per cent. in value in a few hours, so large was the demand for them. But equally pronounced and sudden was the collapse, a collapse so complete as almost to be without precedent. It is now too evident that dealers were led into going far ahead of actual demand, that what seemed a real demand was an unhealthy inflation, and the bitter fruits remain with us and will remain for long yet, in overstocked godowns, bankrupt dealers, and a depression of prices far below corresponding value at home.

How different might have been the issue had we paid for our silk in a currency which could have circulated through the country, following in natural channels the natural flow of trade, circulating automatically where it was wanted without let or hindrance, and without the constraint of forced media. Possibly to this day we might have been enjoying a steady demand for our goods, the outcome of the gradually developed wants of those to whom the silk crop had brought prosperity, in place of short lived inflation to be followed by collapse and stagnation.

Here then, I venture to think, we have a very strong case in favor of the desirability of assimilating the currency to the purposes of native and foreign merchants alike, and on these grounds I contend that the principle contained in the proposition is of the highest importance.

The subject of the propriety of adopting the *yen* standard follows naturally on the foregoing, and I am induced to add a few words thereon.

We have in the *yen* a coin ready made to hand, and if we could *satisfactorily* adopt it in Yokohama, we at once get rid of all the difficulties caused by the barrier between ourselves and the interior of the country.

To enable us to accept it with satisfaction and confidence, we, however, need guarantees.

1. For the maintenance of the standard.
2. For the issue of a sufficient supply.
3. For the regulation of the currency.

As to the first point, there need be no difficulty if the Japanese Government adopt the same means as upon the first establishment of the Mint some years ago. Specimens of the silver *yen* issued from the Osaka Mint when it was under the superintendence of Major Kinder have been declared (Nov. 1874) by the Deputy Master of the London Mint to be in all respects satisfactorily coined, the legal weight and fineness being very accurately maintained. What has been done, can be done again.

Equally, there should be no difficulty about the *second:* indeed, it is not improbable that there is still sufficient bullion in the shape of coin left in the country to suffice for a properly adjusted currency. Want of attention to the *third* point, has been, it is to be presumed, the chief motive power at work in driving the coin out of Japan in former years. There has been an inflation of currency, possibly too much coin, and assuredly too much paper, for the want of trade; hence at every check in business, the currency has been at a discount compared with other countries, and it has paid to export the metallic portion of it.

The peculiar position and circumstances of Japan, particularly the slowness of internal communication, would probably render the task of adjusting the currency one of unusual difficulty; but it seems to me that it would be useless to seek for a re-issue of *yen* from the Osaka Mint until we are safe from a recurrence of such a wholesale export of the coin as has occurred before.

I surmise that the elements of this adjustment must be, a moderate supply of Silver *yen*, and a lesser quantity in Gold *yen*:—a fair proportion of convertible paper, and Branch Banks in some of the most important districts to further facilitate circulation. I venture to think that with such an adjustment, the existing inconvertible paper might be extinguished without risk to the Government of any financial crisis. There are grounds for fearing that we are at this present time threatened with further issues of this inconvertible paper, on the fallacious plea that there is not enough money in the interior for the purposes of trade: the true state of the case being rather that we have already too much currency, but that it cannot move about.

There is another point in this discussion which it is justly urged is of great importance, viz, that the silver currency in use amongst us in Yokohama should be such as circulates also in China;—but while admitting the gravity of this consideration, I am disposed to contend that the results of isolating us in this respect from China could not be worse than the results of our isolation from native trade. Practically, however, is there such a risk of isolation? The Mexican Dollar could still circulate here side by side with the *yen*, and would be always available for export or import to regulate the balance of trade.

On the other hand the prospects for the reception of the *yen* in China are by no means bad. In Hongkong the want of additional trustworthy currency has been affirmed, and in Shanghai a similar want is felt, while the scarcity of Mexican dollars with which we were but recently threatened, must have tended to deepen such feelings.

One need not be very sanguine to anticipate that if the *yen* and Mexican dollar circulated side by side in Yokohama, they would ere long circulate together not only in China, but also in the interior of Japan.

In conclusion I admit that the difficulties which surround any attempt to give practical effect to this proposition are very great, but if the principle be right, it is not with the difficulties that we have now to do. Let us affirm the principle, and then patiently work on until we attain the results we desire.

I am Sir,
Your's obediently
W.

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Tuesday, March 20th, 1877.

YOKOZAWA ZENSUKE *v.* TEMPLE WILLCOX.

Plaintiff claimed a return of $150 bargain money paid to defendants on account of a contract for 300 pieces of velvet which the plaintiff did not receive. Defendants sued plaintiff in the *Saibansho* for not taking delivery, and during the hearing defendants admitted that the goods were not according to sample.

Mr Temple Willcox appeared for defendants.

(Continued from 6th instant.)

Tomataru Yoshimatsu cautioned, stated:—On the 3rd of October I made a contract with defendant for the purchase of velvets, and after that, on the 28th, I went to take delivery. This is the contract (shown). I made it as the agent of Shinano The goods had arrived on the morning of the 23rd, and as the agreement was to take delivery of them on the hatoba within a period of two days after their arrival, I went in the following morning to see about them, but was told that they had not yet been landed. I told defendant I wanted them with the least possible delay. I was informed on the 28th that they had been landed and I went accordingly with the purchase money. But when a box was opened it struck me that the velvets were not like the sample I told defendant of this difference but he denied it, and as the original sample upon which they had been purchased was in Tôkiô in the possesion of the man to whom he had contracted to sell them, defendant allowed me a period of six days in order that I might confer with this person as to whether he would accept them as they were. The original contract was for goods according to sample, and defendant knowing that, and also that I had no authority to take goods other than the sample he agreed to allow for the difference. I accordingly took one sample of the goods that arrived to Tôkiô to compare it with the original I consulted with the Tôkiô people and they decidedly refused take the velvets as they were. After I had done so, on the 1st November, defendant's compradore came to my house and enquired what was the result of his consulation with the Tôkiô people. I told defendant they would not take the goods. Defendant wanted me to take them, but as I refused, agreed to call experts, who met on the 8th or 9th. They found that the goods differed from the sample.

Cross-examined by Mr Willcox:—At the time of the contract velvets stood at $8, 87½ per piece. I was to sell them at the price at which I purchase l them and get nothing beyond the recognised commission, which is 4 *yen* per mill. On the 28th October I do not remember the price of velvets, nor how much it had fallen. Between the 28th October and 6th November I am aware of no fall in prices having occurred. It was in consequence of a notice from the compradore that I went to take delivery of the goods. I first examined the velvets at No. 73 on the 28th. I did not examine any case on the hatoba. I was anxious to take delivery of the goods because the total value was a little under 3,000 *yen*. I therefore readily agreed to pay the interest and coolie hire as suggested by you for the six days' postponement which was necessary to allow me to arrange with the Tôkiô purchaser. I did not see the bales which arrived by the *Fleurs Castle*. When I asked for the delay I did not say that I had not money enough to meet your contract. I made no promise to abide by the decision of the arbitrators.

To the Court:—The piece of velvet I took to Tôkiô was from a case ex *Martaban*. Two of the five cases were opened at No. 73. I wanted to see all the goods before taking delivery, but was told I could not do so on the hatoba so we agreed that they should be brought to No. 73 and and there examined. I gave this memorandum to defendant after the examination of part of the velvets. When I first went to defendant for velvets I intended to buy no special quantity. I went to see if he had any and he told me he had 300 pieces. The compradore told me they were coming in the *Martaban* and *Fleurs Castle*. The texture of the goods was very bad and the colour vastly inferior. There are grey, green and black velvets and each is known by its name. Some of these were approaching white. The black velvet was not equal to the sample. I did not see the second arrival per *Fleurs Castle*.

Adjourned till 2 p.m.

When the sitting was resumed in the afternoon, Tomita Yoshimatsu was recalled and re-examined by the Court; he said:—The five cases containing the 150 pieces had been brought to No. 73 on the 28th October before the sample piece was given me. If defendant says a man went to the hatoba and there took a piece out of a case and brought it to No. 73 to me, he lies.

Kimura Riyemon, of Benten-dori, No. 19 Gochôme, cautioned:—I had a request from plaintiff that as he had got into some dispute in respect to a contract for velvets to come and examine for him as to whether the goods were good or bad. I accordingly went No. 73 on the morning of November 9th. Mr Walter was to act on behalf of defendant, but being unable to come the examination was put off. There was another Japanese arbitrator besides myself, and out of the whole lot of which an examination was made, we compared two pieces of the contents of case No. 1038 with the sample and found great differences existing. The pattern was closely woven with three threads whilst the velvets in the cases were bare and could be seen through. Having decided that these two pieces were inferior to the sample we took out one more piece which turned out much the same as the first two. Upon comparing in like manner the rest of the lots we found them all widely different from the sample. While the sample piece was entirely black the others contained a large white element. The three arbitrators them conferred amongst themselves and agreed that the goods differed from the sample. That is all I've to say.

To the defendant:—I fancy there was some slight fall in the price between October 28th and November 29th. The price continually varied. I did not use a magnifying glass nor do I know if the others did. I could easily discern striking differences in texture with the naked eye. It is customary to accept goods which may vary slightly from the sample but sometimes this is impossible.

Okata Heisaburo, of Benten-dori, Ichome:—I coroborate the evidence of the last witness and have nothing more to add to it. I have to take delivery of the velvets belonging to the velvet dealer with whom I stay.

Plaintiff had no other witness to call; defendant called

Ah Chau, Compradore, who stated:—On the 28th October the *banto* came to the office and said he could not get the velvets that day. The next day I sent the godown man to the Custom House and he brought black a sample piece. Plaintiff's *banto* compared this piece with the sample. He took the sample away after promising to pay six days' interest. I went to this house on the 3rd November asking him to take delivery. He said nothing about the difference then.

To the defendant;—It was because he had no money that he asked for the six days' delay. On the 28th October he said nothing about difference in quality. He asked for an allowance of 25 or 30 cents. You said you could not settle. 150 pieces of velvet came by the *Martaban*, and 150 by the *Fleurs Castle*. We had no other velvet coming.

Ah Hee, godown man, stated:—On the 28th October last, the compradore asked me to go to the hatoba and open a case of velvets and bring a sample piece. I did so, and the compradore took it to the office. Plaintiff's banto was with the compradore, and I saw him look at the piece.

Muroga Masayoshi, interpreter at No. 73, stated:—On the 28th October the compradore brought upstairs a sample piece of velvet with plaintiff's banto and they talked with respect to these goods The compradore said plaintiff had accepted the goods without making any complaint as to their quality. Owing to want of means plaintiff did not take the goods that day but left a document in the hands of the compradore, the purport which I explained in English to Mr Willcox, who said plaintiff must pay interest for the delay which he asked. When Yoshimatsu came again after six days and said he could not accept the goods because they were inferior to the sample, there was considerable discussion, after which it was ultimately agreed to call in arbitrators who were to decide whether or not the goods were according to sample, and if they were not according to sample, what difference in price it would be necessary to make in proportion to the market value of the goods then and at the time the contract was made.

W. B. Walter, sworn, stated.—I am a merchant's assistant. Mr Willcox asked me to survey these velvets. I went about the 9th November and found there some Japanese who were said to be present on behalf of the buyer of the goods. There were two lots which arrived by different vessels. We took 3 pieces out of each lot and compared them with the sample piece on which Mr Willcox said the goods had been sold. Some of the velvets varied a little in colour which is not uncommon in low class goods of the kind, but taking them altogether I thought them fairly up to muster. The Japanese, however, found them all inferior to muster. I told Mr Willcox my opinion, but that as the price had gone down a good deal and it would be difficult for him to recover in a Japanese Court, I thought that to avoid trouble he had better make an arrangement. He asked me what I thought the Japanese would accept? I said about 50 cents reduction per piece should satisfy them and save trouble. I believe that if the market price had kept up from the time of the purchase till the time of delivery no objection would have been made. Japanese are very fond of repudiating contracts in such an event if possible. That is my report (produced).

Adjourned till this morning, at 10 a.m.

Wednesday, March 21st, 1876.

Mr Walter's evidence, as given yesterday afternoon, was translated to plaintiff, who said that it differed from what was given at the *Saibansho*. Defendant, Mr Willcox, said that Mr Walter had not appeared as witness at the *Saibansho* at all. His report which was now in Court had only been handed in with the petition and read. Plaintiff said he meant Mr Walter's report differed from his evidence now. Mr Walter said the velvets differed slightly in colour from the sample but that the difference was not sufficient to authorise a total repudiation of contract. Plaintiff maintained that the difference, though not great, was enough to change the characteristic colour of the velvet. Upon examination, plaintiff's translation of the survey report was found to be wanting in several parts.

Mr Walter, recalled, to Court:—That is my report (shown). I made no other. I gave no evidence at the *Saibansho*. By saying "fairly up to sample," I mean that in these low class velvets such slight inequalities often occur, but in more expensive stuff the variation is less. Buyers accept these as a rule. The colour of the first lot was rather better than the colour of the second lot. I only saw one muster. Some of the pieces of the second lot were as good in colour as the sample; one piece appeared to be better; some others not so good. I do not think the purchaser was entitled to any reduction whatever on these goods. Goods with such variation

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are generally accepted as being equal to the sample. When the market falls, however, the Japanese often try to obtain some reduction on all classes of goods. Supposing the purchase money to be less than the depreciated value of the goods, the seller would naturally make no reduction. If the bargain money be insufficient, a compromise is usually made in order to avoid litigation in cases where there is a variation as in these goods; or even with regard to goods without such variations as occur in velvets. The variations in velvets occur through the great difficulty in obtaining many pieces of exact resemblance to sample. I thought these goods fully up to muster. It is very unusual for such a fall to occur as happened in this case. As a rule, when the bargain money does not cover the loss which such a fall would necessitate, the Japanese would not accept the goods without demur. This aid, however, depends upon the nature of the man; some prefer going to Court, others would rather lose their money than their time, some are easy to deal with, others hard; some like to keep their good name, others are indifferent on the subject. If, in the agreement between buyer and seller it was promised "the goods shall be fully up to sample," I should say these were *fully* up to sample. I put *fairly* on account of the variation in colour, I could have said *fully*, for this variation did not make the goods unmarketable on the sample. My proposal of a reduction of 25 cents had, as I said before, no reference to the difference in these goods, but simply on account of the fall in the market.

Plaintiff said that in spite of what Mr Walter might say, when Japanese bought goods on sample they could not take them unless they were all right.

Temple Willcox, sworn, stated:—The particulars of this contract have already been stated to the Court. On the 28th October plaintiff's *banto* came to me in the forenoon. I asked him if he had seen the goods landed from the *Martaban* that were then on the hatoba. He said, he had; but that he was unable to take delivery according to contract, and would I allow him six days? I said I would. This conversation took place through the interpreter, the compradore also being present. On the 3rd November this *banto* came to me, and for the first time stated that the goods were inferior in quality, but that he would still take them if I made an allowance, as the market had so fallen, of 50 cents a piece. I told him that as the goods were a consignment and not my own, and as the sale had already been advised to the consignor, I could make him no allowance whatever, as the goods were up to sample. Through the interpreter I said that rather than carry the case into the *Saibansho* I would make him some slight allowance to prevent this disagreeableness He then proposed arbitrators should be called in, to say what allowance, if any, should be made, to which I agreed, fully believing that there was no inferiority in the goods. I would state that I have sold a great many of this class of velvets here and no complaint has before been made as to variation in colour; that I subsequently sold the goods at the then full market price, $7 per piece, realising a loss of $562.50. The contract was made in my presence in my office, and Yoshimatsu was then taken down to the compradore's room where it was then written out It was then concluded as usual by the clapping of hands between Yoshimatsu and myself. I had no other consignment of velvets then. I sold the whole consignment to Yoshimatsu. Such is my case.

Judgment to be given to-day, the 22nd March, at 2 p.m.

Thursday, March 22nd, 1877.

JUDGMENT.

In this case the plaintiff sues the defendant for the return of the sum of $150, paid by the plaintiff to the defendant as bargain-money upon a written contract entered into between the plaintiff and the defendant for the purchase by the plaintiff from the defendant of 300 pieces of black velvet, according to a sample delivered at the time of sale. The velvets had not then arrived, and when they did arrive the plaintiff refused to receive them, alleging as the ground of his refusal that they were not equal to the sample.

On this point of the accordance of the goods with the sample, the most important evidence which has been given is that of the two Japanese experts appointed by the plaintiff, and by Mr Walter, an expert appointed by the defendant. The two Japanese experts agree in saying that the goods were inferior to sample both in texture and in colour. They admit, however, that they answered the description of black velvets. Mr Walter's evidence is that they were "fairly" up to sample, and in explanation of that phrase he states that they were marketable on that muster, that is to say, that as between foreign merchants the goods in question would pass upon the sample shown without any demur or any abatement in price being allowed. Mr Walter further states that on account of the variation in colour he could not have put in his report that they were fully up to muster; he would not have felt justified in stating that the velvets were up to muster without qualifying that statement with the word "fairly." The conclusion I arrive at upon this evidence is that the goods were not according to sample so as to satisfy the terms of the contract. The terms of the contract are that the goods are to be according to sample. There is no qualification of these words in the contract itself, and if any is to be introduced by any custom of trade that custom must be proved. Now upon such a custom we have some evidence. What Mr Walter stated as already mentioned as to the goods passing between foreign merchants upon the muster without any demur or any abatement being allowed, is evidence of a custom as between foreign merchants. But this is a contract between a foreign merchant and a Japanese merchant, and as to such transactions Mr Walter's evidence goes to show that there never has been a general acquiescence on the part of Japanese merchants in any custom of allowing in the carrying out of such contracts the qualification expressed by the word "fairly;" that on the contrary they have, when it was their interest to do so, insisted on the letter of the contract. I find, therefore, that no such custom has been proved, and the contract must therefore be construed strictly according to its terms. It may seem harsh that such a construction should be put upon it. But the harshness is not in the law. If people deliberately make hard bargains, they ought not to blame the law if it will not relieve them.

In deciding this point I am untrammelled by any decision given on the same point elsewhere. The petition mentions that the same point was litigated between the same parties in the Yokohama Saibansho, when the defendant in the present case sued in that Court the plaintiff in the present case for breach of contract in not receiving the same goods But the judgment in that case has not been put in, nor has it been argued that it could or ought to be put in. As it has been mentioned, however, in the course of the hearing, it may not be out of place for me to refer to it. In that case the Yokohama Saibansho upon this point came to the same conclusion as I have come to; and, if this had been the only point to be decided in the case, the judgment of this Court must have been, as the judgment of that Court was, in favour of the plaintiff here, the defendant there.

But I do not think that this is the only point to be settled in order to decide the right of the plaintiff to recover. It is well established in English law,—and in the absence of any proof to the contrary I am to presume that Japanese law is the same—that when goods are purchased out of bulk and warranted equal to sample, the purchaser, in the absence of any stipulation to the contrary, can refuse to take delivery of the goods if they are not equal to sample, or having taken delivery of them, can return them within a reasonable on discovering that they are not equal to sample, and recover whatever time he may have paid the vendor for them. But it is equally well established that, when the goods purchased are specific goods and are warranted equal to sample, the purchaser cannot refuse to accept them. He must take the goods, and has his remedy against the vendor for the inferiority in the goods by setting off the difference in an action for the price, or by taking an action against the vendor for breach of warranty. It is possible for the vendor and vendee to make the goods being equal to the sample a condition precedent to the completion of the sale. But there is nothing in the present contract to show that such was its meaning. The stipulation as to the goods being equal to sample is, as I construe the agreement, a warranty.

Were the goods, then, purchased out of bulk, or were they specific goods? The contract is for "300 pieces Black Velvet as per sample; of these 150 pieces shipment of *Martaban*, 150 pieces shipment of *Fleurs Castle*."

I find upon the evidence that these were the whole of the shipments of velvets by those vessels consigned to the defendant. Now it would have been possible for the defendant to have specified the goods more particularly by putting the marks and numbers of the pieces or the cases in the contract; but still, even without that, I consider that the goods are sufficiently earmarked so as to prevent the contract applying to any other velvets, and the plaintiff is therefore not entitled to rescind the contract and refuse to accept the goods, because they do not come up to the terms of the warranty. He ought, as already mentioned, to have taken the goods and to have sued the defendant on the warranty, or, when sued for the price, to have given the inferiority in evidence in reduction of the claim. This is clearly laid down in the case of *Heyworth and others v. Hutchinson* (L.R., 2 Q.B., 447). The plaintiff is therefore not entitled to recover back the money paid on account.

I shall now look at the whole case without confining myself to the particular form of the pleadings. By the plaintiff's refusal to take the goods, I find that the defendant has suffered loss to the extent of $562.50. As to the extent of the inferiority of the goods to the sample, if it were necessary to determine that question with accuracy, I should wish for further evidence. Mr Walter's opinion is, that the inferiority was not sufficient to entitle the plaintiff to any abatement. But from the view I have taken there is some inferiority, and there must be some abatement. I am satisfied, however, on the evidence given, that the extent of the inferiority does not exceed—if it does not fall considerably short of—the amount which Mr Walter suggested should be allowed, namely, 25 cents a piece,—that is to say, $75. Deducting the $75 from $562 50 would still leave $487.50 as the amount due from the plaintiff to the defendant; and the sum which the plaintiff seeks to recover is $150, or much less than that in which he is indebted to the defendant.

On these grounds, therefore, the plaintiff is not entitled to recover, and judgment must be for the defendant. There are no costs.

ENQUIRY.

An enquiry was held on Saturday afternoon, the 17th instant, before H. S. Wilkinson, Esq., H. B. M.'s Acting-Consul, on board the British barque *Forget-me-not*, into the death of a Chinaman, Ah Sam, who fell from aloft on the evening of the 10th March last off Rock Island, during a gale. The captain was aloft at the time of the occurrence, and knew nothing about it till his return on deck, when the pilot told him what had happened. In falling the deceased stuck the weather sail, and fell overboard and was seen no more. It was impossible to lower a boat, even if there had been spare hands, and it was so dark that nothing could be discerned at a very short distance.

Daniel Jamieson, Licensed Pilot No. 5, deposed :—I boarded the *Forget-me-not* on the 10th March, at 10 a.m. Wore ship about 7 p.m., and while on the other tack the truss of the top-sail yard carried away. I then took the wheel. We hauled the braces tight and squared the yard so as to keep it steady. I saw a man go up the main rigging, and on enquiry was told it was the captain. I took another pull on the weather braces and sent all hands aloft. I shortly afterwards heard something fall, and then a splash in the water, when I immediately sung out "a man overboard," as I supposed it must be so. The mate immediately came aft and cut away the life buoy and threw it overboard. There was apparently nothing faulty in the truss; merely through the sea causing the ship to roll heavily, it broke. In fact it was a very heavy truss for the size of the vessel.

Thomas Claussen, first mate, said :—All hands were aloft. I heard the pilot sing out "a man overboard." I did not see any man fall. I cut the life buoy away and hove it overboard. The sea was running too high to do anything more. It was a very dark night.

Alee, a Chinese seaman, said he was upon the yard when Ah Sam fell, but did not know anything of it until he came on deck. Witness was on the lee side while Ah Sam was on the weather side. He noticed Ah Sam go. Nothing could be done to save Ah Sam. All was black.

Sing Song, a Chinese seaman, said he saw Ah Sam fall. Was on the same side with him, and as Ah Sam fell he touched his foot. Witness them sung out to the second mate that a man had fallen.

J. D. Poulsen, second mate, was aloft on the evening of the 10th to secure the top-sail yard. He saw no one fall, but heard one of the men say a man had fallen. The ship was in danger. The truss was a strong one, and was quite proper for the ship.

FINDING.

I find that on the 10th instant Ah Sam fell overboard accidentally from off the top-sail yard of the *Forget-me-not* and was drowned, when the vessel was off Rock Island (light bearing N. W. about one mile distant), and that afterwards everything was done to endeavour to save him that could be done.

From all accounts it appears that the *Forget-me-not* encountered very bad weather, and that, but for the exertions of the master and pilot, the vessel might not have reached this port.

REUTER'S TELEGRAMS.

LONDON, 8th March, 1877.

THE PACIFIC MAIL COMPANY'S SUBSIDY.

The United States Senate has rejected the motion for the proposed Subsidy to the Pacific Mail Company voted by Congress.

ARRIVAL OF THE ENGLISH MAIL.

(From the Strait Times Extra.)

London, 16th Feb.—In the House of Commons, Mr. Bourke, replying to Sir R. Anstruther, said that the Sultan of Zanzibar had fulfilled his engagements entered into by treaty for the supression of the slave trade.

London, 19th February.—Canon Gee, who is appointed to succeed the Rev. Mr. Tooth, forcibly obtained entry into Hatcham Church yesterday, and resumed the services quietly. Mr. Tooth has been released from jail.

Constantinople, 19th February.—Prince Nikita has agreed to despatch Envoys here to negociate for peace.

London, 20th Feb.—The English newspapers are discussing the likelihood of Russia chiefly attacking the Asiatic territory of Turkey in the event of war. Midhat Pasha is staying at Naples. An uneasy feeling exists at Constantinople, and rumours are current that the Sultan is mentally ailing. Edhem Pacha's position is said to be untenable.

London, 21st Feb.—In the House of Lords last night, Earl Derby, in replying to a question, said that England had told the Porte that she would neither coerce it into accepting the demands made at the Conference, nor would she protect it against coercion from others. The Marquis of Salisbury and Earl of Beaconsfield both spoke in opposition to the policy of coercion. The Press to-day, commenting on the debate in the House of Lords last night, express the opinion that it has removed nothing from the uncertainty which surrounds the future.

London, 22nd Feb.—It is stated that the probable result of the War Office Committee will be the compulsory retirement of General Officers at the age of 65 years.

London, 23rd Feb.—An animated debate took place in the House of Commons last night as to the propriety of resuming the debate of the 17th inst. On Mr. Gladstone's motion, the Marquis of Hartington agreed not to press the matter if Government thought that any further discussion would embarrass their action, and declined to challenge the Conservative members in the House of Commons to submit a formal motion on the policy of Government. It is understood that the debate is adjourned *sine die*.

London, 4th March 1877.

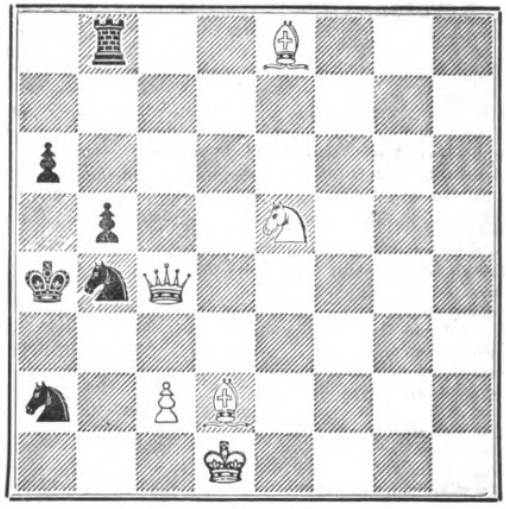
AMERICA.

Mr. Hayes has been elected President.

ENGLAND.

The Fleet has left Pirœus for Malta.

The house of Commons has negatived the withdrawal of the declaration of Paris abolishing Privateers.



Orders have been sent to Sir William Jervois to proceed to Australia and advise regarding the defences.

PROBLEM.

BY W. S. PAVITT.

Our of the set which won the 4th prize in the British Chess Association Tourney.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF C. BAYER'S PROBLEM OF LAST WEEK.

White.	Black.
1.—Q. takes P.	1.—P. takes Q.
2.—B. to Q.'s 4th, ch.	2.—K. takes Kt.
3.—B. to K.'s 4th, mate.	

(Meeting of the Bishops.)

Correct answers received from C. B., Yokohama; W. H. S., and W. B. M., Tôkiô.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market continues firm and a moderate general business has been done, while in some articles prices have slightly advanced.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.37½ to $1.67½	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.55 to 2.20	Turkey Reds 24 yds.	30 in. 2—3 lb.	per lb. 0.60 to 0.87½
8 lbs. 4 to 8¼ lbs.	38½ ,,	39 in.	,,	1.57½ to 2.35	Black Velvets		7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.50	English Drills 15 lbs.	40 yds, 30 in.	2.55 to 2.65
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45 to 1.62½	Taffachelas	12 yds, 48 in.	1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No 16 to 24	per picul	$29 50 to 32 50	No. 38 to 42 per picul $33.00 to 38.00
No. 28 to 32	per picul	$30.00 to 34 00	Reverse Twist 16-24 ,,

Woollens.—Owing to more favourable news of Government successes in the South, business is more active and deliveries more satisfactory. Plain *Mousselines de Laine* have again slightly advanced, and a good demand for *Coloured* and *Black Orleans* exists, but the further decline in the rates of sterling exchange renders the prices offered very unsatisfactory.

Plain Orleans	40—42 yds.	32 in.		5 50 to 7.00	Figured Mousselines de Laine	30 yds.	30 in. 0.25 to 0.30
Figured Orleans	29—30 yds.	31 in.		4 25 to 5.25	Multicolored ,,	30 yds.	30 in. 0.30 to 0.36
Shimagoro	30 yds.	30 in.		4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.		0.24 to 0.31	Presidents	54 in. to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.		5.75 to 6.00	Pilots	54 in. to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.		16 50 to 17.50	Union	54 in. to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.		12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb 0.39 to 0.45
Plain Mousselines de Laine	—30 yds.	30 in.		0.17½ to 0.19			

Sugar.—Our market is firm at a slight advance, and a fair business has been done both in *Formosa* and white kinds. Stocks are light.

Sugar:—Takao in bag	per picul	$4.40	China No. 4 Kook-fah per picul $5.90 to $6.20
,, in basket	,,	$4 20	,, No. 5 Kong-fun ,, $5.40 to $5.90
Taiwanfoo in bag	,,	$4.25	,, No. 6 E-pak ,, $4.70 to $5.20
do. in basket	,,	$4.10	Swatow Brown ,, $3.60
China No 1 Ping-fah	,,	$7.60 to $7.90	Daitong ,, $3.60
,, No. 2 Ching-pak	,,	$7.00 to $7.50	Japan Rice ,, $2.00 to $2.15
,, No. 3 Ke-pak	,,	$6.40 to $6.80	Kerosene Oil ,, $4.40 to $4.50

Kerosene Oil—In the absence of transactions quotations remain nominal at $4.40 at $4.50.

EXPORTS.

Silk.—After the short period of excitement reported in our last transactions have, during this week, been much curtailed by the poorness of the stock. With the exception of a few parcels held, we hear, at over $800, all the Hanks left are below the standard of good medium. Oshius alone still offer fair assortments, and holders are pressing them on the market.

Since the 9th instant arrivals are 213 bales. Settlements may be estimated at about 250 bales of Hanks and 200 of Oshius and other sorts. We quote:

Hanks.—Best	No. 1 and 2	$760 to $790
,, Good	No. 2	$730 to $750
,, Medium	No. 2½	$690 to $720
,, Common	No. 3	$650 to $680
,, Inferior	No. 4 and 5	$600 to $640
Oshiu.—Best		$680 to $700
,, Medium to Good		$550 to $650
Kakeda.—Best		$730 to $740
,, Medium to Good		$700 to $720

Tea.—It can scarcely be said that there has been any market at all during the past week, as settlements since our last barely exceed 200 piculs. Arrivals have been on a corresponding scale, and the small stocks now unsold are firmly held at previous nominal rates.

Common	$8.00 to 11.00	Fine	$23 to $27
Good Common	12.00 to 14 00	Finest	Nominal.
Medium	15 00 to 17 00	Choice	Nominal.
Good Medium	18.00 to 21.00		

EXCHANGE AND BULLION.

Exchange.—Business during the past week has been on a moderate scale, especially as regards the demand for Bank Bills; rates have recovered about 1 per cent. from the lowest point touched and close rather firm.

Rates close as follows:—

Sterling—Bank 6 months' sight	3s. 11½d.	On Shanghai—Bank sight	73½
,, Bank Bills on demand	3s. 10⅝d.	,, Private 10 days sight	74½
,, Private 6 months' sight	4s.	On New York—Bank Bills on demand	94
On Paris—Bank Sight	4.85	,, 30 days sight Private	97
,, Bank 6 months' sight	4.95	On San Francisco—Bank Bills on demand	94½
,, Private 6 ms. sight	5.10	,, 30 days sight Private	97
On Hongkong—Bank sight	¼ % dis.	Kinsatz	406
,, Private 10 days' sight	1¼ ,,	Gold Yen	400

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On the 25th instant, at No. 15, Yokohama, the wife of JOHN RICKETT, Esq., of a daughter.

At London, on the 29th instant, the wife of W. M. STRACHAN, of a daughter. (By telegram).

Notes of the Week.

It is difficult, perhaps impossible, for any foreigner entirely to understand all the causes remote and proximate which have led up to the present unhappy conflict which is now raging round Kumamoto. This difficulty is not lessened by the forced silence of the native Press. As a matter of fact, however, it would appear for the nonce that by far the most important question of all is; are the confessions made at Kagoshima, regarding the intended assassination of Saigo and others, true or not? If they are true it is easy enough to understand the action of Saigo. In Japan there is no outlet for peaceful political agitation, by which the policy or *personnel* of the Government may be changed. Be this as it may, that the confessions were accepted as true by Saigo, hardly any one doubts. The reputation of Saigo for truth and honesty is simply unsullied. That the confessions were accepted as true by Governor Oyama there would seem to be equally little doubt. Otherwise it is impossible to understand why he should have peacefully handed over Kagoshima, and afterwards have accompanied the Envoy Yanagiwara, unless he did so, in the confidence of his own innocence and loyalty, and that the confessions were his sufficient authority for his acts in connection with Saigo's departure for Yedo. And here it is to be remarked, as having a most important bearing upon the whole case, that the men who confessed were not put to death, but handed over to the Government to confront them with their confessions.

The degradation and unseemly treatment before trial of Governor Oyama on board the mail packet at Kobe, and the promotion of a certain official accused of being implicated in the intended assassination, point painfully to the future. It is not for us to remind the Japanese authorities that Japan is not yet received into the comity of civilized nations. She has still to submit to ex-territoriality clauses in her treaties, and will have to continue to submit to such, as long as an Asiatic spirit pervades the administration of her laws and her forms of government.

There is one thing we would impress upon every Japanese in authority; that Japan gained far more by sparing the lives of the Lord of Aidzu and Admiral Enomoto, than by the deaths of Eto Shimpei and Mayebara.

The same uncertainty still prevails with regard to the position of the proceedings of the two armies in the South. Nothing whatever reliable is known, but it can only be surmised that affairs are not prospering too well with the Government forces. There can be no doubt that the ranks of the Imperial troops have been terribly thinned by killed, wounded, and missing, which means desertion to the Satsuma side. There can be as little doubt that the army of Saigo has been further strengthened by a large force of Shimadzu's retainers, for it would be taxing our powers of belief too much to ask us to take for granted that they had set out to the assistance of the Government. The fall of Kumamoto into the hands of Saigo is also generally believed, but we have no certain proof that such is the case. That the Government is at its wits' ends where to find troops is proved by the raw levies that are being sent forward as fast as they can be collected together, and who are only remarkable for their youth and air of general incapacity, and the entire absence of that spirit which forms one of the chief elements of strength in troops going into the field. We can quite believe what we have been told with regard to the conduct of the Imperial troops. They can be once driven into action, but having had one experience of the gallantry of the Satsuma *samurai*, they cannot again be brought to face their terrible enemy. Hence the need of having constant supplies of men. But to what good result does all their slaughter tend? The question to be solved is whether certain members of the present administration shall continue in office. They can only retain their offices by the utter annihilation of Saigo and his supporters, and this we maintain is altogether beyond their powers, as it would involve such expenditure of time, men and money, that the country would not submit to the necessary prosecution of the war. The matter must end in a compromise, and then the changes that Saigo strove so hard to effect peacefully will be brought about.

To meet the demand for reinforcements that are so urgently called for fresh levies of troops are everywhere being raised, and as fast, as the men can be got together they are shipped off to the seat of war. We say men, but we should say boys; boys of seventeen scarcely able to carry the weight of a rifle and accoutrements. No one who saw the fourteen or fifteen hundred troops who were shipped off by the *Nagoya Maru* on Monday last, but must have been painfully struck by the youthfulness of the greater portion of them. What in the name of common humanity is to be gained by sending such corps into the field? The only result can be to afford more victims to the fearful prowess of the sword-wielding *samurai* of Satsuma. The Government may prevent any particulars of losses in the field from being published, but certain facts will leak out, and it is well known that of the two thousand troops which the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Nagoya Maru took down to the South, shortly after the breaking out of the revolt, five hundred have been sent back to Kobe disabled from sword cuts either in the shoulder or thigh. With such proportion of wounded it is only natural to suppose that the number of those killed outright cannot be small. Of course, to support such losses as these, the Government cannot afford to be particular about age when it looks to sustain its position by numbers alone. But this enlistment or conscription of children seems of all phases most lamentable and useless. In looking at the youth and utter feebleness of the larger portion of the troops and this was more especially remarkable in the officers who left for the south on Monday, one could not but feel sick at heart, and shudder to think what fate would be theirs if opposed against a body of Saigo's veterans. Numbers may be imposing in a review, but numbers unsupported by the lustiness that comes of age and training are in the field only added weakness, encumbering their side with the sick and wounded.

Just as we go to press, we have received from a well informed source news of the death of General Nodzu. If this prove true, the Government has met with a most serious loss. General Nodzu was one of the few men who possessed the necessary qualifications for the important position of leader in such a war as the present. The Government placed the greatest reliance on his fidelity and ability, and it was to him that the suppression of the revolt, raised by Mayebara, was entrusted. While the report of the deaths of Shinowara and Kirino altogether want confirmation, it is true that the younger brother of Saigo, Saigo Koyemon, has been killed. The unfortunate officer was aged thirty. A son of the Commander-in-Chief, has also been wounded, having been shot through the chest. His hurt is serious but not necessarily fatal.

We would call the attention of our readers to the two letters on the Currency question, with reference to the proposal for a change in the circulating medium brought forward by our correspondent W. in his letter of last week. Although differing on some points in their views, they are both entitled to the highest consideration as being the opinion of two members of the community, well known for the clearness and soundness of their judgment on all matters connected with finance. The subject is one of great importance to all who have mercantile interests in Japan, and we hope that it will be fully entered into and discussed.

We hear on extremely good authority that the so-called loan to China from Japan, which was in reality only a speculation on the part of a Japanese banker and a Chinese official, has fallen through. It is stated that this official entered into an arrangement without the authority of the Central Government, and that he has thereby incurred its displeasure. We trust for the sake of the Chinese Government that this is true, for an arrangement more likely to lower its credit and its dignity could not well have been contemplated.

The Mitsu Bishi Company's steamer *Hiroshima Maru* will be despatched for Shanghai at 4 p.m. on Wednesday, the 4th April.

The attempts of Mr. Gill, of the American firm of Martin Gillet & Co., to introduce several choice specimens of Japanese fish into the United States have been crowned with success. Among others is the well-known *Kin-giyo* or gold fish peculiar to Japan, and noted for its triple lace-like tails, and brilliant variegated colours. Out of eighty-eight specimens selected to cross the Pacific and the plains, only eight survivors arrived in Baltimore. These, when in calm water after their long travels evidently enjoyed the retirement of private life more than "globe trotting;" for they spawned, and the interesting event resulted in over a half hundred promising young *Kin-giyo*. One of them, in the new Aquarium in New York city is "the observed of all observers," and is a splendid specimen of its kind. It would be a good point for some of our scientific residents, interested in the matter, to study and find out whether, as the Japanese assert, the wonderful tails are the sheer result of careful breeding. It is well known by observers of the native hatching-troughs in the north-western part of the city of Tôkiô that the fry produced from the complete specimens of the parent *kin-giyo* do not all produce triple tails, but that frequently, simple tailed gold fish of the normal type result. Mr. Gill was also successful in domiciling in New York water a fine specimen of the "hairy tortoise," as it is called. This tiny creature, about an inch and a half long has growing out of the shell of his back a little forest of greenish (vegetable ?) matter. This parasitic growth, if such it be, is very thick and stands upright waving to and fro with the motion of the tortoise. Some foreigners who have noticed representations of this animal in native books and on art-work have expressed doubts of its existence. Both the "hairy tortoise," and the "rain-coat tortoise," which has a long fringe-like trail, are to be found in Japanese rice-field brooks, and especially in old castle moats.

The game of Polo, which was introduced into England by some British cavalry officers from India, may now be considered as one of the standard amusements and athletic sports of England, from which it passed to America. Mr. James Gordon Bennett, proprietor of the *New York Herald* (and late duellist) with his characteristic energy and enterprise introduced the sport in the United States last year. For this purpose he had brought from the plains of New Mexico, a dozen or more of the mustang ponies so noted for speed and bottom, as well as for diminutive size. There are now several Polo clubs in the United States, and at Gilmore's Gardens in New York the game is regularly played as a public exhibition, to which admittance is charged. It is an interesting fact that the game of Polo, called *da-kiu* in Japanese, is of very ancient origin in this country (Japan). Traces of it can be found as far back as the time of the feud between the great families of Taira and Minamoto, or Genji and Heiké. The origin of the sport is said to be as follows:—It was a well known custom, in the battles of ancient and mediæval Japan for the soldiers to cut off the heads of their enemies when the combat was a hand-to-hand fight, and even after the struggle to decapitate the slain, in order to get as great a heap of heads as possible. The victors scattered over the field collecting the bloody prizes, and brought in the heads for reward, usually holding each one by the queue or top-knot. After the wars were over and the Minamoto were completely victorious, they felt the need of martial exercise both to keep their hand in, and to enjoy all the excitement of war with only ten per cent. of the danger. Instead of severed heads of victors and vanquished, red and white balls—the colors of the Heiké and Genji flags respectively—were made to do duty in the bloodless strife; and in this time of peace, the sword was beaten into a bamboo scoop or netted spoon. Arrayed in costume and helmets of red and of white, the players mounted their horses, and the goal of victory was the wicket through which the whole number of balls on either side must be first thrown over by their rivals. This sport was highly cultivated in Kiôto, at Kamakura especially under the Ashikaga rule, in Yedo, and in the various *Daimios'* capitals. In some of the games only six balls, three on a side, were used, but in others there were as many as thirty-six on a side. An effort is now being made in military circles in Washington to have the game introduced at West Point. At the Centennial Exposition in Philadelphia there were very spirited effigies, nearly two feet high, of Polo players, members of the old Kiôto garrison in the Hôjô times, and most of our readers have doubtless seen this spirited game depicted on lacquered ware, screens, etc. It is a somewhat curious fact that though the foreign residents in Japan have made use of most of the means of pleasure to be enjoyed on horseback, yet this game, though indigenous to the soil, has not been imitated by foreigners. Residents in Tôkiô may see it almost any month at the various *baba*, or riding courses in the city, and notably at the celebration of certain temple festivals. It is still practised in the interior, and by the members of the Mikado's court in the capital.

From the "Japan Mail Daily Advertiser."

Monday, 26th.

From the *Chôya Shimbun.*

A telegram received yesterday announces that Kuroda, with two and a half battalions of troops and twelve hundred police constables, landed at Miyanohara, chased the insurgents out of the place and took possession of the town. He then made an attack on another quarter, and at first seemed successful, but soon afterwards the rebels unexpectedly attacked him. The result of this engagement is not known.

The Imperial forces who landed at Yashiro attacked and overcame the insurgents who were at Kagami-mura, and then advanced against some others at Mitsumata.

The Imperial forces at Uyeki endeavoured to supply some *saké* and food to the besieged troops in Kumamoto on the 21st instant, but they were prevented from communicating with the castle. All the insurgents who were at Kawajiri have stationed themselves on Kitaokayama.

A telegram despatched from Kiôto at 10.40 p.m. on the 24th instant announces that the insurgents have been driven from Uyeki and Yamaga, and that they have united their forces at Kodome and the environs of Kumamoto.

Another telegram from Kiôto says that the Imperialists have made an attack upon the insurgents at Kodome, which place, however, they have failed to capture.

From the *Hôchi Shimbun.*

The whole amount already spent by the *Okurasho* on the Satsuma expedition is 4,645,000 *yen*.

A telegram from Uyeki at 3.20 p.m. on the 24th instant states that only skirmishes have taken place at Yamaga. The engagements at Uyeki and Kichiji were indecisive. The insurgents, who are about to attack Tawarazaka and Yamaga, have constructed batteries at Torinosu, Takai, Hiro-o and Otsu. Postal communication is now open as far as Yamaga.

From the *Akébono Shimbun.*

The Imperial forces which landed at Hinaku have made Yashiro their headquarters. The insurgents are said to be encamped at Ogawa.

Tuesday, 27th.

From the *Nichi Nichi Shimbun.*

A telegram depatched from Osaka at 10.50 p.m. on the 24th instant announces that on the 23rd instant a desperate engagement took place at Miyanohara, between the Imperialists of Yashiro and the rebels. The Imperialists were victorious and advanced towards Ogawa.

From the *Mainichi Shimbun.*

For the past five or six days Saigo has occupied himself in inspecting the camp of his men.

The Chinese frigate *Hoyin* arrived here from Nagasaki early on Monday morning last, and saluted the Japanese ironclad ram *Adzuma-kan* when the flag went up. She is entirely officered and manned by Chinese and is in that respect somewhat of a novelty, and we may add that the men we have seen on shore from her are men of really very fine physique.—*Hiogo News.*

The insurgents made an attack upon the Imperialists who were stationed at Kagami-mura but were very soon repulsed, and the latter followed up their victory. The insurgents have set fire to the towns of Nodzu and Futagawa.

From the *Hôchi Shimbun.*

Mr. Oyama, the late Governor of Kagoshima *ken*, is confined in the prison at Ichigaya, Tôkiô, and is placed in the same cell as those newspaper editors who are there undergoing imprisonment.

The notorious fencer Sakakibara Kenkichi has received permission to go to the seat of war and fight for the Imperial cause, and will start in a few days accompanied by some hundred and fifty of his best pupils.

At the time of the outbreak of the present rebellion there happened to be about two hundred wrestlers in Kagoshima, who were there pursuing their calling. All these men were forcibly siezed by the Satsuma *samurai* and sent to the front, where they are made use of in the following manner. Japanese mats, having been previously soaked in water, and placed together in threes to increase the thickness, are given to them to hold out at arms length, and thus form a screen for the rebels from the fire of the Imperialists, or rather a living breast-work. It is only necessary to lift up the mats a foot or two to allow the rebels to make a sally when desirable. A shot will not penetrate these mats, and they are even proof against cannon balls, which they effectually stop, though the wrestlers holding them are sometimes knocked over by the heavier shots. Four of the men thus engaged contrived to effect their escape to the Imperialists and have since returned to Tôkiô. They report that as yet none of their comrades have been killed.

[We present our readers with the above, which is worthy of the venerated Baron Munchausen himself.—Ed. *J.M.D.A.*]

Wednesday, 28th.

Shortly after 1 o'clock this morning a fire broke out at Ôta machi, *Ichome*, a few doors from Usui's photographic gallery. The direction of the wind was towards the sea, which caused the fire to spread to Benten-dori and thence to Minami-naka-dori, where a great effort was made to stay its progress by pulling down the houses which were in danger, but without success, as the fire shortly afterwards extended to Honcho-dori, and at one time the Machigaisho was in danger. All the men-of-war in port sent detachments of their men on shore and they, together with the Fire Brigades who mustered in great force, worked hard to prevent the flames spreading, but were unfortunately not successful until a large number of houses in all the four street named were destroyed.

Some excitement has been created in Tôkiô by the rumour that three men were discovered within the enclosure of the *Kaigunsho* (Naval Department) on Sunday night, their object being to blow up the powder magazine there, which contains upwards of 90 tons of powder. If is further stated that the three men thus caught were decapitated the following morning.

The steamer *Viking* left Singapore for Hongkong on the 15th, and the *Radnorshire* on the 16th instant..

From the *Nichi Nichi Shimbun.*

The following is a special letter addressed by their Excellencies Sanjô and Iwakura to all the *kuazoku* (nobles) :—

Since the order for an expedition against the rebels of Satsuma was given by the Mikado, bloody engagements have daily taken place and many of our soldiers have suffered by fire and sword. His Majesty the Mikado, feeling warm sympathy, has sent his attendants and Imperial physicians to the wounded, has presented them with necessaries and anxiously enquires after their progress. Moreover, the greatest care is taken of them in the hospitals that have been established at the seat of war. The Empress and the Empress Dowager have also expressed their sympathy and sent them assistance. Such being the case, not only will the wounded in the hospitals appreciate this benevolence, but those men who are now in the field of battle will become still further zealous in the Imperial cause. We, Saneyoshi and Tomomi, have heard that when there was a rupture between Turkey and Russia, England and France assisting the former, the war lasted for several years and there were many among the officers and men who were wounded. At this time the Empress of Russia herself visited the hospitals and carefully attended upon the wounded, thus rendering valuable assistance. Among the English several ladies collected money from the wealthy for the English wounded, and sent the widows and daughters of the nobles of England to Turkey to nurse the wounded. Again, those wounded who returned to England were visited in the hospital by the Queen. And later on, in the Franco-Prusian war, the Empresses of both countries engaged went to the camps and visited the wounded, and by this the troops of both countries thought that to die in pressing onwards was honour, while it was a disgrace to flee and live.

Europeans deem the above incidents to be most honourable. The case is similar with our two Empresseses who have a feeling of compassion for the wounded, and every one who is a man should be so animated by the same feeling, become zealous in a good cause and burn to perform his duties and obligations properly. Now the *kuazoku* are superior to the *shizoku* and the *heimin* and have received special favours from the Emperor. This is not the time to be only wearing good clothes and indulging in luxuries. Such being the case, it is unnecessary to say that the *kuazoku* must act in such a manner as to show their thankfulness for past kindness. Some have already given money towards the expenses incurred by the war, which is very commendable indeed. But some consultation about this question ought to take place, and the *kuazoku* ought to make their wives and daughters do their duty towards their Sovereign and his people, although it may be only to a slight extent. Now by the making of lint or bandages for the wounded some slight as-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sistance may be given to them, and it would be in accordance with the kind wishes of the two Empresses, and a slight recompense for the past favours that we have received. This lint is easily made, while it is of great use to the wounded. The daughter of a merchant at Osaka, Takahashi by name, sold her jewels and gave the proceeds towards the expenses of the war, and an old lady of *shizoku* family, named Matsui, of Takasaki in Joshiu, sent her two sons to become policemen that they might do their duty towards their country, while she herself said she would not mind drawing water or gathering fuel during their absence rather than they should be kept from serving their country. These events have been published in the newspapers and when we read of such deeds we are filled with shame at our own supineness. We have written the above as our own opinion, poor as it is, and now further seek the opinion of all other *kuazoku*.

(Signed) SANJÔ SANEYOSHI.
IWAKURA TOMOMI.

March 1877.

Some newspapers state that Kido, being unwell, has gone to Chôshiu, but this report is false, we expect, on the ground that telegrams very frequently come addressed to Kido at the *Daijôkuan*.

From the *Hôchi Shimbun*.

A telegram which reached Tôkiô at 2 p.m. on the 26th instant states that on the morning of the 25th instant an attack was made by the insurgents of Kodome and Uyeki. There was a dense fog at the time, notwithstanding which the engagement was a desperate one, and the rebels were finally repulsed. Another attack was made by the insurgents from Kodome at 8 p.m., but they were again repulsed.

From the *Chôya Shimbun*.

A telegram from Kobe at 3 p.m. on the 24th instant announces that the Imperialists carried all the fortifications of the insurgents at Kodome on the afternoon of the 23rd instant.

Another telegram which was received at 9 p.m. on the 24th instant announces that the batteries of the insurgents at Miyanohara and Taneyama were taken. An attack was also made upon the insurgents at Ônoyama when their double line of defence was captured and the Imperialists followed up their advantage by chasing the fleeing insurgents beyond Kitagawa-mura. The pursuit only ceased with the close of day. Imperial troops were stationed in all the batteries taken. The insurgents on the same day made an attack upon Kagamimura but were repulsed. There were a great many killed and wounded on either side.

Thursday, 29th.

We have received notice from the Agent of the Great Northern Telegraph Company that the Nagasaki and Vladivostock cable has been interrupted since 7 p.m. on the 27th instant. The southern route is in order.

From the *Mainichi Shimbun*.

A telegram which was despatched from Nagasaki at noon on the 26th instant reports that the Imperialists who advanced from Yashiro on the 23rd instant captured the batteries of the insurgents erected at a naturally strong place of defence near Ogawa. The road from that place to Kumamoto is now comparatively easy. In taking the above stronghold about one hundred men were killed and wounded.

From the *Akébono Shimbun*.

A temporary *Kencho* for Kumamoto has been established at Takase.

A telegram despatched from Todoroki-mura at 11.30 a.m. on the 27th instant announces that the Imperial forces made attacks upon the insurgent batteries at Kodome on the 26th instant, and managed to capture thirteen of them. Many among the insurgents were killed and wounded, while the losses of the Imperialist were very slight.

From the *Mainichi Shimbun*.

A telegram which was despatched from Nagasaki at noon on the 26th instant reports that the Imperialists who advanced from Yashiro on the 23rd instant captured the batteries of the insurgents erected at a naturally strong place of defence near Ogawa. The road from that place to Kumamoto is now comparatively easy. In taking the above stronghold about one hundred men were killed and wounded.

From the *Hôchi Shimbun*.

The following are notices that the insurgents have made public in the neighbourhood of Kumamoto :—

"There are matters concerning the constitution of the Japanese Government which causes us the greatest grief. The reason that the people have to suffer miserably is because wicked officials are preventing His Majesty the Mikado acting wisely. Such being the case, the subjects of His Majesty cannot overlook this in silence, for which reason we have righteously taken up arms for the purpose of destroying those wicked officials. Let the people therefore be freed from anxiety, there being no necessity for their being alarmed.

FROM THE CAMP AT KUMAMOTO."

February, 1877.

"We hear that of late there are some rogues, who, borrowing worthy names, have both in towns and country attempted to extort rice, money, etc., by force. We intend to form a body of men for protecting the people against such rogues, but for the present they should be arrested by the people themselves and brought to the nearest camp for punishment.

HEAD CAMP AT KUMAMOTO."

March 9th, 1877.

Goods,		„	648.917
Total		Yen	8,640.402
Corresponding period last year		Yen	4,580.934

The wounded from the seat of war continue to come up in increasing numbers. Four hundred and fifty arrived on board the *Shinagawa-maru* and were sent on to Osaka on Thursday. We hear that the proportion of sword wounds is, as before, extremely large and that they are situated for the most part on the left arm and thigh.—*Hiogo News*.

The S. S. *Loudoun Castle*, which arrived this morning from London and Singapore, has made a remarkably good passage. She left London on the 9th Feb. and anchored outside Green Island at 7 o'clock last night, thus making the time from port to port 37 days; deducting stoppages, we find gives 32½ days, under steam. The *Loudoun Castle* averaged 300 nautical miles a-day from London to Suez, but from that port to Singapore she could only average about 285 knots, having to contend with adverse winds and currents. Her officers are sanguine of making the trip home with tea under 39 days.—*China Mail*.

The *Straits Times* of the 2nd instant, after giving an account of the *Ulysses* mishap adds the following information :—

The S. S. *Bangkok* passed while the *Ulysses* was on the reef, and was hailed by Mr. Bogaardt from the *Pilot Fish* to give assistance, but declined on the plea of want of coal. The Captain was then requested to take a message for more assistance and was understood to promise to do so, but no such message was received at the office of the Agents, or of the Master Attendant. Another steamer also passed the *Ulysses*, without taking any notice or offering any aid. There was no cargo jettisoned and only a little portion in the forehold damaged. The extent of the damage to the steamer cannot of course be ascertained until she is docked, but it is not anticipated that the vessel has been seriously damaged. She is now rapidly discharging her cargo at the Tanjong Pagar Dock.

REVIEW OF THE JAPAN SILK TRADE FROM 1874 TO 1877.

WE now conclude our review of the Japan Silk Trade which has appeared in three of our previous issues.

III.

Table E shows, season after season, the fluctuations of prices in this market and the influence of the value of silver on the cost at which Japan silks could be laid down and sold in England or the Continent so as to cover all charges and commissions on both sides. The object of Table F is to explain those fluctuations by the influence of two other great staples, the Italian and Chinese raws, on their value at home.

TABLE F.

Total Export from		Seasons.	Highest, Lowest and average prices in Lyons of			Showing Hanks No. 2 to have been on an average

It will be seen how largely the export of China silk increased in 1874, and our readers when they remember that there was a contemporaneous increase in the European crops will at once realize two of the main causes of the fall in the value of Japans during the two last seasons.

Oscillating between 11,000 and 16,000 bales, our exports from 1863 to 1875 has averaged 14,000 bales per season. The exports of 1874-75 and 1875-76 have both been under that average. Thus far, it may be said that the production of this country has remained stationary, for there is nothing to show that native consumption has increased. The total value of the import of foreign goods in Yokohama has remained steady since 1871 at from 10 to 11 millions of dollars. After the revolution of 1868 there was a tendency among the upper classes to adopt the foreign dress; but a reaction soon set in, and it may now be said that Japanese men and women remain faithful to their old fashions. Looking back to what we wrote on this subject in November 1874, we find no reason for altering our estimate. Since then, our endeavours to ascertain the quantity of silk-worm's eggs used by the silk growers, or the quantity of silk consumed by native manufactures in Kiôto have been fruitless, and we still surmise that an export of 14,000 bales leaves 6,000 or 8,000 bales for Japanese consumption.

The large supplies brought to this market during the present season have taken everybody by surprise. A crop made, as the last was, under exceptionally favorable circumstances, old stocks accumulated in the interior after two years of moderate exports, and an extraordinary rise in prices, will not alone account for the arrival of 21,726 bales to Yokohama in six months from July to December last. There is good reason, indeed, to believe that production begins to increase. In the great Hanks districts of Joshiu, Shinshiu and Bushiu the cultivation of the mulberry tree has undoubtedly augmented. As in a recent trip from Yokohama to Kobe overland by the Tokaido, we travelled through provinces which have not yet been known as silk growing countries, we noticed a great many new plantations of mulberry trees; but what struck us most at the same time was the wonderful developement in the cultivation of the tea plant, and we perceived that among the causes which we had hitherto ascribed to the stationary state of the production of silk, we had overlooked a most important one, namely the immense favour which Japan tea has found in the American market. The following figures will best illustrate the course of the tea trade: The total export of Japan teas has been

in 1862-63..... ..... 6,500,000 lbs.
in 1875-76..... 24,893,000 lbs.

In the provinces which grew tea when this country was opened to foreign trade, the production of that staple has enormously increased. In those which produced neither tea nor silk, but could grow either, tea had the preference, probably because the tea culture is sooner learnt than the silk culture and promised a more immediate remuneration. On the other hand, we hear that tea no longer pays the producer so well as it did at first, and this fact, if it assumes a permanent character, may eventually re-act in favour of the growth of silk.

If, under the present circumstances, we cannot anticipate a large and early increase in the production of Japan Silk, we may at least, taking it as a whole, report an improvement in its quality. That the export of silk-worms' eggs, when it was very large, told on the quality of silk, is most certain. But in what has been said and written on the deterioration of the Hank sorts especially, there has been a great deal of exaggeration and misconception.

The proportion of each description in our total exports has been as follows:—

	1867-68.	1873-74.	1874-75.	1875-76.	1876-77.
Hanks.....	64 %	76 %	80 %	66 %	75 %
Koshiu.....	6 ,,	—	—	—	—
Oshius..... Hamatski ..... Kakedas	19 ,,	21 ,,	16 ,,	26 ,,	18 ,,
Sodai, Echizen & Taysam sorts...	11 ,,	2 ,,	1 ,,	2 ,,	3 ,,
Filatures.....	—	1 ,,	3 ,,	6 ,,	4 ,,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

These figures show that all the Koshiu, and to a great extent the Sodai, Mashta, Echizen, Tussah, Goshiu, Tamba, Hida, Nagahama, etc., have gradually been reeled finer in size and made up in Hanks. As 2nd or 3rd class Hanks, those silks have thus become available for export whilst in their former state they were generally unsaleable.* Later on, a good deal of the best Joshiu and Shinshiu Hanks have been made up in Kakedas. The decrease in the proportion of Hanks which is noticeable in 1875-76 is the obvious consequence of an increased consumption of the best cocoons of Bushiu, Joshiu, Koshiu, Shinshiu and Oshiu by the "filatures" which have been established in those provinces. That by these several causes the standard of quality has, in respect of Hanks, been somewhat lowered is true, but it is equally true that for most of the Oshiu sorts it has been maintained, and for all other descriptions considerably raised. The sudden change in the proportion for all silks during the present season has a double but transient cause. It must be born in mind that the establishment of "filatures" in this country unfortunately coincided with a general decline in the value of silk, so that the Japanese were thoroughly discouraged in their work of improvement. At the beginning of this season, when prices rose so rapidly, their object was no longer to produce superior silk, but to reel their cocoons quickly and bring their produce to our market as soon as possible. This is what accounts for the decrease in the "filature" silks, the full size of most Hanks, and such large early supplies.

This prompt answer of the supply to the demand cannot but be considered, notwithstanding its temporary drawbacks, as a good sign for the future; and there are, it seems to us, other signs which are of good angury for the Japan silk trade. In Italy the area of production may increase; in France it will probably be reduced. From China, there is no further danger of overwhelming exports; her production seems to have recovered its normal state, and beyond the figure now reached, viz 70 to 75,000 bales, the shipments from Shanghai are not likely to increase. But China will always beat Japan for the production of coarse silk. We hope therefore that the Government of this country, looking upon sericulture as one of its greatest sources of wealth, will by all the means in their power foster the production of fine sized raws. Unaided, the Japanese people are too poor to achieve any large improvement in that direction; it can only be brought about by a liberal admission of foreigners into the interior, and by substantial guarantees being given to the capital required for the establishment of large factories. In the opinion of the best judges, there is in this country a tremendous waste of cocoons caused by defective modes of smothering, drying, storing and reeling. Foreign skill would effect a great saving.

For the sake of those people at home whose eyes are turned towards Japan, we must repeat that foreign industry is, under the existing treaties, entirely paralyzed, and that our dealings with the Japanese are confined to cash transactions at a few open ports. We should further warn them against the opinion that labour is much cheaper here than it is in France or in Italy. We have the most competent authority for stating that supposing the case of a filature of 150 "bassines" being constructed in one of the nearest silk districts after the best European system, and so conducted by a foreign manager as to give a maximum of product, say 485 kilo of silk per month, the total cost of reeling calculated on the same principle as it is at home would amount to no less than fr. 14 or 15 per kilo.

The export of dried pressed cocoons from Shanghai to Marseilles has induced a demand for Japanese cocoons. For a variety of reasons which we shall not undertake to enumerate, their export is under the present circumstances impossible, and the probable increase of filatures which would of course enhance their value makes it very problematic at any future time.

Of the Yokohama market we have very little to say, for the simple reason that its action is an entirely reflex one. The history of it rises and falls, of its alternate periods of activity and dulness can be read in the chronicle of the European markets. Let the telegraphic communications be interrupted, it is struck with paralysis. Yokohama remains the only silk market of Japan; in this staple the other ports have no trade worth mentioning.

The Kiito Aratame Kaisha, or Silk guild, continues to be the harmless body which we described in our last review. It is still composed of about twenty members, five or six of whom command 85 per cent. of the total silk business, and we are not aware of their having attained that preponderance in the trade by any other means than their old standing, wealth, ability or respectability. They are at the same time among the directors of a Banking establishment which advances money to the *shonin*, or native dealers, against the consignment of their produce. The foreign merchants who are prepared to run the risk of entering into direct transactions with the native dealers of the interior generally do so, for their own security, through the agency of some member of the guild. A few hundred bales of Silk, and large quantities of Silk-worms' Eggs have thus been contracted for and delivered without hindrance during this season.

Perhaps it will be asked: What is the use of ransacking the past as we have done in the present review? Our reply will be this: Trade, like science, only thrives on facts; what so many obscure writers like ourselves are doing in all departments of science, we do for trade; we collect facts. We have, as much as possible, avoided expressing our own opinions, but in trade as well as in war, certain gallant deeds will bring to memory the remark made by an illustrious witness of the charge at Balaklava: "Cela est très beau, mais "ce n'est pas la guerre."

* The small quantity of Taysam sorts which the high price of this season have attracted to our market, is an additional evidence of their being now scarcer than in 1867-68.

We regret to hear that matters are still unsettled at Ichang. The natives continue to make themselves very disagreeable to foreigners, who cannot go out without being mobbed and pelted; while two members of the Taylor Inland Mission have had their house destroyed. The *Monocacy* is going up there as soon as the river rises a little, and takes Consul Shepard; while the *Kestrel* is said to be still ashore about forty miles below. A heavy fall of snow occurred at Hankow on the 11th and 12th of March.—*Shanghai Courier.*

NIIGATA TRADE REPORT FOR 1876.

IN our last issue we published Mr. Troup's Trade Report for Niigata for the past year and we now proceed to a brief review of its special features, which want of space prevented us from noticing at the time of its publication.

Mr. Troup commences by stating that in reporting on the trade of Niigata as British Consul, he feels himself in the somewhat anomalous position of having no ostensible British trade to report upon. "No British ships have visited the port during 1876, and no British merchants have ever settled there. Whatever trade is done in which British interests are concerned is done by merchants of other nationality, or consists of the still more indirect trade in British manufactures done by native merchants" Mr. Troup might have added that no merchant vessel of any foreign nationality whatever had visited Niigata, for as we remarked in our review of the Customs' Report of foreign commerce, there has been for the past year neither arrivals nor departures. There must be something radically wrong to cause such a complete cessation of foreign commerce at a port which ought to command the whole of the important trade of the North West of Japan. In 1871 the shipping returns showed that the total number of British vessels alone entered and cleared at Niigata was twenty three, with a tonnage amounting to over eleven thousand tons, and cargo valued at £89,082. The junk tonnage has also decreased, and has been growing less from 1870 downwards. Although the falling off in the foreign shipping is to a great extent due to whatever carrying trade there may be having fallen entirely to the Mitsu Bishi Company, this will not account for the complete stagnation of traffic which at present makes Niigata a port only in name. Mr. Troup's report is an exhaustive review of the capabilities of the North-west coast for trade, and shows clearly that this state of depression does not arise from the unfitness of the surrounding country for commerce. There is a very large production of rice. Mr. Troup says that 3,300,000 piculs may be looked upon as a safe average, of which, in ordinary years, 600,000 piculs are available for export; there is a gradually increasing development of mineral wealth; tea of good and improving quality,—although it does comprise the choicer grades,—and silk, are annually rising into importance; petroleum and coal exist abundantly, and yet trade year by year decreases, and as far as regards foreign interests, the port might as well be closed.

Now it is certainly much to be regretted that the whole western coast of Japan should be, so to speak, thus left out in the cold, and that a port like Niigata, which might by vigorous and proper measures be raised to high importance and commercial prosperity, should be allowed gradually to sink into decay. The evil, however, is one to which attention has always been called when the trade of this portion of Japan has been under consideration; the want of a proper harbour. Vessels cannot visit Niigata without incurring unusual risks, and it is evident by the falling off of native tonnage that Japanese ship-owners suffer from the same cause that has compelled the complete cessation of the foreign shipping trade. At the present time, for instance, what advantages might not Niigata reap did she possess facilities for direct export of her rice? Instead of being compelled to sacrifice their produce at ruinously low prices to Government speculators, whose offers they are compelled to accept for want of means of transport, the growers might be in a position to enrich themselves, while they fed the starving myriads in China, if Niigata had the means that she should have of carrying on a direct export. It seems inexplicable that something has not long since been done to supply this want of harbour accommodation, without which it is useless to hope that any trade of importance can be carried on at the treaty port of the West. The Japanese Government has consulted English and Dutch engineers, and requested them to report upon the feasibility of the construction of a harbour. All have reported favourably thereon. The only question is that of cost, which has been estimated from $500,000 to $700,000. What is required is to dredge the bar which has formed outside the river, and to deepen the mouth of the river which has been allowed to silt up. By then running out two piers on embankments, a channel would be preserved, and a greater scour be created by artificially making the river narrower. With a little care the channel could then be always kept clear. When it is known that the Shinano-gawa is a finer stream than any of the English rivers, and vastly superior to the Clyde or Tyne, which admit the largest sea going merchant steamers, it can be well understood how much might be made of it.

Mr. Troup justly suggests that some portion of the large revenues of the province (more than a million *koku* of rice) of which a small portion only is expended in that part of the country, might be profitably employed in such a work; without which it is difficult to see how the vast productive powers of that part of the country are to be turned to any account. Unless something be shortly done to supply this want, it is not taking too dark a view of the matter to foretell that at no distant period the ruin of Niigata will be entirely accomplished. As Mr. Troup very properly puts it, "it seems worthy of the consideration of the Japanese Government. whether an outlay, if not extravagant, on a work thus intimately affecting the whole district, would not be financially justifiable, and would more than repay itself by the increased agricultural and commercial prosperity of the district."

We hear that the distress in Shantung has reached such a pitch that the unfortunate people are throwing themselves down wells and poisoning themselves with arsenic, unable any longer to bear their sufferings. At Tsi-nan Fu they are bringing their children to the Roman Catholic bishop, saying that if he will not take them into his Orphanage they will kill them. From Tung-chow Fu we hear that a good deal of grain is coming into the province through the small rivers, but the people who are famishing are those who have no money to buy it. The Bishop above referred to is distributing over a hundred dollar a days to the poor, but has quite exhausted his resources. We are therefore glad that part of the money subscribed by the community of Shanghai has been forwarded to him. More grain would find its way to the suffering province, were it not that the mandarins forbid merchants to sell at higher prices than those of last year, and this checks importation.—*Shanghai Courier.*

Among other rumours that are disporting themselves, we may mention one to the effect that the home companies have combined not to run any steamers to Hankow during the ensuing season.—*Shanghai Courier.*

A SUMMARY OF THE JAPANESE PENAL CODES.

By JOSEPH H. LONGFORD, Esq., H. B. M. Legation.

Read before the Asiatic Society of Japan, on the 28th February, 1877.

(Continued.)

CHAPTER III.—ROBBERY AND THEFT.

All cases of robbery—with the exceptions of "Sacrilege," "Theft of Imperial Property," and "Theft of Public Documents," each of which offences is provided for by a special statute—are included in one or other of four classes, namely "Violent Robbery," "Embezzlement of Public Property," "Theft of Public Property," and "Common Robbery," and all these offences, as well as those of "Rescue of Prisoners," "Abduction and Sale of Women," "Trespassing," "Conspiracy and Riot," and "Harbouring of Thieves and Receiving Stolen Property" are described in the present chapter.

VIOLENT ROBBERY.

New Code, "Violent Robbery." Revised Code, Sec. 127-133.

Violent robbery includes burglary effected by smashing of doors, fences or walls, highway robbery, robbery effected by stupifying a person with drugs, and, in general, all cases where force of any kind is used by the thief at the time of the actual commission of the robbery, either for the purpose of effecting his object or preventing his arrest. Two degrees of it are recognized—namely, violent robbery with weapons, and violent robbery without weapons. Thieves who at the time of the commission of the offence are armed with swords, spears, pistols or guns are always to be, and, if armed with sickles, knives, hatchets, sheath knives, or clubs, may be considered guilty of the first, and are to be punished, if the robbery has been accomplished, irrespective of the amount stolen and without distinction of principal and accessory, by decapitation; if the robbery has been only attempted, the principal by hanging and the accessories by penal servitude for life, unless the offenders have, in addition to the robbery, been guilty of either murder or wounding when, as before, all shall be punished by decapitation. Violent robbery without weapons includes all the above cases when, at the commission, the thief or thieves were not armed with any of the weapons mentioned. The punishments which are to be inflicted for it vary according to the amount stolen, as shown in the table below, and in passing sentence the following provisions are to be observed. All parties to the offence without distinction between principal and accessories, are to be punished for the full amount stolen irrespective of whether any division of it has been made among them or not. Thus, if three unarmed persons together commit a highway robbery of ten *yen*, although the principal may appropriate three-fifths of this sum, the first accessory the remaining two-fifths and the second get nothing, the whole three are nevertheless to be punished alike as having stolen ten *yen* and sentenced therefore as will be seen by the table, to penal servitude for five years. If murder is committed in connection with the robbery it shall involve the punishment of decapitation, and wounding or rape (even if only attempted) that of hanging, but those of the offenders who had no share in such murder, wounding or rape are only to be punished for the crime of robbery. Reductions of the degrees of punishment provided in the table shall be made of one degree in the case of an accessory who, though he enters a house, does not assist in the search for booty, or who only remains on watch outside and assists in passing out the booty;—of two degrees in the case of persons who, having been forced by threats to join in the commission, have entered a house, searched for, and shared in the division of the booty,

Preliminary matter. "Table of seven kinds of Unlawful Gain."

Revised Code, Sec. 127.

New Code, "Violent Robbery by unarmed persons."

Revised Code, Sec. 127.

Revised Code, Sec. 128.

Revise Code, Sec. 129.

—and of three degrees if they have not shared in such division, or if they have only remained on watch outside the house and assisted in handing out the booty. These mitigations shall not be made in the case of second offences. Persons who are clearly proved to have purposed committing a violent robbery but have been prevented doing so by being arrested, shall, if they were armed at the time of arrest, be punished by penal servitude for five years, and if unarmed by penal servitude for one year.

Revised Code, Sec. 130.

EMBEZZLEMENT OF PUBLIC PROPERTY.

New Code, "Embezzlement."

Embezzlement of public property is the offence of which superintendents of public property, or custodians of Government storehouses of any kind, who appropriate or obtain fraudulent possession in any way of the property committed to their charge, are to be convicted. The punishments for it are as given in the table, and, in inflicting them, no distinction is to be made between principal and accessory, and all parties to the offence are to be punished for the full amount stolen in the same way as in the case of violent robbery. A repetition of the offence, even if only attempted, shall involve an increase of one degree in the punishment, and an offender guilty of a second repetition shall be punished by penal servitude for life.

Notification No. 267 of July 24, 1873.

THEFT OF PUBLIC PROPERTY.

New Code, "Theft by Ordinary Persons."

Theft of Public Property is the stealing of it by any persons other than those in whose custody it was. A distinction between principal and accessory is only to be made when the theft has been attempted but not successfully accomplished, and, in other cases, all the parties are, as before, to be punished for the full amount stolen.

Notification No. 267, of July 24th, 1873.

An increase of one degree of severity is always to be made in the punishments provided in the table in the case of a repetition of the offence, and a second repetition is always to be punished by penal servitude for life, irrespective of what the amount stolen may have been.

COMMON ROBBERY.

New Code, "Secret Theft."

Common Robbery includes all cases of offences against private property that are unaccompanied with violence,—such as pocket-picking, secret theft, embezzlement of master's property by a servant, obtaining fraudulent possession, extortion by threats, etc., etc. All parties to its commission shall be punished for the total amount stolen by them, but the distinction betwen principal and accessory is to be observed. If the robbery be only attempted the punishment is to be penal servitude for 40 days, but, if it be a second offence, for 50 days, and, if a third, for 3 years, and if it be committed or attempted a fourth time the punishment is always to be penal servitude for life, irrespective of the amount stolen. Accidental wounding in connection with the robbery shall be punished more or less severely, in proportion to the gravity of the wounds by the penalties contained in the law of "Quarrelling and Fighting" increased one degree, but this punishment is not to exceed penal servitudefor 10 years. Accidental killing shall be punished by hanging. The term "obtaining fraudulent possession" is used to describe all cases in which property is obtained by asserting a false claim to it, by deceiving the owner by a plausible story, by prevailing on him to part with it on any pretence, or by absconding with it. The punishment to be inflicted for it is limited to penal servitude for 10 years.

New Code, "Extortion of Property by threats."

Revised Code, Sec. 136.

Notification No. 266 of July 23, 1873.

New Code, "Fraud."

All the punishments of the above offences, with the exception of that for violent rob-

bery with weapons, are shown in the following table as are also those to be inflicted for offences treated of in the chapter 'Bribery and Corruption."

TABLE.

SCALE OF PUNISHMENTS TO BE INFLICTED FOR OFFENCES AGAINST PUBLIC OR PRIVATE PROPERTY.

Penal servitude for	Violent Robbery without weapons.	Embezzlement of Public Property.	Theft of Public Property and Bribery for all unlawful objects.	Common Robbery and Bribery for a lawful object.	Pecuniary Malversation.
Ten days	—	—	—	—	If the value of the property obtained is under five yen.
Twenty days	—	—	—	—	Over 5 yen 20 "
Thirty days	—	—	—	—	" 20 " 40 "
Forty days	—	—	—	—	" 40 " 60 "
Fifty days	—	—	If the robbery is attempted but no property obtained.	If the robbery is attempted but no property obtained.	" 60 " 80 "
Sixty days	—	—	If the value of the property obtained is under one yen.	If the value of the property obtained is under one yen.	" 80 " 100 "
Seventy days	—	—	Over 1 yen 10 "	Over 1 yen 10 "	" 100 " 120 "
Eighty days	—	Over 1 yen 10 "	" 10 " 20 "	" 10 " 20 "	" 120 " 140 "
Ninety days	—	" 10 " 20 "	" 20 " 30 "	" 20 " 30 "	" 140 " 160 "
One hundred days	—	" 20 " 30 "	" 30 " 40 "	" 30 " 40 "	" 160 " 200 "
One year	—	" 30 " 40 "	" 40 " 50 "	" 40 " 50 "	" 200 " 400 "
One year and a half	—	" 40 " 50 "	" 50 " 60 "	" 50 " 60 "	" 400 " 600 "
Two years	—	" 50 " 60 "	" 60 " 70 "	" 60 " 70 "	" 600 " 800 "
Two and a half years	If the robbery is attempted but no property obtained	" 60 " 70 "	" 70 " 80 "	" 80 " 90 "	" 800 " 1000 "
Three years	If the value of the property obtained is under five yen	" 70 " 80 "	" 80 " 90 "	" 90 " 100 "	" 1000 "
Five years	Over 5 yen 10 "	" 80 " 90 "	" 90 " 100 "	" 100 " 110 "	
Seven years	" 10 " 15 "	" 90 " 100 "	" 100 " 110 "	" 110 " 120 "	
Ten years	" 15 " 20 "	" 100 " 150 "	" 110 " 250 "	" 120 " 300 "	
Life	" 20 " 30 "				

In inflicting the above punishments the following increases or mitigations are to be made. In the case of common robbery, an increase of one degree in the punishment of a servant guilty of robbing his master's property and of two degrees in that of a servant guilty of embezzlement of his master's property; an increase of one degree is to be made even in the case of persons only temporarily employed, such as chair coolies, boatmen, etc., who may steal any property entrusted to them by their employers or in that of a hotel keeper who steals property committed his care by a guest. In the case of theft from a relative of the fifth degree of relationship a mitigation of one degree in the punishment provided for ordinary cases shall be allowed, and a further mitigation of one degree for each closer degree of consanguinity that there may be between the parties, but in the case of violent robbery this mitigation shall only be allowed when the offender is the senior relative of the two; *e. g.* it shall allowed to an uncle robbing his nephew but not a nephew robbing his uncle. In the latter case, however, if the crime is accompanied with the killing or wounding—though accidental—of the relative robbed the offender shall be punished under whichever of the laws of Robbery or Homicide subjects him to the severest penalty. This law of course applies only to relatives dwelling apart from each other. Robbery from relatives resident under the same roof shall be treated as "Unauthorized disposal of the family property" the punishment as provided in the law contained in the chapter on Domestic Law to be increased two degrees, but not so as to exceed the maximum penalty of penal servitude for 100 days. A mitigation of one degree shall be permitted in the punishment for Common Robbery of a stranger who steals family property either at the instigation of, or in conjunction with a member thereof, but if the latter is guilty of causing at the time of the robbery either death or wounds, the stranger even though he took no part in and was ignorant of such killing or wounding, shall be punished for violent robbery.

New Code, "Theft of Master's property."

Notification No. 74 of May 19, 1874.

New Code, "Theft from Relatives."

New Code, "Theft of Government or private cattle." Revised Code, Sec. 140.

New Code, "Theft of growing crops."

Revised Code, Sec. 141.

"Stealing cattle or animals of any kind from pasture or stables shall be punished either as Embezzlement or Theft of Public Porperty or Common Robbery as the case may be, but if from pasture the punishment must not exceed penal servitude for 10 years. This limitation is also to be observed in case of theft of growing crops, timbers, or anything prepared for use and left in an unwatched place, which are all to be punished under the law of common robbery. If animals that have been stolen are afterwards killed the punishment is to be increased one degree, and no matter what the value of the animals may have been it is not to be less than penal servitude for one year in the case of Government, or for 100 days in case of private property. Wilful killing of animals, even if they are not stolen, is to be punished according to the laws of robbery, the punishment, no matter what may have been the value of the animals destroyed, not to be less than penal servitude for 100 days in the case of Government or for 90 days in the case of private property.

SACRILEGE—IMPERIAL PROPERTY—PUBLIC DOCUMENTS.

Revised Code, Sec. 122.

Revised Code, Sec. 123.

Revised Code, Sec. 124.

New Code, "Theft of Imperial Clothing."

New Code, "Theft of trees from Imperial Cemetery."

New Code, "Theft of Public Document."

New Code, "Theft of Official Seals."

Revised Code, Sec. 125.

The punishments provided for the three classes of robbery specially treated of are as follows: For Sacrilege, which consists of the theft of the offerings to the gods, of articles that have been got ready with a view to and are about to be offered to the gods, the relics of shrines, etc.—penal servitude for life if committed at the shrines of Isé or at the chapel within the precincts of the palace, and if at other shrines for a period varying from 10 years to 90 days according to the class of the shrine. For theft of Imperial clothing in use—penal servitude for life; if already used and laid aside or only prepared for use penal servitude for 2 years; for theft of food, prepared for the Emperor or of Imperial furniture, penal servitude for 1½ years, and theft of plants and trees from Imperial grave-yards, penal servitude for 100 days, or such heavier punishment as would be entailed if the offence were treated under the ordinary law of robbery and the penalty increased one degree. For theft of Public Documents, if belonging to the Privy Council, penal servitude for 100 days; if to one of the chief metropolitan or provincial departments for 80 days, and in the case of any other public document, for 30 days, the punishment in each case to be increasad one degree if the documents were of primary importance, and in all instances the theft to be punished by the most severe law applicable to it if committed with an ulterior corrupt motive. For Theft of the Seal of the Privy Council, penal servitude for 10 years; of that of one of the chief metropolitan or provincial departments for 3 years, of of any other Government seal for 80 days and of a private seal for 70 days, with the same reservation, as in the previous instance, if the theft

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is committed with an ulterior corrupt motive.

There remain to be noticed certain offences which, though treated of in this chapter, are not necessarily connected with robbery.

Rescue of Prisoners.

Revised Code, Sec. 134.

Forcible rescue of a prisoner from custody, whether only attempted or successfully carried out, shall be punished by penal servitude for 10 years, or for life if the prisoner were under sentence of death, or if wounds are inflicted on any one while the rescue is being effected.

Abduction and Sale of Women.

New Code, "Abduction and Sale of Women." Revised Code, Sec. 145.

Forcible abduction or enticement of women away from their guardians shall be punished by penal servitude for 7 years if the woman be sold to a prostitution or any degrading or toilsome occupation, and for 2½ years if she be sold as a wife, concubine, or servant; the woman in each case to be restored to her guardians unless she be over 10 years of age and have assented to her abduction or disposal, when she shall undergo punishment three degrees less severe than that of the chief offender, whose punishment shall also be reduced one degree. A husband who sells his wife to prostitution against her will shall also be punished as above, but if with her consent by penal servitude for 70 days; any person who sells his daughter to prostitution against her will by penal servitude for 50 days, and any one who in like way sells his niece, younger sister or granddaughter by penal servitude for 70 days. Abduction of a wife or concubine, and making her one's own or another's wife or concubine, shall be punished by penal servitude for five and three years respectively. Disposal of any woman against her will to a foreigner, even if only attempted, shall be punished by penal servitude for ten years;—and in both this and previous case, the stipulations provided in the first instance as to the mitigation of the punishment of the chief offender and the punishment to be inflicted on the woman whenever she is a consenting party to her abduction or disposal, are to be observed. Disposal of a daughter to a foreigner against her will shall be punished by penal servitude for 1 year, and for 100 days, if with her consent, mitigated in either case one degree if the disposal be not actually completed. Any Japanese purchasing a foreigner shall be liable to a penalty less severe by one degree than those herein provided for the offence of disposing of a Japanese to a foreigner.

Revised Code, Sec. 146.

Revised Code, Sec. 147.

Revised Code, Sec. 149.

Revised Code, Sec. 150.

Trespassing in a Dwelling-House at Night.

New Code, "Unauthorized entry into a Dwelling-house at night."

Any person, who without due reason, enters a dwelling-house during the night time, shall be punished by penal servitude for 30 days, and no blame shall attach to any householder who kills such person on the spot. Should, however, a householder deliberately kill or wound such person after he has been duly arrested, he shall be liable to the punishment provided in the law of Quarrelling and Fighting for the offence of killing or wounding in an affray, mitigated two degrees. The owner or custodian of any cereals, vegetables, or fruit, who pursues a person attempting to steal the same during the night time, or, of any house or other property in town or country, who pursues a thief entering therein in broad daylight, and slays him on overtaking him shall, without reference to whether the theft has been successfully accomplished or not, be punished by penal servitude for 2 years; and killing, wounding, or beating such person after he has been duly arrested shall in each case be visited by the same punishment that would have attached to the offence if it had been committed during an affray, mitigated, however, one degree.

Revised Code, Sec. 155.

Unlawful Conspiracy and Riot.*

New Code, "Riotous Assemblies."

The ringleaders of any band of rioters who wreck, burn, or plunder property or cause wounds or death shall be punished by decapitation; an accessory, who, with his own hand, commits murder or kindles a fire, by hanging; and other accessories by penal servitude for 10 years. The word 'accessory' is in this case to be understood to mean an offender who, though he has not been the actual contriver, or originator of the riot, has yet taken part in the deliberations among the offenders which preceded its actual outbreak. Persons who have not done so, but have been present at the time of the riot and contributed to swell the numbers of the rioters, shall be punished according to the law "Violation of Standing Orders," contained in the chapter entitled "Miscellaneous Offences," but they shall be permitted to commute the term of penal servitude therein provided by the payment of a fine calculated at the usual rate. If, however, persons who would otherwise come under this category, with their own hands kindle a fire, they shall be punished by penal servitude for 10 years, and by penal servitude for 3 years if they do so under compulsion; and if they assist under compulsion in the wrecking of property they shall be punished for a "Grave Impropriety," the law relating to which is also contained in the chapter "Miscellaneous Offences."

Revised Code, Sec. 151.

The ringleaders, again, of any number of persons who, on account of agricultural distress in their own district, assemble and assault farmers, threaten the authorities, plunder the local stores, make an uproar at the Government office; or on account of any resentment, forsake their occupations and so bring discredit on the authorities, shall be punished by hanging; the accessories by penal servitude for 10 years. If, however, persons who have thus assembled inflict no injury on the people but merely forcibly urge a petition on the Government, the ringleader shall be punished by penal servitude for 10 years, and the accessories by a penalty mitigated one or two degrees in proportion as their share of the guilt may have been greater or less. When a riot is clearly ascribable to bad government on the part of the local authorities, or when the rioters are discovered by other authorities than those under whose jurisdiction they are before they have proceeded to extremes, they shall be punished by penal servitude for 100 days, or for 70 days if the riot were not of a serious nature.

Revised Code, Sec. 153.

Revised Code, Sec. 154.

Harbouring of Thieves.

New Code, "Habouring of Thieves."

Any lodging-house keeper who harbours persons guilty of robbery with violence, and who likewise contrives a robbery of this nature and shares in the booty thereby obtained shall, even though he had not assisted in its carrying out, be punished equally severely with those who have, and in the case of common robbery he shall under similar circumstances be treated as the principal in the offence. If he does not share in the booty he shall be punished in the case of robbery with violence by penal servitude for two years, and in that of common robbery as an acces-

* There is no law of "High Treason" in Japan, and though the present one might be applied to cases where the treason extended to rebellion, it is impossible to say whether or not it is under it that punishment is imposed for that offence, as none of the sentences that have been passed on persons guilty of it have been published. The absence of a law of "High Treason" is the more remarkable from the fact that in the Chinese Codes on which the "New Code" is founded, the crime is treated with the greatest minuteness, several degrees of it being described.

sory. He shall also be punished equally severely with those who have actually committed robbery with violence when, though he may not have been its contriver, he has yet taken part in the deliberations that preceded it, and has either shared in the booty even without assisting in the commission or assisted in the commission without sharing in the booty, and he shall in all these instances be treated as an accessory in the case of common robbery. Mere harbouring of persons guilty of violent robbery shall be punished by penal servitude for 80 days, and of persons guilty of common robbery by penal servitude for 80 days.

Receivers of stolen goods, or of money or property acquired by the disposal of persons forcibly abducted or disposed of with their own consent, shall be punished as accessories in a common robbery; purchasers of stolen goods or receivers of any property acquired by extortion, fraud, or bribery, whether for a lawful or an unlawful object, shall be punished under the law of Pecuniary Malversation. A mitigation of one degree in the punishment provided in this law shall be allowed to those who purchase, and two degrees those who merely receive into their keeping, property unlawfully acquired by any of these means last mentioned, but in all cases the punishment shall be increased one degree of severity on every repetition of offence until the maximum of penal servitude for three years is reached.

Revised Code, Sec. 158.

Pawnbrokers who receive in pledge any stolen goods unsecured by broker and guarantor shall, even though they were ignorant of the fact that such goods were stolen, forfeit them to their rightful owner; and any person who acts either as broker or guarantor in pledging stolen goods, shall be sentenced to a punishment one degree less that that provided for Pecuniary Malversation; and if he has received any money for doing so to one degree less than that for common robbery; and he shall in addition in both cases be held liable to reimburse the amount for which the goods have been pledged.

Revised Code, Sec. 157.

Revised Code, Sec. 156.

OUR NEIGHBOURHOOD.

DEPARTED FROM THIS WORLD, UPON THE 10TH DAY OF THE 2ND MONTH, THE STORY-TELLER OF "OUR NEIGHBOURHOOD."

Near the western extremity of the Main Street, where the road becomes irregular a little, as if tired of adhering strictly to the same direction it longed to wander into the pleasant fields on either side—where the declining sun's last rays are thrown before it withdraws its lingering glance from our simple village and retires to rest beyond the hills,—there stands upon the right hand as you travel towards the country and leave behind the haunts of business—if such poor ineffectual barter as we pretend to, can claim so grand a designation,—an ancient temple.

A grave old building is this temple; so old indeed, that the fashion of its architecture is out of date. Velvet mosses flourish on the venerable roof, and the *matsu* trees in the courtyard, planted in its days of infancy, have grown from tender saplings into gnarled and distorted elders.

Huge old fellows, with rough tesselated bark, whose hoary heads have rocked in many a storm, and not come off uninjured, neither, as scars and wounds where branches have been torn away, can testify.

In keeping with the temple is the enclosure in which it stands. A gloomy spot instinct with generations of departed worshippers, whose feet, long crumbled into earth, have left their tracks upon the granite steps and pathways leading to the Shrine, where their prayers and supplications, groaned out upon the placid air, would seem to linger still.

For of nights, when the bamboo grove beside the temple and the dark pines behind it are agitated by the wind, strange sounds and sighs are shaken from their branches. Wild and inarticulate, but expressibly melancholy.

A solemn spot is this at all times; shady in the early mornings; drowsy with the hum of insects in the afternoons; sombre in the evenings and redolent of incense always. A place to hold one's breath in, and speak in whispers, and yet one which from immemorial times has been chosen by our Story-teller to exercise his craft in.

Not *inside* the boundary wall, be it understood, but in the space outside, where one grand old pine tree leans over and spreads its ponderous body, and inclines its bushy head to listen, as it were,—an unexpected levity in such an ancient tree.

Here our lecturer was accustomed to hold forth beneath a canvas awning, once white, perhaps, but now a neutral tint in keeping with the age around it.

And hither on summer evenings, when their work was over, all red-legged from their baths, the old and young folks—tranquil as is usual with those who have earned their leisure—were wont to gather, to fan themselves and smoke their pipes, and have their drowsy souls excited by the deeds of heroes, and their soft hearts melted by the wrongs and sorrows of unhappy lovers.

At such times the mellow notes of the grand old temple bell have been known to mingle with the story, and vibrate in unison with the tender chord which the Story-teller had just deftly touched in the bosoms of his auditory. For he was a skilful artist and knew how to play upon the human heart, as it were a lute.

Nor did he find, at times, the sharp metallic ring of the good priest's gong an unseasonable accompaniment, when swaying to and fro in the description of a fight.

But he's gone! And the bell now, in place of taking part in his discourses, wails out a trembling monody over the deserted court, and the pine tree has wept a silent shower of withered needles upon the empty canopy which sheltered till now the best and gentlest of his kind!

Oh! it was a sight to be remembered, how grandly he took his seat, and gravely disposed the folds of his *hakama*. Before him a little table, and behind, upon the canvas curtain, a picture of a circling crane whose outspread wings formed a little "glory" round his head.

Then how solemnly he bent him forward and hid his face in the hollowed palms for a little space, as though bespeaking the assistance of the gods in the task which he had before him.

What a decorous silence always fell upon us at this time, until he knocked the fetters off our tongues with a cheerful rap upon his little table with his fan. This was his preliminary warning,—his way of intimating that he would presently bespeak our entire attention,—his summons to make ready to attend.

For he had yet to take a cup of tea before commencing, and to roll the cup between his hands—as he leant his elbows on the table—and lay his head upon one side and cogitate and smile to himself, as though he tasted on his supple tongue the good things which were ready to fly out the moment he opened his mouth.

And when this breathing space was over and the cup was flung aside, and silence ordered with a thunderous rap, what a light blazed in his eyes and a glow shone upon his fine old countenance, as he commenced his tale. How artfully, too, he started with a whisper and gradually increased the volume of his voice, until he had worked his way into our minds, so to speak, before we were quite aware of it. He delighted not in rude surprises or startling effects. He preferred rather to woo you with his gentle accents until he had secured your ear, and then trust to the magic of his voice and eye to hold you captive. We have lost a beloved friend! For he brought us up, so to speak. Hand in hand with him, it might be said, we trode our path of life. A dull and commonplace round enough at best, but immeasurably more so deprived of his good company. Whatever of nobility of soul is ours we owe to him. The pleasant thoughts which lighten labour, and lend wings to the dreary hours which otherwise we should have passed unprofitably beside our *hibachis* on rainy days, he furnished to our unfurnished minds. To his influence is due our knowledge of the high-souled past, and perchance the flavour of antiquity which hangs around our quiet village.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

But that is past and over! Our page is turning and who can read what's written on the other side!

Where is our friend? Gone to that country from which he was wont to summon the silent shades, and breathe upon them for our delectation and reanimate them, and make them re-enact for us their parts.

But one comfort still remains to us. If there is ought in the Indestructibility of Sound his words will live for ever, and when, rebounding from sphere to sphere they will at last revisit this planet from whence they started upon their never ending journey, who knows but out children will have cause to thank our Story-teller for their pleasant dreams?

Correspondence.

To the Editor of the "Japan Weekly Mail."

Yokohama, March 28th, 1877.

Sir,—The currency question which came up before the Chamber of Commerce, and which failed to produce a quorum when brought forward for discussion at an adjourned meeting, must not be put down to the apathy of its members, but rather to the fact that few at present would care to give a definite opinion with the certainty of their deductions proving ultimately correct. It seems rather premature to recommend the Japanese Government to coin a silver dollar or *yen*, when the best financiers are in doubts about the future relative value of silver to gold, in the absence of any reliable data of the annual production of silver and also of the intentions of the European Powers (known as the Latin Union) regarding the retention of the double standard. Besides, is Japan in a position to supply a coin for her trade requirements? Most certainly not! To do so, she must import bullion for which, as she is only a small producer, she must pay in gold or its equivalent, and this she is unable to do; which brings us at once to the gist of the question, viz., the inconvertible currency, a purely State question, on which foreigners may continue to theorise until some one can point out the means whereby Japan can redeem her floating debt.

No one can deny that it is not desireable to have an uniform coin as a means of value between foreigners and natives, but I most distinctly deny that foreigners would be benefitted in the least by the substitution of a silver *yen* instead of the Mexican dollar. Fluctuations would still continue in even a greater degree. For instance, with an Import trade in excess of the Exports, the silver *yen* would be depressed such a percentage below bullion point, as would enable the Bankers to export their superfluous balances; and *vice versa* would their value be enhanced with exports in excess of imports. The natives must continue all the same to suffer from the fluctuations of *satsu* or inconvertible paper currency, which is, and must remain, their only means of exchange except with foreigners.

BETA.

To the Editor of the "Japan Weekly Mail."

Yokohama, March 28th, 1877.

Sir,—It is plain that any community, which isolates itself with respect to currency from the country around it, incurs thereby some serious disadvantages. One of the prime conditions of a healthy trade is that its measure of value shall not only be as free as possible from fluctuations in itself, but in harmony with the circumstances of the country where it is employed. If it be not so, friction arises, which must either be met by special means, involving special expenditure (which constitutes a tax upon every transaction), or must tend to impair the usefulness of an instrument of exchange which ought to be fixed, simple, and smooth in its work.

The oscillations which have occurred in Japan during the last six months between the native and the foreign currency indicate that one or the other is defective in this essential condition.

Such oscillations perplex and injure trade, at one time operating as a tax upon sales, at another as a stimulus to purchases; and both in an unhealthy manner. This is well pointed out by your correspondent W. As merchants can seldom anticipate or explain them, they must, on the whole, lose by them. The only class which can gain by them are the money changers, shroffs, and others who thrive by the confusion, as lawyers do by the disputes or blunders of their clients. This class naturally desires to perpetuate the disorder which suits it so well. But the merchant must equally desire to abolish that disorder, and to rid his trade of the burden of supporting a class of whose services, under proper conditions, he must have no need.

These considerations furnish ample reasons for the establishment of a better currency for foreign commerce in Japan than that which now exists.

But when the merchant has to choose a measure of value for his trade and his accounts, his first consideration is as to its stability. He wants to feel that the capital he lodges here in the forms of money or of merchandize, he may withdraw at leisure without loss from changes of currency. Other losses he is prepared to risk, but he rightly objects to incur one wholly beyond his means, in fact even when these appear to be increasing in figures.

It was practically on this principle that foreigners originally adopted the Mexican dollar for their trade and accounts in Japan. They knew little about Japanese money, found it difficult to understand and unfixed in character, and, instead of it, chose a coin which they had found convenient under similar circumstances in China. It was not a perfectly good coin, but it seemed more stable than any other money then obtainable, and there was even some chance of getting the Japanese to adopt it as the Chinese had. It may be said, therefore, that the choice was a wise one at that time, and gave to foreign investments then as nearly as possible the required fixity of value.

But it is now proposed to reconsider this choice, on the ground that Japan has definitely rejected foreign money and has established a good currency of her own.

If this last be true, it would undoubtedly be advantageous to foreigners to bring their business and accounts into harmony with the native currency. For it must be admitted that the Mexican dollar is not only a troublesome but an unreliable coin, the supply of which may at any moment be cut short by the revolutions continually occurring in Mexico.

Moreover the *yen*, as we have it now, is unquestionably a good coin, whether in gold or in silver; and in most respects it is clearly superior to the Mexican dollar. The Japanese Government have taken much pains and spent much money to establish the Mint which produces it, and they have done this at the instance, and, at least partly, in the interest of, and to please, foreigners. It seems rather ungracious of us under such circumstances to reject the *yen*.

It is further to be considered that any possible depreciation in the *yen* would not materially affect new, or even current, business. If it should be depreciated, prices of merchandise would soon adjust themselves accordingly, and foreign trade would not on the whole suffer any serious loss. The check that the Import trade would at first receive would be offset by the impulse that would be given to Export trade, and in a short time prices in both branches would rise to a normal level.

But if the *yen* were adopted by foreigners, any instability in it would materially affect all fixed investments here, and all accounts which were of the nature of creditor accounts. Every merchant must ask himself the question, "if I keep my Bank account in *yen*, can I depend on "drawing out, say a year or two hence, the same weight of "silver or gold which is represented by my present "deposit?". And every Banker must enquire "if I lend "money in *yen* to-day, can I depend on getting back at "the due date the same weight of silver that I now pay "out?"

In short, for the whole creditor class the question of the stability of the *yen* is a vital one. And the foreign communities in Japan are, on the whole, creditor communities, and in the nature of things must remain so.

The purpose of these notes has been merely to state this question and the considerations involved in it. It would be presumptuous in any one person to answer it for the community, for the purposes and policy of the Government with regard to its Mint and its currency are not easily ascertainable. It must be at present a matter of

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

individual opinion whether or not the *yen* is likely to be maintained at its present value, and whether or not the Mint is likely to furnish a regular or sufficient supply of the coin.

It is tolerably clear that foreigners, as a creditor class, cannot afford the risk of dealing in the *paper* currency of Japan. That currency has maintained its value thus far in a marvellous way, which proves that the people have the greatest confidence in the good faith and resources of the Government. Nothing else can explain its present value. And there is, certainly, in the facilities which a hearty adoption of that currency would give to trade, a great temptation to foreigners to thus respect what the Japanese do. But this is a question somewhat like that of exterritoriality, and those who prefer to remain independent of the uncertainties which surround the future of finance, as of legislation in Japan, have much on their side.

The present question is not quite analogous to that answered in Shanghai about twenty years ago, when the *tael* was adopted by foreigners. Their dollar currency had become very inconvenient, so that fluctuations of five per cent. a day were not infrequent. The remedy for this was found, not in the employment of another coin, but in that of a measure of value of a certain weight and fineness of value of silver, which, though called a tael, has hardly more than a nominal existence.

Perhaps the remedy here may be found in the same direction, say by the adoption of 416 grains of standard silver, or its equivalent in gold, as a standard of value, calling that a dollar or a *yen*, and accepting every coin, Japanese or foreign, which shall respond to that standard, rejecting all others. This would apprise the Japanese Government of our readiness to take *yen* as long as they were supplied in sufficient quantity and of standard quality (for being so they would naturally be preferred to any other coin), and might lead to some compact or assurance on their part which would remove all doubt as to the future.

A. Z.

Yokohama, March 18, 1877.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 30th March, 1877.

The training for the forthcoming meetings of the Y. R. Club and the Y. R. Association may now be said to have commenced, but, alas! how different from those of former years are the very limited assemblies which now take place at the Course in the mornings. Most of us have, at some period of our existence, been witnesses of a funeral ceremony. Even on such a solemn occasion I have seen many people look more cheerful than did the group assembled at the Race Course yesterday morning. In vain I looked for more than one familiar face, and listened for that flow of ready wit and cheerful jokes which often used to be the rule, not the exception. These are evidently things of the past, and the training, instead of being a pleasant recreation, has become one of the most serious events of a sporting man's life. Even the ponies seem to be affected with the morbid desire to do themselves, or their riders, an injury; and although I have not witnessed any spills, still there have been one or two already. The demand for *Rifles*, which has somewhat increased during the past few days, may also be attributable to the disturbed state of affairs existing between the two racing parties, but up to the present, I believe, no actual use of weapons has been made.

The first instalment of a shipment of griffins for the Race Club arrived on 22nd instant by the *Nagoya Maru*. They were drawn for during the afternoon and the favourite (by Shanghai opinions) fell to the lot of Mr. John Peel, and the next three in choice to Mr. Pringle and his associates. Mr. J. Peel's pony, although possessing every appearance of a racer, lacks condition and stength, while on the other hand Mr. Pringle's lot have come over in very good order. The *Hiroshima Maru* brought over the balance of the griffins yesterday, viz., six for the Club, eight for the Association and one private property. Those for the Club were drawn for, and appear to give general satisfaction to the various owners. The best, to my idea, has fallen to the lot of the new "Devonshire" stable, but I suppose next week we shall get a good view of them all in working order. The Association ponies will not be distributed till after the arrival of the next steamer from Shanghai, when ten or twelve more are expected. Those of the first instalment are all too small for this course and not likely to turn out anything wonderful. Taking the ponies on the whole, however, they are the most promising mob of subscription ponies ever yet introduced here.

The sole remaining partner of the De Benter interest has appeared in an active part, and for the sake of the really good ponies of which Mr. W. Fairplay has become the fortunate owner, I trust that the continuation of their training will be administered with more judiciousness than has been the commencement. Ponies cannot be taken off "soft food," crammed with oats, blanketed, and bucketed (so to speak) without showing symptoms of uneasiness, nor is it the best method of training to allow ponies, thus highly fed, to cool their heels for two consecutive mornings in the Gothic, but perhaps too well ventilated stables erected in the Race Course paddock. Nothing new has occurred in the way of training with the exception of the noticeable fact that hot cross buns were not supplied at the Race Course, whereby I was done out of my usual Good Friday's breakfast. Saturday afternoon is the favorite day at the Course now, and although the *Alaska* carried away the principal supporter of the Y. R. A., I am glad to see that he has left his ponies to be raced at the coming meeting.

The programmes of both Clubs have been published, that of the Y. R. A. being very carefully and well drawn up and showing that every minor point has been carefully studied. The Y. R. C. excludes all winners of more than three races in 1876, whereby some of Mr. Morrison's best ponies are shut out, so these will doubtless run at the Associatiation Meeting. This is a step in the right direction, for there is certainly not room for two Race Clubs in Yokohama, and from the enthusiastic support which both the Committees have met with, it is evident that there are more people willing to go in for racing than there were in former years, and I think it a great pity that an amalgamation cannot be brought about, and so ensure one really good Race meeting instead of two second class horse fairs; and this might easily be brought about if the *contending spirits* would submit to the dictation and advice of their respective Committees. Until this is the case we shall have no decent racing in Yokohama.

TRITON.

Law Reports.

IN H. B. M's COURT AT KANAGAWA.

Before H. S. Wilkinson, Esq., *Acting Law-Secretary*.

Tuesday, 27th March, 1877.

Kondo Hikoyemon and Hakii Seijiro *v.* J. E. Carter.

(Continued from 14th instant.)

This was adjourned in order that two witnesses, whose evidence was of paramount importance, might be brought forward. The *Kencho* authorities, whose aid had been called in, produced two men, who were now examined.

Kobayashi Masanori, cautioned, stated:—I am a dealer in piece goods in Tôkiô. I know nothing either of the plaintiffs or defendant. I do not know Kobayashi Hidetaro; nor Kobayashi Hideji. Five years ago I was called Kobayashi Hidetaro; since then my name has been Kobayashi Masanori. I was arrested by an officer of the *Saibansho*, on suspicion of being concerned of this case. After investigation, I was released and allowed to return home. I know nothing of the man who assumed the name of Kobayashi Hidetaro; I gave no one authority to use the name, nor do I know anything about this affair. Kobayashi Hidetaro may be a common name in Japan, but I really do not know.

Mr Carter said he did not recognise this witness; he had nothing whatever to do with the circumstances under notice.

Plaintiff knew nothing of him either.

Kawamura Hideharu was now called. Mr Carter said he knew the man, but he had nothing to do with the business. Witness stated:—I belong to Otamachi, Tôkiô. I went to the house of Hakii Seijiro on one occasion in company with two persons named

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Hanawa Koijiro and Murata Seijro, on a visit and without reference to business. I knew Hanawa Koijiro, before but not Murata Seijiro. Hakii Seijiro lived in the hotel called Asahi-ya, in Tôkiô. I do not know his residence now. I have been examined by the authorities about this suit, but I know nothing about it. These men may have gone to some place between Sendai and Hakodate. There are no particular circumstances which make me come to that conclusion, but Hanawa Koijiro's father lives at Sendai, and MurataSeijiro's home is at Hakodate. I only went as I stated to this plaintiff's house on one occasion. All I did was to look at some pictures and walk about the house a little. No conversation of any importance took place. I was not formally introduced to any one. I did hear some talk about a loan of money and the buildings being given as security. They did not mention any name; they said the money would come from an Englishman in Yokohama. There was no further conversation beyond the property being security and where the money was to come from. We just called by the way at Kondo's house and then went direct to Hakii's. Kondo went with me, from what I saw I conclude it was Kondo's first visit also. Murata had, I noticed, some friendly conversation with Kondo, so they perhaps knew each other. I knew Murata Seijiro before I went there. He is the servant of Hanawa, in whose house he lived. I daresay Murata has gone along with Hanawa, I did not hear Hanawa call himself Kobayashi Hidetaro. I am still under the surveillance of the *Saibansho*.

Plaintiff, Kondo Hikoyemon, to Court:—On the visit of which I spoke it was the first time I saw the three men. I was told that this witness was Carter's *banto* when all three were sitting together. He must have heard it. In company with the other plaintiff I requested the authorities to discover the whereabouts of these men. I was told to make inquiries myself, but I had done so unsuccessfully.

Hakii Seijiro, the other plaintiff said:—This is the man who came with the other two at the beginning of the transactions.

Witness said that Hanawa understood English. Witness did not know defendant, Carter.

Mori Shigeshiko, a police official, stated:—I live in Government House at Noge-yama. I cannot give the exact particulars of this search, only the general outlines. The first time this affair came under our notice was when these two men, plaintiffs, came and lodged a complaint again Carter. I explained to the two men that it was my duty only to attend to foreigners in criminal matters and not in civil, and so I gave a sketch of the routine which they should adopt and one of the forms to fill up for this consulate. They followed my instructions. After the complaint had been heard I know nothing of the affair until the day on which I received a letter from the Acting-Consul on the 5th instant, requesting that the missing witnesses might be searched for. By orders from the *Kencho* this search was instituted; but the date for the hearing in the Court had been fixed for the 14th, and up to that time the enquiries had been unsuccessful and the men remained undiscovered. After a time I learned that the name of the first witness Kobayashi Masanori had been formerly Kobayashi Hidetaro. By a fortunate chance this man came down to Yokohama on the 14th instant and plaintiffs and defendant were sent from the Consulate to see him. They, however, pronounced that it has not the man. We afterwards sent a policeman of the first order to see the other man whose whereabouts we had discovered. He was not found at home then, but a friend of his was there; and in this man's tobacco-pouch a paper bearing Kawamura's address was found. This was not his actual place of residence, but a house which he frequented. And so, by the aid of the metropolitan police he was ultimately found. On the supposition that the other fellows are in Sendai, I have communicated with my brother officials there, and await the result of their enquiries, I cannot say when an answer may be expected. I can telegraph to Sendai, should his Court think it necessary.

Mr Carter applied now for a dismissal of the case. These men did not come forward, and the case had now been adjourned four times on their account.

Plaintiffs had no other witnesses to bring forward. Defendant had nothing more to say in the case.

Judgment to be delivered at 10 a.m. to-day, the 28th instant.

Wednesday, 28th March, 1877.

JUDGMENT.

The conclusion I arrive at upon the evidence is that Murata Seizo, and Hanawa Koichiro calling himself Kobayashi Hidetaro, falsely represented themselves to the plaintiffs as acting for the defendant and to the defendant as acting for the plaintiffs, and that the plaintiffs and defendant believed and acted upon these representations; that Kobayashi Hidetaro fraudulently misinterpreted the conversation and mistranslated the writings which passed between the plaintiffs and defendant. I find that neither party was prepared to carry out the contract as understood by the other, and I therefore consider that the plaintiffs are entitled to recover. I find that the defendant refused to complete the contract unless the plaintiffs produced the two men, Murata Seizo and Kobayashi Hidetaro (being no doubt under the impression that they were the agents of the plaintiffs) while the plaintiffs could not produce them and believed that they were respectively the agent and servant of the defendant. It appears to me that, however wise a precaution it might have been on the part of the defendant to have the two men in question present at the completion of the loan, he was not justified in making their presence a condition to the fulfilment of the contract, that the plaintiffs were justified in considering the contract rescinded, and are entitled on this ground also to recover the deposit.

It is to be observed, moreover, that the defendant has in no way been dammified by the misunderstanding. He has not parted with the $4 000. If he had paid it through the intervention of the so-called Kobayashi Hidetaro, the probability is he would have lost it altogether; if he had paid it direct in the face of the notification of H.B.M.'s Chargé d' Affairs of the 11th day of June, 1872, it is probable he would have great difficulty in realizing his security.

I do not consider that this is a case for interest and there will be no costs.

Let the defendant within ten day's pay to the plaintiffs the sum of 300 *yen* and deliver to the plaintiffs the promisory note for 60 *yen* delivered to him by the plaintiffs, or failing therein pay to the plaintiffs a further sum of 60 *yen*

IN H. B. M.'S COURT AT YEDO.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Monday, March 26th, 1877.

TÔKIÔ *Fu vs.* BLOCKLEY & BLOCKLEY.

KUSUMOTO MASATAKA, *Chiji* of Tôkiô *Fu*, } *Plaintiff*

ARTHUR BLOCKLEY and BRIDGET BLOCKLEY, his wife } *Defendants*

ARTHER BLOCKLEY and BRIDGET BLOCKLEY, his wife } *Plaintiffs*

KUSUMOTO MASATAKA, *Chiji* of Tôkiô *Fu*. } *Defendants.*

The Tôkiô *Fu* claim from the defendants three years' ground rent for Lot No 17, situated in the foreign settlement of Tsukiji, Tôkiô, amounting to $340, with a penalty of two per cent per month added. The defendants' plea is, that, while they admit the arrears of rent, the Government has broken its contract by not confining foreigners, resident in Tôkiô, within the limits of the foreign settlement. They, therefore, claim from the Government the sum of $5,000 damages for breach of contract.

Mr Lowder appeared for the Tôkiô *Fu* and Mr Ness for Mrs Blockley.

The hearing of this case was to have come off on Friday last, but as no notice had been served on one of the defendants His Honour declined to proceed.

On the Court assembling, Arthur Blockley was called, but as he did not appear, evidence was taken showing that a notice had been served at his last known place of abode on the 24th.

Bridget Blockley was then sworn, and deposed that she was the wife of Arthur Blockley and resided at No. 17, Tsukiji. A notice of the trial had been left at her house, but her husband was beyond the jurisdiction of Court, having left the country.

The witness expressed a desire to be represented by Counsel, and had engaged Mr Ness to defend her, but he could not appear to-day.

Mr Lowder asked if Mrs Blockley, under the circumstances, appeared in person, and received a negative reply.

His Honour said that, although it would probably inconvenience the gentlemen of the Tokio *Fu* who had attended under the expectation that the case would proceed to-day, he thought it would be better to adjourn the hearing until Counsel for the defence could appear.

Mr Lowder asked His Honour to fix as early a date as possible.

His Honour:—Suppose we adjourn it for one week; will be that convenient?

Mr Lowder:—Cannot you put it down for an earlier date than that, say, to morrow?

His Honour.—To-morrow I shall be engaged, but I can adjourn it till Thursday afternoon if that will be more convenient to you.

Mr Lowder having signified his assent the case was adjourned till Thursday, 29th inst, at 4 p. m.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI. Esq., Vice-President.

Monday, March 26th, 1877.

C. BRAUN *v.* KAJIRO SHOKIDO

This was an action to compel defendant to take delivery of shirtings sold to him, valued at over $6,000.

(Continued from 7th March.)

Mr Dickins appeared for plaintiff.

The hearing of this case was adjourned from the 4th instant until to-day; and on the Court assembling this morning Mr Dickins said he was sorry to have to trouble the Court so much; it was not plaintiff's fault but owing to persistence of defendant in demanding proof. At first it was thought sufficient to show the arrival of 19,200 pieces of shirtings between September and 20th October, 1876, because our books showed that of this quantity more than sufficient was left to meet defendant's demands. Defendant will not admit this and brings other merchants to prove that all the 19,200 prices were delivered between these dates. The difference between the books of these witnesses and our own are differences of date of delivery in some instances, and these differences are easily explained by the fact that the money was often deposited long before the goods were taken delivery of, and while our books show only the actual date of delivery, defendant's books show the date of delivery to be the date of deposit of the money on many occasions. Hence we say that our books are really right and do not clash with those of defendant's witnesses, and that out of the 19,200 pieces which arrived between the end of September 1876 and 20th October, more than 5,000 pieces were left on the latter date, nearly twice as much as necessary for defendant's contract, part of which had been executed. However, to satisfy defendant and the Court we have gone to much trouble to prove that at the end of September and in addition to the 19,2000 pieces already mentioned we had several thousand pieces left over from previous arrivals. I said at last sitting, 6 000 pieces were on hand in this way but I have found upon closer examination that more than that number were ready. Such is the result of our re-examination of the books. In fact ever since January 20th, 1875, up to this very day, at least 7,450 pieces have been ready for delivery to defendant any day he chose to come for them.

Mr. Dickins produced, in support of the above statements, the Custom House returns, Bills of Lading and Invoices for the shirtings which arrived between January, 1875, and this date.

The Judge now asked Mr. Dickins to state the circumstances of the second (7 lb. contract).

Mr. Dickins said that the only defence was that the goods were up to sample. The contract was that the shirtings were to be like those bought in the 7th month. Plaintiff maintains that they were equal in quality and manufacture to the 500 pieces sold in the 7th month. If these 500 pieces were produced by defandant, and if, on comparing with the 5,000 pieces arrived for defendant, they were found to be of a different mark or manufacture, we must lose our case. But as it is impossible for us to prove a negative, defendant ought to produce the whole of the 500 pieces and himself prove by comparison that the 5,000 pieces are not on the average equal to the of the 5,000 pieces. These shirtings are manufactured in enormous numbers and sometimes one piece will be a little better or a little worse than another; therefore, I do not say that all the 5,000 pieces are equal to the very best of the 500 pieces, but that the average of the 5,000 pieces were fully equal to the average of the 500 pieces and were of exactly the same mark and manufacture. The contract simply refers to shirtings that were brought in the seventh month and says that the shirtings now brought are not to be of the same quality but "the same stuff," *i.e.* the same mark and manufacture, but nothing is said about quality. Nevertheless the quality of the 5,000 is the same as that of the 500, being made by machinery there can be none but accidental and trifling differences. In the answer, the defendant says that the plaintiff requested the defendant to take delivery of the 5,000 pieces, offering to reduce the price. This is wholly untrue. The plaintiff simply said "if there is any difference in the quality we will refer it to an arbitrator, and if he decides that I ought to make a reduction, I will make such." The arbitrator suggested by plaintiff was Echizenya, a Japanese merchant; but defendant would not agree to any arbitration. The answer also says that defendant asked plaintiff to take back 5 bales and to pay to defendant the money paid for the 5 bales and interest. This is wholly untrue. The answer then goes on to say that plaintiff brought this action unexpectedly and before negotiations were concluded. This also is wholly untrue. The notice was given to defendant long before the action was brought, both verbally and by letter, that an action would be brought if the remainder of the goods were not taken delivery of. Mr Braun can prove that and also his *banto*, who wrote the letter. Mr Braun being unwell did not come to-day; besides, he did not know the case came on to-day. That is all I have to say at present. Let defendant show by comparison between the 500 and 5,000 pieces of shirtings, that the latter are inferior to the former; then we will withdraw the case.

His Honour asked what factory's mark the red deer in a circle represented?

Mr Dickins was not certain, but the mark showed that the shirtings which bore it were of a particular weight, size and number of threads. In all probality it was a mark confined to Reiss & Co.'s but not being himself a merchant Mr. Dickins could not positively say. For a manufacturer to send out different qualities of shirtings under the same marks would be to ruin his whole business. No sample is given; they buy by mark, size and weight. In this case the goods were not bought on sample.

Plaintiff said that as regards the difference in quality in the two quantities mentioned he had had the opportunity of comparing them. Plaintiff's banto had written to Mayeda, the purchaser of the goods, offering a reduction in price.

Mr. Dickins asked if plaintiff knew anything about this Mayeda? Defendant sent they were known to each other. Kashiwo made this contract with plaintiff. Defendant had the letter, but not at present with him.

Adjourned till Wednesday, the 28th instant, at 1.30 p.m.

Wednesday, March 28th, 1877.

Mr Dickins appeared for plaintiff.

Defendant remarked that though Mr Dickins had stated during the last hearing that in a large number of shirtings some slight differences might be found, this was no excuse for a discrepancy between the goods and the sample.

Mr Dickins replied that the goods of the second contract were not sold on sample. The 5,000 pieces were, as promised, the same as some 500 pieces previously sold to defendant.

Defendant denied that the 500 pieces referred to were a mixed lot, and Mr Dickins had again to explain that he had not meant to convey such a meaning when he said there might have been, as usual in such large quantities of shirtings, a few pieces better than the others. Of course it would be unfair to expect the whole of the 5,000 pieces to sustain the quality of the best of the 500.

Defendant said that was quite so, but unless a sample existed how could he have known what the 5,000 pieces were to be?

Mr Dickins said that to the best of his knowledge all the 5,000 pieces were equal to the best of the 500; the 500 must be produced for comparison.

Defendant said that if these had been the terms of the contract he would have had to keep the 500 pieces on purpose.

Mr Dickins said that was his look out; the understanding, however, was that the 5,000 pieces were to be shirtings of the same size, weight, quality and mark as the former 500.

Defendant said he had a sample on which he was willing to take the goods. It was of course not to be expected that he could produce the 500 pieces.

Mr Dickins again denied that any sample was given to defendant at the time of the sale. If it had, the circumstance would certainly have been mentioned in the contract.

Mr Braun confirmed these remarks of Mr Dickins', adding that as a fact, when goods were sold to arrive they were sold on the mark &c., and it was only when the goods happened to be on hand at the time of sale that a sample was shown.

The original contract was now produced and shown to defendant. His Honour asked how the price was settled in the absence of sample? Mr Dickins said he supposed by agreement between the parties, or according to weight and size or other particulars. Practically, no differences in quality occurred in shirtings of the same weight and mark; *slight* variations happened accidentally.

Defendant asked how it was that there were such differences in the packages of which he took delivery lately? Mr Dickins said he did not believe there was any such difference as he spoke of.

His Honour said that for himself he would like to know whether Mr Dickins admitted the probability of the existence of these inequalities.

Mr Dickins said it was of course impossible to make two things, either great or small, exactly alike, either in goods such as now under notice or in anything else. In Nature nothing was alike its neighbour; in mankind no two faces could be found alike, and the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

differences, as in art, were caused by the natural failings in the manufacture.

A Japanese witness said he went on the 16th January to No. 30 and saw Mr Braun, to whom he spoke of the inequalities in the goods. Mr Braun said the goods were in his godown and he could go and examine them, though Mr Braun denied that the goods showed any failing. They went to the godown and the Chinaman opened the bales, some of which were found to be very bad in quality. When this was told to Mr Braun he asked witness to bring a sample of the 500 pieces that they might compare the lots. Witness was afraid at first that plaintiff would take possession of the sample if he were forced to bring it; but being hard pressed he eventually went in a *jinrikisha* and brought it. Witness then compared the goods with the sample and found them quite different in quality. Mr Braun said the difference in quality was so slight that the price would not be more affected than ½ cent per piece. The witness maintained that the deterioration amounted to more than that, and after some dispute, Mr Braun offered a reduction of 25 cents per piece.

Mr Dickins remarked that the jump from *rin* to 25 cents was somewhat abrupt.

Witness corrected himself and said:—10 cents were offered. Mr Braun then went away and the *banto* came advising the parties to come to some arrangement. Witness, being unwell, went home and did not come to Yokohama for some time. On the 30th he received a letter from Riske who wrote, that though no greater reduction than ten cents per piece could be allowed, he (witness) had better come to Yokohama and make some arrangement. Witness was not well, however, and did not come down.

Recess for ten minutes.

His Honour, on returning, read the letter from Riske mentioned above.

Cross-examined by Mr Dickins, witness, stated:—I do business in 9 lbs. shirtings and other goods. When I have two pieces of shirtings to compare I know which is good and which is bad. I have had dealings several times with Mr Braun, but not under my own name. I don't suppose Mr Braun knows my name. I saw him about this affair upstairs in his office; I was with Riske. I said that as I had heard the goods were inferior to sample I would like to see them. I saw the goods on the 13th January, before 12 o'clock, myself, and then went immediately to Mr Braun. I mean, that Kashiwo had received a part of the goods, and it was after seeing these that I went to No. 30. Mr Braun was not present in the godown at the examination; the Chinaman and myself were alone. In the interview which followed, Mr Braun promised a reduction of 10 cents per piece. I heard him with my own ears. (Mr Dickins said they were big enough!) I heard him say so two or three times, both to myself and Chiuske. Chiuske did not need to tell me, because I heard it myself. Riske was present, but not the Chinaman. In the beginning of the interview, 5 cents were offered and afterwards, towards the end, 10 were offered. Mr Braun went away about the middle of the conversation. Kashiwo did not accept the reduction offered; I don't remember him offering to accept any reduction whatever. I cannot say how it was that Mr Braun, after offering this reduction on the 13th January, threatened to sue him for the whole amount. It was towards the end of my visit to No. 30 that I compared the sample with the goods. Mr Braun was present. I only went once. I have sold all of the 500 pieces which I bought in the seventh month. The difference between the goods and the sample was in colour, the one looking white and clean, and the other old and dirty. The threads also appeared to be different. About this time, the middle of January, the market prices had only fallen a little; it is very low now. It did not, to my knowledge, fall 30 cents per piece then. I don't know if I would be surprised to hear now that the market actually fell so much. If by taking the goods when the market was good and I could have made good profit, I would not have taken them as they were.

Riske, plaintiff's *banto* was now examined.

Mr Braun, in answer to His Honour, said he was not aware till this case commenced that Riske had written the letter produced in Court.

Riske, cross-examined by Mr Dickins, stated:—That is my letter (shown). On the 29th January I wrote a letter by Mr Braun's orders, threatening to bring an action against defendant. I remember seeing Mayeda, the witness who gave evidence a little ago, twice at No. 30. I never heard Mr Braun promise him a reduction of 10 cents per piece. Mr Braun often spoke to me about the necessity of defendant taking the goods and paying the full amount immediately, or he would sue him in the *Saibansho*.

Mr Dickins said he would like to remark that Mayeda's statements were all incorrect, Mr Braun having had nothing to do with him. Mr Braun was not present at any such comparison between goods and sample, nor did he ever say anything about 5 *rin* or 25 cents, or use any such terms. When the pieces were brought up to the office, Mr Braun said that they were quite up to the contract. Some were brought from Kashiwo's house also, and they were prfectly good as well as those taken from the godown. Kashiwo never objected to those brought from the godown in Mr Braun's presence.

Adjourned *sine die*.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E. M.

(The Engineering & Mining Journal.)

(Continued from the last.)

COPPER.

Although copper has been mined and smelted in Japan for nearly twelve centuries, the active working of the copper mines, as we have already seen, dates back less than three hundred years. The average annual production for the first two hundred and fifty years of the three hundred I would estimate at about 2,800 tons.† According to Von Siebold,‡ the annual product in 1830 was fifty to sixty thousand piculs, which would equal 3,333 to 4,000 tons; while, according to the estimate of Mr Godfrey, the present annual yield is about 3,360 tons. This yield, as Mr Plunkett remarks,§ represents the product of about two hundred different mines; but, as will presently appear, four mines furnish about one-half of this amount.

Copper is found nearly everywhere in Japan. A list of localities, which I have compiled, shows that out of thirty-eight ken and fu, copper is reported to occur in thirty-three. The records of the Mining Office show that permission has been granted to work copper deposits in more than four hundred different places.

Many, if not most, of these so-called copper mines are very poor, and few can be worked with profit, even in those parts of Japan where labor commands but a few cents a day; but the abundance and wide distribution of copper deposits is interesting and encouraging.

Thus far the copper mines and copper smelting works have been conducted according to Japanese methods, no "western improvements" having been introduced either by the Government or by private enterprise. The secret of this conservatism lies in the fact that the more important copper mines and smelting works, as conducted, yield large profits, which the owners are afraid to jeopardize by any change; while in the case of their silver and iron mines, which have not been very profitable, they are willing and ready to accept and act upon foreign advice.

Ores.—Copper occurs, generally, as chalcopyrite, associated with pyrite or pyrrhotite and other sulphides. Occasionally a specimen contains a little erubescite, which mineral also was formerly found as an ore at one mine. Fahlerz (or tetrahedrite) and copper glance are also common ores; the former often containing silver. Native copper is quite rare, though occurring at several places. A specimen was given me by the superintendent of the Osarisawa mine, in Akita ken, as a great curiosity. The oxidized ores are rare, malachite and azurite occurring only in small quantities at certain mines. Cuprite (copper oxide) is more common, but is not often smelted. It serves the miner, however, as an important indication of copper; and, as such, often determines the course of his drifts and stopes.‖ Copper surphate occurs in any mine waters; but is, I believe, not used for the extraction of copper. This water is, however, sometimes evaporated for the production of the salt.

Silver minerals are often associated with the ores of copper, in the same vein. Of the permits granted by the Mining Office for the working of copper mines, nearly forty per cent. were for this class of deposits.

The copper ores of Japan are usually poor; containing, as mined, from two and a half to seven per cent. By washing, these ores are concentrated to yield eight to sixteen per cent of copper, twelve per cent being the average richness.

Copper ores occur in Japan only in veins. These sometimes have all the characteristics of true fissures, but are more often of limited

* A paper read before the American Institute of Mining Engineers at the Philadelphia meeting, June, 1876.

Original from UNIVERSITY OF CALIFORNIA

extent, and apparently only gash veins. In either case there is usually a certain amount of parallelism between the different veins in the same region, and according to their direction, they may be grouped into two or more series, often differing somewhat in their characteristics.

The thickness of the veins varies from a few inches to three or four feet. The average thickness is less than one foot. The deposits are almost always of limited extent, and much dead work has to be done for exploration.

Metallurgy of Copper.—In the introduction I have briefly described the method of working employed in the mines of copper; and here a few words concerning the smelting process will not be out of place. This process, in its most perfect form, may be summarized as follows:

1.—Roasting of ores in kilns.

2.—Fusion of roasted ore in low hearth, producing the matte and black copper.

3.—Roasting of matte in kilns.

4.—Fusion of roasted matte, producing impure copper, taken off rosettes or cast in ingots, and a second matte, which is roasted and returned to the same operation.

5.—Fusion of black copper from the ore fusion, producing impure rosette or ingots copper.

6.—Fining and refining; usually divided into two operations, producing pure cake copper.

6.—Fusion of slags.

When the ore contains silver, the black copper and copper from the matte fusion are treated with lead by a very effective liquation process, which I hope to describe at another time. The fining and refining of the copper is effected after the separation of the silver and lead. The fuel used for smelting is invariably charcoal, wood being used in the roastings. The furnaces are simply low hearths, excavated in carefully prepared beds of charcoal, and provided with a partial cover of clay for retaining the heat, and with large hoods for carrying off the noxious vapors and products of combustion. The roasting kilns are usually rude rectangular structures, built of stone. The blast for smelting is supplied by very ingenious wooden bellows worked by man-power. The smelting is always conducted on a small scale, and one operation rarely lasts more than a few hours.

As illustrations of the copper mines of the country, I will describe in detail, from my own notes, a few of the larger and more important.

The Ani Copper Mines, in Yamamoto kôri, of Akita ken, are among the largest and most important of the country. These mines extend over thirty or forty square miles, in which area there are many hundred different veins. In 1873 over three hundred of these were yielding ore, while there were perhaps twice as many not worked.

The most important and most defined fissures have a general north and south direction, more or less parallel to the strike of the rocks. Those of a second series, which comprise the majority of the veins, have a general east and west direction. The veins of this series are of limited extent. The veins of a third series run northeast and southwest. The north and south veins are said to contain a larger proportion of galena than the others. The country rocks are sandstones and shales, often more or less metamorphosed, associated with volcanic rock in dykes (?) and erupted masses.

The copper veins are usually thin, and the ore seams vary in thickness from a few inches to three feet, ranging usually between four-tenths of a foot and one foot, the average being five to six-tenths of a foot. The average richness of the ore from these mines is about five and a half per cent.; in certain districts, seven and a half to eight per cent. When concentrated by washing, the ore yields ten to sixteen per cent. of copper, the average richness being about twelve and a half per cent. The ore is copper pyrite, tetrahedrite (?), and other copper sulphides, associated with which are pyrite, galena, blende, etc., and sometimes malachite and azurite in small quantities. The ores also contain silver, and sometimes gold.

These mines have been worked for centuries with great skill, yielding large profits. The old Japanese methods of mining and smelting are still retained. At present, nearly three thousand men, women and children are employed in the mines and smelting works. In 1873 the total products was 1,029,484 pounds of copper, while in 1872, according to Mr Plunkett, the yield was only 886,266 pounds.

The copper is sent, by river, to the Kagoyama smelting works, where it is refined, being previously treated with lead, by liquation, for the separation of the silver.

These Ani mines, with about sixty gold, silver, copper, lead and other mines in different parts of the country, formerly belonged to Ohno, a wealthy Japanese merchant; but since his failure, they have reverted to the Government, and are now under the control of the Mining Office. I am informed that it is proposed shortly to put these mines under foreign superintendence, with the view of substituting for the Japanese processes better and more economical methods of working. The results of this experiment will be of great interest, as these mines are among the best managed and most profitable in the country, and represent the best phase of Japanese mining and metallurgy.

The Osarisawa Copper Mines, situated in Kadzuno kôri of Akita ken. These mines are now actively worked on a large scale by Mr Okada, a Japanese merchant of Tokio. Japanese methods alone are employed, though an unsuccessful attempt was made some years ago by Japanese to introduce reverberatory furnaces for roasting and smelting. The ore occurs in nearly vertical fissure (?) veins, having a north and south direction, with branch (?) veins running east and west. The veins traverse slates and metamorphic sandstones, with which are associated masses of volcanic rock (trachyte?)

The veins are somewhat larger in the average than those at the Ani mines; but the seams of ore are about the same size, averaging six to eight inches. An ore seam five feet in thickness, however, is reported to have been at one time worked. The ore was formerly rich, but at present the average is about five per cent or less. Concentrated by washing, this ore yields eight and a half to nine per cent. In 1873 the average was 13 per cent of copper. The ore is copper pyrite, with sometimes a little bornite, and is associated with pyrite and other sulphides. Specimens of pure bornite are sometimes found.

The production of this mine in 1874 was about 300 tons of copper; in 1873, 246 tons. Formerly, when the ore was richer, the annual yield is said to have been over 600 tons.

The copper is not refined, but is sent to market as crude copper in the form of rectangular pigs, branded with the name of the merchant in Japanese and English characters, and with the inscription in English letters: "Copper Mine in Kadzuno of Tictiu."

Copper Mine in Sakai ken.—Mr Plunkett's report contains a description, by Mr Gowland of the Ozaka Mint, of the large copper mine in Yoshino kôri of this ken, from which account I extract the following details:

"The ore is copper pyrite, associated with pyrite and pyrrhotite. The ore seams vary between one and a half and three feet in thickness, are sometimes split into two, and often end abruptly. The gangue is calcspar and quartz. The yield is fifteen to twenty tons of copper per month, so that the annual product must be over two hundred tons. The mine is worked by Japanese methods, and yields large profits."

Kinonebira Copper Mine.—This mine, which I visited while on the island of Kiushiu, last summer, is situated in the village of Okawachi, in Ashikita kôri of Kumamoto ken.

The ore occurs in fissure veins, running east and west, and dipping twenty to thirty degrees. The average thickness of these veins is said to be three and a half to four feet, the greatest thickness six feet. The ore seams vary between seven-tenths and one and a half feet; though reported sometimes to reach a thickness of four feet. The richness of the ore varies between seven and twenty per cent, averaging thirteen per cent. The ore is copper pyrites, without gangue, except included fragments of a dark blue, slaty wall-rock.

This mine has produced largely; but is now flooded with water, so that but four or five tons of copper are produced per year. A new drainage tunnel was begun in 1872, which was, at the time of my visit, three years later, nine hundred feet long, and within about fifty or sixty feet of the vein. The face of the tunnel was then in very hard rock, and the progress was but one and a half feet per month.

Kumayama Copper Mine.—Mr Geerts ¶ speaks of a large mine in Yehime ken on the island of Shikoku, which is known as Besi san or Kumayama. The ore is copper pyrite and tetrahedrite, associated with other sulphides, and contains silver. Mr Geerts calls this the largest copper mine in Japan. If so, the annual production cannot be less than five or six hundred tons. With the first three mines described, viz., Ani, Osarisawa, and the one in Sakai ken, we thus have four mines yielding a total of fifteen hundred tons per year—about half the product of the empire.

I add an estimate, taken from Mr Plunket's report, of the cost of producing one ton (240 lb.) of copper by Japanese methods:

This does not include cost of transportation to market.

LEAD.

The deposits of lead ore in Japan are neither numerous nor valuable. Galena is the only ore used, though other ores are probably to be found. I have so far met with no specimens of oxidised ores, nor can I find any mention of such. According to Geerts,** jamesonite, and plagionite, antimonial sulfides, are found in many parts of Japan. These are, of course, not used as lead ores.

Galena occurs in Japan only in veins, usually associated with copper or silver ores; and lead is, in most cases, a by-product of mines worked for other metals. In 1874 there were thirty-five mines producing lead, of which eleven were worked solely for that metal; and, in all but two of the remaining cases, lead was only a secondary object of exploitation.

These thirty-five mines produced, in 1874, but 207 tons (of 2,000 lb.) of lead, more than half of which was the product of a single mine. Of the remaining mines, probably two-thirds yielded during the year less than one ton of metal each.

The explanation of this small production is to be found in the character of the deposits. The veins are usually thin, and always irregular and pokety of large amount of exploring work must therefore be done, usually with very unsatisfactory results. A seam of ore four inches thick, when discovered, will pay the cost of working; but the average thickness of the ore deposits barely reaches this limit. Ore seams one foot thick are very rare; and the discovery of a poket of ore four feet in thickness will be carefully chronicled and the tradition handed down for centuries.

For these reasons lead mining is usually, itself, unprofitable. As a rule the mines are worked only to supply the lead necessary for the extraction if silver from its ores or from argentiferous copper; in which the cases cost of the lead is of secondary importance, ann it may even pay to work the lead mines at a positive loss. In this lies also the explanation of the large imports of lead, though deposits of galena are by no means rare.

Lead Smelting.—The process by which lead is extracted from the ore is very simple. The ore is crushed and carefully washed, and all blende pyrite, gangue, and other impurities removed, leaving nearly pure galena for treatment. The process may be summarived as follows:

1.—Roasting of washed ore in kilns, producing a little lead, which is added of the next operation.

2.—Fusion of roasted ore, with the addition of cast iron in a low hearth producing lead, which is cast into pigs.

3.—Fusion of slags.

With certain ores, a little *yuhada*, or glass, is sometimes produced. This is roasted and returned to the fusion. The slags are picked over and washed before treatment.

Conducted by skilled workmen, this rude method produces excellent results. At one place which I visited, sixty per cent of lead was obtained from an ore containing perhaps seventy or seventy-five per cent. Japanese smelters, however, are rarely so skilful, and the yield is not often so large. Mr. Gowland†† speaks of works which he visited, where, from ore yielding sixty-nine per cent by assay, but forty per cent was obtained; and at Innai, where metallic lead is used for the extraction of silver, I found, in the simple fusion of this lead with the silver ore, a loss of fifty-seven per cent.

When the lead contains silver, this is separated by a rude cupellation with charcoal on an open wood-ash cupel, and the resulting litharges are reduced again to metallic lead by fusion with charcoal in a low hearth.

Daira Lead Mines.—These mines, situated in Yamamoto kôri, Akita ken, are probably the most important of the country. They lie near the head waters of the Fujitokawa, a branch of the Noshiro river; and near the junction of these streams are situated the celebrated Kagoyama smelting works, where the lead from these mines is used in the treatment of the argentiferous copper of Ani. These lead mines were, at the time of my visit, worked by the merchant Ohno; and with the Ani mines, the Kagoyama smelting works, etc., have since reverted to the Government, and are now under the control of the Mining Office.

The date of the discovery of these lead mines is unknown. More than three hundred and fifty ancient tunnels can now be counted on the neighboring hills, and doubtless the real number is much larger. Within an area of about one and a half square miles, ninety-four different veins are known, twenty-seven of which are now producing ore. These veins can usually be traced for several thousand feet, though the ore bodies do not continue of workable thickness for any great distance. The veins are true fissures, usually one to two feet thick, sometimes larger. With few exceptions, they run east and west, dipping at a high angle (50° to 60° S). The ore is galena, associated with blende, copper and iron pyrite, and other sulphides, and occurs in irregular lenticular masses in the vein rock. The ore bodies are fifty to four hundred feet in their greatest extent, and from two-tenths of a foot to two feet in thickness. The average diameter of these lenticular masses is about one hundred and fifty feet; and the usual thickness three to six-tenths of a foot. If thinner than three-tenths of a foot, they cannot be mined with profit; and, in such case, are followed only for the purpose of exploration.

The vein rock is sometimes quartz, but usually a white porphyry, which is often much decomposed. The veins have often a symmertically banded structure, with regular seams of ore, pink carbonate of manganese, blende, quartz, etc. Near the surface, the carbonate of manganese is changed into the black oxide. Sometimes the veins are simple fissures in the country rock, containing galena mixed with pyrite and blende, and without gangue.

The country rock is hard, dark-blue argillite, with beds of sandstone, etc. The strata are sharply folded, the general direction of the axes being north and south, or a little to the east of north. The dips are steep, 45° to 70° toward the east and west.

With these stratified rocks are associated large masses of a white porphyry, similar to the rock filling some of the veins. These apparently occur at intruded masses or dykes, with an east and west direction parallel to the strike of the veins, and across that of the sedimentary rocks. Ore-bearing fissures are found in these masses of pyrphyry, as well as in the stratified.

The richness of the ore is not known, as it is bought from the mines in the form of nearly or quite pure galena, which has been separated from the gangue and the sulphides by washing: This washed ore yields, in the furnace, about sixty per cent of lead.

The mines employ at present about four hundred persons, including officers and workmen; men, women and children. The men earn about eight cents per day, and the women five.

The product for 1874 was about one hundred and five tons (2,000 lb) of lead. This is below the average, which, in past years, has been about one hundred and thirty tons.

The lead contains 0·075 to 0·1625 per cent of silver, which is separated at the Kagoyama smelting works.

These mines are admirably managed, and apparently with great economy; but in spite of this the profits are very small; and indeed, were it not for the necessity of supplying the Kagoyama works with lead, it is probable that the mine would be abandoned.

Yurap Lead Mines.—Yamakushi kôri, Ibori Province, Yesso. In the course of my work for the Geological Survey of Yesso, I spent some time at these old mines. It was intended to make a careful survey of the region, but the work was interrupted by cold weather, and was not afterwards resumed.

The lead deposits of Yurap bear a striking resemblance to those of Daira. The country rock are dark blue, slaty rocks and quartzites, much folded, and having a general north and south strike. The stratified rocks, like those of Daira, are traversed by small veins and large dykes of a white porphyry, having an east and west direction. The ore-bearing veins are found both in the quartzite and in the porphyry, and are filled with the same minerals as at Daira—galena, blende, copper, pink carbonate of manganese, quartz, etc. These minerals are here, also, sometimes symmetrically arranged in seams within the vein. Veins containing only quartz and ore, and without gangue rock, complete the resemblance between these and the Daira deposits.

These mines have been abandoned for a number of years; and, at the time of my visit, I could find no one who was familiar with the old workings. The old stopes which I examined had been exhausted, and I saw little or no ore. Others, who visiied these mines at an early date, report that they saw ore bodies a few inches to a foot thick.

From the very remarkable similarity between these veins and those of Daira, it is probable that the Yurap mines could be worked, should a necessity here arise for a supply of lead. In view however, of the fact that labor is much more expensive in Yesso than in Nippon, it is also probable that the profits would be even less than at Daira, though the works should be conducted on the most approved methods,

Other deposits of lead occur in Yesso, but none of importance. At one place the deposits closely resemble those of Daira and Yurap, but the veins are small and not workable.

Towada lead mine—Akita ken. This mine was opened some years ago by the Mining Office, with the view of obtaining a supply of lead for the smelting of the Kosaga silver ore. The explorations had, at the time of my visit, revealed no large bodies of ore.

A few fine specimens of galena, since divided among the museums of Tokio, constituted, in fact, the total product of the mine. I have lately been informed that this mine is now paying expenses. Larger bodies of ore, therefore, have probably been discovered.

——— Lead Mine—Yeichi (?) kôri Shiga ken. The following notes concerning this mine are condesed from Mr Gowland's description‡‡.

The vein is large and wide, but is chiefly filled with a blue, shaly material, through which the ore occurs in thin, straggling seams, and in irregular pockets, associated with similar seams of calc-spar. The vein has a steep dip; its course, however, and the direction of the dip are not stated. The country rock is a silicious shale, much broken up and decomposed near the surface.

The ore is galena, associated with iron oxide, magnetic and arsenical pyrites, mispickel, and, sometimes, copper pyrites. The ore is poor, yieding, in the furnace, but four or five per cent of lead. Small quantities of purer galena are sometimes found. A sample of ore of this description, from a seam ten inches thick, gave Mr Gowland, by assay, 69 per cent of lead, and 125 oz of silver to the ton. This yielded the Japanese smelters but 40 per cent of lead.

** Trans. Asiat. Soc. of Japan, vol III, part I, p. 87 et seq.

†† Mines of Japan p. 25.

‡‡ Quoted by Mr. Plunkett, Mines of Japan, p. 25.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

The mine is worked by levels driven into hill-side, and is drained in the usual manner. The workings are very irregular. Gunpowder is used only in hard rock. Mr Gowland does not state the yield of the mine, but it is probably not large. The lead produced contains eight per cent of silver, so that the mine should be regarded as one of silver rather than of lead.

(To be Continued.)

REUTER'S TELEGRAMS.

[SUPPLIED TO THE "CHINA MAIL."]

(Viâ Suez.)

London, 15th March, 1877.

Russia has put forth fresh proposals for collective action on the part of the Powers, who were represented at the recent Conference.

Montenegro still persists in the demands she put forward as a basis of negociations.

Mr. Macleod has been appointed Acting Governor of the Straits Settlements during the absence of Sir W.F.D. Jervois in Australia.

LONDON, 16th March, 1877.

The Porte has rejected the conditions of peace laid down by Montenegro.

General Ignatieff is now in London.

The appointment of Mr. Macleod to be Acting Governor of the Straits Settlements is contradicted. Lieut.-Col. A. E. H. Anson, the present Lieut.-Governor, will administer during Sir W. Jervois' absence.

ARRIVAL OF THE FRENCH MAIL.

(Strait Times Extra.)

Berlin, 23rd Feb.—The German Parliament was opened to-day by the Emperor in person, who, in a speech from the throne, said that the concert among the European Powers on the Turkish Question justified a confidence that peace would be maintained between the Powers, even supposing that the Porte should fail to execute the reforms promised, or that the negotiations for peace should end in failure. His Majesty said that the interests of Germany do not prescribe any finite course to be followed in the Eastern Question, but that she will continue her efforts for the maintenance of European peace and the protection of the Christians in Turkey.

London, 24th Feb.—Mr. Hardy has issued the army estimates for the coming year, giving a total of £14,500,000 sterling, which shows a decrease of £740,000.

Constantinople, 25th February.—The peace negotiations between Servia and Turkey have resulted in a favourable issue.

St. Petersburg, 25th February.—The rumours in circulation that the crossing of the River Pruth by the Russian army was imminent, have been denied here. The measures which the Russians will eventually adopt towards Turkey are dependent on the replies which the Powers will send to a circular issued by the Russian Government on the 4th of February, and the course that events may take at Constantinople.

Constantinople, 26th February.—Terms of peace between Servia and the Porte have been arranged.

Constantinople, 26th February.—The Shah of Persia has assured the Porte that the massing of his troops on the frontier is simply to punish the Turcomans. The basis of peace negotiations between Turkey and Servia is the *status quo ante bellum*, and the evacuation of the Servian territory by the Turks twelve days after the armistice ends. No formal treaty has been drawn up; but Prince Milan receives a new firman from the Porte. Negotiations for peace have been opened between Turkey and Montenegro.

London, 26th February.—The decrease in Mr. Hardy's army estimates is due to nominal credit being taken for the whole payment by the Indian Government for the British troops serving in India.

Constantinople, 27th February.—The armistice between Turkey and Montenegro has been prolonged for twenty days pending peace negociations.

St. Petersburg, 27th Feb.—At a Grand Council which was held yesterday, the Czar presiding, and General Ignatieff being present, it is asserted that it was decided to demobilize the Russian Army when Servia and Montenegro had signed the peace with Turkey.

In the House of Commons, Mr. Bourke, replying to a question, said that neither the Government nor Count Schouvaloff had received anything confirming the report published by the *Times* of yesterday, that the Russians had decided to demobilize their army when Servia and Montenegro had signed terms of peace with Turkey.

Belgrade, 28th Feb.—At the sitting of the Servian Skaupchtina to-day, the terms of peace as arranged with the Porte were sanctioned.

London, 28th Feb.—The reason assigned for the delay in replying to Prince Gortschakoff's Circular to the Great Powers in because they (the Government) are unwilling to agree to joint action or countenance the isolated action of Russia in the Eastern Question.

London, 2nd March.—The report published by the *Times* respecting the demobilization of the Russian army proves to be utterly false; neither was there any Council held as was stated. The British ironclad fleet has left the Piræus for Malta.

London, 3rd March.—The House of Commons, after a long debate, have negatived, by 170 against 56 votes, a motion to withdraw from the declaration of Paris for the abolition of privateering in time of war.

Lord Hamilton, replying to a series of questions from Sir G. Campbell, said the title of Kaiser, as applied to her Majesty in India, was Arabic and not German.

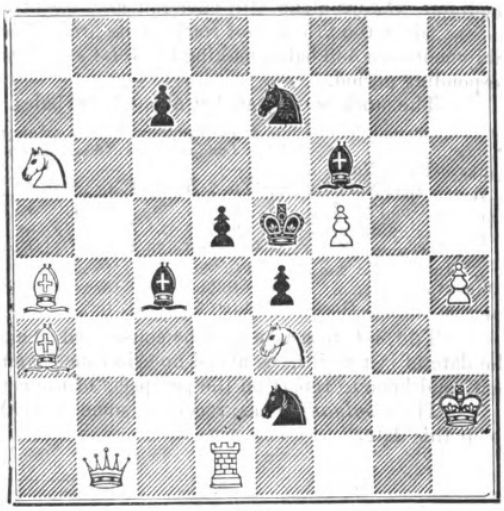
With reference to a new summer residence for the Viceroy, he said that it had already been decided to build one at Simla.

Gerald Fitzgerald, he said, has simply chosen to spend a year's leave in the Khedive's service, in carrying out Mr. Goschen's scheme for the reorganisation of the finances of Egypt.

Mr. Heddert, a Liberal candidate, after a closely contested election, has been returned for Oldham.

In compliance with the request from the Colonies, Sir Wm. Jervois, Governor of the Straits, has been ordered to Australia to advise as to the best means of improving the defences there.

The reason assigned for the British fleet quitting the Piræus is that the state of politics does not require its presence in the East.



Constantinople, 3rd March.—The elections commenced yesterday; parliament is convoked for the 12th instant.

The Cretans refuse to send deputies.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—The improvement communicated in our last report has made further progress, and in many instances prices show an advance. *Yarns:* A considerable business has been done in 16/24; for 28/32 there is a better demand, while of 38/42 only small lots have been sold. *Shirtings:* There has been a better enquiry, chiefly for 8¼ lbs. inferior makes and 9 lbs., while prices are firm. *T. Cloths* and *Drills* are saleable at quotations. Of *Velvets* fair sales are reported, and *Turkey Reds* are in moderate demand. *White Shirtings* and *Taffachelass* are neglected and nominal.

Grey Shirtings:—						
7 lbs.	38½ yds.	39 in.	per pce.	...	$1.37½ to	$1.72½
8 lbs.	38½ yds.	44 in.	,,	...	1.60 to	2.20
8 lbs. 4 to 8¼ lbs.	38½ ,,	39 in.	,,	...	1.60 to	2.30
9 lbs.	38½ ,,	44 in.	,,	...	2.00 to	2.50
T. Cloth 7lbs.	24 ,,	32 in.	,,	...	1.50 to	1.70
,, 6lbs.	24 ,,	32 in.	,,	...	1.10 to	1.25

White Shirtings:—						
60 to 64 reed	40 yds.	35 in.	per pce.	...	...	2.20 to 2.40
Turkey Reds	24 yds.	30 in.	2—3 lb.	per lb.	...	0.60 to 0.90
Black Velvets	...	...	...	...	...	7.25 to 8.25
English Drills	15 lbs.	40 yds,	30 in.	...	...	2.70 to 2.90
Taffachelass	12 yds,	48 in.	...	...	...	1.70 to 2.15

Yarns.—

No. 16 to 24	... ...	per picul...	$29 75 to 32.50
No. 28 to 32	... ...	per picul...	$30.00 to 34.00
No. 38 to 42	... ...	per picul...	$34.00 to 39.00
Reverse Twist	... ... 16-24 ...	,, ...	

Woollens.—There has been rather a better feeling in this market since our last, and a fair business in *Mousselines de Laine* at advanced rates, as well as in *Army Cloth* and *Blankets* for Government requirements, has been done. There existed, also, some enquiry for *Black* and *Coloured Orleans*, but the present low rate of exchange ruling renders prices very unsatisfactory.

Plain Orleans	... ...	40—42 yds.	32 in.	...	5 50 to	7.00
Figured Orleans	... ...	29—30 yds.	31 in.	...	4.25 to	5.25

Union	... ...	...54 in. to	56 in.	...	0.60 to	0.75
Blankets, scarlet & green	6 to 8 lbs.	...per lb	...		0.39 to	0.45

Sugar.—There has been no special change to note since our last. The estimated stock is 12,000 bags, and in view of the moderate receipts rates keep firm.

Sugar:—Takao in bag	... ...	per picul...	$4.42½
,, in basket	... ...	,, ...	$4.20
Taiwanfoo in bag	... ...	,, ...	$4.25
do. in basket	... ...	,, ...	$4.10
China No 1 Ping-fah	... ...	,, ...	$7.60 to $7.90
,, No. 2 Ching-pak	... ...	,, ...	$7.00 to $7.50
,, No. 3 Ke-pak	... ...	,, ...	$6.40 to $6.80

China No. 4 Kook-fah	... ...	per picul...	$5.90 to $6.20
,, No. 5 Kong-fun	... ...	,, ...	$5.40 to $5.90
,, No. 6 E-pak	... ...	,, ...	$4.70 to $5.20
Swatow Brown	... ...	,, ...	$3.60
Daitong	... ...	,, ...	$3.70
Japan Rice	... ...	,, ...	$2.00 to $2.15
Kerosene Oil	... ...	,, ...	$4.40 to $4.50

Kerosene Oil—We have no change in quotations to report, at which also there are but few transactions. The *American Lloyds* arrived from San Francisco yesterday with 8,000 cases.

EXPORTS.

Silk.—A fall in the rate of foreign exchange, and telegrams reporting a better feeling at home, induced an active demand at the beginning of this fortnight. Prices for all good Hanks advanced at once $30 to $40; but soon after, upon the receipt of discouraging advices, receded to the rates quoted below, which for the present are nominal. With the exception of a very few parcels, all the Hanks left are below the standard of good medium. Oshius alone still offer fair assortments. They are much pressed on the market at declining prices.

Since the 9th instant settlements are 325 bales of Hanks, and 175 of Oshiu sorts, Echizen and filatures. Shipments are 538 bales, making the total export since 1st July 20,105 bales against 12,037 last year for the corresponding period.

The stock is estimated at about 1,500 bales.

	At Exchange 4/1 in London.		*At Exchange 5.15 at 6 m.s. in Lyons.*	
Hanks.—Extra No. 1	—		—	—
,, Best No. 1 & 2	$760 to 780	27/4	to 28/	76 to 78
,, Good No. 2	$720 to 750	26/	to 27/	72 to 75
,, Medium No. 2½	$680 to 710	24/7	to 25/8	68 to 71
,, C'mon. No 3	$640 to 660	23/3	to 23/11	64 to 66
,, Inferior No 4 & 5	$570 to 620	20/11	to 22/7	58 to 63
Oshiu—Best	$680 to 700	24/7	to 25/4	68 to 70
,, Medium to Good	$550 to 650	20/2	to 23/7	56 to 66

	At Exchange 4/1 in London.		*At Exchange 5.15 at 6 m.s. in Lyons.*	
Hamatski No. 1 & 2 noml	$470 to 500	17/6	to 18/6	48 to 51
,, No. 3 & 4 ,,	$420 to 460	15/9	to 17/2	43 to 47
Kakeda—Extra	$760 to 800	27/4	to 28/8	76 to 80
,, Best	$710 to 730	25/8	to 26/4	71 to 73

Echizen	$420 to 450	15/9	to 16/9	43 to 46
Filature Silks nominal	$800 to 930	28/8	to 33/2	80 to 92

Tea.—Our season may be considered as closed, and as the few transactions which have taken place since the date of last mail issue afford no criterion for market quotations, we therefore withdraw the same for the present, and hope to report on the prospects of the coming crop in our next mail issue.

The *Coulnakyle* has received some 18,000 lbs. from this port, and may be expected to leave Kobe about this date.

EXCHANGE AND BULLION.

Exchange.—Sterling rates have been very unsteady during the past week but there has been more business doing, especially in Bank Bills.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s. 0½d.
,, Bank Bills on demand	4s. 11½d.
,, Private 6 months' sight	4s. 0¾d.
On Paris—Bank Sight	4.95

THE GREATEST
WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which coutains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with thename and address of the person bv whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

At Niigata, on the 29th March, the wife of JAMES TROUP, Esq., H. B. M. Vice-Consul, of a son.

MARRIAGE.

At Christ Church, Yokohama, Japan, April 2nd, 1877, by the Rt. Rev. C. M. Williams, D.D. Bishop of Yedo, assisted by the Rev. Wm. B. Cooper, B.D., and the Rev W. F. H. Garratt, M.A., the Rev. CLEMENT T. BLANCHET, B.D., of the American Episcopal Mission, Tôkiô, Japan, late of the Diocese of Illinois, and Miss ANNIE VAN NESS, eldest daughter of ELLSWORTH P. MALTBY, Esq., of Albany, New York.

Notes of the Week.

The past week is singularly barren of any news from the South, the increased severity of the censorship of the Native Press excluding almost every item of intelligence, with regard to the progress of the war, from their columns. As we remark elsewhere, several issues have appeared with blank spaces or dummies, showing where the red pencil of the presiding Rhadamanthus has struck out discouraging telegrams. The news that we published relative to the attack on Fukuoka was correct. We see that it is now stated that the town was retaken by the Imperialists, and the attacking party driven out. We have no means of verifying this report. Whether Kumamoto has fallen or not remains a mystery. We believe the so called telegram from General Tani to be altogether a fabrication. It is most amusing to be told now that the Government "would rather prefer to hear that Tani had sallied out from his post, and left it without defence, than otherwise," and "that the loyal general might make Saigo a present of it, to the public advantage." This is making the best of it with a vengeance. Perhaps the Government may by and bye, think it rather ,a "public advantage" than otherwise to make Saigo "a present" of Kiushiu. It may then possibly occur to one or two of its members that the country at large would be singularly benefited by their withdrawal from an Administration which their presence involves in the most serious and compromising charges. Until this last idea shall have been received and acted upon, we fear that there will be no permanent peace for one of the fairest, but one of the most unquiet of the world's fair lands.

There was once a man who imagined that he was possessed of the genius of a Quintin Matsys, and that it would benefit the world at large if he should immediately proceed to the development of his powers. Fired with ambition he at once set about the forging of a noble horse-shoe; not a great work, certainly, as we are accustomed to estimate art productions, but it is ever the characteristic of self-imagined genius to mistake its puny and worthless efforts for world-stirring labours. But alas! conceit and enthusiasm are not always the foundation of success, and so our poor tinker discovered to his chagrin and disappointment, for beat the iron how he would, he utterly failed to produce anything resembling the object of his ambition. Still he would not be altogether foiled. "If I cannot make a horse-shoe," he cries, "I can manage to make a nail," and forthwith sets about his self-imposed task. Again after repeated trials he is compelled to give up the attempt. The nail is no easier than the horse-shoe. Still he is determined that all the expenditure of time and material shall not be wholly barren of result, however poor. Taking the hot iron in the pincers, and plunging it in the water trough, he exclaims as he sees the clouds of vapour that arise, "If I have failed in making everything else, at least I have made a *fizzle!*"

We dedicate this little tale to the *Tokio Times*, and feel convinced that it will see its application without further remark on our part.

The censorship of the Japanese press may for aught we know to the contrary, strain at gnats, but it is very certain that on a recent occasion it was compelled to ingulp a particularly large camel. We can imagine that while smarting under the annoyance of having merciless excisions made in the columns of their issues of the 4th instant, the editors of the *Nichi Nichi Shimbun* and *Mainichi Shimbun* must have chuckled with a bitter pleasure at the frightful revenge they were enabled to consummate, by issuing the paper with blank spaces where the unfavorable telegrams or obnoxious truths had stood. The *Akébono Shimbun* of this morning has again had most serious blanks left in its columns, while the *Kinji Hiôron Shimbun*, a weekly paper, which was unfortunately not reviewed until after its entire issue had been printed, has had to suffer the removal by the scissors of a page and a half. We should strongly recommend the Government, if it wishes to silence speculation as to what is transpiring, to lose no time in having a clause added to the press-laws which shall make it especially culpable for any newspaper to issue dummy columns. The public mind is naturally of an inquisitive turn, and it really must not be blamed if from certain auguries it draws ominous conclusions.

It is singular that the censors of the Press, who seem as many eyed as Argus, should have allowed the insertion of such an article as that which we translate from the columns of the *Hochi Shimbun*. If it can knowingly permit the appearance of such expression of opinion it surely might afford to be a little less severe on reports from the seat of war. Though the meaning is slightly "wrapped up" it is the simplest reading

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

between the lines. Three of the translations that we give today are well worthy of careful perusal and in spite of much enforced servility of expression, show a straightforwardness of reasoning not too often found in the native journals. The fourth is an optimist view of the state of affairs in the South.

We take the following paragraph from the London "Times" of the 16th February

JAPAN.

(FROM OUR OWN CORRESPONDENT.)

Paris, February 14.

A telegram which arrived here last night from Japan announces another insurrection of the Sarmerais. This time it is in the turbulent Satsuma clan that the rising has occurred. It cannot, however, be regarded as serious, for the reason that neither Shimadzu Labouro, nor Sags, nor Murata (the great Satsuma leaders) has taken part in it. On the contrary, they seem to disapprove it altogether. The Government can now absolutely rely upon the Army, which has altogether ceased to be clannish, which has become purely national, and which has been well drilled and instructed by the French Military Mission.

Surely such errors as these are somewhat inexplicable in a journal like the "Times." As it has evidently derived its information from the Japanese Legation in Paris, it would not have been very difficult to have made the announcement correct and comprehensible.

We again have the privilege of publishing a letter from A.Z. on the Currency question as well as one on the same subject from another correspondent. In acknowledgement of his communication, we can assure A.Z. that we look upon the thorough ventilation of the question as most interesting and important, and that we trust he will favour us with his views in our next issue in accordance with his kind suggestion. Next week we shall take occasion to review the whole matter. We are sorry to be compelled to admit that our correspondent's complaint of the treatment he received last week at our printer's hands was just. On the part of that functionary, and his attendant imp, we offer our profound apologies.

We are glad to see that the appeal from the appointed committee for the Shantung Famine Relief Fund has been well responded to by this community, as the Honorary Treasurer announces the receipt up to date of $2,962.50, and will doubtless receive yet further donations. Foreign residents in China are doing their utmost to afford the relief which is so urgently needed, and it is comforting to know that the contributions from this port will not be frittered away in the same absurd manner as was the fund subscribed for the sufferers by the last great fire in Tôkiô, but that care and discrimination will be used in disposing of the charity, so as to afford the maximum of relief to the poor starving creatures who so sadly need it.

A fire broke out yesterday morning at Kanda, Tôkiô, at two o'clock and destroyed over one thousand houses. No loss of life is reported as having occurred, though it is known that many serious accidents happened.

From the "Japan Mail Daily Advertiser."

Tuesday, 3rd.

From the *Chôya Shimbun.*

A desperate struggle between the Imperialists and the insurgents took place at Uyeki on the 26th instant, but the result was indecisive.

A special Court has been appointed to try Oyama, the ex-Governor of Kagoshima *ken*, for alleged complicity in the rebellion, which will be presided over by Mr. Tamano, a Judge of the second class, assisted by Mr. Iwaya, a Judge of the sixth class. The Minister of Justice will himself be present during the trial.

From the *Nichi Nichi Shimbun.*

The *Okurasho* have paid over the following sums to the Army Department to meet the expenses of the Satsuma expedition:—First payment 5,722,200 *yen*, second 274,300 *yen*.

From the *Akébono Shimbun.*

There is a rumour that about two hundred *samurai* of Fukuoka *ken* (Chikuzen) banded together to raise a disturbance. They succeeded in interrupting telegraphic communication, but twenty of them, however, have already been arrested.

From the *Chôya Shimbun.*

Since the 27th instant several engagements have taken place between the insurgents and the besieged troops in Kumamoto castle. On the 28th instant there was a severe fight in which the insurgents were successful in the morning, but in the afternoon the Imperialists repulsed them and came off victorious.

Yesterday we were ordered always to submit a copy of our newspaper to the Bureau of Police; and as we are not allowed to publish obstinacy, rendering it most inconvenient (!) for the Imperialists to make a sortie.

Major Murata has done a great deal of execution with his rifle, and General Kirino is said to have been killed by him.

From the *Hôchi Shimbun.*

A telegram which arrived from Nagasaki at 2.20 p.m. on the 30th ultimo, states that on the 26th the second division of the Imperial Army was divided and made a simultaneous attack on the rebels at the two positions they occupied at Ogawa and Isagogawa, from which places they drove the insurgents. The latter attempted to fall back on Hitoyoshi, but were prevented doing so by the Imperialists.

From the *Mainichi Shimbun.*

A sharp engagement took place in the neighbourhood of Waifu and Torinosu on the 30th ultimo. A telegram which arrived at Tôkiô at 7 a.m. on the 31st ultimo announces that an attack in force was made upon the insurgents at Yashiro, when the Imperialists were completely successful. The rebel Commander Kodama was killed, and several pieces of artillery and some small-arms were taken by the Imperialists.

The insurgent army beseiging Kumamoto has been reinforced by 5,000 men, at the two positions the rebels hold at Tsuboi and Sendangatake.

[There is a rumour that Kumamoto has been taken by the rebels, but nothing to this effect as been published as yet by the native papers.—Ed. *J. M. D. A.*]

From the *Osaka Nippo.*

Some reforms are to be made in the government of Kagoshima *ken*. New officials are being appointed, none of whom, however, are Satsuma men.

Wednesday, 4th.

The effect of the new regulation that all native newspapers are to be examined by the police before publication is permitted is such, that the *Mainichi Shimbun* of this morning has been issued with a blank space where the leader should have been, and several other blank patches which had originally been filled with news from the South. All this is ominous!

There was no regular issue of native newspapers yesterday, but we take the following items from an extra issued by the *Chôya Shimbun.*

On the 31st ultimo His Majesty the Mikado left Kiôto for Osaka, where he reviewed the troops of the garrison, and afterwards visited the wounded from the seat of war at present in the hospital of that city.

A telegram which left Konoha at 10.30 p.m. on the 1st instant announces that Kichiji and Kodome have been taken by the Imperial forces.

A telegram which was despatched from Nagasaki at 12.40 p.m. on the 2nd instant announces that on the 30th ultimo the town of Matsubashi was taken by the Imperialists.

Lieut.-General Soga left Kobe on the 29th instant for Fukuoka.

Some fifty officials have been selected from the *Naimusho* and the *Okurasho* who will shortly be sent to Kagoshima.

From the *Osaka Nippô.*

Saigo is at Kawajiri and is said to be unwell, as he is suffering from *kakke.*

Thursday, 5th.

News from an undoubted source has been received of an attack on Fukuoka on the night of the 28th ulto., or rather at daylight on the 29th, which seems to have been a serious affair, and likely to create a strong diversion in favour of the insurgents. From the few particulars that we have been able to learn, it seems that this important town, which, at the commencement of the outbreak was made the head quarters of the Imperialists, was left by them protected by about four hundred policemen only, though it is a large place and a castle town. On the nights of the 27th and 28th ulto. a large band of *samurai*, the number of which cannot positively

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

until after it has been examined and approved, our time of issue to our readers will therefore be later than usual.

From the *Akébono Shimbun.*

The insurgents have destroyed the bridge at Shirakawa, and have constructed a fortress which they are defending with great be stated, consisting principally of Saga and Akizuki men—though members of many other clans had joined—managed secretly to enter the town. At the same time a steamer succeeded in running in under cover of the darkness, and in landing a number of men. At daylight an attack was made, and after some hard fighting the castle was taken by the *samurai.* It is reported that the killed and wounded on both sides amounted to over four hundred. Attention had been called to the unprotected state of the place, but it was stated that no danger was apprehended, as Fukuoka was so far removed from the actual seat of war.

With regard to the report that a body of women had joined Saigo's army, it is generally believed that a number have gone into the field to act as nurses to the sick and wounded.

The offices of the *Gaimusho* (Foreign Office) were yesterday removed to Hamagoten.

From the *Hôchi Shimbun.*

The following notification has been issued by the Acting Governor of Kumamoto *ken.*

"To the *Kucho* and *Kocho.*

It is hereby notified that information must be given of those who have relieved the distress of any people who have suffered loss through the rebels; those who have deposited money with the local authorities for the relief of such sufferers, and those who have captured any insurgents or given such information as led to their capture, in order that all such may be rewarded. Information must also be given of those non-combatants who may have been killed or wounded, since the war commenced, either by the rebels or unintentionally by the Imperialists, in order that the families of the killed and the wounded themselves may be assisted if need be. You are therefore to be diligent in finding out the same and report the result of your enquiries to the branch office of the *Kencho* at Takasc.

(Signed) ISHII SHOICHIRO,
Gon-rei of Kumamoto *ken.*

The rebels have their hospitals at Kawajiri. There are forty-two buildings of various sorts used for the purpose, and in the larger ones upwards of one hundred and fifty wounded are accommodated, but these hospitals are being gradually removed to Sadowara on account of the continued advance of the Imperialists.

About one hundred surgeons belonging to the province of Suwô have been sent to the seat of war, and ten thousand coolies have been engaged in the same district for Army purposes.

From the *Mainichi Shimbun.*

Saigo's wife is a stronger minded woman than is ordinarily met with, and any report of failure on the part of the Satsuma *samurai* excites her resentment at the incapacity of her clansmen, and at the same time urges her to prompt action. So much so, that she has formed a corps of about one hundred Amazons under her own command, her daughter undertaking the necessary commissariat duties. These women are all dressed in a white uniform and are armed with halberds and spears.

From the *Akébono Shimbun.*

The Imperial forces from Yashiro have advanced as far as Ônohara (about 1 *ri* east of Udo) where they captured about ten batteries without any resistance whatever being offered on the part of the enemy.

Friday, 6th.

The Mitsu Bishi Company's steamer *Tokio Maru* will be despatched for Shanghai on Sunday next, April 8th, at 4 p.m., being a day in advance of the time of departure previously advertised.

On the 4th instant at Yokohama, upon the motion of Mr. Ness, before H. S. Wilkinson Esq., Acting Law Secretary of H. B. M. Supreme Court for China and Japan, Mr. R. J. Beadon of the Inner Temple, barrister-at-law was, upon an order of the Chief Judge, admitted to practice in H. B. M. Supreme Court for China and Japan. Mr. Beadon is attached to the Kobusho, as legal adviser to the Government.

From the *Hôchi Shimbun.*

A telegram which was despatched from Kiôto at 9.30 p.m. on the 2nd instant announces that an order has been sent to the Commander-in-Chief of the Imperial forces and others, that the punishment of the rebels of Satsuma must be the same as that inflicted on those guilty of insurrection at Saga. Such being the case, the Commander-in-Chief has been invested with the necessary authority.

Another telegram from Kiôto on the same day says that a report arrived at Kurume on the 31st ultimo that about two hundred of the insurgents were fleeing towards Tashiro, upon which a force comprising several companies of troops and some sixty policemen were immediately despatched from Kurume, and met with the rebels at Otokuma-mura in Chikugo. The Imperialists made an immediate attack, and quickly routed the rebel force, capturing the insurgent commander and eight of his men, and killing about fifty others. The ammunition of the rebels also fell into the hands of the Imperialists.

A telegram from Nagasaki on the 4th instant announces that the Imperialists have taken possession of Udo and Kushima, and are now within three *ri* of Kawajiri, the headquarters of Saigo.

Another telegram which was sent from Kiôto at 5.25 on the 23rd instant announces that the insurgents of Kodome made a sudden attack on the previous night, but were repulsed by the Imperialists. Heavy guns were heard in the neighbourhood of Kumamoto. An attack was made on the same day upon the insurgents at Tarumi-mura and Heta-mura.

The insurgents have commenced to make large guns from trees cut down in the grounds of temples in the district.

Another telegram from Kiôto at 11 p.m. on the 26th instant states that Beppu and Hayami left the rebel forces near Kumamoto and returned to Satsuma for reinforcements, and on the 1st and 2nd instants succeeded in enlisting 1,500 men, who were immediately sent to the front.

Two younger brothers of Shimadzu Saburo are about to visit the capital. They will embark on board the *Daiju Maru,* the *Teibo Kan* and *Hôshô Kan* having been despatched from Nagasaki as an escort.

From the *Akébono Shimbun.*

Three battalions of newly enlisted men are now being drilled at Tôkiô, and will shortly be sent to the South.

Saturday, 7th.

The cherry blossoms at Uyéno, Tôkiô, are now budding and, together with those at Mukojima, will be in perfection in about a week's time.

The M. M. Co.'s steamer *Tibre,* with French mails on board to the 23rd February, left Hongkong at noon yesterday, the 6th instant.

The ponies offered for sale at auction by Mr. Cope yesterday afternoon were sold as follows:—*Sirocco,* $19; black Japan griffin, $16; bay Japan griffin, $10; *Grayling* being bought in at $65. There was not so much interest evinced in the fate of the China griffins, as might have been expected, but on the whole they commanded fair prices. The first offered was a strongly built bay pony, and this, together with the last on the list, a thick-set iron-grey, was knocked down to Mr. A. Jaffray for $34, the grey fetching $40, while a big white pony of the sheep breed was bought by Mr. Davis for $28. Nos. 3 and 4 commanded some brisk bidding. The spotted pony was evidently a favorite, and the purchaser was fortunate in securing him at the low price of $112, while Mr. Kirkwood must be congratulated on having obtained a valuable addition to his stable in the well shaped white pony he secured at the moderate figure of $62.

The Agent of the Great Northern Telegraph Company informs us that the Vladivostock cable was repaired on the afternoon of the 5th instant, so that the Russian line is now in perfect order.

Rumours of all sorts have been flying about as to the condition of the Kumamoto garrison, and no definite news has been allowed to appear in the native papers. Now, however, we are favoured with the following, published by the *Hôchi Shimbun* and purporting to have been received from General Tani, commanding that garrison, but no particulars at all are given as to how the despatch was sent, by whom received, nor any reason given for the extraordinary delay in its publication.

"A telegram from Kiôto on the 4th instant announces that the following report from Lieut-General Tani, commanding Kumamoto castle, dated the 20th of March, has been received:—So far we have been successful. The insurgents only number about eight hundred, and for the past day or two we have been engaging only with artillery, as the insurgents do not come close to us but keep at long range distance. The troops of the garison are firm, and it is impossible for the rebels to force their way into the castle, and fortunately we have plenty provisions. We feel that the result of this war depends upon this garrison. The rebels seem to be waiting for our provisions to give out,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

but we look to the Imperial troops to come to our aid. It seems that fighting is taking place on the Tawarazaka, for reports of heavy guns frequently reach us. If the enemy at Tawarazaka be beaten the insurgents generally will be in a state of despair, I therefore hope that three battalions will be sent from the coast towards Takahashi with all despatch, as the insurgents do not number many in that quarter. I think it would be well to send men-of-war to Okunegawa and cut off the transports of the insurgents."

From the *Chôya Shimbun.*

Mr. Tanaka Sutezô, the editor of the *Bummei Shinshi*, was, on the 5th instant, sentenced to imprisoment for three months for violating the 12th article of the Press laws, by publishing an leader in the twelfth number of that paper on the assassination of the Ministers in Turkey.

The number of the insurgents who have already been killed and wounded amounts to upwards of four thousand.

From the *Nichi Nichi Shimbun.*

A telegram which was sent from Kurume at 2.40 p.m. on the 5th instant, announces that on the morning of the 30th ultimo the Imperialists advanced as far as Akeshikama-mura, where they encountered an insurgent force and an engagement ensued, with the result that by sunset the latter were put to flight. On the following day the rebels were pursued into the province of Hizen. The main body of them made ther way to Akidzuki leaving about thirty dead behind them, but the *samurai* of Akidzuki would not afford them such assistance as they evidently expected. Another engagement took place on the 2nd instant when the rebels were completely beaten, their leaders Kato and Murakami, together with over one hundred and fifty of their body, having been taken prisoners.

E. Massais, M.D.
Surgeon-in-charge.

We are extremely sorry to record an accident which befel the fine steamer *Loudoun Castle* yesterday morning. It seems that just as she was preparing to cross the Woosung Bar, a collision took place between her and the *Macgregor*, which was coming down the river, which resulted very disastrously for the *Loudoun Castle*. Her rail, davits, steering gear, etc., were all considerably damaged, and after the crash she added to her misfortunes by going ashore. The *Macgregor* appears to have escaped comparatively unscathed, but the *Loudoun Castle* was compelled to commence unloading without loss of time. It was not long however before she was released from her uncomfortable position, and she came up the river this morning. The damage she has sustained is estimated at some few thousands of taels, and she will be docked without delay. It is a most unfortunate finish to the splendid run she made from London, but not so serious as was at first supposed.—*Shanghai Courier.*

EQUO NE CREDITE, TEUCRI.

WHEN either nations or individuals fall out, and the quarrel is carried to such lengths that the whole land suffers or the entire houshold is rendered unhappy by the selfish disputes of the two parties, it is time for those whose wellbeing and comfort are at stake to interfere, and to endeavour, by such means as seem most suitable, to put a stop to the ungenerous strife. It seems to us that the disputes concerning the Race Course have at last reached a length when some action on the part of the community that shall put an end to the unseemly struggle for power between the rival clubs is warranted.

Although the Foreign Ministers are not unanimous in their conclusions regarding the rights of the community to govern the course, and for want of any definite settlement of this question, the powers of its members are somewhat curtailed, they still retain, in addition to the moral support which they can exercise, sufficient influence over racing affairs to be able practically to control them. It is quite within their power to give or withhold their subscriptions, except under the conditions that racing shall be open to all comers, who must agree to abide by rules drawn up by the community or its nominees. The latter should be selected for their general ability, and not, as frequently happens, because they are personally popular or have pledged themselves to carry out a particular policy. If the community, therefore, is of opinion that racing matters have not been conducted as they should be, we maintain that they should exercise their power, and resolutely decline to support either faction unless satisfied that steps will be taken to place racing matters on a permanent footing by the carrying out of some amicable arrangement. Unless this be its object no club can be said to fairly represent the community. What the community demands is an association that is willing and able to carry out the duties imposed upon it by the substantial support afforded to it by the public. Although at present each faction has its supporters, there is doubtless a large section of the community who are totally unrepresented, but who at the same time believe that they have certain just rights, in defence of which they are willing to stand up. They are opposed by those who bear them and their views no hostility, but who obstinately cling to old customs for old customs' sake. Owing to the want of interest in racing matters displayed by a large portion of the public, they are not strong enough to enforce their views. It cannot be denied that the Y. R. C. have taken advantage of these elements of weakness, and acted in many ways too despotically. They were entrusted with the interests of the residents and it is time that they should be called upon to give an account of their stewordship. They cannot in the present divided state of public opinion be regarded as the representatives of the community. Their strong prejudices, stubborn adherence to old habits, and the many defects in their constitution, renders them unfitted for such representation, and it would solve many difficulties if they would retire in favour of certain nominees who should be put forward by the community.

Original from UNIVERSITY OF CALIFORNIA

We do not claim for the Association any more virtues than are possessed by the older body. Both seem to be cursed with the same evil spirit of obstinacy, arising in the one from ultra-liberalism and in the other from inveterate conservatism. This is the spirit so much to be deprecated; the spirit which nurtures pitiful jealousies and foolish antipathies, forms the greatest hindrance to all improvement, and alienates from both parties the sympathies of the bulk of the community. It is this spirit which bars all possibility of union; an union that all true lovers of racing so much desire, and which, if we be not greatly mistaken, is the one thing most longed for by the majority of the members of both clubs. Is it too much to hope that an amalgamation may be brought about before the next meeting? If there be yet time, the respective committees incur a grave responsibility by delaying the calling of general meetings and taking the opinion of the members on so desirable an issue.

We make bold to state that the feelings of the greater portion of the members of both clubs have of late undergone such a change, that the union could at once be accomplished except for the personal opposition of one or two, who either lack the inclination or the ability to govern themselves, while they desire to wield authority over others. Why should the community yeld passive obedience to the will of such few? It it be really indifferent, let it decline to show any partisan spirit by refusing its support to the present anomalous state of affairs. Both fabrics must then tumble to the ground, and in their place may arise one that shall be constructed of good and sound material, and one in which all who wish to become occupants can take up their abode, and live secure of harmony and content. The present executives of the clubs wield the immediate power; they are, or ought to be, in direct contact with the public, and in them are centred our hopes and fears with respect to our rights as residents. They are backed by a very effective opinion, and if they fail to bring about an amalgamation of their respective parties, not only the members of the two clubs, but those of the community to whom racing affords interest, have a right to know the reasons of failure, and take action accordingly.

As we have previously remarked, we do not intend to imply that the Y. R. A. any more than the Y. R. C. have acted in such a manner as to fill all requirements of the community with regard to racing matters. That they have in a measure met the views of the public is evident from the large number of their followers. Is it too much to assume that what is wanting in the one club may be found in the other, and that thus an union of the two may bring about such a state of things as shall be most conducive to the contentment of the lovers of sport, and put an end once for all to such an unseemly division. That this is a consummation most devoutly to be wished no one can deny, and we would submit that, without loss of time, delegates from each side be appointed who shall calmly discuss all points in dispute, and use their earnest endeavours to bring about the amalgamation under rules that can, with no loss of dignity, be subscribed to by members of both factions.

MUNICIPAL.

THE question of the direction of municipal affairs, which has for so many years formed a stock piece that could always be brought out before a Yokohama audience with a very fair certainty of drawing moderately well, whenever any special matters of interest were wanting, has for a long time been shelved. It has recently been played as a broad farce on the Kobe boards with immense success, and owing to the efforts of the principal performer—though, like that of some low comedy actors, his performance is marked by vulgarity of the worst type—the piece seems likely to have a very extended run. We had hoped that it would be unnecessary to revive the question here, for many a long day. But alas! the necessity is forced upon us, and once again behold us rummaging amongst old musty and dusty documents, perusing addresses and replies, petitions and conventions, resolutions and dissolutions, in order that we may be able to arrive at some conclusion as to whether it is desirable that the office of Municipal director, which cost so much labour on the part of the Foreign Representatives to set up, and so large an expenditure on the part of the Japanese Authorities to maintain, be continued or abolished.

In the present case the discussion of the question is rendered necessary by a representation that has been made by the Japanese Authorities to the Foreign Ministers to the effect that, as for some time past the state of the roads and drainage, and general condition of the settlement, has rendered the office of municipal director absolutely unnecessary, it is considered advisable to abolish it forthwith, and the present incumbent, Mr. Benson, has been notified that at the expiration of three months, his services will be dispensed with. For the benefit of those of the community who were not resident at the time of the appointment of Mr. Benson, it will be necessary to make a short review of the circumstances which led to the formation of the office, and of the conditions under which the arrangement was concluded with the Japanese Government.

On the 15th of July 1867, a letter was addressed to the British and other Foreign Representatives in Japan, by a Committee of the Landrenters of Yokohama, requesting them to call upon the Japanese Government to receive back into their hands the control and management of the municipal affairs of the settlement, and to endeavour to obtain from them guarantees that the work should be efficiently done. As Mr. Von Brandt, the chairman of the then Municipal Council, stated, the condition of affairs in Yokohama was an anomalous one. It was found impossible for the Council to raise the necessary funds for improving and maintaining the roads and drainage of the settlement, supporting an efficient police force, etc., and the only course open to them appeared to be to ask the Japanese Government to assume the control. This was accordingly done, and after communication with a commission specially appointed by the Japanese, an arrangement was finally concluded, embodying the measure recommended in a resolution adopted at a meeting of the land-owners, namely; the resumption by the Japanese Authorities of their municipal duties, and the establishment of a Government office, specially appropriated

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to municipal affairs, with a foreigner at the head of it. At first a provisional arrangement was made with Mr. Dohman, of H. M. Consular Service, to assume the direction of the municipal office, but in a few months it was decided that the filling of the appointment should be settled by public vote on the part of the foreign residents, which ballot resulted in the election of the present director, Mr. Benson.

No one can deny that, looking at the results of the system, it has on the whole been fairly satisfactory. There have doubtless been causes for complaint, and we have all made the most of our opportunities and exercised to the full our privilege of grumbling. But if the Japanese authorities have at times appeared to our views sadly dilatory and procrastinating in supplying our wants and requirements, it must be remembered that most of such delays arose from lack of knowledge and inexperience, and it is but just to state that as they have grown more accustomed to the system and organization, the improvements have been more rapidly carried out, and that they have fulfilled their engagements satisfactorily and well. We do not say that everything has been done that might have been done. There are still some ugly holes and corners that sorely need looking into ; foul pools of filth and mud that are the hot beds of fever ; vacant lots that are allowed to become the dust-bins of the settlement, the play grounds of mangy curs by day, and the trysting places of amatory and kakophonous cats by night. But taking one thing with another, we have really little to complain of in the existence of offences against healthiness or comfort. It is not surprising however that after ten years of experience, the native authorities should deem themselves competent to assume the entire control of municipal affairs, and we cannot therefore in fairness find fault with them for representing that the office of Municipal Director should be done away with. It is to them a very serious item of disbursement, and in the present impoverished state of the treasury, and the pressing need that there is on the part of the Government to curtail its expenditure wherever it is possible, it is only natural that they should wish to dispense with Mr. Benson's services. It must be pointed out that when the arrangement was entered into with the Japanese Government, it was distinctly understood that it was not necessarily a permanent or unalterable one. On the contrary, as was then stated, should "experience at any future time show that its revision is desirable, it will be in the power of the Foreign Representatives, or of the Japanese Government to call for a reconsideration of the question."

What we have now to consider is this : Do we as community want a foreign municipal director? It must be conceded that the Japanese Government, though in many ways still ignorant of our requirements, is at the present time far more fitted to be entrusted with the responsibility of carrying out operations which are demanded to be undertaken for our health and comfort, then when the office was first instituted. Substantially, it is in native hands that the municipal government has actually been for the past ten years. Mr. Benson has been merely the channel of communication, the buffer between the wants and woes of the community and the native authorities. He has in many instances been most unjustly blamed for apparent neglect of important reforms, and delays that have occurred from no apathy on his part, but which have been the necessary result of the very limited authority allowed him, and the well known procrastinating tendencies of the Japanese officials. It is almost impossible for outsiders to appreciate the many difficulties that surround a position such as Mr. Benson occupies, and we think it only fair to give him every credit for the manner in which his duties have been fulfilled. We must candidly confess that if the status of a Municipal Director is to be no more than what it is; that his duties are simply to look after ground rents, advertise land sales ; arrange the beats and be chief superintendent of a force of three policemen ; if he is to have no voice or authority of decision in the most trifling matter, however necessary, but is merely to be the fetcher and carrier of requests or complaints, —without the least power to grant the one or redress the other,—between the native officials and the community, the Japanese Government is quite right in arguing that there is either no need at all to employ any one in such a position, or that a far inferior man engaged at very much less cost will answer every purpose.

But if the Japanese Government will raise the position of Municipal Director to what it ought to be, and which an important community like our own demands, it cannot afford to abolish the office, and will certainly save itself much trouble and annoyance, and probably considerable expense by permitting the duties to be carried on by a foreign official in its own pay. Were the Municipal Director invested with those powers which should in all propriety be his, his duties would be neither small nor unimportant. He should have the control, at least to a considerable extent, of the native police; the power to make all necessary repairs in roads and bridges; the entire scavengering arrangements should be under his charge ; in fact, he should be responsible for the whole supervision of the settlement, and for the expenditure of the funds set apart for these purposes. With these powers granted, his appointment is a most valuable and necessary one, and although we can scarcely expect that the cleanliness of that famous Dutch village of Brock will ever be ours, or that the time will arrive when chains of gold and jewels of price may be left hanging for weeks on our gate posts, we might be spared such abuses as the filling up of certain compounds with the fever breeding sewage of the creek, or such impudent robberies as those of which so many were the victims not very many months ago.

We are informed that a new Chinese Association is in course of being formed, to be called the Ningpo Steam Navigation Company. It is said that when the business of the S. S. N. was transferred to the China Merchants, the compradores in connection with the old company were informed that they could only be kept on, under the new régime, by each taking shares to the amount of Tls. 10,000: and this the compradores refusing to do, they have clubbed together and are going to run in opposition. We hear that they have already purchased the steamers *Pao-kong* and *Ping-on*, and that they have sent to England for three more. Such, at any rate, are the particulars given by those who seem to know.—*Shanghai Courier.*

SPIRIT OF THE JAPANESE PRESS.

Are Reforms Properly Carried Out?

("Nichi Nichi Shimbun" of April 1st, 1877.)

When one form of Government falls, and another rises in its stead, then even though the latter may leave no good measure uneffected in its admistration, there will nevertheless be found some bigoted individuals who hanker after the past;—and this is but a natural disposition. On this account did king Bu of Shū, having, through his followers, overthrown the riotous efforts of king Chiu of In, transfer the latter's people to another land. How far more is this likely to happen when old usages that have been in vogue for several hundred years back are changed, and new laws are enacted to which the people's eyes and ears are not yet accustomed! Looking at the matter in this light we find that at the present moment our Government has drawn down upon itself the hatred of the lower classes of the population, and, even though matters have eventually come to such a pass as to to necessitate the employment of well-drilled garrison troops and forces of police to chastise the people, still the latter are not so very much to blame after all. But nevertheless, if it could be shown that any existing means by which this might have been avoided were disregarded, and that the Government were not indisposed to welcome some such matter as has actually arisen, then, we cannot refrain from expressing to the Government our regret at their action.

Just consider; if the hatred of the lower classes had arisen in consequence merely of the changing of old usages and the enactment of new regulations, then should the *shizoku* of the various *Han* have been the very first to set on foot disturbances. And why so? Because, after the fall of the Tokugawa Gevernment, there have been no persons amongst whom the effect has been so terribly apparent as the *shizoku*. They have been by degrees despoiled, just as one might pluck the feathers from a chicken's wing, of their incomes which for several hundred years back sufficed to provide them, without labour, on their part, with warm clothing and plentiful food; their usual military prerogative has been ended; and they have been deprived of their special privileges (as for instance in the case of punishment for offences by *samurai*) of taking rank at the head of the four classes of the people and of using their power as they themselves pleased. Of late, by wielding the spear and lance, they acquired renown, but at the present moment they are accused as a whole of holding empty position and eating the bread of idleness. Is not this by far the most sweeping of all changes in regard to old usages! And yet, with regard to the *shizoku*, even supposing that there exist some among them who feel in their inward heart some degree of discontent, we have not as yet seen any instances of their having, on that account, stood up against the Government. For although there have at different times come to pass the disturbances at Saga, Kumamoto, Hagi, and the present one of Kagoshima, they have all taken their origin from other sources, and it needs no explanation from us to show that they did not arise merely from the changes in old usages as mentioned above. What, then, was the reason for (their remaining quiet)? Was it not in consequences of there being many persons who perceived that the state of affairs in the period of Meiji had entirely changed from that in existence prior to the period of Kei-ō; that an atmosphere of enlightened views was noiselessly and imperceptibly pervading the whole country,—and that it was not a time for accomplishing the restoration of the remnant of power of the Feudal System? For if not, no matter how intelligent a Ruler, no matter how able a Ministry might have been at our head, still had the *shizoku* twenty or thirty years ago, been brought down to their present status, would any of them, throughout the whole empire, have been quiet in retirement in far distant localities? It would merely have come to pass that all the land would, in one single morning, have been thrown into tumult. In regard, then, to the fact of the *shizoku* of the present day not being thrown into agitation on account of the changing of old usages, although this may be owing to the power and influence of H. M. the Emperor, is it not brought about by the force of events and the turn of circumstances?

How, then, comes it to pass that among the exceedingly weak and obscure peasantry, there should yet be found men who have even taken precedence of the *shizoku*, in opposing the officials within their particular local district, and in eventually causing trouble to the well-drilled and exceedingly powerful garrison troops and police forces? Why are the peasants alone unable to endure change in old usages, and why do they remain unaffected by the force of events or the turn of circumstances? This is a point concerning which we are unable to give the public any explanation.

Still, however, if we may be permitted to give outward expression to a mere conjecture, we cannot but say a word here. According to our own view, the *heimin* have not felt the effect of the changes of Meiji in like manner to the *shizoku* who thereby lost their former status,—but they have, on the contrary, recovered thereby a certain proportion of freedom and power. What, then, is the cause that leads them at times to break out into their desperate riots? There must certainly be some source for this. The matter most deserving of attention, with regard to them, is simply the fact that *the steps concerning the revision of the land tax are not properly arranged.* It is the complete changing of old usages that have been in existence for several hundred years back, that is disliked by the ignorant classes; and the officials of the administration should steadily keep their attention fixed on the object of following old customs. On this account has it been said that "He who well effects re-"forms does so by following old precedents." But nevertheless, should circumstances render it an absolute necessity, it would not do but that they should be amended. Such is the case with regard to matters like the revision of the Land-tax. For, consider a moment:—In the time of the feudal system, each of the 300 *Han* possessed its own separate regulations for the payment of taxes, some being lighter and some heavier. The fact, therefore, that sooner or later these must be revised and arranged under one general system, is one that we have never heard denied by intelligent men. Furthermore, the Tokugawa Government effected the direction of administrative matters throughout the whole Empire upon its revenue of 8,000,000 *koku* from its own special estates. When the form of Government of Meiji arrived, the feudal regime was abolished, and centralization system introduced, and the whole of the taxes from the entire country were paid in to the Finance Department. Thus, even though the expenses of the Government,—as foreign relations, too, were commenced,—were augmented from what they were in the time of the Tokugawa rule, still, if, upon a comparison of the revenues of the entire country with the expenses, it be desired that a greater or less balance on the former side should appear, it is quite according to reason that such should be effected. Again, the dues levied in the various *Han* may be better styled *heavy* than *light*. On this account it is clear that it was necessary to enact one general law for payment of dues throughout all the land and to strike an even balance between light and heavy. Now if it be desired to enact one general law for payment of dues, and to strike an even balance between light and heavy, there must be carried out the Revision of the Land-tax. And this is an absolute necesssity arising from circumstances. The revision of the land-tax is, from the very outset, a most urgent matter. But even the rules for this must, again, be determined, in regard to the cost of the land and the amount of produce, by comparative estimate. If this be submitted for the consideration of disputants in general, some of them may assert that it is better to follow the old regulations of Japan. In our own opinion, however, we fail to see the evil nature of the present existing rules. And why so? Some disputants may assert, "Take the case of a sheep; now for shearing "a sheep there are fixed rules and there may be a stated length "for the wool in a certain period; but it does not matter even if the "shearer, without strictly observing the rules, slightly exceed the "limit of growth of the wool, in the case of a healthy and strong "sheep. Nor does this occasion any injury to the animal. But "on the contrary, in the case of a weak and sick one, it is well "for a shorter quantity of wool than that provided by the rule to "be cut off. By this means can you tell a skilful shearer. Now, "our agricultural classes are simply like a flock of sheep. If, in "dealing with them, we adopt one ever-fixed rule, and levy taxes "without regard to whether each year be one of plenty or of scarcity; "such action would be the same as if a shearer, without regard as "to the condition of his sheep, were to follow but one single rule as to "length of the fleece, which would be the very height of thought-"lessness. On this account, therefore, it would be as well, in "respect to the laws of taxation in our country, to adhere to the "old usage of fixing the dues, after inspection of the crops accord-"ing to the plenty or scarcity (of the year)." This line of argument certainly possesses some fairness, and yet, should such a plan of inspection be adopted, it would give rise to unspeakable evils. It is far better, in accordance with the present revised regulations, diligently to strive to lighten the taxes, so as not to cause pressure upon the powers of the people, and by establishing one general rule for the levying of taxes throughout the whole

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Empire, to strike an equal balance between the heavy and the light.

Such rules of revision as the above being set on foot, we have not only failed as yet to perceive any evil effects therefrom, but, in those localities where permission was first granted for the revision to be carried out,—namely, Yamaguchi and Kokura,—we find that the people do not dislike the alteration of old usages dating from several hundred years back, and do not regret the expenditure of large sums raised from the people, for the measurement of land, etc.,—and furthermore, that on account of this revision they, on the countrary, feel more and more firm confidence in the Government, and dance and sing for joy. As we have relatives living in the localities in question, we are especially well acquainted with this state of feeling. If, however, we cast a glance at those places in which the plan was more lately put into operation, we find they present an appearance of great trouble, and worst of all, disturbances such as we have stated above are set on foot by the inhabitants, who thereby eventually cause trouble to the garrison troops and the police forces. What is the reason of this? We will sum up the matter in a single word; it is this,—*the measures for carrying into effect the revision are not properly arranged.*

THE POSITION OF THE REBELS.

("*Nichi Nichi Shimbun*" April 6th, 1877.)

Everybody is saying just now "The Government forces, consisting of several tens of thousands of well armed brave soldiers, have now been fighting day and night for nearly seven weeks, and nevertheless have not yet been able to open communications with the castle of Kumamoto. Allowing that the position which the rebels occupy is an immensely strong one, and that they fight with great desperation, we cannot understand how it is that their den has not yet been captured. Is it that the Government forces are not strong enough, or is it that they do not fight regardless of their lives?"

But this is a very erroneous view to take. According to the statements of one who has lately returned from the seat of war, where he has actually seen with his own eyes the positions occupied by the rebels and the distribution of their forces, the character of the warfare is such that the day on which the castle of Kumamoto and the advanced guard of the Imperial army unite, will be the day on which the rebels are utterly destroyed. Certainly it is not, as the world says, either that the Government forces are not strong enough, or that the men do not fight regardless of their lives. The reason why the rebel position has not been captured with facility is, that it is a case of desperation; the rebels strain their efforts to the utmost, and defend the magnificent position which they occupy with all their might, knowing that life and death hang upon the result. Just consider the telegrams of the last day or two. They tell us that the spirit of the rebels is much broken, that both Shinowara and Kirino, whom the old rebel Saigô looked upon as his most valuable helpers, have been killed in battle, and that the wounded are so numerous that there were forty-three hospitals at Kawajiri each containing one hundred and fifty patients, that is to say about six thousand wounded men. In proportion to the whole number of the rebels, the killed and wounded must be very numerous. The rebels always fight at close quarters, for they have very little ammunition, and charge down sword in hand, so that when they get within reach of the fire of the Government forces, they are knocked over like so many pawns on a chessboard. And when they retire, being taken in the rear they are shot down in large numbers. When the Government forces took Tabaruzaka (on the 22nd) and pursued the flying enemy to Mukaizaka, more than three hundred of the rebels were shot down, which gives an idea of the number of killed and wounded they must have had. According to the news received the day before yesterday a new levy of fifteen hundred men has left Kagoshima to fall on the rear of the Government forces which are marching to attack the rear of the rebels who are before Kumamoto; but as they have no fire-arms, they have to content themselves with swords, and it is clear that if a look-out is kept to prevent them from coming to close quarters and against night attacks, they can be shot down with small arms and cannon, so that they are not formidable enemies. One cannot help believing that before these fellows fall on our rear, the Government forces will have reached to the castle of Kumamoto and have effected a junction with the garrison, and that the annihilation of the rebels is close at hand. "So, gentlemen, you need feel no anxiety," he concludes, and his opinion seems a sound one.

PROGRESS.

("*Nichi Nichi Shimbun*," *March 23rd*, 1877.)

Tokô said to his sovereign Shiba In "I shall not live to see the day of the conquest of Go, but when it is conquered, as it surely will be, it is destined to cause anxiety to Your Majesty." Shiba In was formerly the Prime Minister of Gen, the Emperor of Gi, but he succeeded in dethroning him, and usurped his throne. He now wished to overthrow the Empire of Go in order that he might become the sole ruler of the whole of China. This was the height of his ambition, and to this end did he labour with such unflagging energy that he ultimately obtained his wish. When he had gained his object, however, imagining that he had no further cause for anxiety, he became filled with pride, and giving himself up entirely to wordly pleasures, no longer gave a thought to the affairs of his Empire or the administration of his Government. But he found that anxieties did not cease with the attainment of his ambition, for through his neglect, his power gradually decayed and faded away, and the words of Tokô were found to be true.

Now all people are well aware of the way in which the Satsuma clan have acted. They rendered excellent service in the restoration of His Majesty the Mikado, and have in consequence received from him special consideration. But on the other hand, they have aways acted in a self-willed manner, adhering to the customs of feudal times, and apparently considering themselves independent of the Japanese Government.

Saigo is the most prominent man in Satsuma. Although a man of only ordinary family, owing to his having struggled hard for the overthrow of the Shôgunate, and the restoration of the Mikado, he was appointed to the Council of State, but disagreeing in opinion with certain other members of the Cabinet, he retired to his home. For a period of four years he has been receiving his pension, and has been permitted to retain his rank. But he has never been able to control the pride resulting from his former success, and has at last risen in rebellion against the Imperial Authority. The enormous wickedness of such a crime can be forgiven neither by the Gods nor men. One after another his plans have failed, and as yet he has gained no advantage, and the day of his capture and decapitation by the victorious Imperialists must come before long.

The restoration of the Emperor to the nation was not merely the act of man, it was brought about by the will of heaven. This is proved by the fact that no sooner was the Imperial banner waved, then the rebels in Ôshu and Dewa laid down their arms before it. Ten years have elapsed since that event, and in that space of time how numerous have been the reforms. The abolishment of the *Han*, the establishment of the *Ken*, the doing away with the wearing of swords, the paying of the pensions of the *samurai* and the nobles, are the most noticeable of these changes. To these reforms there has been no forcible opposition. It is true that the Kumamoto and Hagi affairs occurred last year, but they were of trifling importance.

It is quite natural that the present Satsuma trouble should arise. Satsuma men may be called savages; they know not how to progress in civilization. They obstinately cling to old customs without observing how times have changed. With such a disposition nothing else than revolt on their part could be looked for. By the civil war of 1868 the restoration of the Emperor was effected, and from the present war equally beneficial results will arise. It is probably the will of Heaven that this outbreak has occurred, in order that the Satsuma men may ruin themselves and that the cause of all distress may be rooted out. Many people are in a great state of anxioty at the sacrifice of so many precious lives, and the enormous expenditure of money. But such men only see what is before their eyes and cannot look forward to results. To days' conflict may be said to be a conflict that will do away with distress and produce general content. Why should we indulge in the least anxiety? All we have to do is to wait and hope that the Imperialists may soon be victorious.

There are, however, a few words that we are desirous of saying to the Government. A Chinese sage says that "distress arises from carelessness and neglect." From such faults many a King has lost the kingdom which it cost him infinity of labour to conquer, and innumerable struggles to sustain. Wise Emperors and their ministers are well aware that it is more difficult to rule a conquered country than to obtain possession of it. They know that all depends on their administration. Now since the restoration, various reforms have taken place in the Government, laws and institutions of Japan, and a similar rapidity of progress has never been parallelled in Europe or America,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

These few years of our existence will be the flower of our history for thousands of years. But after all what do the reforms amount to? Our Government is not yet founded on a sound constitution; the people are not settled quietly in their respective callings, nor has the true light of liberty shone upon the nation at large. In short the spirit of the progress has not yet reached the minds of the people, while the love of old institutions still clings to them. Under such circumstances the demand that our influence should be extended amongst foreign powers, and that we should become possessed of equal rights with them is absurd. What is most required at the moment is that the people should be weaned from their ideas of old customs, and that the door of civilization should be opened to them.

Imitations of foreign laws and education, and the diffusion of the religions of other countries may be matters of great importance, but there is something of still higher importance, and that is,—the institution of a representative assembly. Our writers have for years past been longing to see the Government take the necessary steps, and its only reason for not acting in accordance with such wishes must have been lack of opportunity. The Satsuma outbreak has taken place and the Government has sent an enormous force to put it down. From the day that the Imperial forces subdue the insurgents we shall have no longer any independent clan like Satsuma. When this is effected the minds of the people will become changed, and all the good sought by the restoration will have been accomplished. When a general change of such a nature is taking place, it may surely be said that the time for the institution of a representative assembly has arrived. We trust therefore that the subjugation and punishment of Satsuma may soon take place. We can then extend our influence to foreign countries and be able to possess equal rights with them, for the foundation of an eternal peace will be laid, and the slavish customs of the past will become extinct. When this time arrives, Tôko, could he speak would say "I did not think so wise an Emperor existed in an Eastern Island—empire. He eclipses the deeds of my former ruler, Shiba In, and makes him unworthy of mention."

Centralization.

("*Hôchi Shimbun*," *March 29th* 1877.)

No one likes to leave his home and to settle in some distant place. Yet there are at present in the capital many men who have settled there from various parts of the country; some of them pursuing their studies, some filling government appointments, while others are engaged in mercantile pursuits. In this way the country has to suffer from a dearth of wealth and talent. Yet those in the capital seem not to think of these matters. What can be the the reason?

The Tokugawa Government had become corrupt, and was finally overthrown and the Imperial dynasty was restored to full powers. Although there were some three hundred feudal lords in the country who carried on the affairs of their own provinces independently of the Government, by the abolishment of the *Han* the entire power was concentrated in the Throne. This was indeed a wonderful reform. This centralization of power is indispensable in tranquilizing and putting in order the affairs of a country that is in a state of confusion, but it must be regarded as only a temporary thing, and were such a mode of administration continued for any length of time much misery and distress must result to the country and people. The centralization was therefore necessary at the time of the Restoration, but ten years have passed since then and it is now become the root of what may be a great evil. All our power is centralized in the capital. The officials of the *Fu* and *Ken*, although they may be possessed with the spirit of wisdom, are debarred from using it, and are entirely prevented from putting any ideas they may have into force. The provincial affairs cannot therefore be discharged with the necessary despatch, and thus the local authorities are made to appear as though incapable of fulfilling the duties assigned to them. The whole of the money of the country finds its way to the capital, and thus the merchants in all other parts are suffering from want of funds, while the farmers see their taxes spent elsewhere (than in their vicinity). There is neither wealth nor power in any part of the land but in the capital. It may be that there is many a man who possesses ample talent to do something for the benefit of himself or his country, but there is either no opening for him, or he has not the necessary means to carry out his ideas. There is therefore nothing for him to do but to remain a prey to anxiety, with an empty purse. This is the reason that induces so many to leave their beloved homes and come to the capital. From this we can see the evils of centralization, and we must arrest the progress of the evil before it gets too great to be handled.

There are many at present concerned in discussing this question. Some say that the power of the Government must be divided; others that the taxation must be decreased, or that a National Assembly must be instituted. And such are continually petitioning the Government or the officials to make such reforms. They possess no spirit of self-reliance; they remain in the capital making a noise about the necessary reforms. They think that all is to be done by officials alone, and rely upon the Government for everything.

Now although the Government is a good one, yet its duties are so numerous and diversified that it cannot perform them without the aid of the people, who must take these various questions (of reform) into their own hands, and criticize the Government whenever it commits a wrong. This is the only way to open a road to civilization.

The Magna Charta, which the English people think so precious that they call it their castle, was not granted by the King to the people. No! It was the people who forced the King to concede it, and this is only one of many like examples. Thus the Restoration was not brought about by petitioning the Government or the Tokugawa officials. It was effected by the action of patriotic men who zealously fought for it at the risk of their own lives and the lives of their families. It is not by entreaties that such (concessions) can be obtained from the Government, it is by the zeal and labour of the people. The learned and the wealthy should therefore unite their efforts in one common cause, and labour hard at their respective homes instead of crowding to the capital. Let them open representative assemblies, promote the well-being of the people, and develope their trade and manufactures. Let them institute schools, and establish newspapers for the public benefit. By thus acting the evils of centralization will be done away with, and those who came to the capital to seek their fortunes will gradually commence to return to their homes. It is evidently useless for us to think that anything can be accomplished by depending upon the Government. If we want to do away with the evils of centralization, it must be done by ourselves, and by ourselves alone.

ON MODES OF FISHING IN JAPAN.

By Geo. Elliot Gregory, Esq.

Read before the Asiatic Society of Japan, on the 28th March. 1877.

A thorough consideration of the subject of the fisheries of this country, even in its more important bearings alone would, of course, assume far larger proportions than it would be possible to bring before the notice of the Society in the form of a paper. I shall, therefore, only lay before you brief descriptions of such of the principal modes of taking fish as will serve for types of the rest, and give a general idea of this industry in Japan, employing as it does an army of fishers and supplying to the nation the article of food second only in importance.

Many of the implements used in fishing in fresh water differing materially from those with which fish are taken in the sea, I shall group each separately under the heads A. and B.

Full particulars of fisheries in rivers, lakes and preserves will be seen in the Table appended to this paper.

I have chosen for description five of the different kinds of tackle used in fresh water angling as those shewing the principal variations of form and use. The first of these, the *koi-tsuri-zao*, (see table A. I.) is a rod of bamboo divided into five pieces or joints which fit one into another. The socket ends of these are bound with silk to prevent splitting, and both ends are lacquered. Of the joints the first is about five feet long and one to one-and-a-half inch in diameter; the third about four feet, and the fourth and fifth each about three feet six inches, all diminishing proportionately in diameter and making a total length of about twenty-one feet. When the rod is not in use three of the joints are contained in the other two.

The line is made of silk, dyed a dark red brown, with a dye called *kaki shibu*, from *kaki*, the persimmon, and *shibu*, the sap or juice of trees or fruits—and is passed through a horse-hair loop at the tip of the rod and attached about five feet further down. The float is large

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

and round, and above it are placed ten or fifteen pieces of wood which may be slid along the line and serve to keep it from sinking. The hook is attached to the line by aboot one foot of horse hair.

The rod being too heavy to be held by hand is supported upon a forked stick driven into the ground. The fish is played and landed with a net.

If the *koi zao* should appear of unwieldy length, as a set off we have the *haze zao* (see table A. IV) a rod, likewise of bamboo, of a total length of about three feet six inches only. It is divided into three pieces fitting one into the other, of which the first is about ten inches long and three-quater of an inch in diameter at the thicker end; the second about sixteen inches in length and much thinner, and the third a mere twig. The line is attached to the rod either by a cogged brass reel set into the first joint or by a cleat fixed on to the outside, runs up the centre and issues at the tip through a metal ferrule.

The hook is attached to the line by a gut about three feet long and is sunk by a small spherical leaden sink. No float is used.

The *ka bari* (table A. X) is a simple bamboo rod. The line is used with a float but without any sink and the bait, as its name *ka* implies, is an artificial fly.

The next, *nagashi bari* (table A. XI), is a piece of common string about four feet in length, furnished at one end with a small, barbless brass hook and attached by the other to a very pliant bamboo switch, which is stuck into the mud at the bottom of a stream near the bank. The bait is a small live fish into which the hook is inserted near the tail in such a manner that the point shall protrude from the back and be fully exposed. The bait is thus at liberty to swim about until taken. Were the rod or switch not very pliant, the fish when caught would break the line in its endeavours to escape.

The last which it will be necessary to describe is the *dzudzugo* (Table A. IX.), a rod and line used without float, sink or hook. The bait consisting of a large bunch of worms attached to the end of the line is allowed to sink until the fish (eels) have fastened themselves to it; these are then drawn gently to the surface of the water and landed with a net.

The *te dzuri*, or hand line (Table B.), is the same as those of Europe, except that it is always used from boats. When more than one are put out from the same boat, small pieces of whale bone bent at right angles about 3 in. from the tip, and bearing tiny brass bells are stuck into the gunwale of the boat, the line is passed over these in notches and the bells ring when the fish bite.

The *nawa*, or simple line (Table C.), is a hempen line varying in length up to about 1,000 feet. At distances of six feet along its whole length are attached other lines about three feet long furnished with hooks.

We now come to nets, descriptions of six of which will, I think, cover all the different kinds that have yet come under my observation. That which is most commonly to be seen is the *uchi* or *to ami*, or casting net (Table D. 1). It is a circular piece of silk net-work, varying in diameter, around the circumference are attached pieces of lead to cause it to spread out flat when cast and to sink rapidly. From its centre springs a thin cord by which it is withdrawn from the water. The manner of casting this net is as follows:—The line being fastered round the left wrist of the fisherman by a noose at its end, is with a part of the net, as it hangs from its centre, laid in folds across the open left hand; upon these folds the remaining portion to within about three feet of the leads is hung in loops and the whole then grasped loosely. A part of the edge of the net is then opened out and hung behind over the left elbow and being continued forward under the arm, is taken in the right hand. What still remains is divided as it hangs from the left hand into five equal folds, four of which are held, one between each of the fingers of the right hand. The fisherman now turns his back in the direction in which he wishes to cast the net; throws it away over his right shoulder, at the same time turning himself half round and allowing the folds to escape freely from his left hand. The net falls flat upon the water, and sinking rapidly encloses any fish which may happen to be beneath it. It is then carefully drawn towards the fisherman until the further part of the circumference has met the nearer part and the fish are entangled in the meshes when it is raised. Ground bait of balls of boiled wheat is used with this net.

The next is the *yotsu de ami* (Table D. II). This net is square, and is stretched by its four corners from the ends of two light poles bent in the form of a bow crossed at right angles, and fastened together at their centres; this cross of four arms or *yotsu te* is then attached by its centre to the end of another and stouter pole, which is itself again balanced upon a short upright post fixed either upon the side of a boat or driven into the ground. The net is lowered into the water, and after having remained a short time beneath the surface is quickly raised; if a large net, by means of pulleys attached to the inner end of the balancing pole; if a small one, by hand, and whatever fish may have been passing over it are taken. When used at night bamboo torches are burnt to allure the fish.

The *kake ami* (Table D. III) is a strip of netting of which the length and breadth vary according to the water in which it is used. One side of this strip is furnished, at distances of about two inches along its entire length, with small pieces of wood sufficient together to sustain its weight in the water. The opposite side is in like manner furnished with small earthenware sinks which cause the whole net and floats to descend to the bottom, when it remains in an upright position. It is then stretched from the opposite banks of a river, when the fish swimming up or down run their heads into its meshes, and passing beyond the gills or pectoral fins can neither advance or recede.

The *sukui ami* (Table D. IV) is formed thus: Two bamboos about ten feet in length being crossed and fastened within a few inches of their butts so as to form the letter V, a silken net of corresponding form and of which the sides are respectively about six feet and three feet in length is spread between them, and attached to them by means of loops slipped over their tips and slid along. The dip of the net in this centre is about two feet.

This net is used either from boats or by a man wading; it is plunged into the water and taken out again with a scooping action, whence its name *sukui*.

We next come to the *oshi ami* (Table D. VII), in form a cylinder of netting about ten feet high by about the same in circumference. Within it are placed three bamboos suited in length to the depth of the water; the upper ends of these are bound together and their lower ends are made fast to the inside of the base of the net at three equi-distant points. The upper end of the net is drawn loosely together in folds around the bamboos, immediately below where they cross each other, and its base is extended in the form of a triangle so that the whole becomes a hollow pyramid of net. When the rising of air bubbles to the surface of the water shews that fish are moving among the weeds at the bottom, the fishermen place the net over the spot and pushing it gently down enclose them; the folds at the top are then loosened so as to allow the fish in their struggles to escape to draw the net down and entangle themselves in its meshes, which being done, the bamboos are closed and the whole withdrawn.

The *masu ami* (Table D. VIII.) is a net in the form of a bag about sixteen feet in circumference by about twenty-five feet in depth. Almost one half of the circumference is floated by means of pieces of wood, and the remainder is caused to sink by weights. To each side of the mouth of the net is attached a thin bamboo by which it is dragged by fishermen in two boats, which are rowed up the the stream parallel with each other and stern first. This net is used in very shallow streams and the fish are taken as they go down to the sea.

We now come to Weirs (Table F.), called by the Japanese *yana*, of these there are two kinds, the one solid and the other formed of netting. The former, or *yana* proper, is thus constructed: In the centre of a river is built a wall from twelve feet to fifteen feet broad, and from each of the ends of this wall to the two opposite banks a close bamboo fence is erected. From the lower side of the wall, about two feet beneath the top, a bamboo platform about twenty-four feet in length extends down the stream. The water rises at the wall and rushes over with great rapidity. Fish going down to the sea are stopped by the fence, and getting into the steam in the centre are carried over the wall and left dry upon the platform, from which they are

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

quickly removed by persons who watch from a hut on the bank.

The latter *yana ami* (Table F. II) are nets which are substituted for the wall and platform; of these there are two kinds. They are stretched across the stream at places where it is very narrow. The fish going down the river, are of course stopped, and with one kind are caught as they hover around, in a net much the same as the *yotsu de ami*; whilst with the other kind they are allowed to fix themselves in the meshes of the net itself, as in the *kake ami*, and are taken by men who dive for them. These thrust a piece of bamboo through the eyes to render their removal more easy.

The traps or baskets in use among the Japanese fishers are many and ingenious; the following are some of the principal ones.

The *yeri* (Table E.) is a kind of maze constructed of bamboo poles driven into the ground at the bottom of lakes and preserves. The fish enter, pass on, and finally losing themselves, find escape impossible. They thus remain swimming around in the smaller compartments until they are removed with hand nets.

The *tsuke shiba* (Table G. VI.) is a trap formed of seven or eight poles driven into the bottom in a circle; the interior is filled up with branches; the fish enter these and are removed with them.

Taka tsutsu (Table G. VII.) is an eel-trap consisting of three pieces of bamboo about 2 in. in diameter and from 3 ft. to 4 ft. long. The joints having been cut out so as to allow a free passage from end to end, the tubes are laid lengthwise, two side by side and the third upon them bound together and suspended in the water by a cord. The fish take shelter in them and are withdrawn quietly before they are able to escape.

The *koi do* (Table G. II.) is an oval bamboo cage or basket. At one end is a semi-circular opening by which the fish enter; it is furnished with a row of bamboo spikes bound together with thread and directed inwards; the points of them fall to the bottom of the cage, allowing the fish to lift them readily from without but rendering escape from within impossible. The bait composed of small balls is deposited upon mud at the bottom of the trap, and is thus prevented from being washed away by the stream.

The *namadzu do* (Table G. IV) is a slightly conical bamboo basket about ten feet in length by two feet in diameter at its larger end. It is covered with coarse mats made of rice straw, and being loosely filled with dried branches and twigs, is sunk to the bottom of the water during the winter months, when the fish take refuge in it.

Two kinds of spears have come under my notice. One, the *yasu* (Table K.), is a fork, the prongs of which are six in number, barbed at the points on one side, about six inches in length and two inches apart. It is fixed to a bamboo pole, the length of which varies according as it is used from a boat or by a man wading. It is thrust rapidly to the bottom until it transfixes a fish. With it are taken flat-fish at the mouths of rivers.

The other, the *unagi kaki* (Table J.), is used for taking eels and is thus formed: To the end of a pole is fixed a piece of iron, like the haft of a harpoon, about eighteen inches long; this is tipped with steel flatened and sharpened; its end is bent back and brought forward again so as to form a hook at right angles to the shaft; this hook is about eleven and a half inches long by one inch in breath, and into the inner side of its bend are welded one or two sharp spikes of the same length. This spear is used either from a boat or by a man wading; when the former, the gunwale of the boat forms a fulcrum, and when the latter, the fisherman's foot serves this purpose. The hook is plunged into the mud at the bottom of the water, carried a short distance forward and raised. If it meets with an eel, the fish is immediately transfixed on one of the spikes and shaken off into the boat before it has time to wriggle itself free.

Besides these there are dredges for taking shell-fish. These I shall not describe here as they are especially in use in salt water, and will therefore more properly be classed among the implements used in sea fishing.

There is still another way of taking fish, viz; *U tsukau* or fishing with the cormorant; this I have not yet had an opportunity of witnessing myself, but I am able to lay before you a translation which I made some years ago from a German translation of a Japanese account handed to me by Mr. Machida.

Catching Fish with Cormorants.

On the island of Susashima, situated in Owara, to the south of Morasaki, are numerous inlets and small rivers which, during the winter, abound with different kinds of small fish. These places are frequented by cormorants which prey upon the fish. From ancient times people have lived on the island and made it their business to catch these birds. This they do by placing wooden images of the birds in spots frequented by them and covering the surrounding branches and twigs with bird-lime, on settling upon which they stick fast. After having in this manner caught one cormorant, they place it among the bushes, instead of the image, and thus catch more. The birds thus caught are conveyed to Owari.

Use of the Cormorant.

The birds thus caught are sold to people employed in fishing with cormorants. Large, young birds are the most valuable, as old ones fish slowly, are quickly fatigued and soon become ill and useless. For ten days after their purchase they are kept in such a manner as to make them as quickly as possible accustomed to people. Near the Nagara river are seven houses, the occupants of which are employed in fishing with cormorants. In each of these houses are kept, on an average, sixteen birds. From the 1st of the 4th month until the end of the 8th month fishing in the river Nagara is carried on every night. The fishermen go out in long boats which at their house are furnished with fire baskets. The fish having been attracted by the light from the fires in these, the birds are sent into the water.

The cormorant, after having caught a fish, is drawn into the boat, and, the fish being taken from it, it is sent into the water again. Large *ai* fish weigh as much as three quarter of a pound and the cormorant often swallows five or six fish of this weight. Thus in an hour's time one boat often takes two hundred fish. Very much, however, depends upon the skill of the fisherman, the tying up of the necks and bodies of the birds so that they be neither too tight nor too loose, and upon the care taken in giving the birds the proper quantity of food.

Training the Cormorants.

From the commencement of the 9th month (Oct. 3rd) until the commencement of the 4th month (May 7th) of the following years the birds are fattened. As above-mentioned the houses in which cormorants are kept amount to seven, possessing a total of about one hundred and twelve birds. These are trained in the following manner. All the one hundred and twelve birds are sent off together on the river Nagara; the fishermen encouraging them to fish by uttering cries of *Aika! Aika!* The birds dive and catch and eat fish of all sizes, (at this time their neck and bodies are not tied up), after having eaten enough they are driven together by help of the boats, none ever escaping. Each of the owners then picks out his own birds from the flock, recognizing them by their heads, and takes them into his boat. Should it happen that a bird strays, the fisherman recalls it by crying *ko, ko, ko!* at the same time holding up a fish which he gives to it on its return. The birds are fed but once a day and in the manner just described. Trained birds have a cord tied round their necks to prevent them from swallowing the fish entirely, but they are able to swallaw small fish notwishstanding. It is not necessary, if they have been out some time, to give them any other food. In the night after having finished fishing in the river, should any of the birds evidently still be hungry they are fed with fish. After this all the birds are taken to their quarters, when it is necessary, however, to tie a piece of cord (made of straw) round their necks to prevent them from vomiting the fish they have taken for food. Every day at about 10 o'clock the birds are placed four together in baskets and conveyed to the river to drink.

In summer to protect the birds from the mosquitoes, which otherwise trouble them very much, their quarters are surrounded with mosquito nets.

Manner of preparing the Ai Fish, caught at Mino on the River Nagara, with Kasu or Rice from which Sake or Wine has been extracted.

The Ai fish taken at Mino on the Nagara is an article everywhere greatly esteemed. Those taken in August and September are especially palateable. The fish caught as described above are sorted according to their size, those being considered the best which are from 6 in. to 7 in. long and are very fleshy. After having been sorted they are salted by sprinkling over them good salt. To ten of the larger fish six or seven handfuls of the salt are used; they remain thus for about thirty days during which time, however, the salt is changed. The fish are then laid in fresh water which has been filtered through thin silk, and are allowed to remain there for about ten hours, after which they are removed, slightly dried and placed between rice from which *saké* has been expressed.

To the above must be added the following manner of preparing the pressed rice: This residuum must be cleansed from all impurities, slightly wetted with *mirin*, or sweet rice wine, and well kneaded. This preparation is called *saké kasu*. On the bottom of a wooden pail in put a layer of *kasu* about 1 in. in depth, this covered with a sheet of paper on which is put another layer of *kasu* about 3 to 4 in. deep. On these two layers is placed a third of salted fish and upon that again another layer of *kasu*. Twelve of such layers may be continually placed in a pail. The pail is made of a light soft wood called Suwura wood, its sides are ½ in. in thickness, its diameter is about 1 ft. 5 in. and its height the same. The lid is made of the same wood and fits exactly.

There is a second mode in which instead of the residuum, pressed rice and sweet *saké* are used. The fish are prepared in the same manner as in the former. This rice and sweet *saké* are called *koji* and are prepared as follows: Good, white rice is washed in clean water and then put into a square box, the bottom of which is made of thin sticks of bamboo. Several of these boxes are placed one open another and the whole put on a pot of boiling water, by which means the contents are cooked by steam. After this the rice is allowed to cool and set to ferment, during which process a kind of white mould forms. Two or three days afterwards the rice is dried in the open air, mixed with an equal quantity of sweet rice wine, or *mirin*, and well kneaded, when it is fit for use. It is employed in the same manner as the *kasu* above described.

(For Tables see p. 265.)

ASIATIC SOCIETY OF JAPAN.

A General Meeting was held in the Society's room, Kai Sei Gakko, on the 28th instant, Sir Harry S. Parkes, the President of the Society, in the chair.

The minutes of the last meeting having been read and approved, the Secretary announced that at last Council Meeting the following gentlemen were duly elected members of the Society:—Rev. H. Maundrell of Nagasaki, Rev. C. S. Ebey of Tôkiô, Dr. John A. McBride and Mr. James Begbie, both of the Japanese Agricultural Department; also that Dr. Eldridge was unanimously elected as a member of council, in place of Mr. Howell, who had left the country.

The Library Committee reported receipt of several very interesting periodicals, more especially that of the Madrid Geographical Society, which was evidently showing great activity in its researches. The Committee also complained that they could not yet discover the whereabouts of several missing books belonging to the library.

The Secretary, in the unavoidable absence of the author, read the paper for the day, "On modes of fishing in Japan."

In recommending the paper to the consideration of the meeting, the President observed that Mr. Gregory had only treated of the implements used in fresh-water fishing, and had reserved his account of the apparatus used in sea fishing lest further details of a technical character should add inconveniently to the length of the paper. He was glad to add that Mr. Gregory had it in view to furnish another paper on the fisheries of Japan, which presented a wide and eminently practical field of enquiry. Fishing to the Japanese was as important a matter as cattle-breeding or sheep-farming was to ourselves. The extent to which fishing was carried on by the Japanese and Chinese as compared with other nations, both Oriental and Occidental, was remarkable, and doubtless something might be learned from their wide experience in this industry. As to the implements used in fresh-water fishing he believed that the casting net of the Japanese showed remarkable skill, both in point of construction and the way in which it was handled, and he also had heard that the fishing rods of Japan were held in estimation by foreign anglers.

Prof. Wyckoff said that while living in Fukui he had frequently seen a curious method of fishing for *Ai*, without bait. The apparatus consisted of a long, light bamboo pole, and an ordinary line, to the end of which a short cord, bearing six or eight hooks at intervals of about ten inches from one another, was fastened. This contrivance was employed only in swift, and comparatively shallow waters, and was used as follows: The fisherman waded out into the stream, and cast his line into the water above him, then carried his rod slowly down stream, the line of course being carried down by the current. After the line has been carried below him, it was drawn in, and if empty again thrown out above. When shoals were passing two or three fish were sometimes caught at a single cast, but it was not usually an expeditious method.

Prof. Wyckoff had often seen the casting-net used, and and quite agreed with what was stated in the paper. He thought, however, that "throwing over the right shoulder," was the theoretical, rather than the practical method of casting. His own observation had been, that the person stood with the right side toward the spot where the net was to be cast. It was a matter of considerable skill to throw the net in such a way that it would spread to its greatest extent, and cover the largest possible space. The fisherman sometimes threw his net at random, but often watched to discover the presence of fish, by bubbles rising to the surface of the water, and then cast.

Prof. Marshall said that the *Kaki Shibu*, which was mentioned in the paper as used in making fishing-rods, was a very interesting substance and well worth the trouble of a chemical investigation. It had come under his notice several times, and he knew more especially of its strengthening and stringent properties. Paper was made very tough by the Japanese by applying this *kaki shibu* to it. Dr. Faulds said that the *kaki shibu* was a valuable substance in medical economy, and he thought it would be owing to its antiseptic properties that it was used in the manufacture of fishing tackle. He further added that when mixed with *sumi* (fine charcoal) a valuable paste was formed for blackening boards, and for this purpose he thought that such paste could be very advantageously introduced into schools.

In closing the discussion the President observed that Japan was the only country he was acquainted with where whales were caught in nets, and he referred to the description of catching whales in this peculiar way which was given in the 3rd volume of the Transactions of the Society, and to the high value set upon whale-flesh as food by the Japanese. He alluded to the use of fire, which was so general in Japanese fishing, both in fresh and salt water, as a very attractive and serviceable contrivance. Referring to the importance of the salmon-fisheries of Japan he mentioned that the average annual catch of one river in Yezo, the Ishikari, had been estimated by Captain Blakiston at 1,200,000 fish, and the sufficiency of the method pursued might he judged from the fact, given by the same authority, that as many as 16,000 fish are occasionally caught at one heave. Much of the benefit of this important fishing was lost to the Japanese because their method of curing the fish was so very imperfect. To foreign eyes, at least, Japanese salted salmon was not inviting. If it were better cured it might become an important article of export. The President concluded by expressing the obligations of the Society to Mr. Gregory for his paper and the hope that the subject would shortly be continued.

Correspondence.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 3rd April, 1877.

SIR.—Admitting the conclusions your correspondent A. Z. arrives at in the introductory remarks of his letter of 28th March, I do not think that the circumstances apply to Japan.

The community does not isolate itself with respect to the currency from the country around it. The currency of Japan is the *yen satsu* (paper money) and circulates at the outports and all over the country; but being of nominal value the Mexican dollar (or silver) forms the medium of exchange with foreign countries.

"The oscillations which have occurred in Japan during the last six months" between the native currency and the "medium of exchange" *i.e.* the Mexican dollar, have been extremely small, much smaller than they have been under similar circumstances in other countries, for instance in America, where during the civil war greenbacks at one time touched 280 for $100 Gold.

Here on the contrary paper money in the month of stood at a premium of per cent, and the lowest it has reached during the present insurrection is 5 per cent. discount, whereas the average rate has been under 3 per cent. against the Mexican dollar and *silver yen*.

A. Z. and W. seem to mix up the fluctuations of the currency with the fluctuations in foreign exchanges. Foreign exchanges during July and August experienced a sudden advance of nearly 20 per cent. in Yokohama, and of nearly per cent. in China. But this exceptional rise was caused by exceptional circumstances. There was not sufficient capital in China, Japan and India to move the produce of those countries to Europe and America, principally caused by the increased value of silk, sugar, etc., coupled with low values for Imports. Distrustful of the ultimate commercial value of silver, foreign bankers in the East imported as little silver as possible, and carried on their business with very small balances; and unprepared for the sudden demand for money, offered a high premium on their own drafts in order to procure it.

Whether Japan had a silver currency of its own at the time or not, circumstances would have differed little, in as much as the same causes which found foreign bankers in the East with small cash balances, would have had similar influences with Japanese bankers.

The great rise in Yokohama, in addition to actual scarcity of dollars, was enhanced by a fictitious scarcity of Japanese paper money, and by the hoarding for the time, when most needed, by Japanese Government banks of the already scarce Mexican dollar. By these acts the whole native native export trade of the country suffered extra and unnecessary losses for the benefit of a few favored establishments.

Excepting this temporary excitement in foreign exchanges, their fluctuations for some time past have been caused by the uncertainty of the ultimate commercial value of silver, and have followed more or less the fluctuations in the price of silver in London, compared with the standard of gold.

Were the currency all over the East on a *gold* basis, bankers would have full confidence, and carry sufficient funds for the requirements of trade; and fluctuations in exchanges would be regulated entirely—as between America, England, France &c., (countries having a gold basis for currency and exchange)—by the exigencies of trade, which at one time would favor exports, at another imports, but always to a calculable extent only.

The "currency" of Japan being practically "inconvertible" has no "basis" of either gold or silver, and its value in the country rests entirely on the confidence with which the people regard it. As soon as the Japanese Government make this currency "convertible" by means that will give foreign capitalists the necessary confidence to receive and hold it, a "basis" will by those means be found; and on the decision of the Government —whether this basis is to be a "gold" or "silver" one, it will rest to determine the probable extent of fluctuation of the "currency" towards European and American money centres.

During the uncertainty of the value of silver, the Japanese Government cannot possibly be benefitted by the coinage of a *silver yen* for purposes of exchange. The Government in importing the silver will be liable to its fluctuations, will have to pay third parties for the cost of financing for such transactions, and incur risk of exchanges, and lose 3 to 4 months' interest.

If it is therefore the desire of the Government to establish a coinage, which is to serve the two purposes of funding the paper currency of the country, and to furnish a means of exchange with foreign countries, the advantages would strongly point in favor of a gold basis.

The first object would be easier of accomplishment, requiring only the keeping of a sufficiently large cash reserve in the treasury to make the currency practically convertible. No great loss would then accrue to the Government by making the currency "legal tender" for all payments, Custom House included. Confidence in the currency would become general, and dangerous fluctuations cease to be apprehended.

The second object is of doubtful success. Before a gold coinage can supplant the Mexican dollar, the Government would have to accumulate a large capital, and give "satisfactory" guarantees as to a regular and sufficient supply. These conditions might be extremely difficult to comply with, and even should they eventually be satisfied, the resistance of foreign bankers might still be encountered, as they earn a small but regular profit in selecting and distributing the Mexican dollar over Japan and China.

Whether a "gold" or "silver" *yen*, the difficulties in giving the necessary guarantees for a regular and "sufficient" supply of *even* stand, appear to me as yet beyond the powers of the Japanese Government. It has thus far fitfully followed the advice of high and mighty, and also of low and interested counsellors; and however little harm may be done to the country when Ministers allow themselves to be swayed by individual counsels in minor matters, they require more experience and better advice than they can get here, before they can successfully grapple with such a far reaching question as the establishment of a coinage, which is to fulfill the conditions demanded of it!

A. Z. says that "The Japanese Government have taken much pain, and spent much money to establish the Mint, and have done it at the instance, and partly in the interest of, and to please foreigners," and that "it seems ungracious of us to reject the yen."

That the Government have spent much money on the Mint cannot be denied, nor that it has been done at the instance, and in the interest of, and consequently to please a *certain number* of foreigners, but certainly not at the instance or in the interest of the foreign merchant generally.

The prudence of the undertaking was at the time questioned by many, and perhaps better authorities than those, who carried their interested motives. However good a measure may be in itself, if undertaken in proper time and places, and then become of great benefit to a country, great inconvenience and loss of prestige to Government and country may follow, if undertaken incautiously, and without proper and sufficient foundation.

The Mint unfortunately bids fair for a long time at least to become one of the many "White Elephants" that have been foisted on a conceited Government by interested parties, backed by influential people, who dispute with the victims the prize for shallow conceit. The Japanese, in their desire to rank by one stroke of the wand foremost among civilized Governments, have bought and continue to buy bitter and dear lessons, and until they will understand that experience and civilization require time and patience, they will have to continue to pay for their follies.

The Government in establishing the Mint had however a more serious object in view besides "obliging foreigners." After the overthrow of the Tokugawa regime, the Empire found itself without a regular or recognised currency. Nearly all accumulated stocks of silver and gold boos and other coins were being exported; and there was nothing in the country to fund the newly created paper money, which had replaced the irregular coinages of so-called silver and gold boos. The Government then discarded the Mexican dollar as cur-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

rency of redemption for the yen satsu, and determined to have like other civilised countries—a Mint of their own. Quantities of gold and silver were imported and coined into gold and silver yen, and these were not rejected, as A. Z. says, but eagerly bought by foreigners and exported! Japan not having any surplus cash of its own, had to return coined money for the gold and silver previously imported. Japanese coin proved also a profitable means of remittance to pay for what the country owed to Europe, in excess of home productions, debts incurred by extravagant expenditure, and in many cases through unproductive investments.

Moreover the coin was not required—and therefore not retained in the country—for the purpose of "funding" the paper currency. The Government found ready takers among their own people for as much paper as presses in Germany and Japan could print off.

If the mint speculation has thus far proved a profitable one, its operations are likely to continue; if the mint is a "White Elephant" the operations may be suspended, until better times; but until the people of Japan find out that they need something more substantial than paper money for carrying on their home and foreign trade, any attempt to establish a Japanese *permanent hard money currency* will prove abortive.

T.

THE CURRENCY.

To the Editor of the "Japan Weekly Mail."

Yokohama, 5th April, 1877.

Sir,—Your printer treated me rather scurvily in the *Japan Mail* of last week. Besides putting a different date at each end of my communication, and wrecking my syntax, he has so mangled the sense of some of my observations that I hardly know what they mean myself.

Possibly he shares the feelings of indifference or disgust with which speculations on Currency are generally regarded here, and takes this method of resenting their intrusion in your columns. I do not blame him, and ask no reparation from him or from you. For he is no doubt quite right in supposing that what your correspondent "Triton" had to say about the treatment of China Ponies, and the rivalry of the Race Clubs, is much more interesting to the public than anything that anyone could say about so dull a subject as that which I discussed.

I judge too, from the letter which you published under the signature 'Beta,' that even persons who are inclined to reflection on the Currency are not willing to sound the subject very deeply. For that writer's main argument against the use of *Yens* is that Japan is unable to produce or import the metal wherewith to make that coin, and consequently could not, however perfect its Minting arrangements, furnish a sufficient supply of them. He forgets apparently, that the sole legitimate function of a Government or of a Mint with regard to money, is to stamp a certain weight and fineness on bullion entrusted to it for coinage, and that for this function only good machinery and honest officers are necessary, and no cash capital whatever. It is therefore not of the slightest moment whether the Government of Japan is or is not in debt, or can or cannot produce or import gold or silver. The only questions of importance are, *Is its Mint a good one?* and, *Can it be trusted honestly to return good Yens for bullion confided to it?* And with these questions its solvency, its politics, the "balance of trade," the operations of bankers and merchants, and even the market price of gold and silver, have no natural or necessary connection. Some of the poorest and most distracted countries in the world use only good money, while some of the richest and strongest use very bad money. The instrument is generally better or worse than the musician. I have, for example, an excellent piano, whereas Beethoven had but a poor *clavicorde*.

If reflecting persons like "Beta" could be induced to consider money merely as what it is, a measure of value, standing as distinct from the other matters he mentions as Fujiyama does from the clouds about it; and if the rest of this community could be persuaded to regard the character of their currency as of at least equal importance to that of their racing ponies, it might be worth while to avail of your invitation to discuss the subject further. For it is, as you say, one of great importance to *all* who have interests in Japan. I think it could be shown that our indifference to it costs us annually what any of us would deem a very handsome fortune, and that we owe it to ourselves and to those whose interests we serve here, to take it into thorough and careful consideration, and to act upon our conclusions. If you think that what I said in (or rather wrote for) your last paper, and what I say now, is likely to enlist sufficient attention to repay you for publishing my letters, I will endeavour next week to offer your some further views on the subject.

Yours faithfully,

A. Z.

Law & Police.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. Van Buren, Consul-General.

Tuesday, 3rd March, 1877.

E. B. Watson v. Walsh Hall & Co.

This was a case in which plaintiff sued defendants for $16,000 for having delivered a quantity of bags inferior to the quality they were represented to be

Mr Dickins appeared for plaintiff, Mr Ness for defendants.

(Continued from March 19th.)

Cross-examination by Mr Ness continued; Mr Wilkin stated:—I do not remember Mr Walsh saying the bags were *new*. He guaranteed them. By opening one bag I do not think I would have ascertained that the whole of the lot were second hand. By opening one bale it would not have rendered the whole of the lot unmerchantable. Mr Watson told me he bought the bags for rice purposes. I knew that he did not buy them to sell them again, but for packing rice. Opened bales were unmerchantable because they could not be brought from Kobe to Yokohama and Tôkiô. "Unmerchantable" is not inapplicable when he is using them himself. It does not mean strictly unsaleable. The opening of these goods to such an extent as was usually done for inspection, certainly would not render them unmerchantable. Under ordinary circumstances only one bale need be opened. I do not know that had one bale of each lot been opened it would have been sufficient. The goods, had all the bales been opened, would have been "unmerchantable" in the sense that they could not have been removed nor stored. Messrs. Browne & Co. wrote us that a few bales damaged had been rejected before the balance was taken. (Letter of February 29th referred to.) I have some recollection that the number rejected was about 2,000 bags. Some bags were refused in Yokohama. I am not an expert about bags. I can't say whether rice is shipped in second hand bags or not. I stipulated expressly for new bags, though I did not use the word "new." The 28,500 only were to be second hand: The word "new" though not expressed was understood as a matter of course when the others were designated second hand. Bone-dust can be shaken out of a bag.

Re-examined by Mr Dickins:—I do not know that the bags rejected by Browne & Co. were paid for. I know of no instance of rice knowingly shipped in second hand bags home. Personally I should not object to shipping home in selected good second hand bags. If the bags had been twice or thrice used, I should imagine they were not likely to be suitable. I have seen the survey report. In a lot of bags such as described in that survey, one bale in each lot would not have spoken for the whole. The bags varied greatly. I would consider goods unmerchantable, which, if I should wish to sell them would be objected to as unmarketable. That is my idea of "unmerchantable." As far as my experience goes every merchant would have the same opinion. When defendants authorised me to write the letter of the 25th January, they did not tell me that any of the bags besides the 28,500 were second hand. They said nothing by which it could be implied that the rest of the bags were second hand. They never gave me to understand that they were unfit for packing rice, or that they were impregnated with bone dust. In effecting the sale I acted as broker to the defendants, and acting as such broker I knew the purpose for which the bags were bought. Mr Watson told me they were for rice, and defendants evidently knew that. I only saw three or four bales, eaten by some acid; these were all I saw. One of the bales was partly damaged and I took it on allowance. I purchased some bales from defendant about January, 1875. None of them were impregnated or stained. I saw no marks on them. I paid 20 cents a piece for them. I am under the impression that I asked defendants if they had any more like those I had bought. To the best of my recollection I said "have you any more of those bags?" They told me they had a good many more bags. I understood that they were to be the same kind, barring the description. Of course, I did not understand that the "gunny" and the "Hessian" were the same. When the samples were sent I did not notice any stains, marks or impregnations. The second hand ones were marked. Just before the commencement of the trial, Mr Walsh told me he had just discovered that some of the samples were marked inside. These were turned inside out. These samples were sent to me before the sale and were duly examined by me. Mr Watson's Chinaman, after the sale was concluded, came one day and took some away. The rest of them lay loose in my office.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

When this question came from Kobe I gathered the Kobe samples together. Some were in my own office and some at Mr Watson's. I made them up into a parcel (all except three, of which the tags were gone and I could not sufficiently indentify them), and sent them to Kobe. That was in August last, and I have not had them since Mr Watson, about three weeks ago, brought them to my office and took them away again. Whilst with me they lay on the floor in my muster room. They were liable to be splashed with water when the room was being cleaned out. In fact, I remember seeing them so splashed.

Mr Dickins said he had no more questions to put, and such was his case.

Mr Ness for the defence called

John G. Walsh, who was sworn and said :—I am one of the defendants in this case. I recollect the particulars. The description which I gave of the goods is in Court. It is in my writing. (Exhibit list IV.) Of the two lots of which samples were not given, one was objected to. I have examined the samples produced in Court. The samples of the goods in dispute in my estimation fairly represent the bulk of the goods complained of, as they are described in the survey. Some goods are complained of, of which samples have been given but not produced. These also fairly represented the bulk of the goods which were said to represent, when given. No concealment whatever as to the true state of these goods was practised by my firm. Neither Mr Wilkin nor Mr Watson stipulated that the lot with the exception of the 28,500 should be new. There was no stipulation whatever, except as to the 28,500. I never assured them that they were new. I had no reason for doing go. I gave them a written description of the whole lot. The goods were always open to their inspection. I had no reason to believe that the plaintiff was buying one thing and defendants selling another. I did not warrant these goods to be fit for rice purposes. I was not asked to. I had a general knowledge that plaintiff was about to ship rice.

Adjourned till 1.30 p.m.

The Court resumed at 1.30 p.m.

Mr Walsh continued :—I can't say that I had a positive knowledge that plaintiff was going to use the bags for rice. He was talking at that time of shipments to California, Australia, England and China. In my opinion all the second hand bags mentioned in the survey were fit for rice shipments. I did not for any purpose turn any bags inside out or outside in. It is clear to the senses that these bags are second hand. They have every sign of having been used before. The prices in the list do not necessarily indicate that the bags were new. It was possible to ascertain from the price in the list without weighing whether the bags were new or old. The price alone would not indicate the character of the bags, and the weight is not mentioned. The weight had nothing to do with it. When Mr Wilkin first spoke to us and referred to his previous purchases, I replied we had some similar to those and others besides. To my knowledge both Mr Wilkin and Mr Watson knew that other besides us had an interest in the goods. The difference of price in no way indicated the ownership. Our bags were sold at one price and the other lots at another. This clearly indicated the different ownerships. Mr Watson finally agreed to take our lots at 17 cents each and the others at 14 cents. Mr Watson's and Mr Wilkin's conversations at the time indicated full knowledge of the different ownerships. That I swear to. They knew we had to remit home the proceeds of sale to the owners of the bags and part of the payment was made in bills on home. The payment in sterling represents the proceeds of the 14 cent bags minus our charges. (Letter of February 5th shown). That was written before the contract was concluded. I wrote it. (Second list shown). W. H. & Co. therein represent Walsh, Hall & Co.; the initials L. & Co. and M. & Co. represent Levi & Co., the house in London, and Morrison & Co. in Dundee. They were the owners and shippers of the goods. The price obtained for the goods opposite L. & Co and M. & Co. was 14 cents; for those opposite W. H. & Co., 17 cents. "On account of" at the head of the column indicates ownership and that we held the goods on account. We kept the part of the money paid us by Mr Watson which was ours, and sent the balance to the owners at home. That was immediately after delivery was completed. A part of the Yokohama goods was rejected before the rest were taken delivery of. That was before full payment was made. Part of the goods were rejected, I think about one or two thousand bags, loose, I believe. Personally I did not take part in the completion of the contract. They were rejected before payment was made. The customary time for inspection of the goods is when they are taken delivery of. In examining these goods it would have been necessary to open one or two bales of each lot, then if they were not equal to the sample to open the whole. Buyers have the right to open the whole and refuse them if not up to sample. I have read the survey of the goods complained of. Judging from it, one bale of of each lot would have been sufficient to know the real state of the whole. Opening one bale would not have made them unmerchantable. Bags impregnated with bone dust are rendered unfit for rice shipment. I have not had much experience of shaking bone dust out of bone dust bags. The bags complained of have never been returned to me.

Cross-examined by Mr Dickins.—There was a demand that we should take back the bags and repay the price, previous to this action. That we refused to comply with. I never tried to see how long it would take to shake all the bone dust out of a bag. I have never seen the experiment made. Previous to August of last year I do not remember that I told plaintiff the names of our alleged principals. I never stated the names in full in writing; I gave the initials L. & Co., M. & Co., and W. H. & Co. We had all the bags marked L. & Co. from the firm of Levi & Co. That I swear to. I do not know that I have invoices signed by Levi & Co. (Mr Ness produced two.) These are signed by Henry and Edward N. Levi & Co. The initials L. & Co. on the list were not a sufficient signification to plaintiff of the firm of Henry and Edward N. Levi & Co. I cannot swear that I did mention the firm to plaintiff or Mr Wilkin. The same answers apply to M. & Co. Unless, therefore, I made verbal communication to the plantiff, he had no means of knowing who the owners of the goods were. I still consider that plaintiff's remedy, if any, is against the real owners of the goods. We had invoices of the goods alleged to have belonged to Morrison & Co as well as those to Levi & Co. I do not remember that the headings of both invoices are identical in expression and word. I should not be surprised if such was the case. It is not usual to see headings of four lines of different firms identical. (Morrison & Co's invoices produced.) That is correct. We have no duplicate invoices of these goods. The 17 cents bags are designated "No. 1 grain bags," I think, but am not certain. We are interested in the Eastern Agency Company; I mean individuals in the firm are shareholders. That Company had no interest whatever in the 14 cent bags. I don't know what the marking E.A. on some of 14 cent bags means. I don't know what S.G., H.B., D. M. and N.B. mean. These are only marks on bales. M. & Co. and L. & Co. were in a descriptive list. I don't know what Levi & Co. are. Apart from collateral information I would not know that L. & Co. meant Levi & Co., or what M. & Co. meant. I do not know that Morrison & Co. are bankrupt. We have had advice that they were in difficulties. In Morrison & Levi's invoices none of the bags are designated second hand, except in Levi's, 28,500. Mr Wilkin was paid brokerage in this matter. He first came from Mr Watson. In that we paid him brokerage, he was broker for us; that is all. I do not remember that I did or did not mention to Mr Wilkin that other than the 28,500 bags were second hand. I said nothing about bone dust, or stains. I said very little about the bags. Apart from the 28 500 I did not know that any of the rest were second hand. I don't believe that I knew that even the 28,500 were second hand. I do not remember hearing from Morrison & Co. or Levi & Co that any but the 28,500 were second hand. During the negotiation I did not think we were selling second hand, impregnated or stained bags. We intended to sell according to the sample, and did so. The statements in the answer to the petition in this case are entirely true. Plaintiff was not obliged to take them if they were not equal to sample. My intentions by selling by sample were that the goods should be equal to sample. At the time I sent them I did not suppose the samples were impregnated or stained, or second hand except the 28,500. I did not think about it at all. Had I known I would not have concealed the fact from plaintiff. I was aware in a general way that the bags were to be used in rice shipments. I knew from what Mr. Watson said and from general report. Mr Watson may have told me particularly; I can't say all he told me. It was generally understood here that he was shipping rice. In one of those papers I wrote that they were grain bags. If I had supposed these bags were unfit for packing rice I would not have concealed that fact from plaintiff. I did suppose them to be fit for packing rice. I supposed Mr Watson considered the bags fit for packing rice. The prices in List No. 4, if they show anything, show that the bags were second hand, although no weights are mentioned. When I told Mr Wilkin we had other bags besides some like what he had bought before, I did not say that they were inferior.

Adjourned till this morning at 10 a.m.

Wednesday, March 4th, 1877.

Cross-examined by Mr Dickins, Mr J. G. Walsh continued.—In my direct examination, I said others besides ourselves were interested in the bags. I stated in which others were interested. I said the 74,000 belonged to Walsh, Hall & Co. and the balance to other people. It was not my wish or intention to keep the names of my alleged principals a secret. I had no reason to give them. They never asked for the names, and it was a cash sale. When we act as agents it is not customary to state the names of our principals when cash payments are made and immediate delivery taken. When the names are not asked for, we abstain from giving them. This list (Exhibit XI) was given in January 1876. I wrote it myself. The column headed "on account of" was meant to show what part belonged to Walsh, Hall & Co. It was not intended to convey to plaintiff the names of our principals. It was our intention to take no responsibity after delivery, but I had no particular intention either way. I don't know what my intentions were at that time. I do not remember that I did tell Mr Wilkin that I disclaimed all responsibility with regard to the 14 cent bags. (Exhibit XVII.) That is a letter from Mr Wilkin to us. I observed the phrase "sold for you." We never objected to that assumption on the part of Mr Wilkin, who wrote this paper. We never stated ourselves in writing as agents nor did we sign any letters as agents in this transaction, except on the 25th January. Mr Wilkin knew that we were only agents on that date. I told him. I said "75,000 of these bags are ours; the balance we hold on commission." I used words to convey precisely the same meaning as that. I don't remember that I said we had no interest whatever in the 14 cent bags. It was not under the circumstance, a natural impression on the part of Mr Wilkin that others besides ourselves were interested in those bags. I don't remember using the word "commission." Consignments out here are very often on joint account. They are quite as often on our own account as on joint account, in my experience. I asked an average price for the whole. Mr John Robertson suggested the different prices on account of differences in quality. The 74,000 were all alike and were consequently worth more than a mixed lot. I have invoices for these 74,000. They were all bought from Levi & Co. They were all new, and were worth when they arrived in

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Yokohama 20 cents each. I judge from what Mr Wilkin paid. The duty was five per cent on the value. I don't know whether they were better than those put down as the same kind of bags in list No. IV. Part of the consideration, on which plaintiff agreed to pay 17 cents for those which belonged to us, was on account of the services we had rendered him. These bags were wholly our own. The Eastern Agency Limited had no interest in them. (Invoices of Levi & Co.'s consignment put in.) I knew that the samples not produced in Court fairly represented the bulk because they were drawn from the bulk. I did not myself draw them. In that way I had no personal knowledge of it. I never compared those missing samples with the bulk. Not having examined the bales I did not see anything to lead me to judge as to the quality of their contents. They arrived about spring, 1874. They were worth 18 or 20 cents a piece. In ordinary transactions in dealing with any firm I should examine the goods and sample, particularly if I knew they were consigned goods. If I did not know they were consigned goods, when dealing with a respectable house, and upon representations that they were up to a certain mark. I should take the goods at my own risk. A buyer has the right to examine his goods and can only do it by opening bales. I could not have hindered Mr Watson from opening as many bales as he liked and refusing as many as were not equal to sample. These goods were paid for immediately. We have copies of account sales sent home to the principals. I don't remember in whose names the drafts were taken. The payments made in some instances did quite likely include the 17 cent bags. We were not the agents of the Eastern Agency in this matter. The Eastern Agency induced these consignments, and all the remittances home were made, I think, to them. They were not our principals. If the people got their money, I don't think they cared through what channel it came. I don't remember that Levi & Co. instructed us to remit through the Eastern Agency. I think we did hear from Morrison & Co. complaining of our sending the money through the Eastern Agency. We did not remit through the Agency to protect our own interests I know of no special reason for it. The Agency by arrangement might have had a commission to get out of it. (Letter of May 9th, 1876, from Morrison & Co. to defendant produced and read.) About half of the payments for the 17 cent bags were made in drafts, I notice.

Adjourned till this morning at 10 a.m

Thursday, March 5th, 1877.

Arthur O. Gay, sworn, deposed:—I am one of the defendants. I remember the negotiations in question. To the samples and descriptive list delivered, I added no assurance as to the age and quality of these goods. The description of the goods sold is to be found in the list (Exhibit IV), and the samples accompanied it.

Mr Dickins here objected to the form of Mr Ness interrogations. He said they were leading questions, and should not be put. After some dispute his Honour overruled the questions, and noted Mr Ness' objections thereto.

Mr Gay continued:—No conversation ever took place between Mr Watson and me in which I stated the bags were fit for rice purposes. Some objection was taken to 1,920 bags, as I understood from the Kobe house. The last instalment of the money for the Kobe goods was paid after their rejection. The accounts rendered to Mr Watson and the memoranda attached thereto show this. The principal payment was made here when delivery was taken at Kobe, and we were then advised of the rejection of some bags. I have read the joint survey. I looked at the samples in Court of the lots complained of, which the plaintiff has produced. In my estimation the samples fairly represent the bulk of the goods described in the survey. In my opinion second hand bags, if in good order, are fit for rice purposes. I should not hesitate to use them. Some of these samples are stained. Something took place in conversation with Mr Watson relative to a part of the goods being the property of other parties to whom we had to remit directly, or pay to their account in the bank here. I told Mr Watson, after it had been arranged by Mr Walsh, that sterling drafts would be taken in payment but that it would not be altogether convenient to us, for the reason that part of the goods belonging to others had been pledged to one of the banks here, and for such portion we had to pay cash to the bank; but for our own we did not wish sterling drafts, and besides we wished to recover our charges in cash. Mr Watson said he had already made an arrangement with the Oriental Bank to provide sterling drafts for this purpose. I told him then we would take the sterling drafts as far as possible, and at the same time that we could not negotiate these drafts either for our own account or for the payments to be made to the Deutsche Bank, except at a difference in exchange of one-eighth of a penny. He agreed to make this allowance. Besides this he agreed to pay in cash the amount of our charges in respect of all the bags, the charges on the account sales and on our own bags. The charges on our own bags were, fire-insurance, duty and godown rent, &c. I did not bring about the arrangement for 17 cents and 14 cents. Inspection is usually made when goods are taken delivery of. A few bales, usually of each lot would be sufficient to open, say, three or four in twenty. With old bags I should be more careful.

Cross-examined by Mr Dickins:—As far as the sample is concerned, I would not consider it quite as necessary to open bales not damaged outside, as bales that were damaged outside. When a purchaser of goods on sample from our firm relied on our representations, he would do so at his own risk.

Mr Dickins now asked:—Would it not then be a risky thing to trust to your representations?

Witness objected to answer this question, and Mr Ness said it was unfair. His Honour also thought that a question which tended to throw ridicule on a witness himself should not be allowed. Mr Dickins then withdrew it after some discussion.

Witness continued: These bales are of a considerable size, generally containing or 400 or 500 bags. Two men usually are required to pull them about. It would be rather difficult to repack one if opened. A number I saw here had their hoops off. These were not the bales complained of, however. If the bales had been opened, examined and then refused the expense incurred therein would of necessity have been borne by us. No delay in payment would have occured through examination. It would take about 15 minutes to examine a bale like those delivered here to plaintiff. To examine one with the hoops on to repack it and rehoop it, would take a long time. We treated the whole of the 17 cent and the 14 cent bags equally as regards mode of payment. I never used words similar or identical in expression to the phrase that, "in the 14 cent bags we had no interest whatever." We left plaintiff to infer from the conversation we had that we had no interest in 14 cent bags. I don't know what he might have inferred. I don't recollect that I said anything to Mr Watson about the 14 cent bags. I think this all took place in one conversation immediately after the contract was made, more than a year ago. I recollect all I have stated distinctly. I made no memorandum of it. The parties to this contract for the sale and purchase of the 350,000 bags are—

His Honour overruled this question on the part of Mr Dickins. It was a point of law and for the Court to judge.

Witness continued:—I never threatened Mr Watson nor Mr Wilkin wth legal proceedings. I recollect Mr Wilkin stated such a thing in his evidence. So far as I am concerned that statement is incorrect. I am quite certain I never did make it. Our firm have shipped rice home to Europe. Stained on boned bags are not quite fit for packing rice. If the dust in bone bags can be extracted they are fit for packing rice. The bags we use are generally new. After the last payment had been made certain bags were declined. There might have been a thousand, or more than a thousand. They were declined because probably they were unfit for Mr Watson's use. After delivering some were left over and it was understood between us that they should be overhauled and perhaps repaired, and put in such order as suited Mr Wilkin. They were not examined or accepted afterwards. In consequence of Mr Wilkin refusing to make an examination of these bags I said something strong, and "put a little pepper in" as you say, Mr Dickins. I said nothing specially about legal proceedings. In one instance we made allowance with respect to some bags. I do not recollect any other.

Adjourned till 1.30 p.m.

Cross-examination resumed at 1 30 p.m.

Mr Gay continued:—I did not personally select the samples from the bulk, nor did I examine them. The samples were not stained or impregnated with dust to my knowledge then. I did not examine the goods complained of in Kobe. I know the samples represent the bulk of the goods in the survey from the description given. I do not think the report specifies that the goods are impregnated with bone dust. (Report referred to). Upon looking at it, I notice several lots mentioned as so impregnated. All are mentioned as stained and mended, and 20,000 as stained, mended and impregnated with bone dust. The list IV does not mention these as so damaged. The goods mentioned in the survey represent the goods in the list in general description. I did not see the goods in Kobe but judged from the description in list IV. There is nothing said in the list about stains. All I mean is that the sample agreed with the description given in No. IV. The duty paid on 100 bales of 17 cent bags was 1,015 *bu*, being five per cent. *ad valorem*. I have the account sales of the 14 cent. bags. None are described as second hand except the 28,500, the account sales being rendered according to invoice.

Re-examined by Mr Ness:—If goods on inspection are up to muster, the seller has nothing to do with repacking. (Survey in hand) I have read this description. I have examined the samples produced in Court of goods therein referred to. The samples fairly represent the description in the survey. The allowance spoken of was made after delivery and before payment.

Mr Ness said the case for the defence had now closed, and proceeded to sum up the evidence.

Friday, March 6th, 1877.

Mr Ness then addressed the Court:—He said the evidence adduced was simply a record of the carelessness which had characterised the plaintiff in the transaction out of which these proceedings arose. Mr Watson sued the defendants for the value of 100,000, bags, being a portion of a larger lot purchased from them, and which portion he alleged to be inferior to the quality contracted for. The defendants replied that the goods answered to the full the description given in the contract: that apart from that fact they sold them for principals in England to whom they had remitted the proceeds before any complaint was made, and they could not be held responsible whatever the bags might now appear to be: that the plaintiff was guilty of laches in neglecting to inspect the good for three months, and this delay, especially in view of the fact that he knew of the interest of others before taking delivery, and that the proceeds were being remitted to consignors, exempted the defendants from responsibility even had there been a variance between the sample and the bulk. He did not dispute that a *purchaser* had to disclose his principal's name if he were to keep himself free, but he argued that the position of a *seller* was altogether different. While the policy of the law required the divulging of the principal's name in the former case so as to entitle the seller to follow his goods and recover their value from the receiver of them, the same necessity did not arise in the case of a selling agent to whom no credit was given, but who delivered the goods on payment or on credit extended to the purchaser. He referred to "Story on Agency," quoting a passage to the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

effect that a purchaser had no remedy against a selling agent, if the latter, before complaint was made, had parted with the funds to his principal on the grounds of laches He urged that it was the duty and the custom of a purchaser to examine goods on taking delivery, and that to postpone the inspection for three months was unreasonable in any case, but it was ridiculous in the present case, where such a delay took place, in the face of the fact known to the plaintiff, that the goods in question belonged to others; and the payment was made in a manner to admit of the transmission of the funds to London immediately after delivery was taken. Mr. Ness then pointed out that as a matter of fact the goods had been inspected before payment was made, or, at all events, representations as to inspection had been made by the plaintiff, inducing the defendants to believe that the bags had been duly examined, and that the defendants were justified in dealing with the funds as if the goods had been found to be in terms of the contract. Certain bags which appeared to be loose and drawn from several bales were rejected, and the payment postponed until these were arranged for. This fact again was evidence of the plaintiff's or rather his agent's, carelessness; for these loose bags disclosed that the goods complained of were second-hand and formed an index to the quality of the bulk. Each of these defences formed in itself a full answer to the action. The defendants were in fact agents and held no funds of their principals when complaint was made The delay in examining the goods, and that too with a knowledge of the defendants' position was negligence, the consequence of which must be visited on his own head, and the rejection of a portion which implied approval of the rest. But apart from these positive defences, the plaintiff had conspicuously failed to establish that the goods differed from the descript on given in the contract while the evidence actually established that they did not differ. The goods were sold by samples accompanied by a descriptive list. It was true the plaintiff desired to add to these certain representations by the defendants that they were new and fit for rice purposes; but he failed to prove them. He had only a nebulous idea that they were made, while the defendants contradicted his belief, a contradiction in which they were corroborated by the fact that the samples were second hand. The remaining question was, did the bulk answer the samples and list? They did beyond all doubt. The list was silent as to whether they were new or old; it described some as "new" and some as "second-hand," and thus excluded any implication about the rest The samples produced of the lots complained of, it was clear to the senses, were second-hand, they were marked, stained, and mended, just as was the bulk complained of; of the other lots the samples were not produced, and the assumption was they too represented their bulk. No evidence was adduced by the plaintiff showing that the samples and the bulk had been compared, and it was idle in the absence of such evidence to ask a variance to be inferred. He then referred to "Chitty on Contracts" to show that when a sale was concluded by sample, a warranty was excluded except as to matters which could not be judged of by sample; and pointed out that the fact of the samples being second-hand was here obvious to the senses. After some remarks as to the fitness of the goods for rice purposes and the absence of any warranty that they should be so, he concluded by asking that the petiton should be dismissed with costs.

Mr Dickins said:—In this case we disclaim all imputations on the defendants. We do not believe they practised any wrongful concealment; the only concealment they did practise was an unwise one, namely that of not revealing to us the names of their principals, an unfortunate ommission which has brought about the whole trouble and for which they must naturally be held responsible.

The first point in the case is that of Agency and in this my position is that as laid down in notes of Thompson *v.* Davenport in Smith's leading cases, when no Agency is declared the agent is responsible, and that even when Agency is declared but the *names* of the principals are not disclosed the agent is still responsible. Buyers and sellers are both within rules,—both parties to a transactions, not *one* as my friend endeavours to make out. There is not one law for sellers and another for buyers. It is not necessary that I should go into all the cases. I will cite one, a recent and extraordinarily strong case, that of Poice *v.* Walker. There Walker contracted to sell to Poice a quantity of wheat. Walker being apparently a broker only and referred to himself in the body of the sold note as "Agent for Schmid & Co. of Dantzic" but signed the note without any restriction. In an action for non-delivery he was held responsible. This case and a host of similar ones show that an agent wishing to avoid responsibility must in the most express and unequivocal terms declare not only that he is an agent, but that he is agent for disclosed principals and in the transaction in question is acting as such agent. And all the cases show that persons known to be agents, such as auctioneers and brokers, unless they disclose their principal are treated in every respect just as if they were principals themselves and altogether without reference to the state of accounts between them and their undisclosed principals. They are taken as having for their own purposes assumed the position of principals and the party with whom they dealt as having acted upon this assumption by them. Hence upon the evidence it is abundantly clear no principal having been named until long after the contract and discovery of default on the defendants' part, that the defendants are liable as principals and must be treated as if there never had been any question of agency in the case. They did not even state with any sufficient clearness that they were agents at all—they themselves admit this and confess that they left the plaintiff to infer it from circumstances, and a few chance expressions which might equally well refer to mere joint interests. The marks in the list; the use if the words 'consignors' and 'consignment' did not necessarily indicate agency. Let us now consider what was the contract between the parties. Addison on Contracts on the very first page lays it down that 'every contract includes a concurrence of intention between two parties.' What was the intention of the parties? The evidence makes it perfectly certain that the intention of the defendants was to sell and that of the plaintiff to buy new and perfect bags fit for rice packing, not only indeed that such *were* their intentions, but that such alone *could* be their intentions. The contract was founded upon the letter of the 25th January from the defendants broker to them, and the acceptance of modified terms of that letter by the plaintiff's letter of 11th February. From these it was clear that excepting 28,500 bags, the bags were viewed as new and perfect. The conversations also which illustrated the contract showed that the bags (except the 28,500) were taken as new. The price asked was 18—19 cents all round. Now the best bags were sold for 20 cents by the defendants to Mr Wilkin a couple of years ago, bags all of one make and kind while these bags were of mixed makes and had been kept here for some time, besides they were bought in a larger quantity. Hence 18—19 cents would certainly indicate new bags both to Mr Wilkin and Mr Watson. Again second hand bags were shown by Mr Wilkin to be worth only about ten cents. Of course the bags if new, &c. would be fit for packing rice and sending it to Europe—and the defendants admit that they knew from the plaintiff that he wanted the bags to pack rice in for Europe. Here it should not be lost sight of that the plaintiff could import perfectly new bags all of one uniform size and make at 14 cents, how then could he be supposed to pay the same price for second hand bags of mixed makes? As to the samples it is clear that both parties regarded the samples as new and perfect and supposed them to be so. One of the samples produced showed a stain about the size of a crown piece, but this appeared to be in the jute itself. That the marks inside some of the samples escaped the plaintiff's attention is not under the circumstances at all to be wondered at. They escaped also the defendants' attention as well as the alleged stitch holes. The fact that upon close examination just before the trial, after all the circumstances were known, some of the sample turned out to be second-hand is of no importance in the case of the clear intention of the parties to deal in new bags. The samples must be taken as if they were as perfect as they were supposed to be by both parties, the intentions of the parties as before said governing the contract. As to the assertion that the bags mentioned in the survey were up to the samples as they were supposed to be—this is monstrous. It is equally absurd to state that they are up to the samples produced in Court. The lengths to which the defendants will go are shown by the astounding assertion made by three intelligent beings in this Court that bags impregnated with bone dust are fit for packing rice. The Kobe survey admitted by both parties is proof positive that some 97 000 bags were not up even to the sample produced, much less to such samples as the samples were supposed by both parties to be,—new and perfect. The argument founded upon the inspection not taking place until after delivery is utterly unsound. In the first place so extreme was the anxiety of the defendants to get the money that they would hardly give the plaintiff time to work at the bales. The very essence of the contract as modified by the express desire of defendants was that delivery should be taken at once and payment made immediately. In fact when a short delay owing to bad weather occurred at Kobe we were scolded by Mr Gay. Beside defendants had plenty of notice that faults were found in some of the loose bags at the time of delivery, and as the drafts sent home were at so many months sight the defendants might have stopped payment. My friends argument that the fact of their having remitted before the present demand was made falls therefore to the ground. Besides it has no legal authority to support it. His citations referred to cases where the principal was distinctly known and the agent had remitted before demand, in which event no doubt the agent in absence of fraud was discharged. The respectable Mr Levy, principal in this case, could not however be looked upon as having clean hands. No doubt, too, where a demand is made against a principal who was undisclosed at time of contract that demand must be subject to account between principal and agent. But this is utterly inapplicable in the present instance. We have nothing to do with any principals except the defendants. They have made themselves our principals and must be treated as such without any reference whatever to account between them and the people in London. Something was endeavoured to be made out of the mode of distribution of payment but it was clear that no distinction was made as to the mode of payment of the 14 cent and the 17 cent bags. It was an absurdity, too, to ask that we should seek our remedy in Europe. Indeed according to the old cases the fact of a principal being out of the jurisdiction was enough to charge the agent, and even now such a fact is a strong presumption that credit reliance was given to the agent present and not to the principal ten thousand miles away. This indeed is but common sense. With regard to the difference in price this was as admitted by defendants simply out of consideration for the services they had rendered to plaintiff by advising him about rice shipping. Such difference had nothing to do with any difference in quality which indeed did not exist. This affair would be a lesson to my client. He entered into the transaction simply out of good will to the defendants, having no present need for the goods which he could have obtained better suited to his wants at a cheaper rate. He would take the defendants advice not in future to credit their assurances but to act just as if no assurances had been given. The representations accompanied the samples and these and the samples, if one can use the expression, must be taken together as being the whole representation upon which the contract was made. There was nothing to oblige defendants to declare their principals, but if they did not do so they cannot complain of being

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

treated now as if they were themselves principals—as which they acted, conversed and signed papers and threatened legal proceedings. Notice was given of the state of the bags as soon as this became manifest. That it did not become manifest before was due partly to the circumstances of the case and to the nature of the goods, but chiefly to the defendants haste in forcing delivery. I entirely deny that in transactions like these when the verbal and written assurances are there of a known and respectable house, especially when acting as principals, it is customary to examine the goods before taking delivery. On this point the evidence of Mr Wilkin, Vice Chairman of the Yokohama Chamber of Commerce, ought to be decisive. The fact of remittance was one we had nothing to do with; the defendants were principals and could no more plead remittance than any other principals could. Nor was three months an unreasonable delay, it was an unavoidable one and could in no wise injure the position of the defendants as principals. If it injured them as agents that was their own fault; they should not have acted as principals if they wished to disclaim the responsibility of principals. It was quite enough for them to have disclosed their principals from the commencement, then my client would have known with whom he was dealing and would have taken extra precautions or demanded extra guarantee. The contract is evidently between parties knowing each other. How can it possibly be said to be between the plaintiff and people of whose very existence he was unaware? Who could sue him on the contract? evidently the defendants alone. The test of who are parties to a contract is who can sue on the same. Under all the circumstances the defendants were clearly liable for about 97,000 bags which had been rejected, and the price of which with expenses was claimed. At all events if there was a scintilla of doubt as to the whole of the 97,000 bags there could be absolutely none whatever in respect of the 20,000 bone bags.

Judgment reserved.

REUTER'S TELEGRAMS.

LONDON, 22nd March, 1877.

Fighting has been renewed in Bosnia and great warlike preparations are being made throughout Asiatic Turkey.

The Porte still persists in refusing the conditions of peace asked by Montenegro.

The separate command in the Straits and China is to be abolished.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

London, 11th March, 1877.—Russia withdraws from the Treaty of 1856, unless the Powers agree to co-operate in obtaining the fulfilment of the Programme decided upon at the conference.

London, 13th March.—Russia has made fresh proposals for collective action on the part of the Powers.

Montenegro persists in her demands.

Constantinople, 15th March.—The Porte has rejected the conditions submitted by Montenegro. General Ignatieff has proceeded to London.

Berlin, 5th March.—General Ignatieff has arrived here on a special mission from St. Petersburg, and will afterwards pay a special visit to Paris and Vienna.

Washington, 5th March.—President Hayes has issued an inaugural address to Congress, in which he strongly urges the union of all parties, in order that orderly Government may be restored to the Southern States. He also urges a speedy return to specie payments.

London, 6th March.—In the House of Commons last night, Sir Stafford Northcote, replying to a question by Sir H. Wolf, said the first reduction in the Suez Canal dues had been postponed till the 15th April. The Canal Company, he said, objects to England voting, because the shares held by the English Government do not bear coupons. Government has protested against this objection, and declares its right to vote as shareholders.

General Ignatieff will not visit London in connection with his special mission, but will meet Count Schouvaloff at Paris, whither the Count proceeds for that purpose.

London, 6th March.—Mr. Ward Hunt estimates the expenses of the Navy for the coming year at $10\frac{3}{4}$ millions.

Constantinople, 6th March.—The Porte objects to the demands of Montenegro in arranging terms of peace, which comprise certain cessions of territory and a seaport.

St. Petersburg, 6th March.—An imperial ukase has been issued ordering the organisation of nine army corps.

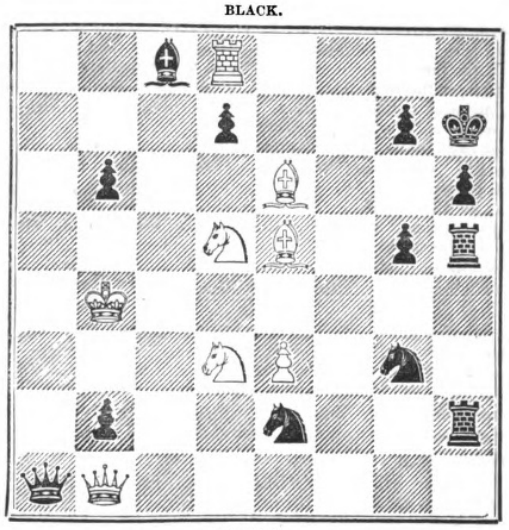
The number of recruits joining the British army since the beginning of January has been 1,000 weekly.

London, 7th March.—Reuter's Office announces from Constantinople that the Porte maintains the firm attitude adopted at the Conference, and accepts war with Russia in preference to having the present state of suspense prolonged. On the other hand, information from the same source states that Russia rejects the suggestion to allow Turkey a year's grace in which to carry out the promise of reforms.

London, 7th March.—According to information from St. Petersburg, Russia still maintains an expectant attitude pending the replies from the Powers to Prince Gortschakoff's circular

OBITUARY: Generals Sir John Fordyce and Evelyn Waddington.

St. Petersburg, 8th March.—Prince Gortschakoff has instructed the Russian Envoys to declare that Russia will withdraw from the treaty of 1856 unless the Powers cooperate to obtain the acceptance of the original programme presented at the Conference.



London, 8th March.—In the House of Commons to-night Mr. Bourke, replying to a question, said that the answer to Prince Gortschakoff's circular had been deferred at the request of Russia, who had promised communications on the subject, which however had not yet been received. The prolonged absence of the British Ambassador from Constantinople, he said, was not intentional.

Washington, 9th March,—President Hayes has nominated W. M. Evarts as Secretary of State for Foreign Affairs, General Sherman as Secretary of Treasury, and Carl Schurz as Secretary of the Interior.

PRIZE PROBLEM.

BY W. GRIMSHAW.

BLACK.

WHITE.

White to play and mate in 4 moves.

SOLUTION OF J. S. SCHULTZE'S PROBLEM OF LAST WEEK.

White.	Black.
1.—Q. to Q. Kt.'s 6th	1.—P. takes Q.
2.—B. to Q.'s 6th.	2.—K. takes B.
3.—Kt. takes B. and mates.	

Correct answers received from C. B., Yokohama; and W. H. S., Tōkiō.

IMPORTANT TO ALL WHO HAVE GARDENS.

We understand that Messrs. SUTTON & SONS, the Queen's Seedsmen, Reading, Berkshire, near London, England, have, after a series of elaborate experiments, perfected a system of packing which secures Seeds arriving inthis country in a dry and fresh condition. This cannot fail to be of inestimable value to all interested in Flowers and Vegetables, and will greatly increase their cultivation. An advertisement of this eminent House appears in another column, to which we refer our readers.

TRAVELLERS, MISSIONARIES & others, may employ their leisure time *pleasantly & profitably*, by collecting *rare butterflies*. Forward (freight unpaid,) folded up separately in paper in cigar boxes. Best prices remitted for perfect specimens. Collecting apparatus sent *free* to those who furnish reference to D. G. RUTHERFORD, *(Horniman's Museum.)* Forest Hill, LONDON. [ADVT.]

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There continues a moderate demand for most articles; prices are unchanged but firm, and deliveries have improved. We quote as follows, viz:—

Grey Shirtings:—							
7 lbs.	38½	yds.	39	in.	per pce.	$1.37½	to $1.72½
8 lbs.	38½	yds.	44	in.	,,	1.60	to 2.20
8 lbs. 4 to 8½ lbs.	38½	,,	39	in.	,,	1.60	to 2.30
9 lbs.	38½	,,	44	in.	,,	2.00	to 2.50
T. Cloth 7lbs.	24	,,	32	in.	,,	1.50	to 1.70
,, 6lbs.	24	,,	32	in.	,,	1.10	to 1.25

White Shirtings:—							
60 to 64 reed	40	yds.	35	in.	per pce.	2.20	to 2.40
Turkey Reds	24	yds.	30	in.	2—3 lb. per lb.	0.60	to 0.90
Black Velvets						7.25	to 8.25
English Drills	15 lbs.	40	yds,	30	in.	2.70	to 2.90
Taffachelass		12	yds,	43	in.	1.70	to 2.15

Yarns.—

No. 16 to 24	per picul	$29 75	to 32.50
No. 28 to 32	per picul	$30.00	to 34.00
No. 38 to 42	per picul	$34.00	to 39.00
Reverse Twist 16-24	,,		

Woollens.—Our market for this staple has been again very quiet during the past week, owing principally to the continued rise in the rate of Mexican dollars against native currency. There exists a somewhat good demand for *Blankets* and *Army Cloth* at higher prices, of which, however, stocks are light. Other quotations remain nominally the same as last given.

Plain Orleans	40—42	yds.	32	in.	5.50	to	7.00
Figured Orleans	29—30	yds.	31	in.	4.25	to	5.25
Shimagoro	30	yds.	30	in.	4.00	to	5.25
Italian Cloth	—30	yds.	32	in.	0.24	to	0.31
Camlet Cords	29—30	yds.	32	in.	5.75	to	6.00
Camlets Asstd.	56—58	yds.	31	in.	16.50	to	17.50
Lastings, Japan	22—30	yds.	32	in.	12.00	to	13.00
Plain Mousselines de Laine	—30	yds.	30	in.	0.17½	to	0.19

Figured Mousselines de Laine	30	yds.	30	in.	0.25	to	0.30
Multicolored ,,	30	yds.	30	in.	0.30	to	0.36
Cloth, all wool plain or fancy	48 in. to 52			in.	0.80	to	1.20
Presidents	54 in. to 56			in.	0.60	to	0.65
Pilots	54 in. to 56			in.	0.45	to	0.55
Union	54 in. to 56			in.	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.		per lb		0.40	to	0.47

Sugar.—There has been a very slight decline in the value of *Formosas* during the past week, but other kinds show a trifling increase in value. Stocks are estimated not to exceed 9,000 piculs.

Sugar:—Takao in bag	per picul		$4.40
,, in basket	,,		$4.20
Taiwanfoo in bag	,,		$4.25
do. in basket	,,		$4.10
China No 1 Ping-fah	,,	$7.60	to $7.95
,, No. 2 Ching-pak	,,	$7.00	to $7.60
,, No. 3 Ke-pak	,,	$6.40	to $6.75

China No. 4 Kook-fah	per picul	$6.10	to $6.30
,, No. 5 Kong-fun	,,	$5.80	to $6.15
,, No. 6 E-pak	,,	$5.20	to $5.50
Swatow Brown	,,		$3.65
Daitong	,,		$3.80
Japan Rice	,,	$2.00	to $2.10
Kerosene Oil	,,		$4.40

Kerosene Oil—The market is quiet at $4.40, with but few transactions, as purchases are only made from hand to month. Stocks are estimated at 30,000 cases.

EXPORTS.

Silk.—Protracted uncertainty about the maintenance of peace in Europe, the disastrous state of the Continental manufacturing trade and the approaching time of the crops, account for the paucity of advices from home, their unsatisfactory character and the dulness of this market.

There have been delivered since the 28th ultimo 113 piculs of all descriptions, which have led to very scanty settlements. It is therefore impossible to establish regular quotations. The prices which, we hear, have been paid are $640 for medium Hanks, $600 for a few bales of best Oshius and $550 to $720 for Silks offered as filatures. All descriptions of Oshius are much pressed on the market at declining rates. Some parcels of genuine filatures are still held at from $800 to $930.

The English mail of 3rd instant took 17 bales.

Tea.—Busines for the closing week has been almost nil and prices entirely nominal. Supplies from the country have ceased to come in.

EXCHANGE AND BULLION.

Exchange.—Business remains extremely quiet with slightly firmer rates. In native exchange *Satsu* have declined, but *Gold Yen* are in demand for export.

Rates close as follows:—

Sterling—Bank 6 months' sight		4s. 0⅛d.
,, Bank Bills on demand		4s. 0d.
,, Private 6 months' sight		4s. 1d.
On Paris—Bank Sight		5.05
,, Bank 6 months' sight		5.15
,, Private 6 ms. sight		5.18
On Hongkong—Bank sight		1 % dis.
,, Private 10 days' sight		2¼ ,,
On Shanghai—Bank sight		73⅜
,, Private 10 days sight		74⅛
On New York—Bank Bills on demand		96½
,, 30 days sight Private		98½
On San Francisco—Bank Bills on demand		97
,, 30 days sight Private		99
Kinsatz		417
Gold Yen		404

ELLWOODS'

HATS AND HELMETS.

J. ELLWOOD & SONS,

Velvet, Beaver, and Felt Hat Manufacturers.

Sole Inventors, Patentees, and Manufacturers of the AIR CHAMBER HATS & HELMETS, Universally acknowledged as so great a boon by all Residents in

Hot Climates.

24, GREAT CHARLOTTE STREET, LONDON, S.E.

Yokohama, April 7, 1877. 52ins.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

MR. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

Yokohama, April 7, 1877. 26ins.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

At the Temperance Hall, No. 86, Yokohama, April 9th, JAMES TURNBULL, a native of Scotland, aged 58.

Notes of the Week.

There can be little doubt, we fear that the state of affairs in the South goes on from bad to worse. The Satsuma Army does not appear to be making much headway, although it is doubtless receiving, and will continue to receive considerable accessions to its strength. The Government fully recognises that its own position is a desperate one. Independent of the orders for a new levy of ten thousand men, the Governor of Osaka has issued a call for the raising of two regiments of volunteers, while notifications are constantly being published, urging, almost in tones of entreaty, the necessity of patience and help. The gaps to be filled up among the ranks of the Imperialists are terribly wide. We think that ten thousand, which is the number that one of our contemporaries estimates of killed and wounded on the Government side alone, is probably excessive, but that the losses have been terrible is evident from the enormous number of wounded in hospitals at the various medical stations,—in Kobe alone there are over three thousand, five hundred,—and the pressing demand for fresh battalions. Of what is actually transpiring at the scene of action we know absolutely nothing, for it is needless to say that not the slightest credit can be permitted to the few reports that the censors of the press allow to be published, and comment on them is time thrown away. We can only judge of the terrible nature of the struggle from those actions of the Government which it cannot conceal. As might have been expected, there are almost daily rumours of risings and disturbances, which may at any moment assume formidable proportions in other parts of the country. The longer this fratricidal strife continues, the greater the danger to be apprehended from such causes. The distress that must accompany civil war, and which arises from so many sources of trade becoming closed is already beginning to make itself keenly felt, and this is another danger to the Government. Hungry subjects become desperate enemies, and we feel convinced that the temper of the people, patient and long-suffering though it is, will not stand the strain that must be put on it by prolongation of this cruel and useless war. We publish to-day the translation of an article in which the writer bitterly deplores the want of spirit in the people, but its very publication—only one of many expressing similar sentiments—shows that the spirit, beaten down and sorely weakened as it is by a long course of injustice and frivolous interference and oppression, is not dead. It will live again,—God hasten the day,—endowed with vigour that comes of new life, and force its rights from a Government that now treats its prayers as a crime.

It is not in the loss of valuable lives, and in the expenditure of money that can be so ill-afforded, that the results of the civil war are so lamentable. Time will fill the gaps made in the families of the land, and well husbanded resources will replenish the treasury. But it is in the vicious tendencies which it insinuates into the minds of the people; in the demoralization of society which is produced by its malignant influence. Japan was beginning to emerge into broader light, and kindlier ways. There was hope that

> "A slowly dying cause,
> "And ancient forms of party strife."

Would cease, and that in their place would reign

> "The nobler modes of life,
> "With sweeter manners, purer laws."

But the clouds have again swept over the heavens, and darkness and confusion seem to be settling down upon the unhappy land. Hearts that were beginning to be stirred by new tenderness and compassion, now again grow callous to the feelings and sentiments of humanity. The strife is as it were a moral gangrene diffusing its poisonous humours through the whole political and social system, Slaughter, devastation, waste, impoverishment, are sufficiently terrible, but it is the collateral evils which they engender; the immoral feeling, the depravation of principle, which form the mass of mischief diffused by this unnatural contest.

We have been informed, and we see that the *Echo* also refers to the report, that there are serious dissensions in the cabinet at Kiôto. If the house be divided against itself, and the division end in the retirement of those who are to a great extent personally responsible for the present condition of affairs, we see therein the only chance for a speedy peace.

It is melancholy to think how much the present administration has done to alienate from itself the world's sympathy which was at one time so readily, nay, almost injudiciously, extended towards the efforts which it was imagined it intended to make for the advance of the people whom it represented. It certainly promised most fairly. A constitution; a representative assembly; revision and equalization of taxes; development of the resources of the country, for the better employment and improvement of the condition of the people, to say nothing of pledges given to the nobles and their retainers in return for the sacrifices they consented to make. It was a programme well fitted indeed to gain the confidence of the people, and to engage the attention and good will of other nations. How have any of these pledges been fulfilled; pledges made under solemn edicts, and in the name of the Mikado?

Original from UNIVERSITY OF CALIFORNIA

It can be little matter for wonder, that discontent which takes the form of open rebellion, should arise from repudiation and non-fulfillment of promises so liberally given, and that force of arms should be employed to change into a National Government what is now only a self interested Committee of Administration.

The *Tokio Times* has the following paragragh :—

"The report given in the *Akebono Shimbun*, to the effect that Admiral Yenomoto had telegraphed from St. Petersburg asking that Saigo's life be spared, is destitute of foundation. No such despatch has been received. There is, however, strong reason for believing the Government have now decided that, if the rebel leader be taken alive, he is not to be put to death."

We trust that this is really the case, and that in the event of the Government proving successful in the present struggle, it will not stain its regained power by rigorous and revengeful measures. The land that is watered with the blood of conquered political enemies is sure bring forth a plentiful crop of evils. That the Government will incline to so merciful a policy is not however borne out by a report, which reaches us from a private source, to the effect that Shimamoto, who is said to be the ablest judicial adviser in the country, and who has been engaged on the national code, has strongly represented to the Government the ill results that would certainly arise from the execution of Oyama, the ex-governor of Kagoshima. His representations have caused the authorities to place him under the strictest surveillance on suspicion of his favouring the cause of Saigô.

At the present time the lovers of Racing in Yokohama appear to have formed themselves into three parties. The Y. R. Association, who generously offer the right hand of fellowship to the Y. R. Club, who are, we are imformed, anxious to grasp it, but are prevented from following out the secret wish of their hearts by a section that considers that the propositions made for reconciliation are not capable of adoption. We are irresistibly reminded of Armado's couplet and Moth's l'envoy

"The fox, the ape and the humble bee,
Were still at odds being but three.
Until the goose came out of door,
And stay'd the odds by adding four.

We can see no remedy for the present state of things but for the public to play "goose." It has often been called upon to do so before.

The *Tokio Times* maketh merry in verse. As Touchstone hath it. "I'll rhyme you so eight years together, dinners and suppers and sleeping hours excepted : it is the right butter woman's rank to market."

"A Donkey's master said unto his beast,
While doling out to him his lock of straw,
'Here, take it—since such diet suits your taste,
And much good may it do your vulgar maw!'
Often the slighting speech the man repeated;
The Ass—his quiet mood by insult heated—
Replies; 'Just what you choose to give, I take.
Master unjust! but not because I choose it.
Think you I nothing like but straw? Then make
The experiment. Bring corn, and see if I refuse it.'
Ye caterers for the public, hence take heed
How your defaults by false excuse you cover!
Fed upon straw—straw it may eat, indeed:
Try it with generous fare—'t will scorn the other."

During the gale which raged so fiercely on Tuesday, a diabolical attempt was made by a Japanese to set fire to a house in Sumiyo shichô near the Otomachi. The wretch had prepared a bundle of rags and sawdust, saturated with kerosene, which he lighted and threw among the outhouses of a silk mercer's shop. By good fortune the blaze was extinguished and the fellow caught. On being interrogated, he stated that it has been the intention of himself and some accomplices, as soon as the fire had well started, to set fire to houses in the Ogicho and at Ishikawa, thus causing a conflagration that would probably have swept away the entire native town of Kanagawa. The object was evidently robbery, as during the confusion wholesale plunder could have been carried on. It is to be earnestly hoped that the gang, with which the scoundrel confesses himself connected, will all be caught, and that effective measures will be taken to prevent their engaging in any similar enterprise. A fire is generally so frightful a calamity in a Japanese town, that any attempt to wantonly cause one cannot be too swiftly or too severely punished.

We understand that a balloon is in process of construction in Tokiô by the Government, which it is intended to use for obtaining certain information of the position of Saigo's Army. As six weeks must certainly elapse before it can be ready for shipment to the South, it does not seem as though the Government expected speedily to bring matters to a victorious termination. It is not expected that any foreigners will be allowed to accompany the native aeronauts on their exploring trip.

The last mail brings us news of the deaths within a week of two celebrated dramatists, Herr Mosenthal and Mr. John Oxenford. The former, who was considered the leading dramatist in Austria, is best known by his powerful play of *Deborah*, made familiar to English play goers under the name of *Leah*, a character in which Miss Bateman laid the foundation of her fame as an actress. He was the author of a large number of dramatic works of the highest literary merit, but few of them have been adapted to the English stage. Mr. Oxenford was not only a dramatic writer of acknowledged excellence, as evidenced by his original farces, *Dearest Elizabeth*, *Twice Killed*; his adaptations,—of which *The Porter's knot* is so successful an example ;—and *libretti* of such operas as *Robin Hood* and *Lily of Killarney*, but a brilliant scholar and original thinker. His articles on various subjects, and his translations from French, German and Spanish poets are all marked by rare ability. He held for many years the responsible position of dramatic critic to the *Times*, and his criticism was remarkable no less for its kindliness than for its conciseness and independence. He died at the age of sixty-two of severe bronchitis, and leaves a blank in literary, as well as in private circles, that it will be difficult to fill.

By the *Gaelic* on the 12th instant, were imported from San Fracisco a number of stud horses and merino sheep for the *Naimusho* (Home Department), which have been specially selected, we understand, by Mr. D. W. Ap Jones, who accompanied the commissioners who lately left for America to purchase stock for this country. The horses were landed in splendid condition, notwithstanding that the *Gaelic* met with rough weather on her way over, and their appearance afforded a treat to lovers of horse-flesh who witnessed their landing, which is but seldom afforded during a residence in this country. The horses, indeed, seemed rather to have stepped out of a comfortable stable, than from on board ship after a trying passage of twenty-one days, so perfect was their condition. The first landed were the two stallions, a bay and a white, the former being a fine framed horse with good points, but vicious in the extreme. Opinions varied, however, as to the breed of the white, which some being inclined to think came of Normandy stock, while others favoured Clydesdale. A bay horse named *Ralston* is really a magnificent animal, but very light of bone, and would most likely give way under a heavy, or even a moderate weight. The dark bay *Regent* might, in England, be picked out as a choice for the Grand National; the grey *Bradly* would make a pretty park hack, while the light chestnut mare is only suitable for some fair *equestrienne's* pet. But the reported cost of these animals is something fabulous. The horse *Ralston* is said to be priced at an enormous figure; a pair of chestnut fillies are set down as costing $4,000, and the others in proportion. If such be really the case we are led to ask, Why are they imported at all? It may be that they are brought here on speculation, for exhibition first at Ginza and afterwards throughout the country, at the moderate charge which characterises all such native shows, though such a proceeding would hardly add much to the dignity of the Home Department. Perhaps some of the horses may find their way to Temples of renown and pass the rest of their lives in inglorious but sanctimonious ease, on an eleemosynary diet of white beans. Certainly they are utterly useless for breeding purposes. For instance, the white

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

stallion has an exceedingly coarse neck, is very faulty in the quarters, and has literally no body, all of which defects are but too apparent in the native pony. None of the others, though splendid specimens of the equine race, strike us as properly adapted for breeding purposes in this country. They will probably only swell the already too large list of "white elephants" which the Japanese unhappily possess. If the Department which authorizes the importation of these horses seriously desires to improve the breed of Japanese ponies—and no desire could be more commendable—why does it not, instead of wasting thousands of dollars on such highly bred but useless animals, import from China fifty or more good brood mares, which could be obtained at a cost varying from $50 to, at the very most, $200. The China pony possesses in particular the very points in which the Japan pony is deficient, as the most casual observer must have seen, and a cross between the two could not only be easily and cheaply effected, but the result would undoubtedly be to produce a class of ponies which would combine the useful qualities of both.

The attempt of a cross with the China pony we recommend firstly on the score of cheapness and convenience. If the Japanese authorities are prepared to go to any expense, with the sincere desire of improving the native breed, then let them import useful Arabs for the purpose. Second class cheap ones will do, as it is well known that the breed of China ponies was greatly improved by the inferior class of Arab horses which Fane's force left in the north of China at the conclusion of the last war. The purchase of expensive American horses such as just imported is a sheer waste of money.

We are glad to say that the subscription to the Shantung Famine Relief Fund now amounts to $3,448.50. It is a notable fact that the Chinese in this settlement have contributed upwards of $900 of this amount, which shows that not only do they evince a laudable desire to help their suffering countrymen, but have confidence that the foreign committee will properly distribute the charity.

A letter has been addressed by a number of land renters of the Swamp Concession, to the Doyen of the Diplomatic Corps, forwarding a petition to the effect that measures may be taken to urge upon the Japanese Government the lighting of the streets of the settlement with gas. We have no space to enter into the question which has so often been made the subject of discussion in our columns. In their own interests and on behalf of their long-suffering fellow residents we trust that the arguments of the propristors of the lots and buildings in the Swamp may prevail, and that our nights henceforward may be filled with gladness. If they succeed, we are going to ask signatures to a petition for a water cart, the want of the liquid element by day being as fruitful of misery as that of the absence of light by night. But we fear there is no hope. Our private opinion is that if, like the citizens of Calais, they went clad only in their shirts and with ropes round their necks, their supplication would be rejected.

From the "Japan Mail Daily Advertiser."

Monday, 9th.

The *Hiogo News* publishes the following from the *Osaka Nippô*.

"The mobs who took to bamboo spears in Miye *ken*, and were recently quelled have been handed over by the police to the *Saibansho*. They are said to number over 60,000."

And we wonder how many police it took to take these mobs in charge. It must have been something like the marriage procession in Marryat's "Wondrous Tale of Han" which included all the inhabitants of the province, so that the only spectators were three blind old women who were so overcome with astonishment at the spectacle that they bowed their heads and died. The question naturally arises, What did the *Saibansho* do with the prisoners? But perhaps it is as well to push speculation no further.

We hear from the *Chôya Shimbun* that Tamano, the Judge who was appointed to try Ôyama the late Governor of Kagoshima *ken*, has declined the task, but no reasons are given for his refusal.

From the *Nichi Nichi Shimbun*.

A telegram which was despatched from Osaka at 4.30 p. m. on the 5th instant announces that the Imperialists of Yamaga made an attack at dawn on the 5th instant, when they were victorious and captured Tajima. (?)

From the *Chôya Shimbun*.

Mr. Iwamura, who was recently appointed the Governor of Kagoshima *ken*, will shortly start for Kagoshima with some newly appointed policemen.

The following report came from some one at the seat-of-war; the date is not known. "While a battle was going on between the two forces, Kirino advanced on horseback and cut General Nodzu on the shoulder, and though the wound was not deep the latter thought it prudent to retreat. During his flight Nodzu met Major Murata and told him of the affair. Murata then went after Kirino, and on ascending a high hill saw him about 4 or 5 *chô* distant. Murata fired at him with a newly invented English rifle, and saw Kirino instantly fall from his horse."

A telegram from Osaka at 5.05 p. m. on the 5th instant announces that the Imperialists have captured the village of Norinosu.

We hear that it has been notified by the *Daijokuan* that ten thousand more troops are to be drawn by conscription.

The Kaisei-Gakkô and the I-Gakkô (Medical School) have been united under the name of Tôkiô Dai Gakkô. The Tôkiô Go Gakkô (Language) will now be styled the Daigakuyobimon.

[Surely some definite name will be arrived at by and bye. With all this chopping and changing it is no wonder that the officials themselves never know where they are.—Ed. *J.M.D.A.*]

The S. S. *Glaucus* left Singapore on the 28th ultimo for Hong kong, and the S. S. *Ulysses* was to leave on the 3rd instant.

Tuesday, 10th.

From the *Mainichi Shimbun*.

The following Notification has been issued by Major General Saigo, the Acting Minister of War, to the officers and men of the Army now in Tôkiô:—

"Several scores of days have now passed since the rebels entered Kumamoto *ken* and resisted the Imperial forces. There are officers and men who are discontented at remaining here in the capital and wish to start for the seat of war. Their brave spirit is admirable, but at the same time it cannot be said that those who go the seat of war are braver than those who remain here for defence of the capital, or *vice versa*, for both duties are necessary in completing the suppresion of rebellion. There is a necessary army decipline and those subject to it cannot advance or retire according to will. Calamities constantly occur from heedlessness, and were every soldier to think about advancing to the fight and think nothing about defending the capital, accidents would arise from such carelessness, and it would then be too late to repine.

The Imperial forces of the Southern expedition are daily advancing and reports of their victories are continually arriving, so that many days will not pass before the insurrection is suppressed. But should the insurgents prove to be powerful so that their suppression may not be quickly arrived at, reinforcements will be forwarded to the south as required, so therefore all of you remain at your posts doing your customary duty and wait for further orders."

From the *Hôchi Shimbun*.

The following letter from H. M. the Mikado has been sent to Arisugawa no Miya, the Commander-in-Chief of the Imperial forces.

"You have ably discharged your office of Commander-in-Chief of the Imperial forces, in the use of both the Army and the Navy. Desiring to show my appreciation of your services, I now send you *saké* and *sakana*, and hope that you will further continue to be zealous and stimulate the officers and men to so discharge their duties that peace may speedily be restored."

Letters of a similar nature were sent to Yamagata, Kawamura, and Kuroda, the advisers to the Commander-in-Chief, and also to Lieut. Generals Oyama, Nodzu, Miyoshi, Miura, Yamada and Kawaji, and a money present made in lieu of the usual one of wine, etc. All the officers and men have likewise partaken of His Majesty's bounty. A letter and a present was also sent to Lieut. General Tani, commanding at Kumamoto, which, however, he has probably not yet received.

A telegram from Kiôto at 10.35 p.m. on the 7th instant announces that the Imperial forces at Kodome and Uyeki made an attack upon the insurgents on the 6th instant, but were unsuccessful and had to retire.

Torinosu, which was taken from the insurgents some time ago, has been retaken by them.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Another telegram from Kiôto on the same day announces that the Imperial forces who advanced from Yashiro have taken possession of Udo. The insurgents' reinforcements on their way from Kagoshima met the Imperialists at Nawodani, about two *ri* from Yashiro, where an engagement took place without any decisive result.

Many policemen have already been recruited from various provinces, and the Government further intends to hastily enrol some three thousand more from the north-eastern provinces.

From the *Nichi Nichi Shimbun*.

A telegram which was despatched from Kiôto at 1 a.m. on the 7th instant announces that on the 6th the Imperialists at Kodome attacked the insurgents. A body of police charged the enemies's batteries and captured about six of them, but the insurgents then made a flank attack, when a desperate struggle ensued and eventually both sides retired.

Some time ago at the battle of Tawarazaka, while Lieut. General Ôyama was moving about giving orders, two rebels with drawn swords rushed out of a wood and advanced towards the General with the intention of cutting him down, but just at that moment were discovered by some Imperial Lancers who attacked and killed them.

Wednesday, 11th.

The *Hôchi Shimbun* states that during his trial before the Minister of Justice, Oyama, the late Governor of Kagoshima, has to submit to the indignity of being closely bound, just as if he were the basest criminal in the land. As such rigour was not deemed necessary at the earlier stages of his examination, we are naturally led to enquire why it is now considered so. The Government may rest assured that justice, tempered by mercy, will add more to its dignity than a display of unncessary severity towards a man not yet proved guilty.

The *Hiogo News* is responsible for the following taken from the *Osaka Nippo*.

"About the 23rd, two or three soldiers set out from Kumamato castle to join the Imperial troops at Uyeki. They were killed on the way and their stomachs dissected, by which it was found that they were living on rice. After this the stomach of woman who started was subjected to the same process with the same result, and it becoming thus known that persons in the castle are eating rice, the rebels are said to have expressed admiration at the place being so well provisioned."

This is indeed most "tragic mirth." We are not told that the unfortunate lady was killed, only that she had "started." Let us hope the best and trust that the proof sought was obtained by the more merciful and equally sure means of an emetic.

The *Hôchi Shimbun* gives the following particulars of an insurrectionary movement on the part of the *samurai* of Nakatsu, in the province of Buzen, the immediate publication of which was perhaps prohibited by the Government, and some portion of the narrative has apparently been excised by the Censor of the Press:—"A telegram despatched at 10.50 p.m. on the 4th instant (whence not stated) announced that the *samurai* of the town of Nakatsu armed themselves with swords and patrolled the streets in force, on the pretence of defending the town. Some of their body set fire to several villages in the neighbourhood and the residences of the *Kucho* of Karashima-mura and Yabake. On account of * * * * *(sic.)* a local police force was sent to the district of Kamige, and a detachment of Tôkiô police to both Hida and Ogura. Another telegram despatched at 11.55 on the same night announced that a report having arrived that the rebels had entered Owake *ken* (Bungo) and were posted at the village of Beppu, the *Asama Kan* was immediately despatched to that place, where troops were landed aud dispersed the insurgents. The *Asama Kan* returned to Shimonoseki that day, but was immediately ordered to proceed again to Beppu. Another telegram which was despatched from Kiôto at 1.30 p.m. on the 5th instant announced that the insurgents of Nakatsu entered Owake *ken* on the 2nd instant and set fire to the town of Funai and then made an attack upon the *Kenchô*, which was gallantly met by the officials, so that by six in the evening the rebels were compelled to retreat, having first set fire to the prison. By midnight they arrived at Beppu where they took up their position, but on the morning of the 3rd instant a naval and police force attacked and dispered them. Masuda Sôtaro, the leader of the insurgents, with two others forcibly obtained money from the wealthy of Beppu. They then went to Saeki and Hide and were there trying to excite others to join them. Another telegram from Kiôto at 5 a.m. on the 6th instant stated that a naval force attacked the Nakatsu insurgents at Beppu and drove them in hurried flight towards Azashi-dani, whence it is reported that they are marching in the direction of Yufuyen-dani, their intended destination being Uchinomaki. The police force have been recalled from Owake to Sakanashi. A telegram despatched from Ogura at 8.05 a.m. on the 7th instant announced that the Nakatsu rebels, after being dispersed at Beppu, proceeded to the Aso district in the province of Higo. The farmers of Takubu have in consequence taken to arms, but a police force has been sent against them, and it is expected that they will speedily be quelled. Another telegram from Kiôto at 0.35 a.m. on the 9th instant stated that the insurgents of Nakatsu attempted on the 4th instant to join the Satsuma rebels at Futayetôge but were prevented from so doing by an attack on the part of the Imperialists. About 100 of the rebels were captured on the day following by a police force. If necessary some police will be sent to Uchinomaki to capture the rest of the fugitive insurgents. The insurrection among the farmers is nearly suppressed."

From the *Chôya Shimbun*.

Shimadzu Saburô is about to leave Kagoshima for Kiôto, and will be accompanied by a considerable retinue.

From the *Hôchi Shimbun*.

Mr. Mutsu, formerly of the *Genrô-In*, has been ordered to proceed to the south on business.

Thursday, 12th.

The funeral of Commander Marvin of the U. S. S. *Alert* took place yesterday afternoon, and was attended by the U. S. Minister and Secretary of Legation, the U. S. Consul General, the German Minister, the Italian Consul, the Captains and Officers of the men-of-war in harbour and a large number of the friends of the deceased. Commander Marvin entered the U. S. Navy in 1856 and served with more than ordinary distinction, and had he returned home in the *Alert* would have been promoted. The deceased officer won the esteem of all who knew him, and his loss will be severely felt. No reason is assigned for the commission of the rash act which led to his death.

A cargo boat loaded with coal sank alongside the *Laurel* yesterday morning. It appears that the boatmen insisted, contrary to the advice of the officers of the ship, in taking in more coal than could be safely carried, especially as a heavy swell was rolling it at the time. This caused the cargo boat to ship so much water when endeavouring to get away from the vessel's side, that she capsized. The boat rose again when all the coal had fallen out of her, and was then towed in to the hatoba.

From the *Nichi Niichi Shimbun*.

A telegram from Nagasaki, despatched at 10.50 p.m. on the 9th instant, announces that the rebels made an attack upon Yashiro on the evening of the 5th from both banks of the Kumagawa. On the evening of the 7th instant the rebels were completly routed and fled towards Hitoyoshi. Another engagement took place at 7 a.m. on the same day. The rebels attacked from Kobara-yama but fell into an ambuscade of the Imperialist's and were beaten.

From the *Mainichi Shimbun*.

A telegram despatched from Kiôto at 1.45 on the 8th instant announces that the third division of the Imperial troops, under the command of Colonel Soga, intended to attack Kawajiri on the 7th instant, but for certain reasons the commander changed his plan of attack and went to Udo, where he united with the van of the Imperialists who were posted in that town.

Another telegram from Kiôto at 5.30 p.m. on the 7th instant staets that the 1,500 recruits whom Beppu and Hayami lately enlisted in Satsuma for the rebel cause, attacked the rear of the Imperialists, who were compelled to retire until reinforcements were received, when they offered battle to the rebels at Kumagawa.

The number of the wounded in the Osaka Army Hospital is largely increasing, and for the last few days there have been only ten attendents to eighty wounded.

From the *Akébono Shimbun*.

A fire broke out at Shinjiku, Tôkiô, at 2 p.m. on the 10th instant, when about two hundred and fifty houses were destroyed. Three women were unfortunately burned to death.

Friday, 13th.

From the *Hôchi Shimbun*.

The following notification has been issued by the Governor of Osaka:—"As regiments of volunteers for the war in the South

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

will be formed, those *shizoku* or *hetmin* between the ages of seventeen and forty, either natives of or residents in this *Fu*, especially those who were in military service during the existence of the *Han*, and who now desire to fight for the Imperial cause, should send in full particulars of their occupation, residence, age, etc., to this *Fucho* by the 20th instant. When all preparations are made directions will be given for calling out such volunteers."

(Signed) WATANABE NOBORI,
Chiji of Osaka *Fu*.

7th April, 1877.

A telegram from Kiôto at 10.55 p.m. on the 10th instant announces that on the 9th instant the Imperialists attacked the insurgents at Hedanomura, but were unable to force the latter to retreat. The Imperialists at Yamaga also made an attack upon Torinosu, the result of which is not yet known.

A telegram from Konoha at 11.50 p.m. on the 10th instant announces that the Imperialists who advanced from Yamaga have taken possession of Waifu. Another body of the Imperialists attacked the rebels at Ishikawa and put them to flight. These rebels, after being beaten, united with the insurgents who were posted about Kume, and as their combined force showed signs of making an attack upon Minami-Shimada, a further assault was made by the Imperialists, the result of which has not been received.

From the *Chôya Shimbun*.

It is said that H. E. Sanjo, the Prime Minister, will shortly return to Tôkiô and that H. E. Iwakura will proceed to Kiôto in his place.

From the *Mainichi Shimbun*.

Three hundred *samurai* of Ishikawa *ken* (Kaga) and two hundred of Aitchi *ken* (Owari) have been armed, formed into a special force, and styled the *Udgeki-tai*. They arrived at Osaka on the 5th instant.

The six companies of troops at present stationed in Yezo are to be sent to Yashiro, in Higo, and as an order has been given for a fast steamer to proceed to Otaru harbour, in Yezo, in order to bring them away, the *Taihei Maru* was despatched at noon on the 8th instant from Yokohama for that purpose.

Saturday, 14th.

In H. B. M.'s Court yesterday morning, Francis Henry, a coloured seaman on board the British barque *Laurel*, was convicted on a charge of drunkenness and using abusive language towards his captain and officers. Mr. Wilkinson fined him $1 and costs, on condition that he returned immediately to duty. The steward on board the same ship had a complaint against the cook, who threatened to shoot him with a revolver, but the charge was withdrawn.

From the *Mainichi Shimbun*.

A telegram from Nagasaki despatched at 5.30 p.m. on the 11th instant announces that a battalion of troops besiged in Kumamoto made a sortie under Major Oku, cut their way through the rebels and managed to join the Imperialist at Udo. From the Major a full report was obtained of the state of the garrison. They were suffering from no want of provisions, but wished that the Imperialists would lose no time in opening a communication with the castle.

A telegram which left Udo at 5.30 p.m. on the 11th instant announces that the insurgents made an attack upon Yashiro which was protected by a small number of Imperialists, but with these their Commander, Yasuda, fought the rebels for five hours and finally managed to compell his opponents to retire to Furumoto. A reinforcement of Imperialists shortly after arrived and an assault was made on the rebels, who were then forced to retreat to Ogawa.

From the *Akébono Shimbun*.

Six *samurai* were arrested on suspicion at Uyéno, Tôkiô, on the 12th instant, four of whom were Satsuma men, one belonged to Mito and the other to Tôkiô. On examination it was discovered that they were engaged in a conspiracy to raise a disturbance in the capital an behalf of the Satsuma insurgents.

A telegram has been received to the effect that there are now only very few rebels at Udo, and they also appear to have withdrawn from Kawajiri. An attack is to be made within a day or two upon the rebel positions around Kumamoto.

A police force under Inspector Kokubu has had a desperate engagement with the insurgents, and succeeded in taking possession of Kôza, where the hospitals of insurgents are situated. This is an important place on the road to the province of Hiuga, and its capture will have deprived the rebels of one easy way of escape.

From the *Nichi Nichi Shimbun*.

A fire broke out at Haramachi, in Ushigome, Tôkiô, at 8 a.m. on the 12th instant and destroyed about one hundred and fifty houses, after burning for a couple of hours.

IMPERIAL GOVERNMENT RAILWAYS.

YOKOHAMA STATION.

Statement of Traffic Receipts, for the week ending Sunday, 1st April, 1877.

Passengers, Parcels, &c.	$7,002.62
Merchandise, &c.	$ 838.93
Total	$7,841.55

Miles Open 18.

Corresponding week last year.

Passengers, Parcels, &c.	$7,339.17
Merchandise, &c.	$ 386.61
Total	$7,725.78

KOBE, OSAKA AND OMIYADORI STATION.

Statement of Passenger Traffic for the week ending 1st April, 1877.

Passengers	Yen	8,437.655
Luggage, Parcels, &c.	„	298.370
Goods	„	978.780
Total	Yen	9,714.805
Corresponding period last year	Yen	3,297.681

An unusual number of Chinamen have arrived in Kobe lately, and we are told that they have been engaged for some speculation to make black tea at Kiôto from the Japanese leaf.—*Hiogo News.*

The *Sumida Maru* arrived here on Sunday morning with about 340 wounded officers and soldiers from Takase—to the north of Kumamoto—where a temporary depôt has been formed for the treatment of those disabled until such times as they can be forwarded elsewhere. There were several severe cases on board, one man having died on the way up, and many more being seriously hurt. The average of wounds appeared to be about in the ratio of two-thirds shot to one-third sword. The men looked as cheerful as they could under the circumstances, and were patiently awaiting the arrival of the boats in which they were to go on shore. The *Sumida Maru* having landed all the wounded, left again early on Monday for Takase, where we were informed there were about 1,500 more wounded and a daily increase of from 100 to 200.—*Rising Sun & Nagasaki Express.*

The Court-Martial held on board H. M. S. *Audacious*, with reference to the stranding of H. M. S. *Lapwing*, which opened on the 31st ult. was concluded on Thursday last.

The Court was composed of the following officers: Captains Buller, of the *Modeste* (President), Colomb, and Douglas, Acting-Commander Castle, and Lieutenant Garbett.

At the termination of the enquiry the Court severely reprimanded Commander Wiseman and the Navigating Lieutenant, and reprimanded the gunner whose watch it was at the time of the disaster.—*Rising Sun & Nagasaki Express.*

Five hundred volunteers have offered to don the red cross and attend to the sick and wounded both in camp and hospital. This speaks well for the spirit of the Nagasaki people, and shows that they are loyal to the Imperial cause.—*Cosmopolitan Press.*

We may shortly expect H. R. H. Arisugawa-no-Miya to come to Nagasaki, but have no particulars as to the intention of his visit.—We wonder if he intends to make this place the base of his operations?—*Cosmopolitan Press.*

We have no correct information as to the number of wounded on the Satsuma's side but we hear from a reliable source that the total on that of the Imperialist exceeds 5,000. Fukuoka is literally crammed with the wounded and all available sheds and barns have been converted into hospitals.—*Cosmopolitan Press.*

When the *Tsuruga Maru* left Yatsushiro heavy fighting was going on, and large numbers of wounded were arriving. From her mast-heads about 2,000 troops could be seen crossing the mountains to reinforce the Satsuma army. It is stated that Marshal Saigo has a well drilled reserve of 20,000 men.—*Cosmopolitan Press.*

SHALL WE DISCARD THE MEXICAN DOLLAR.

A CONSIDERABLE amount of attention has been bestowed during the past few weeks on the subject of the currency by means of which our commercial transactions with this country are mainly carried on. An attempt has even been made to elicit an expression of opinion from the Chamber of Commerce in a sense unfavourable to the continued use of the Mexican dollar by the foreign communities at the open ports; and the substitution for it, under certain supposed conditions, of the Japanese *yen*, as the standard of value, has been advocated, with much mildness and moderation, as well by some of our contemporaries, as by a few correspondents in our own columns, whose views on such a subject are entitled to be listened to with respect.

The anomalies incident to the exclusive use in the mercantile centres of a coinage that cannot find its way to the producing districts have been clearly pointed out and forcibly dwelt upon, and the way has been, at all events, prepared for that stage in the progess of remedying an evil which consists in the distinct recognition of its existence. The consideration that has been given to the matter has therefore been well bestowed ; and on a subject so nearly affecting the most important interests of every class of the community we feel called upon to furnish our own contribution to the discussion. If we take decided exception to some of the arguments put forward by the advocates of the change, and if the practical conclusion we draw from the admitted facts is a widely different one from that to which they seem to incline, it will not be difficult to show that the grounds on which we base our opinion are neither less numerous nor less solid than their own.

From the very beginning of the commercial intercourse opened up under the Treaties between Japan and the outside world the medium of exchange has been the much abused Mexican Dollar. At that time the native coinage of this country was on an altogether unsound and artificial basis, and was much more greedily availed of as an article of export than treated as a medium of exchange. Under the circumstances, the only available expedient was that which the framers of the Treaties had had recourse to when they stipulated that all foreign coin should be current in Japan. Under this arrangement the Mexican dollar, for obvious reasons, bore down all possible competitors, and in a very short time took the place which it still tenaciously holds as the coin of commerce. Practically there was no choice in the matter, for the alternatives were either the Mexican or indescribable confusion.

In the beginning, therefore, it cannot in fairness be said that the foreign mercantile communities isolated themselves with respect to currency from the country around them. Nor have they done so since. Isolation confessedly there is ; but it has neither been of their seeking nor making. And in spite of much well-meant, if often misdirected, effort on the part of the Government of this country to remedy the deplorable condition in which they found the native currency, the justification, indeed the necessity, for the continued employment of the Mexican dollar remains almost as strong as for its original adoption.

It is a noticeable feature in the arguments urged in favour of the adoption of the *yen*, that whereas they start with premises which logically involve the entire exclusion of the Mexican dollar, when it comes to the drawing of definite conclusions and the formulating of practical propositions, a modification is tacitly admitted, and all that is asked for is that partial adoption of the *yen* which would be compatible with the circulation, side by side with it, of the pertinacious Mexican.

And the explanation of the inconsistency is not far to seek. The evil is more apparent than the mode of remedying it ; at least of remedying it from the side of the foreign merchants. In truth the problem is one not so much for their solution as for that of the Japanese themselves. Behind the manifest desire of the reasoners in question to see the Japanese producer reap the fullest benefit which the exchange of his commodities can bring him, there looms an ill-concealed dread of the inconvertible paper which constitutes the real currency of the country around them, and it is here that the whole gist of the question lies.

By all the received doctrines of the political economy applicable to the countries of Europe and America, an inconvertible paper currency, such as that of this country, ought not to hold its own for any length of time against a concurrent metallic currency. But the fact is that it does. The causes of this exceptional phenomenon are not readily apprehensible to the foreign enquirer, but it may safely be asserted that amongst the foremost of them is the all but unlimited extent of the Government authority, and the corresponding submissiveness of the people. Be the more recondite causes what they may, the fact remains that in Japan an inconvertible paper currency is as acceptable to the people as specie, or so nearly so that the difference is barely appreciable. Are the advocates for a system of circulation that shall beat in unison with the centre prepared to face the consequences of such an anomalous monetary situation ? Clearly they are not ; and hence their suggestion that the change to the *yen* standard might be effected under guarantees from the Japanese Government. But that is equivalent to an admission that the change is undesirable under existing circumstances ; and the probability of the Japanese Government being induced to enter into the desiderated guarantees is inconceivably small.

Nothing could well be further from our desire than to disparage the attempts which have from time to time been made by the present administration to solve the problem of the national currency. Much has unquestionably been effected. A chaotic mass of currency, both paper and metallic, the issue of the old Daimiates and of the Shôgunate, has been bought up and replaced by the currency of the Central Government ; the monetary unit has been changed from the *riô* to the *yen ;* the *ichibu*, its debased double and its fractional counterparts have entirely disappeared, and from one end of the empire to the other a new and uniform currency has supplanted the old miscellaneous varieties. The task of effecting all this was by no means a light one ; and the results will compare favourably with the best that any of the other departments of Governmental activity can show in the way of progress. But when we turn from the internal aspect to the outward, and measure the substantive monetary achievements and position of this country by the standard of older countries and the requirements of a foreign trade, the outlook is not so satisfactory ; and it is evident that much yet remains to be done. As to the degree of urgency with which the completion of the work of monetary reform should be undertaken opinions may legitimately differ ; but if there is one proposition connected with the subject that seems more self-evident and unassailable than another, it is that, unless the Japanese Government were in possession of a Mint of their own, no hopeful beginning of the work would be even possible. It is altogether beside the mark to say that the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Osaka Mint was established at immense expense; or even to prove, if it could be proved, that considered simply as a commercial venture it has not hitherto yielded a high profit. The answer to all criticism of that sort is simply that it was a prime political necessity, and that if the national currency is ever to be placed on a sound metallic basis it is through the instrumentality of the Mint alone that the work can be achieved.

But the work of the Mint hitherto has been little more than tentative, so far as the needs of foreign commerce are concerned. Gold was chosen as the standard metal in spite of the preponderating reasons in favour of silver, and some seventy odd millions of *yen* in that metal were minted, to be either at once exported to redress the balance of trade or to be hoarded in the interior. So far as the circulation in the commercial centres, the open ports, is concerned, the gold *yen* is as though it had never been. The silver *yen* is not minted. The silver trade dollar is an experiment the fate of which is yet involved in the obscurity of the future. Only in the case of the subsidiary coinage—of which the more issued the better,—can the work effected through the agency of the Mint be pronounced an unqualified success. The mere possession, then, by the Government of a Mint of its own capable of turning out a rival coin of equivalent fineness and value, is not of itself sufficient to bring about the displacement of the Mexican dollar. It is one of the conditions indispensable to the attainment of such a result, but it is by no means the only one.

It is easy to see that the exciting cause of the present attempt at agitation against the dollar was the extraordinary fluctuation in the value of that coin in the autumn of last year, caused by the unprecedented run upon silk for export. This fluctuation was, therefore, primarily, an ordinary incident of a rapid change in the balance of trade; and it is only in its secondary aspect, as it affects the Japanese producer, that it becomes a question of currency. And fortunate it is for the foreign silk buyers that the case was so. Had the native currency alone been the circulating medium, can it be supposed for a moment that it would have stood the strain as satisfactorily as the Mexican did? Could the Mint have supplied *yen* as rapidly and copiously as dollars were imported from the Chinese ports? And would the consequent isolation from a near and abundant source of hard money have been compensated for by the fact that such quantities of *yen* and *satsu* as might have been obtainable from the Mint and the Japanese Government banks together, would ultimately find their way back to swell the volume of the currency circulating in the interior?

The conclusion to be drawn from the foregoing considerations is plain. The Mexican dollar is the one element of stability in the present unsettled condition of the monetary relations of this country. To abandon it in favour of its proposed native competitor would be to cut ourselves adrift from the very sheet-anchor of our trade. The native currency must be established on a sound metallic basis before the displacement of the Mexican dollar can be seriously brought forward as a practical question. The censure so liberally expended by another section of the press on the Chamber of Commerce for refusing to discuss the topic is wholly undeserved and uncalled for. The enunciation of theoretical truth is one thing, the discussion of practical measures is quite another; and until the reform of the native currency has been effected, and until the subject has received all the light which is capable of being reflected on it in the columns of the press, any attempt to commit the Chamber as a body to a merely vague and general assertion of the desirability of a hypothetical change will be, to say the least of it, premature.

SPIRIT OF THE JAPANESE PRESS.

The Situation.

("Hôchi Shimbun" of April 6, 1877).

Well nigh fifty days have elapsed since the issue, on the 19th of February, of the decree for the chastisement of the Kogoshima *ken* rioters. Our troops have fought bravely and advanced gallantly, nor, though their bodies have been piled up like very mountains, and though their blood has flowed in very rivers, have they shown the slightest disposition to flee, or the least appearance of shrinking. In front of the rebels, they have carried Kichiji, Yamaga, and other precipitous localities; while on their rear, again, they have taken Matsubashi, Udo, and other places. The very lips of the rebels have been cut off, leaving their teeth exposed to the cold; and every person of intelligence and position in our land is convinced that our troops will effect communication with the garrison of Kumamoto Castle, will in concert with them hem in the rebels, will annihilate their ringleaders, and, by the time that the gardens of Uyéno are covered with blossoms, will already have raised the pean of victory. And yet some persons, believing false romours or led astray by flying reports, even though every telegram brings us news of the success of the Government troops, say, "such is not the actual fact;" while, worst of all, owing to the fact of a certain gentleman having vehemently urged on the Government the question of a peaceful settlement, others again declare that such will be put into operation. How can we, who have taken upon ourselves the duty of a vehicle for public opinion, bear to keep silent at such a moment as this!

Now, upon what grounds, and for what reason do the persons who believe in such vague rumours as the above give expression to such false statements? Those people who declare that our troops do not always gain the victory merely believe, upon seeing news to the effect that "such and such earthworks "were taken, but the rebel troops appearing on our rear we "were forced to retire," or that "to-day an advance was "made from such a place, but rebels guarded their dead, "and our soldiers sustained or fought at disadvantage,"—that in the first engagement our men were completely routed, and that in the second instance the rebels gained a victory. This line of argument does not regard the *general condition of affairs*. That an earthwork should be attacked, and it not being taken, that the troops should retire; or that we should lose many men in killed and wounded, are but ordinary circumstances in offensive manœuvres. Again the rebels are the very flower of the *shizoku* of our whole country, and our line of battle extends over a distance of several tens of *ri*. Thus even though our generals be good, and our troops well-drilled, how can it be guaranteed but that, amongst some hundreds of engagements, they may not have sustained a few reverses! And yet, just consider the whole state of affairs. In what direction do the minds of the people turn? Which of the two armies is considered to be the better organised? Which is held to be the wealthier in money and provisions? Whose weapons are deemed the better?—Is our Government of Meiji considered weak and impotent as that of King Kei of Kan?—And can a civilised army, that gives strategy the preference over mere dealing of blows, and that carries on warfare less by men's strength than by (superiority of) weapons, be placed in comparison with the uncivilised and barbarous warfare of the seven kingdoms of Go and So, in which every single man who possessed a sword or made a club for himself became a tried veteran? Even persons who credit the above vague rumours will perceive that such is certainly not the case. Once more give your attention to the fact that although the rebels and our own forces are by turns victorious or defeated, the former are day by day retiring, while the latter are day by day advancing. Thus, then, if we fix our glance upon *the whole state of affairs*, there is positively no fear of our being led astray by vague reports.

How much the less, then, in the case of proposals for a peaceful settlement. *Seeing that the Decree for Chastisement has already been issued, no peaceful settlement can be entertained.* And yet, the following statements may, again, be urged. The fact of Saigô Takamori's setting on foot a disturbance was not by reason of hatred of our present Emperor, nor again was it with the desire of plunging the lower classes of the people into misery. It was only that he held those who would not do his bidding to be evil persons, and was merely desirous of pouring out his wrath upon them. Thus, then, the present disturbance partakes of the nature of a contest between those persons and Saigô himself. Now, they are vassals of the Sovereign; and so, too, is Saigô. Both parties are equally vassals of our Ruler,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

If, then, the hatred existing between them and Saigô be dispelled, and they be caused to make peace the one with the other, the present disturbance will disappear from off the face of our country. And how much the less (would hatred then exist) between our soldiers who follow the one party, and the men assembled under the standard of the other! For even though they were to pour out their blood and let themselves be slaughtered, no benefit, but loss alone, would thereby be caused to their country and homes. The above, again, is merely a line of argument that *does not look at the whole state of affairs*. For, do the men who give expression to these views consider that the difference of opinion between the above-named persons and Saigô has only arisen lately, or that it existed in former times. Surely none even of those who make these statements would consider the matter to have originated but lately. They must, furthermore, be aware that it was in existence at the time when the question of a Corean expedition was started in the years 1872 and 1873. When our enlightened Emperor, whom we name with reverence, refused to entertain the idea of a Corean expedition, Takamori was the most influential man amongst those who in consequence threw up their appointments and withdrew; and at that moment it seemed as though the members of what was styled the "Corean Expedition Party" all watched Saigô's movements with the intention of determining their own actions therefrom. Thus, then, it is certainly not too much to say that Takamori was *the leader of the 'Corean Expedition Party.'* And *the leaders of the 'Party against a Corean Expedition,'* who were opposed to him, were "those persons" mentioned by the promulgators of the above-named line of argument, who, on behalf of general public opinion, rejected the headstrong scheme of an expedition against Corea. Thus, "those persons," as they are styled, are *the leaders of the majority of our people*, while Takamori is *the leader of the minority who advocate a Corean Expedition*, just as, at the present moment in America, the leader of the gradual reform partisans is Hayes, while the leader of the advanced reform party is Tilden. Now a contest between the leader of the one and the head of the other is a public contest between the two entire factions, and is not a private struggle between the leaders only. And so, even should it unfortunately come to pass that the minority, Saigô's faction, should conquer in the contest, and spread throughout our country, then must we of the——— party, who are in the majority, send round circulars, raise troops, and take an oath to overthrow the others. We must not carelessly follow Saigô's standard, to smite Corea. How much the less, then, when we have prospects of complete victory! And even supposing for a while that, in consequence of some reason for peace, the same were to the have been proclaimed, in what way would the adherents of the above line of of argument deal with Takamori? Would they wish his councils to be followed, and his schemes to be put into operation? Would they desire to empty our treasury, and send forth beyond the seas an army on an empty pretext? And with what countenance would they face the loyal troops who are now pouring out their blood and losing their lives? Our Government is no such fickle and changeable Government as this. And again, since the abolition of the *Han* and establishing *Ken* subsequent to the revolution, the military power has been transferred collectively to the Government, so that there is no reason why even a general should take up arms and march about the country. Thus, even supposing those Satsuma rebels to follow the example of the seven countries of Go and So, or to imitate Montenegro or Servia, still, our's is an uniform Government of Centralization, whilst their's would be the system of independence for each several *Han*. If rebels arise under our rule, we slay them but pardon them not; if, under their rule, there be offenders against the *Han*, they are pardoned and the matter is disposed of. For this reason do we say, "*Seeing that the Decree for "Chastisement has already been issued, no peaceful settlement can "be entertained.*" What we desire is merely that the public will in some slight degree *fix their eyes upon the general state of affairs*, and not be led astray by groundless street-rumours.

The Civil War.

("*Nichi Nichi Shimbun*" *of April* 11, 1877.)

Although Saigô Takamori be at the present moment the most evil and most hateful enemy of our country and homes, he has brought no shame upon his former title of General of the War Department, but has united in one the hearts of over 10,000 men, has fought more desperately in each succeeding defeat, and has not as yet been finally overthrown. It is perhaps on this account that the troops sent to subdue him have lost many in killed and wounded, and now there has at last been issued a decree for the enrolment of volunteer forces. This has from the outset arisen from an unavoidable necessity, and we are aware that many of the loyal *samurai* of our country have joyfully accepted this decree. Though, then, the Satsuma rebels may prowl about freely, what fear need be felt in regard to them!

It is, however, easy to enrol troops, but difficult to disband them. How much the more is this the case in respect to persons who hold in their hearts some fixed scheme? For this reason, then, unless in case of some positive necessity for such action, we are not desirous that *shizoku* troops should be lightly enrolled. And again, we are in our folly totally unable to comprehend the meaning of the expression, contained in the decree for the enrolment of volunteer forces that "the rule in existence hitherto is to be followed." If we look at the "Conscription Regulations" that were notified at the time of the establishment of the grand scheme of raising troops in previous years, do we not find it stated by way of introduction that there is a difference between the volunteers and the ordinary levies of troops, and next that although the volunteers, after fully learning their drill and after several years of service, become a body of drilled troops, still it is evident that evils too may easily arise therefrom, so that in the end a decree was issued for the abolition of the laws for volunteers and for the establishment of the grand scheme of conscription. And thus, since the issue of the said decree for the raising of conscript troops, as long as no order for a revision of them be published, there is no reason for the existence of regulations for volunteer forces. As we think, then, can allusion be made to the precedent of the *shizoku* of the neighbourhood of Saga being enrolled when the disturbances took place there, or of permission being granted during the Formosan affair for the band of Kagoshima men called "Chôshiûtai" to take part in the war? We are unaware as to whether, in these two instances, there may not also have existed at the time some circumstances of absolute necessity, but intelligent persons would seem to find fault with the wrong policy of the Government in regard thereto. How, then, in speaking of this at the present moment, can we apply to it the title of "a rule"? But surely the issue of decrees by the Government would not be performed in this heedless fashion; there must positively have been something notified on the subject. It is merely the fact that we have not as yet seen it.

Even though we now look at the boundless extent of the spreading force of the Satsuma rebels, our thoughts still turn of themselves to the evils of volunteer forces, while we cannot, on the other hand, restrain our joy at the benefits resulting from conscript troops. And why so? The whole of the present Satsuma rebels were originally in the Household Guards. The latter, again, were in reality formed from among the volunteers who had taken part in the expedition against the East. If these volunteers had been for a length of time kept in the same position as formerly, the power that they are displaying in the present desperate fighting might have been enlisted on behalf of the Government, and the fact of troops forming our actual Government would ere this time have been brought to pass. Had this taken place, into what a dismal state of affairs should we, the people, have fallen! But fortunately there was set on foot the scheme for raising conscript troops and the Household Guards composed of the volunteer forces were all disbanded; this has now resulted in the outbreak of the desperate fighting in the West. Are not the evils arising from volunteer forces far from being slight?

Nevertheless, should an unavoidable necessity arise, there would not be any harm in the enrolment of volunteer forces for the moment. And again, should enemies invade our country and the power of the Government be utterly powerless to oppose them, then too it would be well for the people, for the purpose of self preservation, to form volunteer corps. Looking at the matter in this light, we do not see any special evil resulting from the temporary formation of a volunteer force by our Government at the present moment; and why, then, should we make a point of discussing the evils resulting from volunteer forces? How much the less, indeed, should we discuss the trivial matter of the existence or non-existence of rules (for their enrolment)! And why do we say this? In the disturbances in the West, the Government troops are not weak, but the rebel forces are likewise far from being powerless. If it be desired to put down those rebels by the mere force of the Government troops now actually enrolled, we should only cause many of our men to lose their lives to no purpose, and simply protract the struggle. Again, nearly the whole of the standing army is in the field in the West, and therefore, should the Western affairs be protracted, we should

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

be unable to restrain our feelings of anxiety. Suppose, for instance, that at this moment, in the Kôchi *ken*, a band of fresh rebels were to appear and suddenly set on foot hostilities, how many battalions of Government troops would be required to oppose them? And although there is not the slightest probability of such an event actually coming to pass, still how can it be well to have the important localities in various districts unguarded for any length of time? This would appear to be the reason for the necessity for enrolment of volunteer forces at the present moment. Looking at the matter in this light, though the enrolment of *shizoku* as volunteers, may not, if argued from a general point of view, be really a good scheme, the degree of necessity for such enrolment is certainly of an unavoidable nature. This is what is meant by the proverb,—"It is more necessary to defend one's front than "one's rear." We are only anxious that the Government may fully consider the question not only of facility of enrolment but of difficulty of disbandment, and not fail in taking good measures after the affair has come to an end.

As we have argued above, the enrolment of a volunteer force is a scheme that has resulted from absolute necessity, and thus our Government has actually taken this step. We may from this form a conjecture as to the determination arrived at by the counsels of the court. Of late, too, some of the street rumours are to the effect that it is thought there are some officials who advocate a peaceful policy. What exceedingly false statements are these! They have already been commented upon by the *Hôchi Shimbun* in an issue of a few days back, and the view therein taken is a perfectly right one. Already has a Degree of Subjugation been issued by His Majesty the Emperor, tens of thousands of the national money have been expended, thousands of human lives have been flung away, and the desperate fighting has lasted even up to the present day. If, therefore, peace were now to be made, then, although we hardly dare to say so, the Emperor would cause his Government to surrender to the rebels, and the whole of the country of Japan to bow before the single *Ken* of Kagoshima. Has any so great shame as this been ever known in this world, from olden times until the present day? And even though this shame were disregarded, with what countenance could he face the soldiers who had gone on the expedition, and the bodies of the dead? No matter with what unmoved face he might look on,—among the troops who had gone on the expedition, from the generals down to the lowest privates, would any single man quietly obey the order and return with his weapons in his hand? Such is already the state of affairs. How is our Government a Government likely to adopt such counsels as the above! We are fully convinced of the untruthfulness of these reports.

It is also said that there would appear to be some among the Foreign Representatives who say that severe fighting has been going on for a long time and the number of killed and wounded is so great that they cannot stand by and look on much longer—and on these grounds are thinking of attempting to arbitrate. But there is no doubt that this story is likewise false, for foreign countries have no concernment whatsoever with our internal affairs. On what grounds then could a Foreign Representative interfere in our internal affairs. If our Government were for a single occasion to accept foreign arbitration, the Japanese Empire would at once be transformed into a state resembling Turkey, which carries on its internal administration under the direction and advice of foreign countries. If that were to happen, the title of independent empire would sink at once for ever. We have always profoundly deplored that Turkey could not avoid being subjected to foreign intervention; shall we then weakly allow this actually to befall ourselves? Besides, what if the fighting be severe, what if it last for a long time? Did not the civil wars of the United States of America and Spain last as long as eight years, and can it be said that they were not severe? But the Satsuma rebels are merely obscure rebels in one part of the country, and cannot be considered as waging a civil war. What grounds then could a Foreign Representative have for talking of arbitration? If it were to be done, it could only be an 'enforced arbitration,' which is rather apt to transform itself into a war of intervention. How could any sagacious Foreign Representative, born in a civilized country and reared upon civilization, be wild enough to start such a notion as this? We know therefore that this is a false rumour. To sum up the situation in a few words, what other wish can there be at the present moment, but to follow out the affair in such a spirit as either to overwhelm the foe or be overwhelmed ourselves? It has not been granted us to take arms and go to the war, but we desire nothing more than to stand or fall with this Government. Nothing else can cause us any anxiety. Those who at this moment talk of arranging a peace are rebels. They deserve to be treated as Hoochuen proposed, namely to have their heads cut off and stuck on a pole in the street. It may be true or not, but we have heard that the cause of the arrest of Washinoô, Shimamoto and others at the outbreak of the troubles in the west, was that they had said 'Saigô ought not to be killed,' and had endeavoured to agitate for arbitration.

A Conversation.

("Chôya Shimbun," of the 6th April.)

The editor, with his left hand clenched and his right holding a pen, says in an utterly despairing voice,

I can't! I can't! it is impossible for me to publish this!

Reporter. What? You know, Sir, that all the news I bring you is true; there is not a single false report among all the items. There surely cannot be the slightest cause to fear that the censors will strike anything out on examination?

Editor. No! no! it is nothing to do with your reports. Look at these communications that I have received from correspondents. They have taken the pains to send them to me from Kiôto and various other places, and so I have examined them, but they are only stupid stuff. Such things as that coral has been dug out of the mountains of Tosa, and that the ghost of Jurobei has appeared at Tokushima in Awa, and similar nonsense. I cannot tell if such news be true or not, and moreover these stories have nothing to do with the war that is taking place in the south. It is very evident then that we can't publish them. Yet if they reach the ears of the public, without being published by us, it will seem as if we took no pains to find out what is passing around us. I am at my wits' ends to know what I shall do. However it can't be helped, we have already too much news, and our columns are limited.

Reporter. But, Sir, can't you manage with your experienced pen in some way to reduce the news, and publish it in a condensed form?

Editor. No! If I don't publish it in full our readers won't understand it. You must remember that I am not juggler, and can't make a horse jump out of a bottle.

A Want of National Spirit.

("Akébono Shimbun" April 11th.)

When a man is poor he wants a good housewife; when a country is disturbed it requires faithful administrators. This is an old Chinese saying, uttered by a sage who knew what trouble meant.

A rebellion broke out in Kiushiu seventy days ago, and yet it has not been put down. The people's anxiety is unrelieved, and the Government is compelled to go on expending its means. Moreover the condition of distress to which the people of Kiushiu are reduced cannot be described by the pen.

Every man is possessed of certain rights and liberties, yet the people of Japan do but slightly appreciate this, and it is the more to be deplored, as it is for this reason that the spirit of patriotism holds no place in their breasts. Let us see with what feelings they regard the present strife. They seem scarcely to notice it, and to think of it as no concern of theirs. One of our contemporaries states that a French gentleman engaged in the Army department said to one of the Japanese officers, when about to start on the Satsuma expedition, "All countries have at all times, when engaged in war, tried to hide the reverses of their Army and make only its victories known. This may work well with the people for a time, but it proves to be a mistake in the long run. The reason that the Prussians are to-day so powerful is that they did not hesitate when at war, to send home true reports of defeat, saying nothing of successes. By these means the people were zealous for the cause, and it would be well for you to remember this."

Certain it is that Prussia has become powerful within the space of a few years, and is said to be one of the strongest powers. But it is not by making known her reverses in time of war that has made her what she is. It is the spirit of her people which makes them determined to support the nation when they hear of defeat.

Does the French gentleman think that the mind of the Japanese is the same as that of the Prussians? If he does he makes a great mistake. When the Prussians hear of the defeat of their troops, they become fired with zeal, while if defeats were to be made known to the Japanese they would immediately sink into a helpless condition of despair. This is the reason that the Government tries to make all its accounts victories, and says nothing about its reverses. This is deplorable but there is no help for it.

The reason that the Japanese people are void of all spirit of duty is that they have no idea of the rights and liberties they possess. The Japanese of the olden time, before the introduction

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of Buddhism, were deficient in mental acquirements, but they were remarkable for their brave spirit, and unconquerable will. This was the result of their rights and liberties being controlled by no foolish customs. But during the middle ages, owing to imitation of Chinese literature and Indian Buddhism, the simple courage, that up to that time had existed unhindered, gradually died out among the general mass of the people, and became centred in the *samurai*. After the *samurai* took the power of Government out of the hands of the Emperor, they exercised a despotic and uncontrolled power, while the people, growing more and more pusillanimous, finally lost all the spirit to uphold their liberty and rights.

What is the fruit of all this? The people know well enough how to love themselves, but they bestow no thought on their country, and though a terrible strife is going on, they care not, apparently, one jot what happens. Were the Japanese like the Prussians they would not fear, though the rebels were powerful, nor would the Government fear to let them know of the reverses of the troops, nor the newspapers display only blank spaces. If the people were like those of former times, they would not rest content, when seeing the country in such a condition, to eat their daily food and do nothing to serve it, but make a little lint for the wounded or give a sword or two to the Government. They would be so zealous that no power would be able to prevent them from doing their duty toward their country. For several hundred years (up to the time of the restoration) our people's liberty has been oppressed, and these are its evil results.

We have come to the conclusion that as a poor man's wishes for a good housewife, or a country's wish for upright officials at the time of disturbance should be respected, so should the claims of a people for their rights and liberties meet with due consideration.

OUR NEIGHBOURHOOD.

In a back street of Our Neighbourhood, happily well retired from view, may be noticed by such as have the hardihood to enter there, a wretched shop, above the open door of which, and beneath the broken and uneven rain board—that thickly grown with weeds, projects like a ragged eyebrow—a tattered bush notifies to all and sundry that liquor is sold upon the premises.

Although answering a like purpose, this shapeless bush bears no relationship to the tidy balls of pine tops, trim and globular as well cut crystals, which may be seen in plenty in our Main Street, above the wineshop hard by the corner where you enter from the high road, for instance.

No, no; such orderly and well proportioned bushes, it pleaseth us to think, are not to be discovered in every hole and corner. As indeed is but fitting, if any relation between respectability and appearance is worth preserving or exists at all. Indeed, if the plain unvarnished truth is to be told, it is a most untidy scrag of mountain ash as ever was seen, is this bush, shapeless and unkempt as the owner of the shop it garnishes. And no better in appearance either, doubtless, than the liquor which it undertakes to vouch for is pleasing to the palate.

Nigorizake, saith the legend on the broken paper window—muddy wine,—and but little of it too, for the matter of that, if a solitary tub, swathed in straw upon a trestle in a far corner—where it looks as if it had retired for very shamesske—is all the stock.

But our business after all is not with the shop or its contents, but a certain character of some note in Our Neighbourhood who is wont to pass much of his time beside the tub in question, and who, when he is not there or on his rounds, is certain to be found in the alley beside the house whose general characteristics have been just alluded to.

A squalid and miserable place is the alley in question, and so narrow, that he who would pass through it, must needs be careful of his clothes on either side, and had better ascertain before he plunges in that no other passenger is likely to dispute the causeway with him. It is, indeed, a vile unwholesome place, where the sun as it blazes down the street off which the alley branches, disdains to cast a ray, and the panting dog, in search of shade in the scorching heats of summer, is sure to find it, but where on other times he cares not to enter, as the most diligent and patient search will be unrewarded by so much as a fish bone. In every season the place is damp and fœtid with pools, ankle deep in rainy weather, and full of oozy mud, exhaling a greasy steam in the long dry season.

The dwellers in the Main Street who affect an ignorance of such plebeian purlieus—as becomes well-to-do and respectable people—know nought of the inhabitants of this laneway, with the exception of a certain story-teller who makes it his home.

For although *the* story-teller is now amongst the "pleasant shades", we would not have it understood that we have had but one amongst us. For in truth we have always had several, but in comparison with him whom we have lost, they are of no account. Mere tinkling cymbals and sounding brass. Low babblers unworthy of the name they bear and beneath the dignity of the Main Street.

We are particular in Main Street. Fastidious, if you will. Fond of order and sticklers for the decencies. No illbred semi-educated fellow would obtain a hearing from us. Not that we altogether object to such a person picking up a living as best he can, elsewhere,—in side streets or outskirts for instance—for we flatter ourselves that we are generous minded folk, and "live and let live" has always been our motto, but we cannot permit our generosity to deprave our literary taste.

The Mountebank who is now referred to—for we are loth to call him story-teller—is the favorite of the common people. His proper walk is in the lanes and byways, notwithstanding which, however, he hath been seen in Main Street. For he carryeth a boundless stock of impudence. Not that he is altogether unworthy of a side glance now and then, for it must be confessed that he is a merry fellow in his way. A double voiced varlet, who bellows at you and pipes a girlish treble in the same breath. A quaint grimacer, who pulls mouths and makes believe to weep with one side of his face and laugh with the other. A scoffer at the great, moreover, for it is whispered that he scrupleth not to mock the Mayor, and hath been seen to jerk a thumb at the village beadle.

Like the proper story-teller he requires a table to rap, and lay his fan upon, or tea-cup, as the case may be. This article of furniture he carries suspended from his neck and stuck out before him, and depending from it is an advertisement in huge Chinese characters, after the manner of a *yose* bill.

To see him lean his elbows upon this table, and hang his chin upon his thumbs whilst he twists his solemn countenance in divers ways is—it cannot be denied—most diverting.

He affects a peculiar dress, too, which makes him conspicuous from a long distance. His outer coat of blue is crossed by bars of red run slantwise, and his girdle is a dingy white. His forehead is unshaven and his long hair he wears drawn up together and tied tightly in a queue upon his crown, and hanging in a horse tail to his neck.

Upon the whole he is a strange character, this Merry Andrew, and is not devoid of a rude kind of wit, such as is suitable to the comprehension of his usual auditory, and which suffices to obtain for him now and then a coin or two to spend in liquor at the wineshop of the ragged bush.

We have much pleasure in acknowledging the receipt of Tls. 1,000 by telegraphic transfer, through Arthur Davenport Esq., H. M. Acting-Consul, from the Hongkong Government for the Famine Relief Fund. An order as also been received for $1,042 from Bishop Russell in Ningpo for the same purpose, the amount having been raised among the Chinese and foreigners in that place.—*Shanghai Courier.*

A Reuter's telegram dated London, 15th March, and which appears in the Indian papers, states "Sir Louis Mallet, Sir Arthur Kennedy, and Mr. Mulholland have been appointed Special Commissioners to negotiate a new Treaty of Commerce between France and England." We are afraid there is some blunder in the names, because it is scarcely likely Sir Arthur Kennedy would be entrusted with such a mission as this, especially just now, when he has just assumed his new appointment. —*China Mail.*

THE RACE CLUBS.

The following letter sent by the Committee of the Racing Association to the Yokohama Race Club, and which has been submitted to us for publication, will show that an earnest effort has been made to bring about an amalgamation, and it now only remains to be seen if the proposed union is possible,—'a consummation devoutly to be wished."

TO THE EDITOR OF THE *Japan Mail Daily Advertiser.*

Yokohama, 9th April, 1877.

To the Stewards of the

"YOKOHAMA RACE CLUB."

GENTLEMEN,—We beg to address you in the hope that a fresh effort on our part may induce you to consider the question of an amalgamation of the racing interests of this place, which will do away with the present anomalous and unsatisfactory condition of affairs.

As there would seem to be an unusual interest taken by the foreign residents in the sport of racing this Spring, we feel convinced that the present is the period at which such an arrangement can be most easily effected.

To simplify matters, we proceed at once to lay before you the terms upon which we consider the proposed amalgamation can take place, which we think will be supported by the members of the Association which we represent, as well as commend themselves to the good sense of your Club.

First.—That the present members of the Yokohama Racing Association, and Yokohama Race Club constitute themselves a Society, for the encouragement and general good of racing in Yokohama and for the support and use of the present Race Course, and that to this Society, all foreign residents in, and Japanese officials of this country, have access, upon payment of an annual subscription of $10, or a half-yearly subscription of $5, towards the expenses of keeping the grounds in proper order and the buildings, fences, etc., in proper repair. For such subscription they shall have free entry to the Course and enclosure at all times, and shall be allowed to ride at races and to enter ponies in accordance with rules provided for in proposition No. 2.

Second.—That a Jockey Club be formed for the purpose of drawing up rules for race meetings in the spring and autumn of each year, and for generally managing the affairs of the Race Course.

Third.—That the Members of the two Committees of the Yokohama Racing Association and Yokohama Race Club constitute a nucleus for the formation of the Jockey Club, and that they Ballot for the first twenty applicants who may desire to become members; thereafter the Ballot to be general by members of the Jockey Club.

Fourth.—That the rules of Newmarket and of the Jockey Club of England govern all matters connected with the actual sport of racing in Yokohama.

Fifth.—That the Jockey Club draw up additional By Laws applicable to and necessary for the good of racing in Yokohama, to be taken from the rules at present existing of the Yokohama Racing Association and Yokohama Race Club, but to embody in any case the additional By Laws of the Yokohama Racing Association relating to the declaration of intending runners at the races of each day.

Sixth.—That the funds of the two present institutions, as well as all funds collected and to be collected from all members of the Society (of which the members of the Jockey Club must individually form part) whether genera subscriptions or entrance and other fees, shall be placed in the hands of a Committee to be elected by the Society, from among the members of the Jockey Club, which Committee shall expend the funds to the best of its ability for for good of racing and the proper maintenance of the Course itself, and shall be accountable for such expenditure to the whole body of subscribers.

Seventh.—That the Jockey Club shall have general control of the Race Course, but that no important changes in the present rules or in the management of the Course shall take place without the same be submitted to a general meeting of subcribers, who themselves shall not be empowered to make any alterations without at least fifty of them be present at such general meeting.

Eighth.—That a fixed programme be drawn up by the Jockey Club, which shall remain in force until any change may be made in accordance with proposition No. 7, to be in force for and after the next Autumn Meeting, but that for the present Spring Meeting, the Committee of the Y. R. A. and Y. R. C. shall together draw out, upon the basis of the present published programmes, a programme for four days racing, such programme to embody at intervals during the four days (in fairness to all persons who have been induced to import so called China Griffins upon such understanding) at least six races for China Griffins only, in which races all bôna fide China Griffins shall be allowed to enter.

These proposals, we would wish you to believe, have been only made after due consideration for the interests of all concerned, and as the time is drawing near for the Spring Meeting and the matter is one requiring prompt action, we shall thank you for a reply at the earliest possible moment.

For the information of Members of this Association, and of the public in general, we purpose forwarding a copy of this letter and of your reply to one of the daily newspaper for publication.

(Signed) R. DE MONBEL,

Committee, Y. R. Association.

Correspondence.

THE CURRENCY.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 13th April, 1877.

SIR.—In my previous letters I attempted nothing more than to contribute something to a clear statement of the Currency question.

Your correspondent T, in your last number, seems to attribute to me however the much deeper design of persuading foreigners to adopt Japanese paper money. Nothing was further from my purpose. What I dealt with was not Japanese currency at all, but the *local currency of foreigners* in Japan, which I hold to be in great need of reform whether regarded *per se*, or in its relations to the currency of this country.

I do not see that T's letter throws any light on this question. He taxes the Japanese with indiscretion in establishing the Mint; asserts that the native bankers hurt and hinder trade by "squeezing" it (though foreign bankers do the like) when opportunity offers; implies that it is somehow the province of foreigners to say what money Japan shall use; and concludes that because, in his opinion, any attempt to endow Japan with a hard money currency is unlikely to succeed at present, therefore it is useless for foreigners to do anything to improve the special currency they use.

I confess that I do not discern the relation of these positions to the topic in hand, nor the logic of the conclusion that because the Japanese have one currency that is objectionable, we should content ourselves with another also objectionable.

If T will review my previous letters he will see that not only did I not "mix up" currency fluctuations with exchange fluctuations, but that I made no reference at all to the latter, and confined myself strictly to stating the question "what is the best currency for foreigners in Japan to employ," barely suggesting the answer I would give to that question. I should have been glad if T had answered it, giving reasons for his opinions. But if I understand him rightly, the only proposition he has to offer in regard to this point is that the whole East shall use a gold currency, which I do not consider a practicable idea. Possibly, as he says, such a currency throughout the East, or even in Japan alone, might induce bankers to keep more capital here, to the advantage of trade. But bankers now make their largest profits out of the fluctuations between the silver currency of the East and the gold

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

currency of the West; and, as these profits would disappear if West and East alike used gold, it is possible that bankers or bank capital would then, to some extent disappear also. However we may probably rest easy on this score, as a gold currency is not likely to prevail in the East in our time. The banks will therefore remain, and, if profits continue, they will multiply, and will increase the capital which yields such profits.

But all this is beside the point I had in view, and is inflicted on your readers purely out of respect to T, and to encourage discussion of a question which, I maintain, is of greater importance to this community than they generally understand it to be.

I have endeavoured to make it clear, and I think it is clear, that what foreigners in Japan want is a currency which can be relied upon as a permanent measure of value; which shall be abundant enough for ordinary business; and which shall be obtainable at the least possible cost.

It is not important whether we use gold money or silver. Gold, as least liable to variation in value, might be the better as far as merchants are concerned. But silver is probably good enough, and as the people all about us use silver almost exclusively, we may gain in convenience by conforming to their practice.

Paper we need not consider, for paper currency is not money. As a representative of money in reserve it is very useful, but it is only a shadow and not a substance, no matter what faith those who use it have in those who issue it.

I will assume then that foreigners in Japan would be satisfied with a good silver currency.

Many suppose that we now possess this in the Mexican dollar. And it is undeniable that this dollar is on the whole a good coin. The marvel is that, with Mexico in disorder, it remains so good. From what we know of Mexican ways and character we might reasonably have expected some deterioration in it long ago.

But, even if we could rely on a continuous supply of honest dollars from Mexico (which is at least questionable), the coin itself is not satisfactory. Of all known dollars it is one of the worst in make and most variable in weight. To use it we have to employ an army of shroffs whose maintenance is a tax upon all our transactions, and whose often absurd caprices are a constant source of vexation. A currency which thus subjects an intelligent community to the tyranny of a clique of irresponsible Chinese is not one to which it should feel any strong attachment.

Further, the Mexican dollar is a *dear* currency. Not only do we have to pay our Chinese despots for regulating it for us, but we have to pay Mexico, or somebody else, a premium on every coin of it that we use. At this moment we are paying, either direct, or in the price we get or give for the articles of our trade, at least, two per centum premium over what an equal value in silver of any other form would cost us, which two per centum is, as far as I can see, sheer waste, doing no payer of it any good whatever. And even when we bring our "clean Mexicans" from China or from California at this cost of two per centum, the chances are that our shroffs, or bankers will find some mysterious fault in them and compel us to sell them at a discount. What reasons have we then for clinging to a currency which is thus unreliable, defective, and costly; the use of which in Japan is entirely limited to ourselves; and for the sake of which we meekly bend our backs and business to this incubus of Chinese shroffs?

But, in bringing the question to this stage, I have exhausted my space for this week. With your permission I will take it up at this point in your next issue. Meantime I hope some of our readers will give it a little consideration, and provide an answer to it if they can.

A. Z.

Yokohama, April 13th, 1877.

TRAINING NOTES.

To the Editor of the "Japan Weekly Mail."

Yokohama, 11th April, 1877.

Notwithstanding the late addition to the different stables, and the formation of several new ones, the training still continues to be very dull and uninteresting, and is likely to continue so until some satisfactory arrangement can be made between the two Race Clubs. Yokohama is not big enough to support two such institutions (this remark has been made before) and it can be but small satisfaction for any owner to run where he knows he has no possible chance of winning. This is pretty nearly the case with the two Race Clubs, or factions, now existing, and very few who know anything about the ins and outs of their proceedings can deny that, as matters are at present, there is one leading stable in both the Y. R. C. and the Y. R. A. By "leading stable" I mean one in which there are so many superior ponies to anything they are likely to compete with, that notwithstanding penalties, exclusions and handicaps, the programmes must (to a certain extent) be made to suit them. This is I think the principal reason for the apparent want of *Public* interest in the training. Those who frequent the course are mostly interested parties, who either own, or hope to own ere long, some part of a pony, and not a few might he classed as "new aspirants for turfite honours." The jovial assemblies that we used to have very morning in the paddock are quite things of the past, and even the "Saturday afternoons" are beginning to be void of interst. But *revenons a nos Ponies*.

There is of course some interest shown in the merits and demerits of the lately imported griffins, and had I seen them all perform I should willingly have imparted my opinion thereon for the benefit of your readers; but, it is very evident that a large number of these erratic animals were bought, or rather subscribed for, that the lucky owner might have the satisfaction of owning a real, live, griffin! Certainly an idea seems to have obtained among some of the new owners that these ponies are more likely to turn one "Flyers," if carefully shut up in some dingy, stuffy stable, and crammed with chopped straw and water ad. lib. and rubbed down with an old sack wherein oats once were packed. Well, we all are allowed to have our own peculiar ideas of training, and I dare say the above course is equally correct with that indulged in by Mr. Morrison and Col. Forrester, who seem to think that galloping is the one great essential. Without doubt the animals produced by these two worthies get enough of it, *especially the latter*.

Of the griffins that have appeared on the course I can only say they are a very promising lot of ponies. Mr. Pringle has the most in number, so deserves first place. This gentleman's ponies have an unfortunate knack of going "off" during the training, and although his string appeared somewhat formidable on Monday, they have resolved themselves into two with bad coughs, and one somewhat prone to lameness; there is, however, plenty of time to cure these trifling defects before the races come off.

Mr. Savile has increased his well known stud of cracks by *Tartar Emetic*—of Shanghai renown—and two griffins. It would be useless for me to comment on the likelihood of the future performances of the first named, but, in the griffin line this owner should make a strong mark. Especially if he can cure his favorite of the nasty habit of bucking which he indulges in at present.

Mr. Morrison, with his usual luck, drew two ponies that will turn out better for next meeting than for this. They certainly can both gallop, the dark grey having done the ¾ mile in 2.30, including lameness.

Mr. John Peel, at an early period of the training, caused some astonishment in sporting circles by disposing of his two very excellent ponies *Mc Tavish* and *Ta Phairshon* to a very prominent member of the Y.R.A.; a proceeding which quickly gave rise to a report (which I had much pleasure in denying) that Mr. Peel was about to relinquish the Turf. That this is not his intention is evident from the fact of his having imported the very celebrated pony *Skylark*, late *Surprise*, who has lately been amusing himself at Amoy, Hongkong, etc., and will I hope bear Mr. Peel's colours to the front, at last. The griffin in this stable has good points to look at, but will never accomplish any very extraordinary victories.

The *New Devonshire*, as also Mr. Walter's griffin, seem to my idea to be more fit for harness than for racing, and would make a handsome pair; this may be the lot reserved for them in future, as they now take their matutinal *exercise* (I was going to say *canters*, but that would be but a feeble joke) together. Of the capabilities of the German Stable, and those of many other of the griffins belonging

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to members of the Y. R. C. I would like to inform your readers, but they are kept too dark altogether, and though I hear of them I have not seen them. I must, however, apologize for omitting from this week's notes any mention of the Doctor's stud, but as I have not yet furnished my usual rooms at the Stand, nor have been able to ascertain correctly the actual weight of one or two of his latest additions, on this head I must promise *my* readers (I dont see why I should always call them *your* readers) full information next week.

Let us now turn to the opposition side of the paddock and inspect the griffins of the Y. R. A. For size and condition they certainly do not compare favourably with those of the Y. R. C.

Mr. Fairplay was lucky in drawing three ponies that were all in sufficiently good order to be able to go straight to work. I am afraid, however, that this gentleman will not bring out as many winners from his long string of *Mongolians* as should be the case. They all lack form: it may be somewhat early in the season to talk almost this, but, odious as comparisons may be, they appear to a critical eye as wanting very much that attention which we all know the *Tartan* ponies receive.

Mr. John Robertson was not favoured by a good pick, and the addition of the "spotted animal" will I fear turn out but a disappointment.

Mr. Sindbad has one good pony among his griffins, but only for ashort distance, his last purchase being certainly too *groggy* to do anything this meeting.

The stable which is under the superintendance of Col. Forrester may also be classed among the unlucky ones. A chestnut pony from Shanghai is, presumably, their crack, but having arrived in dreadfully poor condition is daily expected to break down under the severe training he is subjected to.

Of Mr. Nicolas' stable I can say nothing. He has a knack of bringing out winners, and I expect fully to see his solitary griffin several times to the front.

The "Bone" (of contention) was favored by Dame Fortune; and a very handsome clipper looking bay—for which I understand there has since been $300 offered—fell to his lot, as also a somewhat dirty white pony which must not be quite overlooked.

Like all gourmands I keep my bonne-bouche to the last, and congratulate very heartily *the* Trustee on the magnificent animal that fell to his lot at the drawing of the Y. R. A. subscription. He appeared on the course on Wednesday for the first time, and I have seldom seen any pony with such glorious action and true signs of good breeding. I don't wish in any way to flatter his owner, or to buoy him up with any false impressions, but I feel certain that I express the opinion of nearly all who saw him when I state, that since the days or *Boomerang* he is the most likely looking pony that has ever appeared on the course.

In the Y. R. A. there are also several other griffins which are being trained "under glass cases," and I hope some of these will turn up before long, so that my Training Notes for next week, which will be anxiously looked for, may, as usual, be teeming with interesting news.

A suggestion has been made elsewhere by a writer who adopted a most appropriate *nom de plume*, that sporting men should devote their attention more to native ponies and leave China griffins alone, but, I should like to know, what advantage can be obtained by anyone speculating in such native griffins as now are offered to us? I think most men would rather have a China pony which *can* go and costs $75 to $80, rather than a Japanese pony which *can't* go and costs $150 to $180.

TRITON.

We hear that Mr. John C. Myers, Consul-General for the United States, has been suspended by the Hon. G. F. Seward, Mr. O. B. Bradford being advertised to assume charge of the American Consulate-General. Mr. Myers, we believe, returns to the States by an early opportunity. - *Shanghai Courier.*

Mr. Robert Hart, we are informed, has issued a circular to the banks intimating that no loan which may be contracted by the Chinese Government on the security of the Customs revenues will be valid without his personal guarantee. This has given rise to the rumour that the Japanese loan has fallen through.—*Shanghai Courier.*

Law Reports.

IN H. B. M.'S COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Saturday, April 7th, 1877.

ANNIE TERESA GARGAN *vs.* BRIDGET WALKER.

The plaintiff sued the defendant for the return of a cloak or its value, $50.

Annie Teresa Gargan, sworn:—I reside at 52, Bluff, and am a dressmaker and milliner. I lost a cloak last July, which was stolen by a jinrikisha coolie and did not see it again until last Saturday, a week past to-day. I then saw it on the defendant in the street. I am certain it was the same cloak.

His Honour, to defendant:—Have you any questions to ask the witness?

Defendant:—Yes. This lady came to my house and accused me of stealing the cloak. I never saw her before but once, when she was walking in the streets in a state of intoxication and leaning on the arm of another woman for support. She told me she recognized the lace on the cloak.

His Honour:—That is hardly a question. Have you any question to put to the paintiff.

Defendant:—I have no questions. This is the cloak (cloak produced).

Plaintiff:—That is not the cloak.

Defendant:—It is; you said you recognized it by the lace on it.

Plaintiff, to Court:—That is not the cloak I saw on the defendant last Saturday.

His Honour, to defendant:—You say that Miss Gargan was intoxicated.

Defendant:—Yes, she was, and had to lean on the arm of the lady she was with for support.

Plaintiff, excitedly:—I was not (turning to defendant). Be careful now; be careful, or you may get into serious trouble. (To Court) I was not intoxicated and never have been in my life. The young lady who was with me was Miss Foote; she is only 13 years of age and to-day is at school.

His Honour, to defendant:—Was any one with you at the time you met the plaintiff?

Defendant:—No one but my two children.

The proceedings were stayed for a short time for the production of Miss Foote, for whom a messenger was sent.

Elizabeth Foote, sworn:—I reside at No. 87, Main Street. I remember Miss Gargan having a cloak last summer; it was a black cashmere cloak, trimmed with lace. I think it was last June I saw it with Miss Gargan. I saw it again last Saturday in Homura Road. It was on the defendant. When I saw her she was coming out of a furniture store. I recognized the cloak. Miss Gargan asked the defendant where she got it from and she said from a Chinaman. Miss Gargan offered to pay for it if she would give it up. It was a different cloak to the one produced. By cloak, I mean a cape. I would know the cloak again if I saw it. I am quite sure that cloak is not the one. I do not know the value of the cloak. Miss Gargan on that occasion was perfectly sober. First Mrs Walker said she bought it from a Chinaman, but afterwards said she had had it made by a Chinaman. The cloak was a plain one, not figured like the one in Court. I went to Mrs Walker's house on Monday last, with Miss Gargan. I saw a gentleman there, but do not know his name. Miss Gargan asked to see Mrs Walker but he said she was gone out. Miss Gargan then asked for the cloak. The gentleman said we had better go to Court. Miss Gargan said she would rather not, but would willingly pay for the cloak. There were two Japanese policemen outside of Mrs. Walker's house. I was leaning on Miss Gargan's arm at the time we met defendant in the street.

Miss Gargan, to Court:—The cloak is worth $50. I made it myself, and the lace and trimming on it is worth $30 and the material about $2 per yard. It was nearly new when I lost it. I reported the loss to the Japanese police at the time.

Bridget Walker, sworn, stated:—I live at No. 131, Yokohama. When Miss Gargan spoke to me I had the jacket on; the one produced in Court. I never had a cloak and no one ever saw me with one on. I had a shawl on my arm when I met Miss Gargan. I am quite sure that is the jacket I had on; I have not got another with lace on it. No one was with me at the the time I met Miss Gargan, except my two little children.

His Honour said that as the evidence was so conflicting, he should order the case to be put down for trial, by jury, on Friday, the 20th instant, at 10 o'clock in the forenoon.

IN THE U. S. CONSULAR-GENERAL COURT.

Before General T. B. VAN BUREN, Consul-General.

Saturday, April 7, 1877.

Thomas Glass, saloon keeper, was charged with beating and bruising his wife, Mary Glass, on the 4th instant, and on many other occasions.

Prisoner admitted having slapped her, but said she could show no marks of violent assault.

Mary Glass, sworn, stated:—I am the wife of prisoner. We have been married eight or nine months. I live at tha "Shamrock" saloon, No. 81. My husband is I don't know what now. I keep the house. He kept it before he married me. We keep it now. On the 4th instant, in the morning between eight and nine o'clock, as my husband was going out, I asked him for a cup of tea. I was incapable of getting up, he had given me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

such a beating the night before. I forgave him then. He said, "get up, and make it yourself" I said, "very well, Tom, I will get up and do it myself, and God will help me." Before this he beat me with his hand on my head. I was laying in bed, and he lifted his foot and kicked me. I said it was useless beating me so, I could not stand it. I got up and put the place to rights. He returned about nine o'clock. I said "I am lost, cook something for me." I said the I could not cook for him; I was not a servant. I asked him to light the fire and cook for himself. He said, "get up and cook for me; I did not marry you to lie in bed." He beat me, pulled me out of bed by the hair of the head, first threw a bucket of water over me and then kicked me. He let me lie on the floor till I recovered. (Handful of hair produced.) He pulled all this out of my head and then went out. I ran through the back door and escaped with my life to the "British Queen." He came in kicked me under the table. Mr Ford, and a woman saw him, and so did several others. After my hair was pulled out, I arranged my hair and dress and came for your protection. It is not only once but continually that he has abused me, since three weeks after our marriage.

To prisoner: I asked you on the morning of the 4th to make me some tea. You would not make it. You did kick me in the "British Queen" that night.

Evan Lewis, sworn:—I am proprietor of the "British Queen." I know prisoner and last witness. On the 4th instant I saw the prisoner and his wife in my house and their own. I saw them often that day. I remember them being in my house on that evening. I was tending the bar, and heard a little noise and talking between these two, but I saw nothing when I went to the dining room, except that she was under the table. I did not see him kick her. She was evidently trying to get away, and he trying to get at her. I went and spoke to him. He was quarrelling with another man, Ford. I saw her with the marshal when the arrest was made. When in my house, Glass had been drinking. All of us round there drink a little. These people, so far as I can see, do not live very pleasantly together. I have heard her complain hundreds of times, but never myself saw him beat or abuse her. She might have had a black eye once (or four or five times, for that matter) but I never noticed.

K. M. H. Ford, sworn:—On the evening of 4th I can't say that I saw either prisoner or his wife at all. The next morning I did not know where I had been. I was taken to bed. I did not recollect having quarreled with Glass. I have been acquainted with these people, and called occasionally. They did not live on the most peacable terms. I never saw him beat or strike her.

Thomas Pearce, sworn:—I saw prisoner and his wife on the 4th instant in the "British Queen," late in the evening. I am a musician and was sitting in the saloon. I heard a voices in the dining room, but saw nothing of the disturbance. I have been in their house on one or two occasions.

Prisoner, being sworn, stated:—The first three weeks of our married life were extremely happy, but after that time my wife got into bad ways. She was in the habit of going out at nights, frequenting bad company, and getting drunk. She was usually found dead-drunk in the grave-yard, and I had to chastise her. Mr White and myself signed partnership and set up together at No. 136 at this time. My wife lay in bed all day, and when I remonstrated, used to take a cleaver which she kept handy and thump me with it. She threw a clock at me, one time. She was in the habit of using bad language. Her conduct was such that Mr White and myself were forced to dissolve partnership. She beat Mr White's wife, and the hair which she showed just now was pulled from the head of a Japanese woman. She often got up during the night to have a pull at her bottles, which usually lay under her pillow. I said I could not stand this any longer and begged of her that we should both go before the Consul General and take an oath against liquor, or get a separation. She got our marriage certificate out of my chest and tore it up into small pieces and then pulling off her marriage ring, cried "we need not go to the Consul-General for separation." I got a copy of the certificate from the priest. I have the remains of the former one now. She went over the back wall into a Japanese store and obtained rum there and drank it upstairs. I could not understand where she got drunk. On the morning of the 4th, I put the kettle on the *hibachi* and then went to the hatoba. I returned and made some tea and boiled some eggs. She said she did not want eggs. I advised her to get up and not lie till noon. She took the cup of tea she held in her hand and pitched it at me. I dodged, and it broke on the wall. She then flung a lemonade bottle and it hit me on the breast. I thought it time to have a drink. I went out, and meeting John Brown we went again to the house, and sat playing cards till five in the evening. She came in then but would not tell me where she had been. She ordered Brown out but I would not let him go. I went out and when I came back she was gone. I found her in the dining room of the "British Queen." She got under the table, and I took her by the arm asked her to come home. I did not strike her then. I have on several occasions slapped her, but never attacked her on that day.

John Brown sworn:—I was in the prisoner's house on the 4th instant, between three and seven o'clock. The wife came about half past seven. They both sat down on the sofa. He kissed her. She abused him, and then I left.

John White, No. 136 sworn:—When these people first came to me they lived nicely together. The first quarrel was on account of her going with Mrs Walker. If she were my wife I would kill her, her conduct is so reprehensible. She abused my wife, and they had a scuffle together once.

His Honour said this was one of the drunken rows frequent in this locality. It was difficult to decide with such evidence, hardly any of which was reliable. Both would either have to be locked up or released. It was indeed a cowardly thing to beat a woman who certainly had not strength equal to the man's.

His Honour spoke at some length on the evils of the life depicted in this evidence, and thought that the whole crew should be locked up. People who witnessed such conduct without interference were as bad as the disputants themselves.

Prisoner dismissed on paying costs of case and imprisonment.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E. M.

(The Engineering & Mining Journal.)

(Continued from the last.)

SILVER.

The metallurgy of silver, and its extraction on a large scale probably date from the year 1590, when the Japanese first learned from a foreigner to separate silver from lead and copper. The discovery of silver and its first production are placed by the Japanese, as we have already seen, some ten centuries earlier.

Between 1649 and 1671 the Dutch exported one hundred and forty millions of dollars in silver bullion: and, even supposing a large proportion of this to be silver previously produced from the mines, or brought into the country by the Portuguese for exchange with gold, the yield of the country cannot have been less than three or four millions of silver per year. Comparing this with the present annual yield, 312,000 ounces, or in value about $350,000 it is evident that there has been a great falling off in the production of this metal.

This is due to the causes already stated, viz., the abandonment of many mines on account of the rise in the value of labor, and the practical exhaustion, so far as Japanese methods of mining are concerned, of the more accessible and easily worked deposits. The silver deposits of Japan constitute, however, the most valuable portion of its metallic wealth, and offer the greatest inducements for the investment of capital. When the abandoned and the feebly worked mines of silver shall be reopened and properly worked, the annual production of silver will certainly equal, and may possibly exceed, that of former times. The silver-bearing veins are, as a rule, true fissures continuous in depth; the bodies are regular and persistent; a constant supply of ore can at all times be depended upon; and there is still left below water level, in the abandoned mines, vastly more ore than was ever obtained above.

Silver occurs in twenty-five of the the thirty-eight ken and fu, and in 1874 ninety-eight mines were producing larger or smaller quantities of bullion. The total yield, according to Mr. Godfrey, was about 312,000 ounces troy. Of this amount probably one-half was the product of ten mines, and thus the remaining ones must have averaged nearly 1,800 ounces of bullion; certainly a promising exhibit when we consider the imperfect methods of working employed.

Silver occurs associated with ores of copper and of lead, and sometimes with gold. Of the ninety-eight permits for silver mining granted in 1874 by the Mining Office, but thirteen were for silver alone; the remainder for silver with copper or lead, or with both copper and lead. But three were classed as gold and silver mines; a much larger proportion, however, produced bullion containing from one to ten per cent. of gold.

Native silver, argentite, and antimonial silver ore are, so far as I know, the only silver minerals found in Japan. Other sulphides probably occur, but they have not as yet been recognized. Silver also occurs in tetrahedrite, galena copper and iron pyrites, and in blende, in larger or smaller quantities.

M. Coignet† describes a peculiar ore or mineral of silver containing organic or bituminous matter, which was found in one of the mines at Ikuno, in Toyôoka ken.

Silver occurs in Japan in true fissure veins through stratified rocks, and in irregular mass deposits distributed through volcanic rock. The ore in the first class of deposits is found usually in regular and well-defined seams in the vein, and rarely in pockets or lenticular masses. In the mass deposits the occurrence of ore is more irregular and uncertain.

The Japanese method for the extaction of silver from the ore is always by fusion with lead. When the ore contains a large proportion of copper, there is a previous fusion for copper matte or for black copper, which are afterwards treated with lead. In the first case the matte is alternately roasted and fused with lead

* A paper read before the American Institute of Mining Engineers at the Philadelphia meeting, June, 1876.

† An. des Mines. Tome VI.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

till the copper is entirely lost in the slags. In the treatment of black copper with lead, by the admirable liquation process already referred to, the copper is saved and the silver more perfectly separated.

Ores free from copper are fused directly with lead, though sometimes previously roasted to agglomerate the fine material. The silver-lead, however obtained, is cupelled with charcoal on an open wood-ash cupel, as already described. The loss of lead is generally very great; and, with few exceptions, the proportion of silver saved is not usually more than sixty per cent. of that contained in the ore.

The following mines, which have come under my notice, are among the most important in Japan, and will serve to illustrate the different classes of silver deposits:

Kosaga Silver Mine, Akita Ken.—This mine is now worked by the Mining Office, and is under the superintendence of Mr. Curt Netto, a German mining engineer. The works, which consist of several shaft-furnaces, reverberatories, an English cupelling-furnace, etc., were built by Oshima, of the Mining Office, from plans said to have been furnished by Mr. Pumpelly while in Japan. The works are well arranged, but the process proves to be unsuited to the ore, which is very poor. For this and other reasons, Mr. Netto has decided to materially change the process, in such a way, however, as to utilize a large proportion of the old plant.

The ore, which is found within a short distance of the works, occurs in irregular masses, distributed through a white feldspathic porphyry. The prophyry occurs as a massive eruption on the flank of a range of hills of stratified rock. The erosion of this porphyry, which is soft and easily decomposed, has formed a wide valley, and the rock is almost everywhere covered and concealad by deposits of alluvium. Its limits have not been determined, but I found exposures in a belt a mile or more in width, and fifteen or twenty miles in length. Ore has so far been found in the porphyry only in this one locality, but similar deposits may possibly be concealed by the river alluvium.

There are two classes of ore, both poor, but found in unlimited quantities. The first is a yellow-clay ore, consisting of decomposed porphyry stained by oxide of iron. This contains four to forty ounces of silver to the ton; and, exceptionally, as much as one hundred ounces. The second class is a black sulphuret, mostly amorphous blende, containing about twelve ounces of silver to the ton, and five per cent of copper. Besides these, certain silicious ores, containing traces of silver, are used in the furnace as flux. The ore mixed for smelting, contains on an average thirteen and a half ounces of silver.

The porphyry is which these masses of ore are found is often locally charged with pyrite, which assays 0·015 oz. gold and 0·73 oz. silver to the ton. Mr. Netto thinks that the clay ore is possibly formed from this by decomposition with concentration of the silver by segregation.

The ore occurs in the porphyry in large irregular masses. One such mass of black ore, which was partly exposod to the open air, measured about thirty-five by twenty-five by fifteen feet.

The process used for the extraction of the silver at the time of my visit was as follows:

1.—Roasting of ore in piles—the blende and part of the flux being submitted to this treatment.

2.—Fusion for matte in shaft furnances.

3.—Roasting of matte in piles.

4.—Fusion of roasted matte with lead in a low hearth by the Japanese process.

5.—Refining and cupellation of the lead.

Operations 3 and 4 are several times repeated, until the matte is reduced to very small bulk and most of the copper has been brought into the slags. These rich slags go back to the ore fusion in the blast furnance.

It is proposed, in order to obtain a larger proportion of the silver, to save the copper now lost, and to avoid the use of lead, which must now be brought from a distance, and for other reasons, to adopt a wet method of treatment. The matte from the shaft furnance is to be granulated, roasted with salt in a reverberatory furnance, and lixiviated after the Ziervogel method. Experiments to test these proposed changes had just been completed at the time of my visit, and had proved very successful. I have since been informed that these changes have been made, and give very satisfactory results. 3,497 tons of ore (of 2,240 lbs. ?) were treated in the year 1874, yielding 172 oz. gold and 22,621 oz. silver.‡

Mukoginzan, Ani Mines, in Akita kori, Akita ken.—On the other side of the river from the Ani copper mines, and under the same management, is the Mukoginzan (literally, opposite silver mines). The mine, at the time of my visit, belonged to Ohno, and is now under the control of the Mining Office. I understand, however, that it is still worked by Japanese methods.

The ore, like that of the Kosaga deposit, occurs in a large crupted mass of white feldspathic in small or irregular seams or impregnations. The mass of volcanic rocks is much smaller than at Kosaga, though its extent in unknown. There are also numerous dykes of the same white feldspathic rock traversing the stratified rocks of the vicinity.

The ore is porphyry, more or less decomposed, and impregnated with sulphurets. It contains copper and ipon phyrites, galena, argentite (?), etc., and more or less free gold. The ore is crushed with hoes, and concentrated, by washing, to one-fifth of its original weight. If too hard to be thus easily crushed, it is weathered for six months or a year. The washed ore contains about three and a half ounces of gold and seven ounces of silver to the ton of two thousand pounds, and about one per cent. of lead. The bullion value of one ton will thus be about eighty dollars; or of the unwashed ore, about sixteen dollars.

About half of the gold in the ore is obtained directly by careful washing. For this purpose the finest and richest portions of the jigged ore are washed by hand on the shallow wooden *ita*, or washing board; and the gold thus obtained is added to the bullion in the last stage of the cupellation. The treatment is as follows:

1.—Roasting of the washed ore in kilns.

2.—Fusion of the roasted ore with lead in a low hearth.

3.—Remelting of the slags and matte with lead.

4.—Cupellation of the lead.

The bullion, which is two thirds silver and one third gold, is sent to the Innai silver mine and there parted. The product of the mine at the time of my visit, in 1874, was about 75 ounces of bullion per month.

Innai silver mine—Okatsu kôri, Akita ken. This rich mine has been known and worked for over 250 years. At the time of my visit, in December, 1874, it was owned by the merchant Ohno. During my stay, however, an officer arrived and took possession in the name of the Government. It has since been turned over to the Mining office; but is, I believe, still under the Japanese management.

There are here quite a number of veins; but one only is worked, and little or nothing is known of the others. The one worked is a fissure vein, five to thirty feet in thickness, traversing strata more or less metamorphosed in an east and west direction. The dip of the vein is steep; from fifty to eighty degrees southward. The vein rock is calcite, usually quite crystalline.

There is quartz, through which the silver is disseminated in the form of argentite and antimonial silver; and contains also sufficient gold to form one per cent. of the bullion produced. The ore holds but little pyrite or other sulphurets, though the veins sometimes contain seams of blende. The ore seams are from a few inches to three feet thick, the average being five to six tenths of a foot. There is sometimes one such seam, and sometimes two, three, or five symmetrically arranged in the vein.

The ore, as mined, averages 130 ounces to the ton of 2,000 lb. This is crushed and hand-picked—not washed—to yield one and a half to two per cent. of silver, or 448 to 583 ounces to the ton. Several amounts of ore are sometimes found which will yield over five per cent. or about 1,500 ounces of silver Ore that, by hand-picking cannot be made to yield 200 ounces, is either left in the mine or thrown on the dump. Thousands of tons of such ore, which, without dressing, would probably yield 80 to 100 ounces to the ton, would thus be available for treatment if a stamp mill were erected.

As may be inferred from this fact, the process of treatment employed at this mine is extravagant and wasteful. This is occasioned by the extraordinary richness of the ore, which has made profit possible in spite of the most unskillful treatment, and has rendered effort after improved methods of working unnecessary. The process employed is as follows:

1.—Roasting for agglomeration.

2.—Fusion of roasted ore with lead.

3.—Treatment of slags.

4.—Cupellation.

Small quantities of ore, not more than two or three pounds, are treated at an operation—with large quantities of fuel and an energetic blast. The consequence is that fifty to sixty per cent. of the lead is sent up the chimney, carrying with it a large part of the silver. The small scale on which operations are conducted, involves,

‡ International Exhibition 1876, Official Catalogue, Japanese section p. 4.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

moreover, an unnecessary amount of labor, and adds largely to the expense of the treatment.

The mine is quite dry, and the Japanese miners have thus been able to extend their working far below water level—having reached, at the time of my visit, a depth of 750 feet below their lowest drainage tunnel. To raise the water, however, a force of about fifty men and 274 pumps are required. The water is pumped in over a hundred lifts, each pump raising it being less than eight feet. Although the amount of water so raised is small, it entails an expenditure of $250 per month—an amount exceeding the average monthly yield of most other silver mines.

This mine is one of the richest in Japan, and, when properly worked, will prove exceedingly profitable, and materially increase the bullion product of the empire. The yield of this mine in 1873 was 44,378 ounces, and in 1874§ about 41,400 ounces of silver bullion. This bullion contains about one per cent. of gold, and five per cent. of base metals—one per cent. of copper and four of lead.

Ikuno Silver Mines—Asako kôri, Hiogo ken. These were, at one time, probably the richest silver mines of the country. They were opened about three hundred years ago, and at the beginning of this century gave employment to some four thousand miners.‖ As the workings became deeper, the ore was found to be harder and more difficult to smelt, and the scale of operations was reduced, so that in 1869 only five hundred men were employed. It is at present worked by the Mining Office, and is under the superintendence of M. Coignet and a large staff of assistants. Mr. Nakano, my assistant, visited this mine last year, and the following description is based on his notes and on information derived from other sources¶ :

The ore is calcite and quartz (?), containing sliver, mainly in the form of argentite, and occurs in veins one to three feet thick, traversing volcanic (?) rock. Associated with the argentite, specimens from the mines show gold, silver and native copper, blende, galena, copper and iron pyrites, malachite, smithsonite and other minerals.

The ore varies in richness from a few ounces to thirty or more to the ton. As it comes from the mine it is sorted, and the richer portions treated separately. Some of this rich ore is reported to yield as much as 1,500 to 1,800 ounces to the ton.

The bullion produced contains seventy per cent. of silver, ten per cent. of gold, and twenty per cent. of base metal (copper). At the present value of silver, this bullion would be worth about $285 per ounce.

About half a million dollars have been invested in machinery. The ore is stamped dry, in a mill said to be capable of treating fifty tons per day. This is only partially finished, and not yet running at full capacity. The stamped ore is roasted with salt, and the silver extracted by barrel amalgamation. A part of the ore seems to be treated by a dry process, as I find mention made of smelting work—possibly Japanese. About five hundred miners are employed, and the expense of running the mine and mill is variously reported at from $15,000 to $30,000 per month. The accounts of profits are also conflicting; but there seems to be no reason why these should not be large, when the works are fairly started. The product of these mines in 1874 was 3,236 tons of ore (of 2,240 lb.), but only about 62 tons were treated, yielding 1,410 ounces of bullion, 1,269 ounces of which was silver and 141 ounces gold.**

In June, 1875, at the time of my assistant's visit, the monthly yield was said to be 4,416 ounces of bullion, showing a large increase of production.

Sérigano Silver Mines.—Takaki Tôri, Kagoshima ken. These mines are owned by a Japanese company and are entirely under Japanese management. The working of them is chiefly interesting as showing how foreign methods may be adapted to the wants of the poorer mines of the country.

There are here three quartz veins, running about N. 55° E. through metamorphic rock, and dipping towards the southeast 30° to 36°. The largest of these veins varies between two and four feet in thickness; the second is two to three and a half feet thick; and the third is smaller, though the exact dimensions are not known. In the largest vein there are usually two seams of ore, one near either wall, each averaging one foot in thickness. In the second vein there is but one such seam, from eight-tenths of a foot to two feet thick. The third is not worked.

The ore is cellular quartz, stained black by oxide of manganese, containing silver as sulphide. The vein-rock is quartz, sometimes white and massive, and sometimes cellular and stained black, like the ore. The ore averages two and a third ounces of bullion per ton (of 200 lb.). This bullion contains one tenth of gold and would be worth, at present, about $3 per ounce, making the value of one ton of ore about $7.

This very poor ore is treated in a rude stamp-mill and by barrel amalgamation, the process being modelled after that used at Ikuno. The ore is first crushed in two stamp-mills of eight stamps each, run by water power. The stamps are of wood, shod with iron, and are quite light. The mortar is also of wood, with a small iron anvil in the bottom. The united capacity of these mills, when in good working order, is about one and a half tons of ore per day; but the average amount treated is little more than one ton.

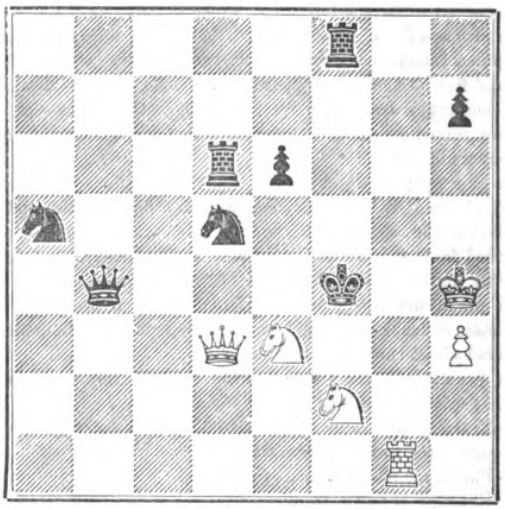
The crushed ore, sifted by hand through forty mesh-sieves,* is roasted with salt, about one and a half per cent. by volume, in shallow cast-iron pans. This roasting is continued for six hours over a wood fire. The ore is then cooled, transferred to barrels and amalgamated with a few pounds of mercury, one-half per cent. by weight of the ore treated. The barrels are revolved at a moderate speed from twelve to eighteen hours; and the charge is then run into a settling tank. Finally, the mercury is separated from the amalgam by straining and squeezing through several thicknesses of Japanese paper. The whole process is rudely but still fairly well conducted; and I was able to suggest few improvements.

The yield of the two mills is about three ounces of bullion per day; but on account of frequent stoppages for repairs, the monthly product averages only seventy-two ounces.

(To be Continued.)

§ Estimated—eleven months' yield being 38'014 oz.

‖ International Exhibition, 1876, Official Catalogue of the Japanese Section, p. 41.



¶ An excellent account of this mine was given last year in the *Hiogo News*.

PROBLEM.

By Mons. L. de Bilow.

BLACK.

WHITE.

White to play and mate in 3 moves.

As we has received no solution of last week's problem from our usual Chess Correspondents, we withold the answer until next week.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

January 13 1877. 13ins.

NOTICE.

MR. JOH. RUD. MERIAN has been admitted a partner in our firm on the 1st January last.

ZIEGLER & Co.

Yokohama, March 27, 1877. 1w.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—During the last week a moderate business has been done, but our market closes quietly and prices in some instances show a decline. For 16/24 *Yarns* there is a good enquiry, but quotations for the lower qualities must be reduced; 28/32 continue to attract some notice and prices are firm, while in 38/42 there is almost no business. In *Shirtings* moderate transactions are reported, and prices show an improvement. For *T. Cloths*, *Velvets* and *Turkey Reds* there is a small demand, but other articles are neglected and nominal.

Grey Shirtings:—							
7 lbs.	38½ yds.	39 in.	per pce.	$1.45	to	$1.80
8 lbs.	38½ yds.	44 in.	,,	1.60	to	2.20
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.62½	to	2.35
9 lbs.	38½ ,,	44 in.	,,	2.00	to	2 55
T. Cloth 7lbs.	24 ,,	32 in.	,,	1 50	to	1.70
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25

White Shirtings:—							
60 to 64 reed 40 yds.	35 in.	per pce.		2.20	to	2.40
Turkey Reds 24 yds.	30 in.	2—3 lb.	per lb.	0.67½	to	0.87½
Black Velvets				7.25	to	8.25
English Drills 15 lbs.	40 yds,	30 in.		2.75	to	2.95
Taffachelass	12 yds,	48 in.		1.70	to	2.15

Yarns.—

No. 16 to 24	per picul	$28.75	to	32.50
No. 28 to 32	per picul	$30.00	to	34.00
No. 38 to 42	per picul	$34.00	to	39.00
Reverse Twist 16-24	,,			

Woollens.—The past fortnight has been very quiet, owing, principally, to the high rate for native currency and continuance of the insurection in the South. The better feeling which prevailed for a short time for *Mousselines de Laine* has ceased, and with the exception of a fair demand for *Blankets* and *Army Cloth* for Government requirements, all other articles must be quoted nominally the same as last, without any business of importance to be noted.

Plain Orleans	40—42 yds.	32 in.	5 50	to	7.00
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.25
Shimagoro	30 yds.	30 in.	4.00	to	5.25
Italian Cloth	—30 yds.	32 in.	0.24	to	0.31
Camlet Cords	29—30 yds.	32 in.	5.75	to	6.00
Camlets Asstd.	56—58 yds.	31 in.	16 50	to	17.50
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00
Plain Mousselines de Laine	—30 yds.	30 in.	0.17½	to	0.19

Figured Mousselines de Laine	30 yds.	30 in.	0.25	to	0.30
Multicolored ,,	30 yds.	30 in.	0.30	to	0.36
Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80	to	1.20
Presidents	54 in.	to 56 in.	0.60	to	0.65
Pilots	54 in.	to 56 in.	0.45	to	0.55
Union	54 in.	to 56 in.	0.60	to	0.75
Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40	to	0.47

Sugar.—There has been no change in prices since our last, which remain steady as quoted. Stocks are estimated at 12,000 bags.

Sugar:—Takao in bag	per picul	$4.40
,, in basket	,,	$4 20
Taiwanfoo in bag	,,	$4.25
do. in basket	,,	$4.10
China No 1 Ping-fah	,,	$7.60	to	$7.95
,, No. 2 Ching-pak	,,	$7.00	to	$7.60
,, No. 3 Ke-pak	,,	$6.40	to	$6.75

China No. 4 Kook-fah	per picul	$6.10	to	$6.30
,, No. 5 Kong-fun	,,	$5 80	to	$6.15
,, No. 6 E-pak	,,	$5.20	to	$5.50
Swatow Brown	,,	$3.65
Daitong	,,	$3.80
Japan Rice	,,	$2.00	to	$2.10
Kerosene Oil	,,	$4.40

Kerosene Oil—The market remains quiet at $4.40, with moderate sales.

EXPORTS.

Silk.—Our fortnightly report, dated 12th instant, was to the following effect:—

Protracted uncertainty about the maintenance of peace in Europe, the disastrous state of the silk manufacturing trade and the approaching time of the crop's, are so many causes under the influence of which this market has continued much depressed since the 30th ultimo. In fact, settlements are 25 bales of Hanks, 75 of Oshiu sorts, and 50 of silks which were offered as filatures and bought at from $600 to $750. The stock is estimated at 1,400 bales. For Hanks, which are now very scarce, our quotations are nominal, and we have a further decline to report in the price of all Oshiu descriptions.

The settlements of the fortnight are 107 bales, making the total export since the 1st July 20,212 bales, against 12,317 last year for the corresponding period.

	At Exchange 4/1 in London.	*At Exchange 5.15 at 6 m.s. in Lyons.*	
Hanks, Extra No. 1:	—	—	—
,, Best No. 1 & 2	$760 to 780	Nom.	27/4 to 28/ 76 to 78
,, Good No. 2	$720 to 750	,,	26/ to 27/ 72 to 75
,, Medium No. 2½	$680 to 710	,,	24/7 to 25/8 68 to 71
,, C'mon. No 3	$550 to 660	,,	20/2 to 23/11 56 to 66
,, Inferior No. 4 & 5	$550 to 660	,,	20/2 to 23/11 56 to 66
Oshiu—Best	$620 to 650		22/7 to 23/7 63 to 66
,, Medium to Good	$550 to 600		20/2 to 21/11 56 to 61

	At Exchange 4/1 in London.	*At Exchange 5.15 at 6 m.s. in Lyons.*	
Hamataki No. 1 & 2 nom.	$460 to 480	17/2 to 17/10	47 to 49
,, No. 3 & 4 ,,	$430 to 450	16/1 to 16/9	44 to 46
Kakeda—Extra	$760 to 800	27/4 to 28/8	76 to 80
,, Best	$710 to 730	25/8 to 26/4	71 to 73
,, Medium to Good	$650 to 680	23/7 to 24/7	66 to 68
Echizen	—	—	—
Filature Silks nominal	$800 to 930	28/8 to 33/2	80 to 92

Since the above was written deliveries have been 44 piculs of Oshiu sorts. A large parcel of Oshiu which a Japanese dealer deposited with a foreign house at the end of December last has been withdrawn.

Tea.—The current season 1876-77 may be considered as closed, settlements for the past fortnight only amounting to 500 piculs, at prices purely nominal. We do not expect that much New Tea will come in prior to the 15th May, as the season is fully a fortnight backward in comparison with the previous one, which may, however, be all the more in favour of the general out-turn of the coming crop.

EXCHANGE AND BULLION.

Exchange.—The past week has been very quiet with steady rates.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 0½d.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On April 17th, at Shiba Sannai, Tôkiô, the wife of Retired Commander WILLAN, R.N., of a son.

Notes of the Week.

For the past few days there has been an almost utter silence in the columns of the native press as to the position in the South. We know that Kumamoto has been made the headquarters of the Commander-in-Chief, Prince Arisugawa, and that the *Kenrei* has been established in his old premises. Nothing whatever is known of the whereabouts of Saigo and his army. By some it is supposed that he intends making a stand, *en masse*, at some strong point in Hiuga; by others, that his army has scattered in small bands, and that a guerrilla warfare will be kept up by them. What the next act in the tragedy is going to disclose we cannot venture to foretell. We do not believe that Saigo's army has yet discovered that it is conquered, and unless its leader is dead, the end will not be attained without many a sanguinary struggle. The operations on the part of the Imperialists, which have resulted in the relief of Kumamoto, have cost the Government over *one third* its entire army, in killed, wounded, and missing. It cannot afford many such victories, and in the interests of humanity it is to be hoped that something will occur to stop so frightful a sacrifice of life. In the meantime the Government seems to be taking measures for re-establishing its authority at Kagoshima, and as the civil officials must be supported by the military, it is stated that a large force will be sent to Kagoshima by sea, and another column will march to the same destination from Kumamoto. The following items from the *Nichi Nichi Shimbun* of to-day, form the latest news relative to this intention:—

When the Imperialists reached Kumamoto, many camp utensils belonging to the rebels were taken, but no firearms.

The *Kencho* of Fukuoka which was temporarily removed owing to the late riots, has now been re-established in the former place.

All subordinate officials of the Kagoshima *ken* down to the attendants and messengers, and also the officials employed in the *Naimusho*, 140 persons in all, leave for Osaka on the 23rd in the English ship *Massilia*, under the charge of Acting First Secretary Watanabe.

On the 18th twenty Judicial officers of various grades were appointed to the Kagoshima *Saibansho*. They leave for Osaka on the 23rd.

As soon as the *Kenrei* and other officials have arrived at Kagoshima, it is said that a hospital will be established there and that two distingnished doctors, Messrs. Miura and Yamazaki of the Tôkiô Medical University, have been appointed Directors.

The temple of Honguanji in Kiôto has given 10,000 *yen* to assist the farmers in the neighbourhood of Kumamoto.

We have received a communication with reference to the Racing differences at present existing, and must leave our readers to judge of the accuracy of its statements and the deduction our correspondent draws from them. While we cannot close our columns to correspondence on this thread-bare subject, we wish it to be distinctly understood that, while deeply regretting that so interesting a sport should call forth so much bitter feeling and useless recrimination, we shall ourselves abstain in the future from all comment or discussion relating to this unfortunate disagreement.

We learn on the authority of Mr. John J. Faylor—though the information might have been conveyed in more courteous terms, and in better grammar—that the precious horses that arrived by the *Gaelic* are not destined for the high service of the Gods at various temples. Neither are they "intended for crossing with the native breed." It must be then, as we have heard, that they have been expressly selected for use at the *baba* at Kudan, where, as any visitor to Tôkiô will know, it is the custom of the *jeunesse dorée* of the capital to "witch the world with noble horsemanship" at the small charge of one *bu* an hour, by careering wildly round a small oval on the fiery and untamed native steed. In view of their size the price of hire is to be doubled. Ladders will be provided for mounting.

With regard to the price paid for the "superb horses sent from California by Mr. D. W. Ap Jones, for the Shimosa farm," we notice a singular discrepancy between the "exact statement" of the *Tokio Times* and that made by Mr. John J. Faylor in his letter to the *Gazette*.

The *Tokio Times*, after pointing out that "on the whole, the introduction of these horses was broadly condemned"—which is perfectly true—proceeds to fabricate a reason for this censure, "namely, that they came from America," which is perfectly untrue and the emanation of a singularly prejudiced mind. They may have come from Mesopotamia or Timbuctoo for aught anyone, but those interested in buying them, cares. Such a suggestion is an insult to a community which shows its good sense in reprobating a purchase which the Japanese have, in their in experience, allowed themselves to be wheedled into. The *Times* then proceeds to "give an exact statement of the cost of every animal in the collection," which stands as follows:—

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Ralston	$1,500.
Bradly	1,500.
Clara McGeary	1,000.
Regent	750.
Amador	650.
Langden	600.
Jenny Ford	500.
Balance	500.
	$7,000.

Mr. John J. Faylor in his letter gives "*the following facts.*"

1st.—The grey stallion *Amador* cost $600.

2nd.—The bay stallion Clydesdale *Langdon* cost $450.

3rd.—The *Norfolk* family, five in number, *Ralston*, *Bradley*, *Clara McGeary*, *Balance and Jessie Ford*, were bought from Mr. Theodore Winters of Sacramento, California, for a sum which in that market—I know nothing of Japan or England— was considered dirt cheap, namely (*in silver*) $15,000.

4th.—The dark bay *Regent*, which is evidently the writer's fancy, but which *to my knowledge* is the worst horse of the lot, cost only(*in silver*) $750.

Oh dear! Oh dear! it's evident that "someone has blundered dreadfully, and it must be very trying to those who are endeavouring to make to themselves friends of the mammon of unrighteousness to have such terribly gushing and indiscreet associates. Has the *Times*, in its eagerness to annihilate all those who will not back up its efforts to hoodwink the Japanese, been too candid, and published too much? Perhaps it has done good by mistake, and its statement may lead to some awkward questions being asked by those who have to pay for the animals, namely the Japanese, as to what they really did cost. Taking Mr. John J. Faylor's figures as correct,—and as he has the horses in charge he ought to know, —we fully agree with what the *Times* says in its closing paragraph, where it does "not hesitate to ask if any purchase ever undertaken by foreigners in Japanese employ has been effected on terms more advantageous to the buyers" (!) We don't know that there has. Really, taking all things into consideration, and at Mr. John J. Faylor's figures, we have no doubt the *buyers* have made a remarkably good thing out of it. But it is to the Japanese owners alone that our sympathy can be extended, and if the remarks of the *Tokio Times* on this importation of live stock only has the effect of arousing the spirit of inquiry in their minds, and of causing them to trust to their own judgment and not to the interested and ruinous advice of the *Times* and its friends, that journal will have unwittingly performed one act of usefulness, during an otherwise worse than useless career. But in its own interests it has, we think, been injudicious in letting us have such a peep behind the curtain.

We are indebted to the kindness of Mr. Tanaka Fujimaro, Acting Minister of Education, for the report of his department for the year 1874, together with a small pamphlet containing a translation of the address to His Majesty the Emperor. The date of the report precludes our making any special remark thereon. Neither can we at present enter into the question of the progress of the proceedings relating to education, which at that time seemed to be inagurated with most praiseworthy care and vigour. It is well known that recently the Government has been compelled to largely reduce the grants made for the support of National educational institutes, owing to the calls made on its treasury by the reduction of the land tax and by various unforeseen causes. We can only trust, however, that the interruption is but a temporary one, and that with returning peace the progress of educational prosperity will be resumed with fresh activity.

The *Tokio Times*, under the head of personal intelligence, has the following gushing paragraph.

The dinner to Count Fé d'Ostiani, at the Uyeno Sei Yo Ken, on Tuesday last, was an example of hospitality carried to its extremest limit. The Japanese government gave the entertainment, and requested the Count to supply the guests, which he did, with customary good taste and discretion, to the number of eighty odd. The Diplomatic corps were all present, and also many Japanese officials of high distinction. Japanese ladies, too, graced the occasion, and one, in particular, attracted unfeigned admiration by the unconscious charm of her singular beauty and refinement.

This is either ignorance or invention—in either case flunkeyism of the worst class. The facts are these. A proposal was put forward by Count Fé d'Ostiani, that an entertainment should be given at Uyéno by the entire Foreign Diplomatic Body. The proposition was accordingly acted upon, and thus the Japanese were, like all others who were present on Tuesday last, *guests* of the Foreign Representatives. The Japanese nobility and gentry are never wanting in graceful and generous hospitality, and the present occasion afforded an opportunity for making some slight acknowledgment of their frequent kindness. We can imagine how their sensitive politeness must shrink from the blandiloquent misrepresentation contained in the paragraph quoted above. But if they ever see the paper, they probably take such flummery at its proper value.

We understand the Mitsui Bank have imported into Kobe from Shanghai a number of Chinese coolies for the purpose of making experimental chops of black tea in the Yamashiro district, thus relieving the distress from which the farmers there were labouring, owing to their inability to dispose of the greatly increased produce of that province.

It is questionable, for all Mahomet said to Fakey as set forth in Sir Samuel Baker's work entitled "The Nile Tributaries in Abyssinia," and impertinently thrust before the public eye as an advertisement ever since, whether a single additional pennyweight of Holloway's ointment has in consequence been rubbed upon the leg of any human being. Nor is it as bit more likely, because Captain Burnaby in his ride to Khiva provided himself with a supply of Cockles pills and a pair of fur lined boots, that a pill the more has found its way down a dispeptic throat, or that fur lined boots have been in greater request than they would have been if the above had never been written. To believe otherwise were to launch oneself on a sea of theological difficulties, with no land ahead and never a compass, or so much as a glimmer of the polar star, to steer by. Does anybody ever really bruise his oats or wear paper collars, because he is advised to do so in the public prints? Or does a tourist the more make his way anywhere because he may have read a description of somewhere or other, and been advised to go and see it? We trow not. And yet there are some places which he might do worse than be advised about, and one of these is Mukojima. Have you ever been to Mukojima, Good Reader! and if not, why not? If a mile and a half or so of flowering cherry trees, arching over head and lining in the form of an avenue a road—more properly a dyke—many feet above the surrounding level, and affording glimpses between their massive trunks, on one hand, of a broad and shining river, gay with craft of many kinds, and on the other of a wide expanse of smiling gardens with quaint tea and pleasure houses embowered amongst them,—if all this does not tempt thee, why then, prithee, good Sir! what will? Not that we would have you fancy that the picture here presented to you is a finished one. Far from it. We have hardly more than stretched the canvas and dashed in an outline here and there. We have hinted merely at generalities and said nought of particulars. There are many objects to be added, but we fear to be suspected of wishing to place ourselves beside the Cockle's pills and fur lined boots and assume the character of advisers. We might have whispered of snowy showers of cherry blossoms and perfumes faint and delicate—beyond cherry laurel—of bitter almonds, and other influences, too subtle for analysis. But chiefest of all might we have endeavoured to delineate in the brightest tints our colour box contains, a vast and moving crowd of tastefully aparalled Japanese. A crowd of people, not taking their pleasure sadly—be it remarked—as some Westerns are said to do, hastening to be happy with an air of being busy with their pleasures, and afraid of losing something if they relax their efforts in that direction for a moment. No, a sauntering, laughing, joyous crowd, with a glad Spring air about them that well accords with the buds and blossoms, and their many odours which seems to mingle with the faint sounds of music and merry laughter from the boats upon the river and the tea houses amongst the gardens, and be borne upon the western gale towards the gates of the sun, as appropriate incense to the genial power to which they owe

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

their existence. For the sun of spring would seem to have a strange effect upon the Japanese. Stimulated by its influence they emerge from their long winter's confinement, and shed their sombre padded garments and don a livelier apparel, whilst their features, paled by immurement and till then pinched by cold, expand and assume a healthier glow. There is still an interesting delicacy about them infinitely more becoming than that robuster tint which usurps its place when the summer sun shines unintermittingly and which may be compared to the difference between the colour of the opening bud and the full grown leaf. In fact, it may fairly be said that a process, similar to that which is at work amongst the vegetation, extends its influence to the Japanese holiday makers when the cherry trees of Mukojima are in blossom.

All this and much more that is interesting, but which our limited space forbids as to touch upon, is to be seen in that pleasant idling place. But, Good Reader! if you have not yet availed yourself of your opportunities, or your destiny has not directed you thither, you'll have ample time to make up your mind about a future visit, as the chance of seeing Mukojima in holiday attire will not return before this time next year.

We call attention of our readers to the translation of a very important article which purports to explain the position of Itagaki and the *shizoku* of Tosa. The supposed causes which led to Saigo's present action are plainly discussed and do not seem to be discredited. It is somewhat strange that the censors of the press should have allowed its publication.

The following communication has been received by Mr. G. C. Pearson, forwarding a cordial acknowledgement of the assistance rendered to Sudzuki Izayemon,—a farmer residing at Katase, near Enoshima, who lost so many members of his family by typhoid fever in November last, —by a number of residents at Yokohama and Tôkiô, in answer to an appeal made by Mr. Pearson.

British Consulate,
Kanagawa, (Yokohama),
April 16th, 1877.

Sir,—I have the pleasure of forwarding to you translation of a letter from Mr. Nomura Yasushi, *Gonrei* of this port, thanking you in cordial terms for the relief afforded to a Japanese family living at Katase, the surviving members of which were assisted by you, or by the relief which you organized at a time when they were in a most destitute condition.

I am, Sir,
Your obedient servant,
RUSSELL ROBERTSON,
Consul.

G. C. PEARSON, Esq.

(*From the Japan Weekly Mail, April 14th.)*

Monday, 16*th.*

The Postmaster General, Mr. H. Mayeshima, has issued a new Table of Foreign Postages for mail matter forwarded viâ the United States, and which came into force yesterday.

Sixty-eight of the Landrenters and Residents of Kobe have addressed a letter to Messrs. Rasch, Makenzie and Groom, who recently resigned from the Municipal Council in consequence of the vagaries of Mr. Nathan J. Newwitter, informing those gentlemen that they will again be placed in nomination at the forthcoming election of a Standing Committee. There seems to be very little doubt but that they will be elected, so it may be supposed that we have not yet heard the last of the Kobe municipal scandal.

From the *Mainichi Shimbun.*

A telegram which was despatched from Mifune, in Higo, at 0.15 p.m. on the 13th instant, announces that the third division of the Imperial forces advanced as far as Katajita by 4 a.m. in hopes of taking possession of Mifune. The right wing was led by Major Yagi, the centre by Major Simada and the left wing by Major Mima. The artillery was posted at Tsuchida-yama, and the engagement commenced at 7 a.m., when Lieut. General Takashima with two batallions of troops made an attack from Yoshida and succeeded in taking Mifume by 10 a.m.

There is a rumour current to the effect that the German steamer *Kobe* has been sold to the Satsuma rebels. Some steamer came as far as the lighthouse at Kobe about 5 p.m. on the 25th of March last without entering the port, and afterwards sailed westward, so it is suspected that she was the *Kobe*. Orders have been given that strict search should be made for her, and it is expected that she will proceed to the coast of Ôwake *ken* (Bungo). It is supposed that she has on board arms for the rebels.

From the *Hôchi Shimbun.*

The sum of hundred thousand *yen* is settled as the amount that will be required in carrying out necessary reforms in the Kagoshima *ken*.

From the *Akébono Shimbun.*

The wives of Kirino, Shinohara, and others have, by the aid of a large force of coolies, torn down the private residences at Kagoshima of Ôkubo, Kuroda and many other officials in the Government service.

Tuesday, 17*th.*

We would remind those sportsmen who took out shooting licenses, that according to the terms of the covenant entered into such licenses have to be returned to the *Kencho* within 20 days from the 15th instant.

From telegrams received yesterday in Tôkiô, there seems to be little doubt that the Government troops have effected a junction with the garrison at Kumamoto.

Richard Andrews, steward on board the British barque *Laurel*, who gave evidence in Court on Friday, brought a charge against Thomas Gale, a seaman, on Saturday morning in H. B. M.'s Consular Court. The complainant stated that on his returning on board on Friday, Gale met him at the top of the companion way and struck him with a sea boot and afterwards kicked him in several places, giving him great pain. Prisoner admitted the charge, saying that when the steward came on board he admitted having told one lie with reference to the men's food and that he was sorry for it. Mr. Consul Robertson fined him $2 and costs.

From the *Akébono Shimbun.*

In order to encourage his men Saigo frequently exposes his life to danger, and the rebel commanders have a difficulty in keeping him out of engagements. Saigo's presence is itself sufficient to stay his men in their flight from the Imperialists and to induce them to return to the attack.

From the *Mainichi Shimbun.*

The Imperial forces at Udo crossed the Midori-gawa on the 14th instant, dispersed the rebels who were defending the place, arrived at Kawajiri at noon, and advanced to Kumamoto castle at 2 p.m. The rebels have posted themselves on Hanaoka-yama, where they have batteries constructed from north to south. The rebels exhibit a spirit of desperation, and any attack on them must therefore be made cautiously.

It is rumoured that ex-*Sangi* Itagaki, at the head of 4,000 Tosa *samurai*, is about to proceed to the seat of war.

From the *Chôya Shimbun.*

Iwamura, the recently appointed Governor of Kagoshima *ken*, with some fifty subordinate officials are due at Nagasaki by the 20th instant. They will there establish a temporary office, which will be removed to Kagoshima as soon as the war ends.

It is said that the rebels in the neighbourhood of Yamaga are so strong that the government forces have decided to give up offensive and take to defensive measures. The same opinion is held by the Imperialists of Waifu.

A telegram from Kiôto at 8 25 p.m. on the 13th instant announces that at 4 a.m. on the 12th instant the troops under Lieut. General Yamada crossed the Kawajiri river by a bridge of boats which they constructed for the purpose.

The rebels are hastily erecting fortresses upon Hanaoka-yama, where they very likely intend to establish their headquarters.

The rebels are drilled upon the English system, and there are, it is said, two or three British instructors among them.

Out of the eight hundred picked men of Saigo three hundred are said to have been killed or disabled.

Shimadzu Haruhiko and Tadauya, two sons of Saburô, with seven attendants, arrived at Kiôto on the 10th instant.

From the *Nichi Nichi Shimbun.*

A telegram which left Konoha at 11.40 p.m. on the 15th inst., announces that at about four p.m. on the same day a fire broke out within the rebel entrenchments at Todoroki-mura. An attack was made upon the position and the insurgents fled, upon which the Imperialists pursued them as far as Kurezaka.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

A telegram sent from Kuroda at Udo to the *Udaijin* at 7.30 p.m. on the 15th instant, states that from dawn of that day the left wing of the division under Yamada and Kurokawa crossed the Midori-gawa and advanced against the rebels. At noon an attack was made upon Kawajiri, the insurgents fled in all directions, and reports have been received to the effect that Major Yamakawa succeeded in reaching Kumamoto Castle at 2 p.m. that day.

Wednesday, 18*th*.

H. M. S. *Vigilant*, with Admiral Ryder, is likely to remain with us for some time, while H. M. S. *Audacious* may be expected here at the close of this week from Nagasaki, H. M. S. *Lily* having arrived at that port from one of the China coast ports. H. M. S. *Hart* will leave in a day or two for Hongkong, to pay off. The French corvette *La Clocheterie* arrived from Kobe 18th April.

From the *Nichi Nichi Shimbun*.

Another telegram, sent from Major General Kuroda to *Udaijin* Iwakura at 0.30 p.m. on the 16th instant, is as follows :—As I reported yesterday, I, with all my troops, entered Kumamoto castle at 11.25 p.m. yesterday, and had an interview with Lieut. General Tani, and found the garrison in good health. All the insurgents surrounding the castle have retreated. Supplies of provisions and ammunition have been conveyed into the castle.

A telegram despatched from Kiôto at 10.50 p.m. on the 15th instant announces that all the insurgents in the neighbourhood of Kodome, Uyeki, and Torinosu have retreated.

From the *Akébono Shimbun*.

When the Imperialists who were advancing from Kawajiri were about to enter Kumamoto, Kabayama and Kodama came from the castle and met them at Demachi. After consultation, Imperial troops were stationed at all the commanding places so as to defend the place against attacks from the insurgents. Most of the rebels are said to have fled toward Koyama on the road along the Hinga coast.

From the *Hôchi Shimbun*.

One of the rebel leaders, Fuchibe, is in Kagoshima, styles himself Commander-in-Chief, and is now occupying the *Kencho*

From the *Chôya Shimbun*.

On the 16th instant Mr. Sakuma Kenzo, the acting editor of the *Hôchi Shimbun*, was sentenced to a fine of twenty five *yen* for having violated the fifth article of the Libel-laws by publication of certain news in No. 1225, and an article in No 1245 of the issue of that paper.

From the *Mainichi Shimbun*.

A telegram which was despatched from Kiôto at 8.55 p.m. on the 16th instant announces that all the rebels surrounding the castle of Kumamoto have been dispersed, and at 4 p.m. on the 14th instant the Imperialists entered the castle by various roads.

Another telegram from Kiôto at 10.20 a.m. on the 17th instant reports that the troops from Yashiro arrived at the castle on the 14th instant ; the troops from Uyeki also reached the castle on the 15th instant. The rebels have fled towards Ôtsu.

Another telegram from the same place, despatched at 8.55 p.m. on the 16th instant, states that the headquarters of the Imperial Army have been removed to Kumamoto, and the *Kencho* has also been restored to its former position.

A force of 10,000 volunteers is to be enrolled in Chôshiu.

The *Riujô Kan* left Osaka on the 6th instant and proceeded to Kagoshima, but owing to certain reasons unknown no landing could be effected.

Thursday, 19*th*.

There can be no longer any further doubt that Kumamoto has been relieved and is now in the possession of the Imperial troops, as it appears that the Commander-in-Chief, Prince Arisugawa no Miya, has established his head-quarters there, and that the *Kenrei* has been reinstated in his old premises.

The movements of Saigo's army seem to be enshrouded in mystery. It would seem that they must have retreated into the mountains to the east of Kumamoto, but whether again to make a united effort against the Imperialists, or to scatter and carry on a guerilla warfare, remains to be seen. Of the whereabouts of Saigo himself nothing appears to be known. Various grave rumours are current concerning him, but as yet it is premature to give them any publicity.

From the *Akébono Shimbun*.

Mr. Kanagaki, an acting editor of the *Kanayomi Shimbun*, was on the 17th instant fined 5 *yen* for publishing certain items of news which were contrary to the 1st and 5th articles of the Libel-laws.

A fire broke out at Fukagawa Kuroyechô, Tôkiô, at 3.50 a.m. on the 17th instant and destroyed two hundred and fifty houses before it was extinguished, after burning for two hours and a half.

Disquieting rumours have been prevalent during the week of further disturbances in Japan. It will be observed from our Stock and Share List that a fall has taken place in Japan Loans—probably to some extent in consequence.—*L. & C. Express.*

A trial of the balloon made by the students of the Imperia Engineering College at Tôkiô, took place in the presence of Major General Saigo and H. I. H. Higashi-Fushimi-no-Miya on the 17th instant, but it could not be made to rise on account of some fault in the gas. As the war is now nearly over, however, it will not be required.

Friday, 20*th*.

We learn from this morning's *Mainichi Shimbun* that a telegram, which was sent from Nagasaki at 1.40 a.m. yesterday, the 19th instant, states that the whole of the insurgent forces have withdrawn from the positions they held round Kumamoto, and have entrenched themselves at Koyama, Yabe, and Mifune, only a few *ri* south of Kumamoto. This change of position was effected in a quiet and orderly manner, and it would appear, strangely enough, either that the Imperialists knew nothing whatever of the movement or did nothing to prevent it. This may turn out to be a strategical movement on the part of the rebel leaders—of whose manœuvres the Imperialists seem to know nothing—which may place them perhaps in a stronger position than before. If such is the case the war is far from finished, and we shall yet have to deplore further bloodshed. The Imperial Commanders were, by last advices, holding a council of war as to the most advisable way of assaulting the new rebel position.

From the *Akébono Shimbun*.

The Monbusho (Department of Education) will be removed on the 21st and 22nd instants to the buildings formerly occupied by the Female School at Takebashi-soto, Tôkiô.

From the *Chôya Shimbun*.

It is said that after to-day (the 19th instant) the Government will cease to enrol recruits for the police force.

From the *Hôchi Shimbun*.

Six hundred *samurai* of Chôshiu having voluntarily placed their services at the disposal of the Government, have been sent to the seat of war. It is said that the Government is about to raise ten thousand volunteers from each *ken*.

On the night of the 16th instant some robbers broke into the godown of the Mitsui Bank at Yokohama, and stole paper money to the extent of 10,000 *yen* and about 3,000 *yen* worth of old gold coins.

From the *Nichi Nichi Shimbun*.

A telegram from Kiôto states that Mr. Tahata Tsuneaki, the *Dai-shokikuan* (Chief Secretary) of Kagoshima *ken*, has been deprived of both his rank and pension.

The reception room of the Tôkiô *Fuchô* has been completed, and will be used after the 26th instant.

The summer clothing of the troops will now be grey, instead of white as hitherto.

From the *Mainichi Shimbun*.

A telegram, which was despatched from the Imperial headquarters at Kumamoto at 8.11 p.m. on the 18th instant, announces that when the police forces were advancing against the insurgents at Mifune they were suddenly and unexpectedly attacked by the rebels, who completely surrounded them. At sunset the remnant of them contrived to effect a retreat along the banks of the Kasegawa.

Saturday, 21*st*.

The thief who broke into Mitsui's Bank has fortunately been arrested before he was able to dispose of any considerable amount of the plunder he had obtained. It appears that the man, who is a native of the province of Awa, went to purchase silk for new clothes at Mitsui's store in Tôkiô, and there displayed more money than his appearance justified, so that suspicions were excited, and some importunate questions being put to him which he could not readily answer, he was siezed and safely lodged in prison, where he now waits further examination. It is more than probable that he had accomplices to aid him in the robbery.

THE DESIRABILITY OF REFORM IN JAPANESE CURRENCY.

VI.

TOWARDS the close of the last chapter of the Autobiography of Mr. JOHN STUART MILL, there is a passage which shows that the science of Political Economy, in as far as it deals with questions of currency at least, has not yet, even in England, wholly emerged from the militant stage.

"In common I suppose with all who are known as "political economists, I was a recipient of all the shallow "theories and absurd proposals by which people are per- "petually endeavouring to show the way to universal "wealth and happiness by some artful reorganisation of "the currency."

We shall run but small risk of error is assuming, that a very large proportion of these schemes proposed to deal with that particular form of currency which has, from time immemorial, in all civilised countries, and in some which are but partially civilised, at one period or another, dazzled and blinded the mind of man. Few delusions have "survived" with such inveterate persistence; it would be hard to name one that has been fraught with more pernicious effects to society than the delusion that "universal wealth and happiness" are to be secured by issues of inconvertible paper money. In modern times, it is perhaps rare to hear the doctrine pushed to this extreme: nevertheless it lurks in many a mind in some more or less modified form, "Great Governments seize with avidity upon this form of currency * * * * and justify their practice by the help of every kind of arbitrary and unscientific assertion." Russia, Austria, Italy, Turkey, and Spain, are all suffering from the formidable disorder of inconvertible paper money.

"The fretting plague is in the public purse." In the other hemisphere there is the case of the United States. In the opinion of Professor Summer, nothing but the buoyant and youthful vigour of the Great Republic has enabled it to bear up under the successive issues of inconvertible paper money with which it has been loaded, from the "continental" bills of 1775, down to the "blood stained greenback" of our own day.

In the presence of facts like these, our readers, whether foreigners or Japanese, will hardly accuse us of exaggeration when we say that the present position of the paper money of this country is a position of peril. For it has never yet, to our knowledge, been authoritatively declared by any competent official, or body of officials—such for example as the Minister of Finance or the Privy Council—that the existing volume of inconvertible paper money will not be increased in any form, nor although more than one budget has been published, setting forth a favourable condition of the national finances, has any declaration, so far as we are aware, been made by the Minister of Finance as to the footing upon which the existing issues are ultimately to stand. The outcome of a situation in which there is no policy is likely enough, before long, to be bad policy, and we can assure all who have interests at stake in the commerce of Japan, that the future action of the Government in reference to this question will not be, by any means, a matter of indifference to them.

In our former articles on this subject, we have contended that the time has arrived for dealing with the whole system of the currency of this country in a broad and comprehensive manner. And it will be remembered that the leading propositions which we have maintained as embodying the proper basis of reform are these, viz.:—

1st. the Government should abandon the gold standard and should adopt in its stead the silver standard.

2nd. That the Government should procure the introduction of their coin as legal tender at the open ports, and as a necessary preliminary to this, that the management of the Mint should be placed upon a footing calculated to give confidence to foreigners in respect both to its ability to do all the work that may be required of it and to do that work well.

3rd. That the Government should determine upon and enunciate a definite policy in regard to placing the paper money issues upon a secure, an economical, and convertible basis.

These reforms will, in our opinion, impart to the currency that elasticity in which it is now deficient; they will place the transactions of commerce and of every-day life upon an assured basis; and they will effectually carry home to the minds of foreigners the conviction that the Government has set its face stedfastly in the direction of financial and economical reform.

Our purpose, however, in this article is to deal exclusively with the question of the paper money. We have said that the situation is a situation of peril, and in attempting to estimate its dangers it must be remembered that among foreign nations there are many bad examples and few good ones; that the internal trade of the country has since the revolution been passing through a long and painful ordeal; that there has been an all but entire collapse of the credit that formerly existed—that all, or nearly all the banks and financial institutions, whether of old or of modern date, have failed; that the landed tax has now to be paid in money instead of in kind, necessitating as a consequence, either a larger supply of circulating medium or an increased rapidity of circulation; and finally, that there is undoubtedly a widely diffused feeling of discontent fermenting in the country. These are circumstances pre-eminently favourable to the growth of unsound economical ideas: they are circumstances most likely to predispose the suffering body politic to have recourse to financial nostrums.

Such being the present aspect of this question, it seems desirable, if only for the sake of our Japanese readers, to insist once more upon this—that under any other system of paper money than one which provides that the notes shall at all times and immediately be convertible into coin, there can be no safety,—and also to point out that the circumstances of the country are most favourable for effecting a retreat from the quicksands of inconvertibility to the solid ground of specie payments.

It is obvious that steadiness of value is of first-rate importance in any circulating medium, and it is equally clear that any sudden increase or decrease in the quantity of that medium must necessarily cause fluctuations in its value. The quantity of money circulating in any country at any given time, bears, as a matter of course, a certain exchangeable relation to the existing commodities of that country, and any increase or decrease in that quantity must of necessity alter that relation—in other words, a general rise or fall of prices must ensue. We have an apposite illustration of this in the present position of the metallic circulation of this port and of the other treaty ports of China and Japan. The discovery of new and rich silver mines in the United States, and the demonetization of silver in Germany, caused an increased quantity of silver to be thrown upon the market, and as a consequence, silver, both in its crude and manufactured forms, suffered a diminution in exchange value, just as any other commodity declines in exchange value when there is an increase of supply but no corresponding increase of demand. All of us know this, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

most of us know it to our cost. And what has just occurred with regard to silver may occur at any time with regard to gold. Or, as is perhaps more probable, the converse may occur—the exchange value of gold may become appreciated. In point of fact it is the opinion of some competent judges—notably of the Government of India—that a rise in the exchange value of gold has already set in. Now these fluctuations in the exchange value of the precious metals are not advantageous. In the words of Mr. Mill, "all variations in the value of the circulating medium are mischievous; they disturb existing contracts and expectations, and the liability to such changes renders every pecuniary engagement of long date entirely precarious." But evil as these variations in the exchange value of gold and silver unquestionably are, it is impossible to get rid of them, and as we have now the experience of many hundred years that they vary less than does any other commodity, we may be content to bear the inconveniences with which, from time to time, the use of them is attended.

But that any community should be called upon to bear the enormous evils and inconveniences which necessarily flow from additions made to the circulating medium in the shape of inconvertible paper money, by whomsoever issued and on whatsoever plea, is a proposition that will only be advanced by the ignorant and the fraudulent. That any body of men should have the power of opening, so to speak, a storehouse, from which they, at their pleasure or caprice can pour forth money, freed from the ordinary conditions under which money, like other commodities, is usually produced; that they should either invest themselves, or be invested by others, with the power of (so to speak), *creating* money, is, as Mr. Mill says, "an intolerable evil." Under such a system the degree of depression that may take place in the exchange value of the notes issued depends entirely upon the moderation with which those who have the right of issue may exercise their most dangerous power. So long as a paper currency is at all times and immediately convertible into coin at the pleasure of the holders, the variations in its value can only move within those limits which bound the variations in value of the coin itself, but there is no necessary limit *in the direction of depreciation* to the variations in value of paper money not convertible into coin.

It it nevertheless true that this simple, and it would seem self-evident proposition, has by no means received universal assent in the past, and we are sorry to add that it does not receive it even now. At various periods there have been other theories of paper money afloat, and as some of these are not without supporters in our own day, we think it may not be uninstructive to glance at one or two of the more plausible.

Perhaps the most common is that which maintains that the value of inconvertible paper money depends mainly upon the credit of the issues, but a more specious, and consequently a more dangerous theory maintains that paper money cannot be issued in excess so long as the issuer retains in his possession some article of equal value to that expressed on the face of his promise to pay, such as land, Government securities, or bills of exchange. Both of these theories lose sight of the cardinal fact that the augmentation of the currency (commodities remaining unaugmented), lowers its value. But both have found at various periods and in diverse countries advocates of no mean ability.

Benjamin Franklin was one out of many distinguished men who supported the issue by the Government of the United States of the inconvertible bills of 1775 "on the faith of the Continent." To him, as to many others, it seemed impossible that the credit of the Government of the United States could fail to sustain the value of its paper promises. He did not perceive that if the *instruments of exchange* are multiplied while the *objects of exchange* are not multiplied in the same ratio it is impossible for any power, or any degree of credit, no matter how high, to preserve the original exchangeable relation between the two. And the "faith of the Continent," we need hardly say, did fail to sustain the value of its inconvertible notes. The sequel is most instructive. When depreciation set in, as it very speedily did, the persons who refused to accept the notes at the same rate as coin began to be regarded as traitors to their country. At length Congress solemnly decreed that "whoever made a difference between gold and silver and continental bills should be deemed as enemies to the liberties of the United States." Nor was this all. For five successive years legislative measures of the most stringent character were taken to arrest depreciation, even military force was resorted to, but in vain.—In 1870 the bills were worth in coin 2 cents per dollar, and at last it was not rare to see them used in practical jokes. "A barber's shop in Philadelphia was papered with them, and a dog, coated with tar and the bills stuck all over him was paraded in the streets." The effects of this most disastrous measure were thus summed up by Webster. "It has polluted the equity of our laws, turned them into engines of oppression and wrong; corrupted the justice of our public administration; destroyed the fortunes of thousands of those who had the most confidence in it; enervated the trade, husbandry and manufactures of our country; and gone far to destroy the morality of our people."

The other theory was tried on a large scale in France under the régime of the Regent d'Orleans about the year 1720. The projector of the scheme was John Law, and it is well known to this day as Law's Misissippi scheme. It ended by the expulsion of Law from France, the enormous depreciation of the notes, and a sarcastic couplet scrawled on the Regent's door having reference to some promise made by him,

"Tu promets beaucoup ô Regent,
Est ce en papier ou en argent?"

Notwithstanding the disastrous result of this experiment, the theory was again tried in France. During the French revolution, notes called "Assignats" were issued upon the security of land. The result was the same. The notes fell at last to nearly a 30,000th part of their nominal value. Then it was tried in England. From 1797 to 1819 the Bank of England was restricted by Act of Parliament from paying its notes in specie. In this interval the Bank issued inconvertible notes in discount of *good bills only*, but depreciation set in nevertheless, and continued until the resumption of specie payment.

These, and other cases that might easily be adduced, show in the most conclusive manner that neither high credit nor good security will avail to maintain the value of inconvertible paper money when issued in excess. There is one test and only one by which we can tell if paper money is or is not depreciated. Does it conform in exchange-value to the coin which it professes to present? If it does not so conform, it is, as a matter of course, depreciated, and any addition made to its volume under such conditions must inevitably, no matter how good the security, or how high the credit of the issues, tend to further depreciation. Paper money, upon the other hand,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

which is convertible into coin can never be depreciated or issued in excess.

Now the peculiar dangers of the existing situation are that the paper money of Japan, as it at present stands, does not rest upon a specie basis, so that any additions made to the quantity upon the present footing must necessarily have a tendency to depreciate the currency, and that, in consequence of the absence of any fixed principle of regulation, the door is left open for experiments in currency, a state of things which, as history shows, is only too likely, sooner or later, to prove an irresistable temptation. We are therefore most anxious to see Mr. OKUMA (who is, we believe, earnestly bent upon financial reform), make an official recognition of the well known and most salutary economic principle, that the only secure foundation for a paper currency is that it be at all times and immediately convertible into coin at the pleasure of the holders, and enunciate a plan of action by which that most desirable end may, without delay, be secured.

And we are of opinion that the circumstances of the country are such as to favour a policy of this nature. In the *first* place there is already in the Treasury much more than the mere nucleus of a metallic reserve. The quantity we believe to be about sixteen millions of *yen*, though it may probably have been somewhat lessened by the expenses incurred in the present war. This sum is lying there quite idle, and it is plain that this is a sheer waste of force. At 12 per cent—the ordinary rate of interest—it would bring in a considerable revenue. It is clearly uneconomical to have such a sum in a dormant state; it is equally clear that there is much danger of its being ultimately dissipated if it is not applied to some definite purpose. And to no purpose can it be more fitly applied than to that of a reserve for the paper money. It is true the quantity may be insufficient. In that case there are two very obvious courses open. The first is to raise a loan to make good the deficiency, the second is to fund a certain portion of the notes. *Secondly*, It is evident that the quantity of paper money now afloat is not greatly redundant, for its exchange-value as compared with gold tends more and more to approach an equality—an incontrovertible evidence that the excess is moderate. Further, we have some reason for believing that the sum total of paper money afloat is considerably less than is generally supposed. *Thirdly*, The expanding trade of the country, and the change in the method of collecting the land tax necessarily cause a greater want of circulating medium. The exchangeable commodities are constantly increasing, but the quantity of paper money remains the same, hence the value of the paper money tends to become appreciated, tends to approach to a parity with gold. Commerce, as the phrase is, "grows up" to the currency. Now these are circumstances most favourable to a return to specie payments. There is a considerable reserve fund on hand, the redundancy of the currency is slight, and the increasing wants of commerce are continually abating that redundancy.

But there is yet another argument for the return to specie payments. It will not be forgotten that when the Government originally issued paper money the notes contained a promise of redemption in thirteen years. These notes have now, for the most part, been called in and exchanged for what are termed the "Frankfort" notes, which bear no such promise. Nevertheless it is clear that it concerns the honour and dignity of the Government to keep that promise. The close of the thirteen years has not yet arrived, and there is ample time left for devising the details of a policy having for its object a return to specie payments.

"England," says Professor Summer "is the *only country* which after falling into the use of inconvertible depreciated paper has returned to specie payments *save through bankruptcy*." In two years more the United States will, we trust, have vindicated their honour. Why not Japan?

SPIRIT OF THE JAPANESE PRESS.

THE ATTITUDE OF TOSA.

(From the "Nichi Nichi Shimbun," April 18th, 1877.)

I have been allowed to see a letter written from Mr. ——— to Mr. ———, respecting the state of affairs in Tosa, and now send your office copy of the more important part of it. To receive it or not of course depends upon you.

So writes to us Mr. Takeichi Yakichiro, a resident of Tôkiô. We publish his paper as we have received it, but disclaim all responsibility for its correctness.

The *shizoku* of Toza are divided into five parties. The first is called the Risshisha (patriotic party). Their opinions regarding the disturbances in Kiushiu are not all alike. Some appear in favour of a rising, but Mr. Kataoka has quietly explained to them the rights and wrongs of affairs, and has repressed any rash outbreak. Since Mr. Itagaki's return, the public excitement has become quieted, and the views of the party have become uniform in consequence. Probably the policy of this party is to take no action in favour of Saigo, but to unite to themselves all patriotic men throughout the Empire in the principles commonly professed by them, and at some future time, to do something on a large scale. For this reason, they take no account of the ups and downs of the war in Kiushiu. Even if the disturbance there should extend to Shikoku, they have resolved to adhere to their old principles, and take no part in them, and if the Satsuma troops should proceed to violence, they will join those like-minded with themselves in assisting the *ken* officials and guarding them even at the peril of their own lives.

The second party is called the *Seikensha* (quiet party) or *Chiuritsusha* (neutrals). This party is not agreed in its views. Some are in favour of raising a force with the cry of "justice," but their influence is nil. Of late they loudly maintained that their former *Daimio* must be sent for. Under present circumstances this policy again has become divided into two sections. One view is that it is the best plan for the *Daimio* to be sent for before any disturbance takes place, and to let him use his influence with the *shizoku* of the *ken* so as to prevent the subjects within it from committing themselves to any false course. The other view is that as not a single man has moved on account of the present disturbances in Kiushiu, if the former *Daimio* were sent for in a time of tranquillity, on a possible future occasion of emergency, he might conceive suspicions, and therefore it would be a mistake to send for him at present.

A very large number of the *Chiuritsusha* (neutrals) are awaiting the arrival of Sasaki in order to define their policy. There are also a good many of them who hold conservative opinions, and who resemble the *Jimpuren* (Gods' wind party). These are always in argument with the patriotic party.

The third party is called the *Taisekiren* (Big-stone-party). I have not been able to learn what policy they advocate. Probably they are expecting the breath of the nostrils of Shimadzu Saburo.

The fourth party is the *Dokuho Yushiren* (Independent patriotic party). They follow for the most part the utterance of Itagaki and Gotô and are constantly striving after union and the spread of intelligence. It appears that the tenor of their private discussions is as follows "If the present Kiushiu rebellion is not soon suppressed, it will cause the nation great suffering, the killed and wounded on both sides will be innumerable, and the Imperial mind will be grievously distressed. These are circumstances under which no one who calls himself a Japanese could stand by unconcerned." These are others again who advocate the bringing about of a cessation of hostilities by an appeal to the Government and by addressing a communication to Saigo. This party is therefore not unanimous in its policy, but it is agreed in maintaining a spirit of independence and, burning the midnight oil or shouldering the spade, they take no note of passing events. "This war," they say, "will lead inevitably to evils. It will then be our vocation to cherish the spirit of freedom, and take the lead of public opinion, in which career our sole object should be the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

"development of the rights of the people." They look upon the present conflict as something in which they have no interest, and it seems never to have had any share of their thoughts.

The fifth class is the *Bekanren* (unconcerned party) which takes no concern in politics.

The state of affairs among the Tosa *shizoku* being as described above, there is not at the present moment the smallest appearance of excitement among them.

I shall now briefly describe Itagaki's views.

Itagaki returned to Tosa because he was afraid lest the patriotic party should make a false step and commit some violence, and he wished to use his influence to restrain them. Mr. Kataoka, however, had already done so with the result of uniting the party in one policy, to which they have since adhered. Itagaki's influence was therefore not required and he has of late been spending his time in the *Shindenrô*, or in hunting on the hills and moors. His views are briefly as follows. It is essential that in times of civil disturbance, men should act each one for himself, guided by principle. If his action is wrong, he will in the end become bewildered in his endeavours, and will be unable to obtain peace of mind. Hence he must be cautious. At present there is this affair in the west. The Government is disturbed by reason of it, and the people do not know what conclusion to form. This is indeed a time when everyone must frame his own views. Saigo's enterprise, however, was not planned in a day or a night, but the sudden carrying it into execution was probably owing to unavoidable causes. One side terms it the enrolment (*of a patriotic army) to examine into the conspiracy of (Nakahara and Nomura) while the Government have issued orders for their chastisement on the grounds that they have disseminated lying stories among the people, and have appeared with arms in their hands in despite of the constitutional laws of Japan. They have accordingly sent a large army to the west for that purpose. It was on the 25th (? 15th) February of this year that Saigo's violent conduct in contempt of law broke the peace of the country. There is however the affair of (Nakahara) and of the ten or more (policemen). If we follow the confession of (Nakabara) it is impossible to believe this story (groundless). It is however beyond our power to decide where the truth really lies, and hence the agitated state of public opinion. It is said that many people are much perplexed whether it is better to raise an army of patriots and chastise Saigo's treason, or to join forces with him on the ground of the Government breach of the constitution. For how, say they, is it the duty, under a despotic Government of the people to rise in anger and assist their rulers in chastising treason. We, the people, have none of the authority of a Government or an army. And through we may be called *shizoku* we are in no different position from common people, in so far as our duties to the state are concerned. The people are protected by the state, and in return for discharging their duties towards it, Government Departments and an Army and Navy are provided by which disorders such as the present are repressed and our security preserved. We must assume that their measures are effective. If therefore the people raise troops and attempt to assist the Government in suppressing rebellion, they are guilty of a contempt of the constitution. Such things may be justifiable under a republican Government, but not with our despotic constitution. Again it might appear as if no other course was open but to join Saigo in risking our lives for the sake of our country in his endeavour to obtain the punishment of Emperor's the wicked counsellors, but it does not seem improbable that Saigo's enterprise proceeded entirely from personal feelings of spite and irritation. Chinese history shows that such men cannot be successful. There is also the saying, "It is treason to slay the wicked counsellors of the throne without awaiting the Emperor's command. It is not the business of the people to associate themselves with traitors.

There are some who think we should seize a favourable opportunity to demand (the return of our former *Daimio*) and to plan the restoration of a form of administration resembling the feudal system. These people are ignorant of the laws of our country. Such a policy is untrue both to our national interests and to the duty we owe our sovereign. It is incumbent on us as subjects of this Imperial despotic Government to rest quiet in our own positions, to attend each one to his daily avocation, to cherish his parents, to support his family, in a word to leave undischarged none of his domestic duties. We will move neither for Saigo nor for the Government, but remain steadfast in the performance of our true duty as subjects, and associate ourselves with wise and patriotic men throughout the land to form an union which will assure our own enjoyment of peace. No other course is possible. This is the chief duty of a subject, and if we are guided by these principles in our conduct, we shall have no reason to be ashamed before heaven, we shall love ourselves and our country, and shall be loyal to our sovereign.

* The words in brackets are in blank in the original.

A Warning from past events.

(From the "Nichi Nichi Shimbun," 19th April.)

The war in the South West has at last nearly come to an end. The leader of the rebels has fled toward Hiuga while the Imperial forces have united at Kumamoto, and if the navy make an attack from Kagoshima, and the Imperial troops pursue the flying insurgents to the frontiers of Hiuga, Osumi, and Satsuma, a complete victory will soon be gained and peace restored,

When the civil war is thus ended, all powers must be put forth to regenerate the Administration, to reform the various departments; to settle the manner in which officials are to be selected; to amend the modes of government of the various *Ken*, and to make other improvements of more or less importance that are sadly needed, such as having the power established in the Central Government under the monarchical form.

This too will be a fitting time for taking measures for developing the wealth of the country, and for assuring thorough protection to the people, and I earnestly trust that during the present rule no more accounts of foreign or civil war will appear in the columns of the press.

The mode of choosing officials is an all-important matter, and care must be taken to employ men who have performed meritorious actions, in order that opportunity may be afforded for the full and uninterrupted display of their talents in (solving) questions of difficulty. I have heard that at one time in England, in order to honour men who had shown themselves specially deserving, various unnecessary and salaried offices were instituted, to which such men were appointed as a reward for their services, and this was considered a wise action (on the part of the Government). But the Prime Minister, Lord Grey, by a bold policy, abolished all such appointments and found other ways of acknowledging merit by the giving of medals, pensions or rewards. The people of England thus began to have confidence in their Government and many previously existing evils were swept away. When inferior officers are appointed, they have to undergo a series of examinations and it is by their own abilities alone that they can gain admittance into office, and not by intrigues or by the influence of their friends or families. I am myself only a mere commoner, but I am afraid that if the Government were to lose the day, we should fall under a despotic rule, and that we should never again see as good an Administration. But Heaven has not yet forsaken the Japanese people, for it has given them the victory in the struggle and Satsuma's forces will surely have to submit. Thus by the members of the Government making no errors in their administration, by the loyalty of the Army and Navy, we have advanced so far towards peace. I hope that henceforth special care will be taken in choosing officials, so that those who once held high offices under the Government, may not hereafter turn out rebels.

Special Regulations for Shipping.

(Osaka Nippô.)

The following notification was issued from the *Anzaisho* (Sojourning Imperial Residence) to the several Government departments on the 3rd instant.

Anzaisho Notification No. 8.

To the several Departments of the Government.

Regulations for the entering and clearing of vessels, and prevention of illegal trading during the time of war.

Art. 1.—Every Custom House must examine closely all the articles Imported and Exported. With the exception of the Mail vessels, whose time is duly arranged, the time of departure of every merchant vessel, the name of the country to which she belongs, whether a steamer or sailing vessel, the name of the vessel, the name of the captain, and the tonnage, must be minutely written down, and where necessary made known by telegraph to the Naval Office at the harbour which she is to clear, the Custom House at the port of her destination, the naval officers stationed at the straits that she has to pass, and to all proper authorities.

Art. 2.—When vessels appear suspicious, or where those conveying contraband articles (that is, amunition, fire arms, swords etc.,) are about to clear, the same must be made known in accordance with the previous article. When such articles as the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

above are found in a vessel, particular notice should be taken of their quality and the quantity.

Art. 3.—Whenever any information of the above nature is received at a Custom House of any of the Straits the officials must immediately make the same known to the branch Naval Offices, and other appointed officials. When a vessel (under suspicion) is due, the greatest care must be taken to watch for her arrival or her passing by, and the Strait's offices must make known to her destined port the time that she passed. When a vessel, being due, does not pass, the fact must be made known to the neighbouring Naval Offices. In the case of her not arriving in a harbour in due time, the same must be made known to the Naval Office at that harbour.

Art. 4.—When a vessel is about to leave for a foreign port, the Japanese Consul at that port, and the Strait's officers of the Straits that she intends to pass must be duly notified thereof, in accordance with the 1st article. The same must also be made known to the officers of the navy in the harbour from which she departs. When a Consul receives the above information he should carefully notice whether the vessel did or did not arrive in due time, and make the same known to the Custom House of the port which she left. The Custom House must again make this known to the naval officers.

Art. 5.—When any vessel, conveying contraband articles, leaves a foreign port in which there is a Japanese Consul, the Consul must make the above known to the Custom House of the port in Japan to which she is bound, according to the 1st and 2nd Articles. The Custom House must immediately make the same known to the Strait's officers who must watch for her passing. The same should also be made known to the Naval Office at the port.

Art. 6.—When any Naval Station receives information in accordance with the 1st, 2nd and 3rd Articles, the same must be made known to the neighboring Naval Stations at once.

Art. 7.—As foreign vessels have no right to enter any port excepting those open to foreign trade, should any such arrive, her route must first be examined, and should she be deemed suspicious she should be prevented from leaving. The vessels that are bound to places where the rebels are known to be should also, in this case, be arrested. The former articles are merely to show how the investigation of ships is to be conducted ; this Article has no concern with the reports mentioned in those articles.

Art. 8.—When vessels conveying contraband goods reach a harbour, the Custom House officers must make known the same to the local authorities, who must make known the same again to the police authorities, who must take charge of the clearing or entering of the vessel or purchase or sale of the articles, and the particulars of same must also be communicated to the Ministers of the Army and Navy.

SANJÔ SANEYOSHI,
Prime Minister.

April 3rd, 1877.

One of the largest audiences ever seen in Drury Lane Theatre assembled yesterday afternoon on the occasion of the performance in aid of the testimonial Fund to Mr. Compton. The names in the bill literally included every actor and actress of note now in London. The chief items in the programme were the Council Scene from "Othello;" the first act of "Money;" Mr. Morton's farce "Lend Me Five Shillings;" a scene from Macklin's "Man of the World;" the last act of Shiridan's "Critic;" and Messrs. Arthur Sullivan and Mr. W. S. Gilbert's "Trial by Jury;" while between these representations Miss Heath and Mr. Irving gave recitations; and the band, under the direction of Mr. Sullivan, played selections of popular operatic music. No feature in the entertainment, perhaps, excited more curiosity than the appearance of Mr. Jefferson in Mr. Buckstone's old part of Golightly in the farce of "Lend Me Five Shillings." It was announced that the performances had produced in money actually in hand the sum of £3,250; besides which a performance at Manchester had yielded £1,000. The subscription list is still open for a few days, and it is expected that the total amount will not fall short of £5,000.—*Pall Mall Budget.*

It is reported from Dublin that a meeting, attended by about 4,000 persons, was held in the Rotunda on February 28th, to protest against the passing of the Sunday Closing Bill. Previous to the chair being taken a free fight took place, and the proceeding throughout were of a very uproarious character. Resolutions were passed to the effect that Sunday closing would greatly inconvenience the working classes, that the public-houses were not abused by the citizens, and that if the bill passed it would be reviving class legislation The meeting broke up into great disorder, the police having to separate the combatants. Many men had to be treated at the hospital.

The *Journal de Bruxelles* publishes a letter which states that the girl Louise Lateau has not slept nor taken any kind of nourishment for four years. This is a fact, the writer says, affirmed on oath by the girl and her sisters, and it cannot be contradicted. Meanwhile, notwithstanding the coninued bleeding of the stigmata on Fridays, Louise is in as good condition and looks as fresh as she did two years ago.—*Pall Mall Budget.*

CONCERNING A TORTOISE.

A VERY SERIOUS STORY.

Once upon a time, in a village on the Tokaido, there lived a certain man, who, intent upon killing a tortoise that he might cook it for his supper, placed it upon a fish-board beside the well, and waited, chopper in hand, until it should protrude its head from its horny case and allow him to strike it neatly off.

Whilst the stupid Chelonian was making up its mind to afford him the opportunity he sought for, the fellow, the better to beguile the time perhaps, amused himself by flourishing about his weapon in a waggish manner, making vigorous cuts and demonstrations in the air, in one of which, however, the knife unfortunately flew out of the handle and fell into the well. That this was a terrible disappointment to a hungry man can readily be believed,—more particularly when it is mentioned that he hadn't another knife in the house,—but that it was an unbearable aggravation of the affliction that the tortoise should have put out its head and turned up one sleepy eye at him, as if it knew what had happened, the moment it heard the splash in the well, nobody can dispute.

A bird in the hand is said to be worth two in the bush, and so it may be indeed, for all anybody cares or knows to the contrary, but the same can by no means be so confidently asserted, under all circumstances, with regard to a tortoise. For one tortoise in the hand is no whit better or worse than twenty tortoises elsewhere, if it is intended for the pot, and you've nothing more effectual wherewith to chop its head off, and dismember it, than the handle of an old knife. Nor, circumstances being unaltered, is its value affected either way—whatever may be predicted of your temper,—because you may have invited a brace of guests to partake of it, and they are momentarily expected to put in an appearance. To find oneself in such a quandary were to be in occupation of a most unenviable position, as no doubt the disappointed bumpkin fully realized during the few minutes which he spent in scratching his nose with the knife handle, and looking from the tortoise to the road in the direction of which his hungry friends, he knew, might at any moment be seen joyfully wending their way.

Under circumstances similar to those which befel our countryman, a philosopher would no doubt have crossed his hands upon his bosom and bowed to fate, consoling himself the while with a neat and apposite saying, about the uncertainty of mundane affairs, for instance, or the number of slips between the cup and lip, or some such other wise and comforting reflection. But the country fellow was by no means a philosopher, nor anything else in fact but a simple clown, and a hungry one too ; on which account, perhaps, he was not content to endure phlegmatically the scurvy trick which the aforesaid fate had played him. For letting go the tortoise for the present, he ran over to the well, and looking down into its black and silent depths, fell to bewailing the unlucky mischance that had deprived him at the same moment of a good kitchen chopper and an equally good supper.

But—man being a complex creature to whom monotony soon becomes intolerable—a very little contemplation of his own disturbed features in the mirror of the well sufficed to exhaust the pleasure which that occupation may at first have afforded him. To stare, however fixedly and long, at his reflection, he speedily acknowledged to himself, would do naught towards the recovery of his blade,—an event which, in view of the imminent arrival of his guests and his own hunger, formed the sum and substance of his desires just then. So he was fain to take his place once more beside the fish-board—on which the tortoise still remained—and set his wits to work to devise some better plan than doing nothing, by which he might re-unite the chopper and its handle.

The people of the house, when they became aware of the accident, as is usual in such a crisis, all spoke together at the top of their voices, and each urged a different and equally impracticable expedient. If their counsels, however, differed, there was a remarkable concord of opinion in one direction, namely, that each and all of them had long forseen that such an accident was sure to come to pass sooner or later, and that if somebody had only taken his or her advice—as the case might be—the knife and handle would never have parted company.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

In the meantime, however, the unlucky countryman sat in silence beside the fish-board—one hand upon the tortoise, and the other beneath his chin in the position of one ruminating, and in a difficulty. None of the propositions advanced by his noisy family seemed to satisfy him, and he might perhaps have sat there till doomsday without seeing his way out of his troubles, were it not that the pangs of hunger, added to the mortification of having lost his chopper, so quickened his sluggish brain, that at last he hit upon the bright expedient of appealing to the generosity which, as is well known, is inherent in the breast of every tortoise, to help him in his extremity.

So turning to it, he said in his most persuasive accents, "The chopper that I was going to kill you with just now, good Mr. Tortoise, has come out of the handle and fallen into the well. I am going to put you in after it, and if you will only bring it up to me, I'll give you your life, and let you out into the river." So with this he dropped the tortoise plump into the well, letting down after it, by a cord, a small basket.

The good natured tortoise after a little groping about the bottom presently rose to the surface of the water, carrying the blade of the chopper in its mouth, and having deposited it in the basket, and crept in after it itself, was quickly drawn up by the man and deposited once more upon the fish-board.

Thinking that its life was now safe, after the promise which had been made to it, the tortoise fearlessly stretched out its long neck to dry it in the sun, which the man no sooner perceived than, alas! for human nature, with one swinging cut he chopped its head clean off and sent it flying away full three feet from the body, saying at the same time with a grin, "Well, after all, nothing pays in this world like knavery."

Nothing now interfered to prevent his completing all the preliminaries which were to culminate shortly in an appetising stew, to which his friends and himself did ample justice when at last it was served up and set before them.

Nor did the guests enjoy the feast any the less for the knowledge of how the tortoise had been deceived. A story which, by the way, the countryman seemed never to tire of repeating, nor they of hearing; as is, after all, only civil in persons feasting at another's expense. And it is not therefore to be wondered at—story-telling is such dry work and laughing boisterously so exhausting—that the *saké* cup flew round and round so fast, and finally so furiously, as to overcome the noisy three in time, and whelm them in stupor.

How long they stertorously slumbered is not known, but it was early in the small hours when the host. who had been tossing and twisting about in his sleep for some time as if the supper he had eaten lay uneasily upon his stomach, was seen to spring up suddenly, and glaring about him wildly for a few moments like one gone mad, to rush hither and thither, crying out in a voice of agony, "Villain who deceived me, and after inducing me to bring you up your knife broke your promise, and then treacherously killed me, do you think you shall escape?" The neighbours, roused by his shouts, crowded in to his assistance, and tried to pacify him when they found what state he was in. But finding that all their efforts to that end were of no avail, they at last tied his feet together, intending to leave him to his own devices until the morning. Having, however, managed to break the rope in their absence, and get hold of the chopper with which he had killed the tortoise, he stabbed himself in the throat therewith, and jumped into the well and was drowned.

Moral:—There are many authentic instances of persons who have been punished for deceiving tortoises and killing them; and with such examples before them it is to be wished that people would show more kindness to animals who are capable, if well treated, of exhibiting much sensibility and gratitude.

The *Official Gazette* of the German Empire, mentioning the despatch of an English man-of-war for the protection of German subjects who had suffered ill-treatment in Nicaragua, adds:—"The readiness with which England intervened with her naval power in behalf of Germans at a place where German ships of war were not immediately available is worthy of all our thanks. The principle of solidarity between friendly Powers with regard to the mutual protection of their subjects in distant lands has thereby been again confirmed."—*Pall Mall Budget.*

YOKOHAMA RACE CLUB.

An extraordinary General Meeting of the members of the Y. R. C. was held yesterday afternoon at the Grand Hotel.

Amongst those present were Messrs. C. Braun, E. B. Jones, J. P. Mollison, Evers, Dodds, Kirkwood, Watson, Thurburn, Jeyes, Dunlop, Abbott, Fraser, Bennett, Cruikshank, Cope, Foster, Reid, Walter, Haselwood, Haswell, Wheeler, Glennie, Winstanley, Barlow, Pinn, Middleton, Strachan, Pugh and others. Mr. J. A. Fraser was voted into the chair.

The Chairman said that they had met in accordance with the notice which had appeared in the newspapers calling an extraordinary meeting, for the purpose of considering the advisability of an amalgamation with the Association. The meeting had been called by the Committee at the instance of several of the members of the Club. A communication had been sent by the Association to the Club, and had been published, so that all present had no doubt read it. But before taking into consideration this communication, the Chairman thought it would be well to hear the statement which Mr. Foster, as Honorary Secretary, had drawn up of the doings of the Committee since the beginning of the year. The meeting would then be asked to give an opinion as to the answer to be sent to the Association.

Mr. Foster then read as follows:—

Mr. Chairman and Gentlemen,—At a Special meeting of the Club held in October last, a statement was put forward by the Committee (our predecessors in office), setting forth the differences which led to the formation of the Yokohama Racing Association, and explaining the pretentions of the so-called Trustees appointed by a number of the foreign Consuls—pretensions, it is needless to remind you, which were entirely repudiated by the Club. At that meeting a Resolution declaratory of the continuance of the Club was unanimously passed by the members then present. After a most successful Autumn Meeting, the yearly business of the Club terminated with the retirement of the old Committee and the appointment of the new Stewards, who have since the 20th December last continued in office, and who now crave your attention to a brief review of the chief events which have claimed their care up to the present moment.

The question raised as to the custody of the Race Course remains undecided, necessarily, until a Title Deed shall have been issued by the Japanese Government to the Representatives of the various Treaty Powers. Notwithstanding the anomalous position occupied by the so-called Trustees, an amicable understanding was arrived at between the Club and the Association, and the Course has continued to be used by them both upon perfect terms of equality, although it is worthy of mention that the Association has seen fit to claim full right to the enjoyment of property created by the Club.

Early in the year, your Committee arranged an interview with the Committee of the Association for the purpose of resolving upon some plan for the joint maintenance of the Course; at the same time your Committee intimated their earnest desire to fairly discuss the misunderstandings alleged to exist between the two Clubs, with a view of securing the coalition of the two bodies if possible, and thus put an end to the somewhat unfriendly feeling which appeared to be gaining ground among the patrons of racing generally in the Community. To the latter proposition the Committee of the Association consented so far as to appoint a special Committee from their own number to confer with delegates from your own Committee. Regarding the joint maintenance of the Course, the Association professed their willingness to share the expenses attending the same, but required first to obtain the consent of the "Trustees" before pledging themselves. This consent was subsequently granted, and it was agreed the Clerk of the Course representing the Club should, with the cöoperation of the Hon. Secretary of the Association, continue to manage the affairs of the Course, all expenses of which were to be borne equally by the two Clubs.

It should be understood at the outset, that in initiating these negotiations your Committee had no intention of assuming any responsibility which they were not fully entitled to bear. On the contrary, their object was to ascertain from the Association how far they were disposed to respond to the Committee's proposal of a fair discussion of all existing differences. Had a satisfactory understanding been reached, your Committee would have commended to the consideration of the members such a plan for the amalgamation of the two bodies, as, in their opinion, would have comported with the dignity and general welfare of the Club. Unfortunately no such desirable understanding has been attained: for at an early conference it became quite manifest to your Committee that the Association was disinclined to recede in any respect from the position they had assumed, but required the Club to subscribe to their Rules in their entirety. An effort was then made to frame a programme under which the two Clubs might join forces at the Spring Meeting: but your Committee regrets to report that these further endeavors were alike fruitless. At this stage of the proceedings, the Committee of the Association advocated a new plan, less open to objection than their previous proposals and one which your Committee took into serious consideration; but before any action upon it was possible, the Committee of the Association withdrew it. It being apparent, therefore, that the Association were animated by no liberal spirit of concession, all negotiations

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

were suspended, and your Committee turned their attention to the drawing up of the programme for the Spring Meeting, and they think the members are to be congratulated upon the promising aspect of the approaching events.

Having persistently abstained from yielding any one point to which the Club might fairly have tendered an equivalent, the Association now comes forward with that they term "fresh" proposals for an amalgamation: but your Committee is forced to declare in self defence that these new proposals, which have been so particularly brought to your notice, embody no single proposition which has not already been the subject of deliberation between the Committees of the two Clubs.

The communication of the Association having been laid before the public with the object, it is to be presumed, of arousing their sympathy, your Committee could no longer hesitate to call an Extraordinary Meeting of the members for the purpose of explaining the circumstances attending the whole of their negotiations with the Association. Your Committee were furthermore impelled to pursue this course that they might not remain under the imputation (should such be made) of displaying any indisposition to consult the best interests of all lovers of true sport in this community.

Your Committee refrain from any comments upon the proposals in detail, but beg to remind the members that the Association will demand a complete and entire acceptance of the terms they have dictated. It has even been intimated that if an unconditional acceptance of them is not now made, the Association will cease from further efforts to propitiate the Club. The Club is called upon, therefore, to surrender its existence forthwith, for in your Committee's opinion a compliance with the plan proposed is tantamount to an absorption of the Club into the Association, under another name it is true, but with a complete abandonment of the principles for which the Club has hitherto contended. If the separate existence of the Club is no longer possible, the most dignified course for it to pursue would be to dissolve of its own volition. Your Committee will not admit that such a step is necessary or desirable.

When convening the present Meeting, your Committee were quite aware that no definite action could, under the Rules of the Club, be taken upon any proposition affecting its constitution. They nevertheless felt warranted in thus consulting the wishes of the members; and having laid before you an account of all that has transpired, they request your instructions to enable them to deal with the propositions presented by the Association.

Before taking leave of the subject of an Amalgamation of the two racing societies, your Committee are desirous of expressing their conviction that a combination is highly desirable if it can be attained in a satisfactory manner. That it can be effected in a way acceptable to all true and earnest friends of sport your Committee does not doubt.

Your Committee respectfully submit the result of their labors, taking this occasion to assure the members that they have always endeavored, to the best of their ability, to maintain the integrity and dignity of the Club.

F. E. FOSTER,
Hon. Secretary.
C. BRAUN.
E. B. WATSON.
W. J. CRUICKSHANK.
AUG. EVERS.

Yokohama, April 18, 1877.

The Chairman remarked that the members owed their thanks to the Committee for the course they had taken and for the full report drawn up. It would correct a false impression which prevailed that the Club had not really tried to bring about the desired amalgamation, but had sat with hands folded whilst the Association alone made any effort. The Chairman thought that the meeting would hardly be inclined to an amalgamation at the present moment. He would be loath to doubt the sincerity of the Association in wishing to bring it about, and unless such were but skin deep they would be as willing after a few weeks as now. At present it was impossible to come to terms, but after a tittle time negotiations might be renewed.

Mr. Bennett requested that the whole of the correspondence which had passed between the Association and the Race Club from the beginning should be read.

Mr. Foster said that most of the communications had been made verbally, and the letters which had passed had little reference to the subject now under consideration.

Mr. Bennett then proposed:—

"That the Secretary read the entire correspondence that has taken place between the Y. R. A. and the Y. R. C. relating to what has been done to bring about an amalgamation of the two Racing Clubs."

Mr. Middleton seconded this.

Mr. Mollison moved as an amendment, which Mr. Walter seconded:—

"That the statement of the Committee, just read by Mr. Foster, be considered sufficient by the members present to enable this meeting to be proceeded with."

The Chairman read both the resolution and amendment, and the latter being put to the vote was carried by 15 against 11.

Mr. Dodds said he thought all must agree that the Committee had done well in calling this meeting, for it had been shown that the Club had not been to blame if the negotiations for an amalgamation had fallen through. He was in favour of an amalgamation on fair terms; but the terms the Association put forward were not fair. They were asked not only for their money, but their lives. An amalgamation could not be brought about in a day, and he therefore proposed:—

"That the Committee be instructed to inform the Stewards of the Yokohama Racing Association, in reply to their proposition for an amalgamation of the two Societies, that no action can be taken upon said proposition prior to the approaching Spring Meeting, or before the General Meeting of the Race Club to be held one month later, but the Committee may at the same time assure the Association of the willingness and desire of the Club to effect a coalition of the two Societies upon a mutually satisfactory basis."

Mr. Thurburn seconded the proposition.

Mr. Kirkwood proposed as an amendment:—

"That if an amalgamation be illegal and therefore impossible before the coming Spring Meeting, then that the two clubs run together under a joint programme, to be settled by the two committees, and the prizes subscribed equally by each club."

Mr. Bennett seconded it.

Mr. Mollison, speaking as a pony owner, said he objected to the amendment as it was quite unconstitutional. The Committee had brought forward a programme and, relying upon it, owners had gone to some expense in getting ponies over from China.

Mr. Cope thought the Committee had not acted quite fairly in making five races for subscription ponies to the exclusion of other Chinese griffins.

Mr. Watson said that the plan was not feasible, and that in the statement read it was mentioned that an attempt had been made to combine a programme.

Mr. Bennett said that the Commitee had brought it on themselves by declining to produce the entire correspondence.

The Chairman said that Mr. Bennett was entirely out of order in making such a statement, as the Committee had not refused to produce the correspondence, but the members had decided that they did not require it.

Mr. Foster said that a joint programme had been attempted, but the Committee had come to the conclusion that this course of action was impracticable.

Mr. Strachan was of the opinion that the amendment had no right to be put before the meeting. The members had bound themselves to a programme, and it could not be altered in spite of any vote passed by those present.

Mr. Cope said that the programme had been altered once already.

Mr. Strachan said that was quite a different thing. They wanted to alter the whole affair now.

Mr. Foster put it to the good sense of the meeting that they had no right to dictate to the Committee in this way. According to the Rules this motion was quite out of order.

The Chairman said that after due consideration of the matter he had come to the conclusion that the amendment was out of order, and therefore declined to put it to the meeting. The meeting had been called for a special purpose, and no previous notice having been given of this amendment, he thought it cast a slur upon the action of the Committee and he could not therefore put it.

Mr. Kirkwood asked by what rule the meeting had been called?

The Chairman said that there was no rule obliging the Committee to call such a meeting, but it had been done in deference to the wishes of a small minority of the members. He thought the Committee would not be bound to call a meeting unless a majority of two-thirds of the members required it.

Mr. Kirkwood asked under what rule notice was required to be given?

The Chairman said he had given his opinion and he would not be coerced into deciding against it. He did not know that there was any special rule, but the meeting had been called at the instance of the members.

Original from UNIVERSITY OF CALIFORNIA

Mr. Dodds' resolution was then put to the meeting and carried.

Mr. Foster said that as a result of their labours the Committee intended putting before the next semi-annual meeting (in June) an amalgamation scheme of their own, which in the meanwhile would be printed and distributed privately among the members.

This concluding the business befere the meeting, it was dissolved after a vote of thanks to the Chairman.

Correspondence.

MRS. BROWN IN JAPAN.

To the Heditor of the "Japan Weakly Male."

Grand 'Otel, April 18th, 1877.

Mrs. Brown presents her compliment again to the Heditor of the *Male* as is much obligated for your hinsertin' my last letter, but 'as been that pestered to write to you again, as is not much given to talkin' about myself though able to 'old my own when 'avin' anythink to say, and 'as been that occipied with all I seen since I bin' 'ere, though not able to go out much as my shins 'as only just 'ealed, but I 'm sure the way as hevery body 'as bin that kind a callin on me and Jemimar Hann as 'as bin unable to come cross 'er Dammyo through 'is avin given up 'is pallis and all as was 'is to the Micoon, as may be generous I says, but 'ill be sorry for it sumday, as don't ' old with sellin 'your birthday for a mess o ' porridge as the saying is but if choosin ' to do it ought to take care to get your porridge first, as the Goverment don't want 'im to lose nothing 'by it, and so sent 'im to Whales to buy meriner sheep, as is pleasant for underwear, but prefers flanning myself as better for the rumatticks which troubles me a little now and then, but 'ale and 'arty and thankful for it, as Welshmen is always known to be filantrophic, and given to understand as they'd given 'im the sheep for nothin' through a wantin' to 'elp 'is country to prime muttin, but sure to be 'ard on the 'eathen, and goin' for wool likely to come back shorn as the sayin' is, and does seem to spend their money very foolish as I 'ear can't afford it through bein' ard up, and 'orful fond of imitatin', as 'as 'eard of Asscot races, and wants to get 'em up in their own country, and sends over to Egyp' and buys five of the most hexpensive donkeys for fifteen thousan' dollars, as I see by the paper was considered dirt cheap, as nothin' aint to be called expensive' when a spendin' somebody else's money, and says they want to himprove their breed, as is good enough as it is, and might 'ave bought 'em nearer 'ome as the sayin' is.

But, bless you, talkin of donkeys, as I said jessnow, heverybody'as bin that kind to me and Jemimar Hann, as always 'eard Yokohammer was the most 'orsepitallest place, and the way they 'ave behaved a haskin 'us here and a haskin us there just as if I'd been Queen Wictoria herself, and all your good ladies as 'as got Dammyos of their own a comin' and sympathisin' with Jemimar and a tellin' 'er not to fret, as is sure to turn up bimeby when the Micoon comes back as 'as 'ad to stay away longer than he hexpected, through somethin' goin' wrong with 'is cabinet as must 'ave been put together by clumsy carpenters, and certain to find 'er 'usband or pay 'er passage 'ome, as is 'ard upon 'er, as expected to be received in a pallis with a pigodour as they calls 'em, and no doubt well deserves the name, for some of their 'ouses does smell dreadful, which I often seen on tea-trays and dinner plates, with little bells on the roofs, but very different livin at a 'otel, though as I says to 'er says I "As you've buttered your bread so you must lay on it as the sayin' is."

I seen by the papers as the hanimals 'ad arrove and bin landed beautiful in charge of a keeper as were wery proud of 'avin brought 'em so far, and no wonder as is tiresome things to drive, and was a settin' by the winder a looking out on the Bung, when a boy brings me a ticket invitin' me to go and see 'em parade, as will probably ride 'em all 'imself like Mr. Ducrow, and jump through paper 'oops, which was very perlite and attentive, though it is well beknown to you, Mr. Heditor, and to all my friends that I ain't no sportin' man, as the sayin is, and glad enough I am to say it, as racin' always seems to me to bring sorrow to the 'art, though knowin' a cat from a kamel, and dearly lovin' a circus, as is a 'eavingly place, though always too near the stable and too much sawdust and horange peel to my taste, as once went with Mrs. Puddicom and see a sailor as made believe he were shipwrecked beautiful on a pieball 'orse with a pink nose, a careenin' round the tent, and swum hisself ashore, with the lamps turned down and the band a playin' "Hold 'undred" werry soft on his stummick on the saddle as was most affectin', and a reachin' land and dansin' an 'ornpipe with the Union Jack in 'is 'and, as were flung to him by the clown just as natral as life.

So I says to Jemimar, "Lor! let's go and see 'em," as ain't got much 'art for pleasure, a feeling that uncertain about 'er 'usband, but as I says "Worry's a dog as always bites the 'and as feeds it, and praps the sight of the animals 'ill drive the other one out of yer' ed."

We goes down to 'ave a bit of lunch as I'm told calls it tiffin, 'cos they always make it a great meal on race days afore going to the races, as has tiffs among their selves, which they serves up wery well at the 'otel, though too eavy anded with the pepper to my taste and too much of one thing and not enough of the other, and then we tittervates ourselves and goes down to the swamp to see the show.

I must say as the present fashions is all very well for them as has a good figger or knows 'ow to make one, but Jemimar is that short and pussy, as I says to 'er "'owever you can walk with them clothes that tight to you," as looked as though they'd bin' washed and shrunk on 'er, as wont use a ginrikkety, though not bein' able to set down and afraid of sumthin' giving way, as I never could bring myself to ride in, through lookin' too childish, though fine figgers of men, but showing too much leg to my taste as is sometimes a trifle bandy.

The wind was blowin' a gale, and the dust was that thick in clouds, as is more like the middle of the Dessert of Sairey than a christian communion, which you'll hexcuse my free speakin its a disgrace and a shame and surely might take example from the 'eathen native and water theirselves in front of their own doors, as a'most ruined my new welwet, as the dust clings to 'orrid.

But lor! when we gets there there was nothin to see but a crowd as was all that savage as said they'd been sold, as the owner 'ad telegramed to the person as wanted to ride the 'igh 'oss, and was a goin' to trot 'em out on 'is own 'ook as he musn't do it, as he was a going' to show 'imself in Tokyo for five cents a 'ed and might take off the profit if showed promiscuous in public, as is what I call runnin' at the bung and savin' at the spigot, as the sayin is.

We was just a goin' back when a gentleman who I often see at the 'otel, and a fine lookin' man, though a little too furrin' to my taste, as is not 'is fault, as is I'm told a native of many countries, but blessed with a 'appy 'eart, as is 'is name and 'is nature, comes up to me, and takin' off 'is 'at quite perlite, says with a furrin axin,

"Ow de daw Mrs. Brown, you come to see daankeys? Vaary saary, I bin see dankeys myself too you know, arful rot you know, buy daankeys like such price, Fifteen tousan daallar! They better bin give me contract, Arful dear you know. I walk back hotel with you, I bin like walk fine woman you know."

Which is free talkin' in my opinion and not what I am in the 'abit of encouragin' but makes allowance for furrin manners as is not displeasin' though flatterin', and different to what Brown would have said, as don't hexpeck no compliments from one's 'usband, as I see ain't thought nothin' of in the East, though no doubt useful but not always hinterestin' as the sayin' is.

Your 'umble Servant,
MARTHA BROWN.

THE CURRENCY.

To the Editor of the "Japan Weekly Mail."

Yokohama, April 19th, 1877.

Sir,—Everyone concerned in the currency question must thank you for the thoughtful article on that subject in your last number. It is a fair and useful defence of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

our old friend the Mexican dollar, recognising past services in a manner with which I have no disposition to quarrel.

But, in so far as I am concerned, you, like your Correspondent "T.," misapprehend the purpose of my letter, which is, not to advocate the use of Japanese currency, paper or silver, but to show that the Mexican dollar has ceased to be the best money for foreigners in Japan to employ, and that we may now with advantage adopt some other measure of value more reliable and less costly.

Permit me then to insist on two points; first that, by adhering to the Mexican dollar, foreigners are in fact isolated in respect of currency from the people with whom they deal, and are thereby exposed to considerable inconvenience; second, that any coin which would secure fixity of value to our possessions here, and which would be sufficiently abundant for our business, would answer our wants as well as that we now use.

These two positions, which are implied in my former letters, seem to me unaffected by any of the considerations mentioned by you or by your other correspondents, and to be essential.

It is obvious that we need a currency which shall be, if possible, independent of the influences which may depreciate the native currency. It is equally obvious that foreigners in Japan cannot expect any Government to provide, and cannot themselves provide, a Mint to supply coins for their special use. And it follows that, having to choose a currency for ourselves, we are free to select its coin representative from any mintage at our disposition.

For the good reasons which your article recited, and which I had already allowed, we chose at first the Mexican dollar. But there can be no feeling of loyalty on our part toward Mexico or its coinage on this account, and therefore it is a fair question to-day if the superior usefulness of the Mexican dollar has not ceased as far as we are concerned, and if we cannot advantageously substitute for it some other coin less expensive, less liable to fail us at our need, and more likely to work smoothly with the currency around us.

It is to this question that I wish now to recall the attention of your readers.

My assertion is that in the Mexican dollar, we have a currency which is defective, unreliable, and needlessly expensive; the use of which is limited to ourselves, and which subjects us to a shroff despotism which is not creditable to our independence and intelligence.

In China foreigners are obliged to follow the preferences of the people about them, and therefore they now employ the Mexican dollar, though they do so restively, as their recent movements in favor of a British, or even a Chinese, coinage show.

But here the circumstances are exactly reversed. The Japanese decline to use foreign money. It is for our own satisfaction and among ourselves only that we use the Mexican dollar.

Is it then because we cannot find any other coin containing 416 grains of standard silver that we cling to this one? Let some facts answer this question.

Not long ago there came here some American Trade Dollars. As money this coin is nearly perfect. It requires no shroffing, and it is uniform, reliable and abundant. It contains 420 grains of standard Silver, and is thus about one per cent. better than the average Mexican dollar. Yet our Chinese tyrants decided that it should only pass at two per cent. discount in Yokohama currency, and the importers had to submit to this absurd "*squeeze.*"

The Japanese Government have offered us excellent coins containing 416 grains of standard silver, which have the advantage of being current at par, *or better*, among the people about us. Yet these too are subjected by our shroffs to a discount, or rejected altogether.

If the British Government were to coin dollars of 416 grains at Hongkong (as is now proposed) no doubt they would be found equally objectionable here, and would be likewise rated at a discount or wholly refused,

What other reason is there for all this nonsense than that those who thrive upon it wish to keep us in their toils, and that we are too apathetic to make an effort to deliver ourselves.

What is it that we really need for currency here? Is it not sufficient that we have 416 grains of standard silver for our dollar? Granting that we must have a coin to represent this weight of silver (though this is by no means a necessity, as Shanghai experience proves), why should we limit ourselves to the one coin of that weight which is more variable in quality and dearer in price than any other? Would not an American, or a British, or even a Japanese coin of equal or better intrinsic value serve our purpose just as well?

I hope that some of your readers will soon find leisure to answer these questions. For my part I maintain that all that foreigners in Japan need as a measure of value is 416 grains of standard silver; that any good coin containing that weight of silver ought to pass among us as a dollar, and that we are, or could be if we would unite, free to use the cheapest coin which answers that requirement. And it seems to me absolute folly in this little community of foreigners of all nations, in these times of unprofitable trade and unpleasant economy, to submit to a heavy tax upon their business and to much inconvenience in order to retain the Mexican dollar, whether for the sake of its former services, or out of deference to those whose gains depend on our unreasonable conservatism or indifference.

A. Z.

RACE ASSOCIATION AND RACE CLUB.

To the Editor of the "Japan Weekly Mail."

April 21st, 1877.

Sir,—I must apologize for asking you to find a space in your columns for a communication on a subject already discussed *ad nauseam* in this community, but my excuse must be the importance I attach to two events that occurred during the past week, viz, the special meeting of the Race Club and the leading article in the *Daily Herald* of Monday.

One proceeding that took place at the special meeting of the Race Club cannot fail to have convinced the members of the Association and the community generally that an amalgamation is impracticable, so long as the Club brings to bear on its negotiations for that purpose, the same spirit of hostility and bad taste as was then evinced by the Committee in its report and by the Chairman in the remarks he addressed to the members; remarks, which were, I am well aware, the result of careful consideration, and not improbably suggested by the same faction of the Club whose opinions found vent in the leading article already referred to.

The *Herald's* sensible observation "that two Racing Clubs in this place are not wanted" must have already been the expressed opinion of those of us who enjoy racing for sport's sake. That the Association have not done their utmost to bring about a solution of the difficulty few will venture to assert, but their efforts have been expended without any satisfactory result.

It is, then, high time that the public should step in and arbitrate, and decide against that Society to whose principles and conduct it is opposed, by withdrawing from it its support. So long as the public remain lukewarm in the matter two Clubs will continue to exist, for there will doubtless always be found some who, though ostensibly opposing amalgamation on principle, will really do so in order to avail themselves of the opportunity of winning a double amount of prizes by running their ponies at both meetings.

That such persons should, in a community of this size, exist is not to be wondered at, but that the community should in any way encourage them in such practices is much to be deprecated.

I am, Sir,

Yours faithfully,

A LOVER OF SPORT.

The *Scotsman* states that the German Government "have come, or are on the eve of coming," to an arrangement for the purchase of a shipbuilding yard on the Clyde. The price is said to be about £250,000.

Law Reports.

IN H. B. M.'S COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., *Acting Law Secretary.*

Saturday, April 14th, 1877.

CARL RHODE & Co. *v.* GEO. L. CASTLE.

This was a claim of $70 for damage to goods on conveyance from London per steamship *Viking*, of which defendant is master.

Both parties appeared in person.

Carl Rhode, sworn, stated:—Our firm were consignees of the 500 cases window glass named in this Bill of Lading (produced). My present claim is for 140 boxes only. These were on the hatoba last Saturday, and in consequence of what my boarding man told me I wrote this letter (produced) to Walsh, Hall & Co., and received this reply (produced); they were defendant's agents. All the boxes were in bad condition and stained. I saw them myself. The captain went with me to look at them and acknowledged that they were in bad order but did not consider himself responsible. As the next day was Sunday, we agreed that a survey should be held on Monday morning by surveyors appointed by the captain and myself, and that I should take these boxes into my godown subject to the survey. I wrote to Walsh, Hall & Co. to this effect (letter produced). The surveyors found that the cases were stained and that it was by fresh water. They were rendered unmerchantable, but the captain declined to admit any claim, and we arranged to wait for the out-turn of the other 360 boxes. To my surprise none of these were landed till yesterday afternoon, and I wrote to Walsh, Hall & Co., because I saw by the newspapers that the ship was to leave on Friday, asking if they would entertain any claim after her departure. (Letter exhibited) Mr Hall replied verbally that they could not entertain the claim at all and the captain disclaimed all responsibility. I then wrote to the captain (letter produced). I sold the whole parcel to arrive to Japanese at $3.35 per case, and the buyer objects to take delivery without some deduction. I consider the damage is 50 cents a case. I cannot account in any way for the fresh water.

Henry Francke, of No. 154, sworn:—I was asked by Mr Carl Rhode to make a survey of some glass. Captain Scott was with me and we conducted the survey in company. The 140 cases were more or less in bad condition, stained, and had signs of wet both inside and out. The straw saturated with water, and water between the panes. In my opinion it was not salt water, and the goods are unmerchantable. I consider 50 cents per case a fair reduction in this matter.

To defendant:—The glass itself is not damaged but the cases are unmerchantable on account of the wet. The straw was rotten. The cases looked like new cases but stained with water. The straw may be liable to sweating. Glass sometimes turns out dirty. They were capital cases. You could distinguish the wet stain on the outside. I asked my banto and those who deal in glass, and was told that 50 cents per case would be a fair reduction.

To Court:—In dealing between merchants a wet case of glass is of less value than a dry one. The case, of itself, is not of any particular value.

Richard Reif, of No. 92, sworn:—I came at the request of plaintiff to certify about the deterioration of window glass through the presence of water. In my experience I have had similar cases when Japanese refused to take delivery of glass damaged in a like manner, although the glass of itself is not spoiled. It is quite enough for the Japanese that the box is stained and the straw wet, to establish a claim for damage to the goods. The amount of reduction naturally varies according to the damage done. A reduction of from 20 to 30 cents is often insisted upon, but it may occur that 50 cents per case is a fair reduction and not at all excessive, especially with a falling market.

To defendant:—I cannot say what the market price is to-day. I have had offers at about $3.50. Glass is often damaged by salt water; seldom, if ever, by fresh.

Felix Beato, sworn:—I have frequently received window glass, and have found that when the boxes are wet it causes a great deterioration in price. When wet, the panes stick to each other and pulling them asunder causes great breakage.

This closed plaintiff's case; defendant called

David Scott, who was sworn and said:—I have examined the glass in question. They were not saturated, only stained. I could not say whether the water inside was fresh or salt. I did not see any fresh water in the ship. I noticed salt water in the hold, in the same compartment but not exactly where these goods were stowed. No fresh water could reach them to saturate them in this manner. They were well stowed, with their ends up. Sometimes glass when landed is stained but not always. It was not raining when this was landed. I saw a portion of the glass taken out and saw it in the godown.

To plaintiff:—I tasted the water but could not distinguish whether it were fresh or salt. What I tasted was between the panes. I could not say whether the straw would be in that condition if the water were salt. I would not take delivery of such cases without ascertaining the condition of the contents.

To the Court: I should think the damage was caused by fresh water, but do not like to say for certain. The cases did not appear like new. When I saw them on board they were in the same condition as when on shore. It is my opinion that they must have been damaged before they came on board. I would not take goods in that condition. There was nothing in the ship to lead me to suppose that fresh water could have got into the hold so as to cause this damage. I should think the damp inside could not have been caused by the steam of the straw. Steam could not do so much as that.

Thomas Clegg, chief mate of the *Viking*, sworn:—I saw these cases where they were stowed. There was no chance of fresh water reaching them. There was nothing wet near them.

To plaintiff:—I was not on board when these 500 cases were shipped. I can come to no other conclusion but that they were wet when they were put on board.

This closed defendant's case.

Carl Rhode, recalled:—Messrs Zoebeli & Co. are shipping agents in London. They acted on my behalf. They received instructions from my agents in Hamburg who bought the glass on my account to ship it by the *Viking*. It was sent direct to London to Messrs. Zoebeli & Co. and they shipped it for us,

George Lewis Castle, master, S. S. *Viking*, sworn:—I saw these cases come on board. To the best of my recollection they were not stained as they are now, and were stored far beyond the reach of any kind of fresh water. My opinion is that the straw was damp, fermented on the passage and so stained the cases, which were all whole with the exception of a few that had the full complement of panes. I told Mr Rhode that I would pay for any cases that were broken, but that in justice to my owners I would resist any other claim.

To plaintiff:—It was winter time when these cases were shipped, but ordinary weather. I paid a claim of Van Oordt & Co.'s for sweating because I had no time to battle it. I allow no claim for the water.

To the Court:—It did occur to me to make a remark when I saw the cases come on board and I spoke to the chief officer. It appears he did not do so. He was relieved and we have another now. I would not knowingly have signed a clean Bill of Lading for them as they were; certainly not as they are now. The cases were sixty days on board.

HUDSON & Co. *v.* GEO. L. CASTLE.

Claim of $427.75 for short delivery of cargo.

Mr E. Flint Kilby appeared for the firm of plaintiffs, defendant in person.

Defendant consented to the case being heard summarily.

Edward F. Kilby, partner in the firm of Hudson & Co., No. 70, sworn:—I am consignee of the goods by this Bill of Lading, 210 packages have not been delivered. They contained:

80	packages dryers,	15 cwt.	@ $7.60	$114.00
40	,, white lead,	12½ ,,	@ 7 50	$ 93.75
90	,, turpentine,	200 gals.	@ 1.10	$220.00
			Total	$427.75

We have received none of these. A lot of empty tins with no marks are lying on the hatoba which the Captain wishes us to take as this cargo.

To defendant:—The number of the tins landed does not correspond with what we should receive.

G. L. Castle, master, S. S. *Viking*, sworn:—These goods were all stowed in the compartment referred to in the last case (*Beato v. Castle*). They were damaged in exactly the same way.

Plaintiff consented to take defendant's evidence on this point as given in the case of Beato *v.* Castle.

To plaintiff:—These goods were stowed in that compartment, which has had a leak before, but not so much as this time. The smell of turpentine was noticed soon after a gale of wind. We found the water about a month after leaving port. We sounded but the water did not go into the well. We did not expect a leak. The former leak was not from the same cause. It was shortly after having the channel we smelt the turpentine. It might have been before leaving.

FELIX BEATO *v.* GEO. L. CASTLE.

This was a claim of $153.75 for short-delivery and non-delivery of cargo per steamship *Viking*.

Felix Beato, sworn:—I am consignee of the goods mentioned in these two Bills of Lading. I claim $153.75 for short delivery of the following:—

25	cases Gin	$135.00
2	,, Brandy	18.00
11	bottles ,,	8.25
6	,, Gin	2.25
	Total	$153.75

The 25 cases and 2 cases were not delivered at all, and the 11 bottles were missing out of the cases which I did receive.

Defendant: I admit the claim for $8.25, and $2.25 for goods stolen. The two cases have been discovered in the ships and are now landed.

Plaintiff, on the faith of this representation, withdrew his claim for $18 for the 2 cases brandy, and continued:—The value of the gin is $5 a case, and 25 cases have not been received by me.

Defendant sworn:—Shortly after leaving the channel we had very heavy gales coming out. A strong smell of turpentine was apparent coming from the hold and when we got into fine weather although the ship was rolling heavily I felt it stronger than usual one night, I do not remember the exact date I told the chief officer to take off the small after hatch and prop it open all night to let the smell escape, and to see what was the matter, when he reported to me that the after compartment was full of water and a strong smell of turpentine was coming up. 5 tins of oil and 25 cases gin were

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

stowed there. The next morning all hands went below to bail this water out. We found it was salt water, turpentine and gin all mixed up together. That is where all those things were stowed. I got a cask, thinking to save the turpentine and separate it from the water, but I was compelled to heave it all overboard. All the broken glass was put in a cask, which we kept till after leaving Hongkong when it broke adrift and capsized, strewing the glass about the deck cutting people's feet, so that it had to be pitched overboard. On arrival at Penang I called a survey and noted a protest, which was extended here.

To plaintiff:—Your tins were all put on end and then the gin stowed on top. The water flooded everything. The 25 cases were stowed in a different place from the rest of the cargo.

To the Court:—The goods were properly stored.

David Scott, of No. 9, Bluff marine surveyor, sworn:—I surveyed the *Viking*. The captain spoke of one particular compartment but when I looked at it, it is was empty. My survey report has no reference to that compartment. There was nothing but about six inches of water in the bottom. If the quantity of water described by Captain Castle went in, it was sufficient to cause the damage described, even if the goods were well stowed.

To plaintiff:—The place was as good as another to put the wine in provided the water did not gain access.

At the conclusion of the hearing of the three cases his Honour delivered judgment as follows:

In the case of *Rhode v. Castle* the Bill of Lading acknowledges that the goods were shipped in good order and condition. It has been proved that they were not delivered in good order and condition. It has been proved that the damage was caused by water and it has also to my satisfaction been proved that the water by which they were damaged was fresh water. As to how the fresh water came to them, the evidence of the chief officer is that he observed the goods to be wet before leaving the ship, that they were stained outside, that they were stowed in such a position that they could not have been wet by fresh water while in the ship, and that all the other goods stowed round about them were quite dry. His opinion is that the cases must have been wet before coming on board. The evidence of Captain Scott, the Marine Surveyor, goes to corroborate that of the Chief Officer, and his opinion also is that the goods must have been wet before coming on board. The Master's evidence is that he saw the cases coming on board, that they were then stained, although not so much as they were on arrival, that he called the attention of the Chief Officer—not the one now in the ship—to the stains, that the Chief Officer seems to have omitted to note the fact in his receipt, and that he, the Master, would not knowingly have signed a Bill of Lading for the cases without noting the fact of the stains in the Bill of Lading. His opinion is that the straw inside the cases fermented and caused the excessive damp which the cases showed on arrival. Sitting as a jury I find from this evidence that the cases were wet when they came on board and that the statement of their condition in the Bill of Lading is not correct. Now there are circumstances in which this finding would not exonerate the Master towards the consignee. The Master would towards a consignee or endorsee for valuable consideration be estopped by his acknowledgment. But it has been decided that as between the Shipowner and the Shipper the Bill of Lading is not conclusive. It has been decided in the case of *Bates v. Todd* that it is not conclusive as to the quantity of goods shipped, and on the same principle it appears to me that it is not conclusive as to the condition of the goods. This latter point does not seem to have been expressly decided in England, but it seems to me to follow strictly from the principle laid down in the case of *Bates v. Todd*. In this case then I think that it is open to the Master to show as against the shipper that the goods were in fact not in good order and condition when put on board, notwithstanding the acknowledgment in the Bill of Lading. And it appears to me also that plaintiff in this respect stands in the same position as the shipper. The shipper named in the Bill of Lading is shown by the evidence to have been merely the plaintiff's agent to ship the goods, and there is no evidence that the plaintiff has been put in any worse position with regard to his agent by reason of the defendant having signed the Bill of Lading.

The case must therefore be dismissed.

In the case of *Beato v. Castle* and that of *Hudson v Castle* I find that the damage and loss were occasioned by the leak in the stern of the ship. The cargo appears to have been properly stowed, and there is not sufficient evidence to show that the vessel was unseaworthy when she left port. I find, therefore, that the damage and loss were occasioned by a peril or accident of the seas for which the Master is not liable. These cases (except as to the amount admitted in *Beato v. Castle* to be due) must therefore be dismissed.

In the case of *Beato v. Castle* judgment is given for the plaintiff for $10.75, the amount admitted to be due, and $3 costs.

Before RUSSELL ROBERTSON, Esq., Consul.

Tuesday, April 17th, 1877.

John Smith, John Glennie, R. Tobieson, Adolf Tonges, Charles Essen, Edward Regan, W. Birkett, Ed. Mills and Charles Winburg, seamen on board the British barque *Punjaub* were charged with combining to disobey the lawful commands of the master.

Edward Mills, as spokesman, said that last night they worked till after six o'clock, and he went on deck about a quarter past and asked the chief mate if it was not time to leave off. The mate said there was still a girder to be discharged, and the ship had a list and must be trimmed. We had worked from six in the morning and had no warning that we were to work after hours. I could see no occasion to trim the ship, myself, and we said we would not work after six for any man.

Ed. Alvers, chief mate, stated:—Last night Mills came to me a little after six o'clock and said something about knocking off work. I said the ship must be trimmed and there was a Japanese Government boat lying alongside waiting for another piece of machinery to fill her, and as she had two tons more on one side than the other I thought it necessary to have it looked to, and ordered the men not to stop. The ship wanted trimming and was not safe for the night. The men refused to work and I had to get the coolies to unship the girder.

To Edward Mills:—It would only have taken about 15 minutes to trim the ship. I tried to trim her before six o'clock. All hands were busy. She has not, by a foot, so much of a list now as she had last night I did not consider it necessary to warn you at six o'clock that there was more work to be done

To Edward Regan:—The girder was ready slung and it would only have taken 15 minutes to get it out of the ship

I. Jelovitz, sworn, stated:—I am a stevedore. I have not much to say, only that these men refused to work about 15 or 20 minutes past six o'clock last night. The *Punjaub* brought out bridge work for the Railway. A boat wanted only one girder to put it right. This girder was put in afterwards by the coolies. The ship had a list of about 2 feet. The weather was not threatening at that time.

John Black, master of the *Punjaub*:—I went on board the ship last night at eight o'clock and the chief officer reported this circumstance to me. I made an entry in the log book (read). I did not see the circumstances myself.

One of the men explained that six o'clock was the usual time to leave off working and when the men were required to do anything after that they were usually warned at six o'clock. In this instance they were not informed and at a quarter past they stopped.

The chief officer, in answer to his Honour, said that he was never accustomed to go in this way and beg the men to work. It was about supper time and they would have had their supper when their work was done. The weather was not threatening then, but being so changeable the ship was not quite safe with the list she had last night.

Another of the accused remarked that the ship was not a bit unsafe and she had still a list, though on the other side. Nothing had been said to them about the girder or the Japanese boat.

His Honour said that from the evidence given he considered the refusal to do duty on the part of the accused was reprehensible, and he quite concurred in the opinion of the chief officer that with a boat alongside which had two tons more on on side than on the other and only wanted this girder, already slung, to put it to rights the men had no right to refuse to discharge it. He believed Mr Mills to be spokesman and leader in this affair, was he not?

Mr Mills.—I am, Sir!

His Honour:—Then, in slight recognition of your talents I will send you to prison for one week; the others are discharged.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

Thursday, April 19th, 1877.

Asmus Backmann was charged with refusal of duty, leaving the ship without permission and general misbehaveour.

Robert Talbot, master of the *Alerta*, sworn:—Prisoner is mate of my ship. I gave him liberty on Sunday. On Monday morning he was evidently the worse for drink. I told him he was tipsy, but he denied it. He was tallying cargo throughout the day.

I went on board at 2 o'clock and found him very drunk. The police were on board to arrest the second mate, who had left the ship. The mate was in my cabin trying to write a letter, which was neither one thing nor another. He could not read what he had written. He was quite unfit for work so I sent him to his berth. He was very noisy and abusive, and smashed open the door of his berth after being put in it. He was so disorderly that I wanted to get rid of him. He all the time insisted on saying that he was sober. He left the ship in a sampan but we forced the *sendo* to return with him. He was put in his berth again but broke open the door and came out. At half past eight I was on deck and ordered the side ladder to be put up. I then turned in, and some time later on I heard a noise, and upon going on deck found he had again left the ship. He returned during the night. In the morning I called him aft and lectured him, but he only gave insolence in reply, instead of being sorry for what he had done. He said that he considered from what I had said that he was free of the ship, and would do no more work. I ordered him to return to duty, but he refused. He left the ship whilst I was in the hold. When I came to the Consulate I found that he had laid a charge against me. He was on shore all day and returned during the night. Next morning I asked him to come on shore with me. I had been told to have him at the Consulate at 10 o'clock. He refused then, saying he wanted to dress first; so I came here without him. He did not turn up and I offered a reward of $10. He was apprehended last night. He left the ship about half an hour after I did, and has not been on board since.

Prisoner said he had no questions to ask. He had never been told to appear at the Consulate.

The Captain said he told prisoner he wanted him to come on shore with him to the Consulate, at once.

Prisoner said he acknowledged all the other statements of the captain. He had denied being drunk, then, but he admitted it now. He was very sorry; it was his first offence; he was willing to return to duty. As to the charge of desertion, he had never left the ship for 24 hours.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The captain said he charged him with being absent without leave. He was willing to take him back.

Sergeant Loxton, sworn :—I received a warrant from the Consul yesterday and about six in the evening I saw accused standing on the English hatoba and went up to him and stated my business. He came along with me, and I took him to the British goal and delivered him to the turnkey. He looked as if he had been drinking but was not drunk. He had a sampan engaged so I supposed he intended to go on board again.

His Honour said that the prisoner was much indebted to the captain for the lenient view he had taken of the matter. Had the captain not offered to receive him on board again he would have been tried by a Naval Court-martial and would undoubtedly have had his Board of Trade certificate (a very complimentary one) suspended, and to go before the mast again as a common seaman. His conduct as first officer on board a ship had been most unseemly, and his Honour advised him, for his own good, to mend his ways.

Fined $10 and costs of arrest, imprisonment, and Court; in all, $17.50.

Before H. S. WILKINSON, Esq., Acting Law Secretary,
and
Messrs. W. B. WALTER, GEO. SHIBRAS, GEO. C. WOOD, F. E. LEWIS, and JAMES WINSTANLEY, as Jurors.

Friday, April 20th, 1877.

ANNIE THERESE GARGAN *v.* ELLEN WALKER.

This was a claim for the return of a shawl, or its value, $50. The case had been heard before, on the 7th instant, but owing to the contradictory and confused character of the evidence, His Honour decided to have it tried by Jury.

Both plaintiff and defendant appeared personally.

His Honour explained the nature of the case to the Jury, and plaintiff was then called.

Annie Therese Gargan, sworn, deposed:—I am an American citizen and live at No. 52, Bluff. On the 31st March last, I saw this lady with my cloak on. It had been stolen in July by a *jinrikisha* coolie. Defendant was wearing it and I saw it on her in Honmura Road. I walked behind her for a space of time to be quite sure that the cloak was mine, and then addressed the defendant. I told her the cloak was mine, that it had been stolen from me by the *jinrikisha* coolie and offered to pay her whatever she had given for it. She said she bought it from a Chinaman. I asked her, to please take me to the Chinaman from whom she bought it, but she refused to do so and commenced using some vile language. I told her I should try and find a policeman and have it taken off her. At the time I could see none. Defendant went down the street off Honmura Road. I followed with Miss Foote, a little distance behind. She walked on till she turned down the street leading to the carpenter's, and then up the creek to the sail-maker's. There she met the first *jinrikisha* and got into it. Just as I turned the corner I met a policeman, and I communicated with him, telling him the circumstances about the cloak and asking him if he could direct me to where she lived. He said he did not know but would try to find out. That was about half past six on Saturday evening and too late, so on Monday I went again to the policeman and took Miss Foote with me, and on the Monday the policeman told me where defendant lived. He came with me and showed me the house. I knocked at the door but at first got no answer; then went back in a little while and knocked again. A man came and asked what we wanted. I said we wanted to see Mrs Walker. He said she was not in, but "since you have a policeman with you, you had better tell me what you want." I said I would call again, and told him that I had lost a cloak and had seen Mrs Walker with it. He recommended me to go to the Consulate about it. I did not go back. That is all. I have a pattern of the material of the cloak, so that if your Honour wishes to question defendant about it, you may.

Mrs Walker:—Why was it the plaintiff did not take hold of the cloak if it was hers?

Miss Gargan:—I could not catch hold of any one on the public street.

Mrs Walker:—Nobody ever saw a cloak on me. Are you sure it was a cloak I had on?

Miss. Gargan:—It was a cloak trimmed with lace. I took hold of it and said it was my cloak.

Defendant:—Could you remember it since July, and did you know it at once?

Plaintiff:—I remembered it perfectly well.

Defendant:—You were not in in a state to recognise that cloak at the time. If I had a cloak like that I would take better care of it, and not leave it lying about in *jinrikishas*.

Miss Gargan:—Mrs Walker, I will make you prove your statements. I was not intoxicated.

Mrs Walker:—You were, and had to lean on the young lady's arm. There!

His Honour stopped this altercation, whilst Miss Gargan said she would prove defendant was telling fibs.

His Honour:—How can you do that?

Miss Gargan:—By bringing a charge of drunkenness against her.

His Honour:—Now, now, this won't do! What is the value of the cloak?

Plaintiff to Court:—The cloak is worth about $30. It is a mistake in the summons. I have not sworn to it.

The Jury had no questions to ask.

Elizabeth Foote, sworn, stated:—I live at No. 87, Yokohama. On the 31st March I was with Miss Gargan, walking down Honmura Road. We met defendant. Miss Gargan said she was wearing a cloak of hers and asked defendant about it. She said she had got it from a Chinaman. Miss Gargan offered to pay her what she paid for it. She said "How dare you Madam, touch me?" Miss Gargan then said "Will you please show me where your Chinaman lived. She then said her Chinaman made it. We did not speak to her after that. I knew the cloak myself. I had seen it on Miss Gargan. I am quite sure it was the same cloak. I saw the one produced here at the previous trial by the defendant. It was not the cloak I saw on her that day. It is not true that Miss Gargan was not in a fit state to follow defendant that day. Miss Gargan was in no different state from what she is now.

To defendant:—Miss Gargan was not leaning on my arm, I was leaning on hers. I knew the cloak last year and recognised it at once. We were going towards the creek.

This closed plaintiff's case.

Ellen Walker, defendant, sworn:—I am a British subject, of No. 131, Yokohama. I was coming from Honmura and met plaintiff leaning on this young lady's arm. She said "Why, Lizzie, that's my cloak, and if she hasn't made it into a jacket and used the lace! Don't you know the lace, Lizzie? she says. I told her that was my jacket and a Chinaman made it and as she was not in a fit state to speak to, so I walked on. It was not six, or half-past six but perhaps half-past four o'clock. I left my house at half past three and went to No. 70 and met two ladies and spoke to them before I met this one. They never saw this cloak on me. I had my two children with me. One of them said, "why does that lady speak to you in that way?" My servant girl saw me when I returned and can say what I had on. I have been in Yokohama seven years and have never been in Court before. I have washed for gentlemen and have never been accused of stealing clothes. That girl is only thirteen years old, and if she could recollect the cloak since July last why did not she hold on to it? If it had been mine I would not have let any one keep it.

To plaintiff:—I was not alone. I had my two children with me. It was a jacket; I never had a cape on in my life.

Miss Gargan:—Is not this lace (produced) the same as what was on the cape?

Mrs Walker:—Of course it is. Didn't you pull a piece off my jacket in the street?

Miss Gargan:—No, I did not

His Honour:—Have you any questions to ask?

Plaintiff.—I have no other questions to ask.

Defendant to Court:—I never seen Miss Gargan before, to my knowledge.

To the Jury:—I have several jackets besides the one I now wear but never had a cloak.

To Court:—The jacket I wear now is the one I had on. This is Maltese lace and so is that which Miss Gargan produces, but they differ in pattern.

Mrs. Mary Ann Morris, sworn, stated:—I live at No. 81. I saw Mrs. Walker on the day in question with a jacket, as she passed by my house, and a shawl on her arm. The shawl was black. This is it (produced). I saw nothing of the interview with Miss Gargan. This was the 29th of March.

Plaintiff:—You mean the 31st March?

Witness:—Well, then, the 31st, or the 30th. It was one day. I meet her often, every day.

Plaintiff:—What time was it?

Witness:—About 2 o'clock or half-past. It was some time.

Plaintiff:—But I saw her at half-past six.

To defendant:—It was the last day of March, the 29th or 31st. Well it was-half past four when I saw her.

His Honour:—Now, tell us, What time was it? What day was it?

To Court:—Well really, I could not say the date.

Mrs Elizabeth Mills, sworn:—I live at No. 168. I have known Mrs Walker, the washerwoman, ever since she came here. I never saw her with a cloak on in my life. She wears only jackets. I meet her every day, sir; her and her children going for a walk. I was going to Honmura on a Saturday, when I met her and the two children. She was coming from Honmura.

To plaintiff:—I think it was half-past four when I saw them. It was not dinner time. She had her two children. She had the jacket on she wears now. I did not see her in a furniture store.

Miss Gargan.—I beg pardon, your Honour, but there's a gentleman now in Court who saw me with my hand on the cloak: Mr Bohm, sir.

Witness, to plaintiff:—It was about the last of the month.

Mrs Walker now called her servant to testify that she (Mrs Walker) had told her when she returned to the house that day about the lady claiming her cloak.

Yoshi, defendant's woman-servant, stated:—I remember my mistress coming in and saying a woman had claimed her cloak. This was yesterday. At the time she returned she said nothing about it. I heard some time ago from a washerman in my mistress' employment that there had been such an altercation. I brush my mistress' clothes every day.

His Honour:—What sort of clothes does Mrs Walker wear usually during the day—outside clothes?

Witness:—She wears woollen jackets. (Lace produced) I don't know if she wears jackets trimmed with that stuff. She has got no upper garment without sleeves trimmed like that.

Richard Connor, pilot, sworn:—I am an American citizen and live at No. 131. I was in my room on the 31st March. The door of my room has glass panels and I saw Mrs Walker coming in at the gate and I stepped on to the veranda. She was excited and told me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

some woman had taken a hold of her in the street and laid a claim to her jacket. She asked me to wait a little because the woman might call. On the Monday afternoon I heard a knocking at the front door, and as there seemed to be no one else in I went and answered it. These two ladies were there with a Japanese policeman. They asked for Mrs Walker. I said she was not in; and one of them told me she had lost a cloak and saw it on Mrs Walker's back. She was willing to give Mrs Walker what she paid for it. I said neither Mrs Walker nor any other lady would buy a cloak from a *jinrikisha* coolie. Miss Gargan said she stole it. I told her she had better take care, or she might be brought up for defamation of character. She said she would go to the Consul. I advised her to do so, and she went away.

To plaintiff:—I never saw Mrs Walker with a cloak with lace trimming

To the Jury:—I never saw Mrs Walker with a cloak or cape, or jacket without sleeves except in summer, and then it was light.

Miss Gargan now called.

Paul Bohm, who was sworn:—I am an undertaker. I don't remember the date, but I passed through Homura Road, and just opposite a Chinese dress-maker's I met Miss Gargan with, what astonished we very much, Mrs Walker, who was my tenant, and I felt it rather curious to see the three ladies altogether, and after having passed them I turned round immediately and could see that Miss Gargan was laying her hand on the trimming of the jacket which Mr Walker had on her. Both ladies were talking one to another, and Miss Foote was on other side of Miss Gargan, and walked round to see the dress of Mrs Walker, and then went over to the other side of the street, apparently going up to the Chinese dress-maker's. I noticed Mrs Walker was nearly in in about the same state as when she went to Mr Hood with the hatchet. I mean Mr Hood of Lane and Crawford's. Thinking that the ladies went to the dress-makers, I went on my road, and have not seen anything or heard anything of the case till I saw it in the paper as set down for hearing to day.

To Mrs Walker:—I have a grudge against you in some way, which I can explain.

To His Honour:—When she left my house she pulled all the paper down—but this has nothing to do with the case. Miss Gargan was looking at some part of your dress, but as I don't take any interest in ladies' clothing I did not notice which part.

To the Jury:—I did not notice whether it was a cloak or jacket Mrs Walker wore.

Miss Gargan:—Was I intoxicated at the time?

Witness:—Certainly not.

This closed the evidence on both sides.

His Honour then addressed the jury, who forthwith retired and soon returned to give a verdict for the plaintiff in the sum of $30.

His Honour ordered that defendant pay into the Court this sum, if the cloak was not itself returned, within 10 days.

IN THE JOTO SAIBANSHO.

Tôkiô, April 16th, 1877.

ESCOMBE & Co.—*Plaintiff and Respondent.*

v.

MAYEDA KENKICHI.—*Defendant and Appellant.*

Mr Cope appeared for Messrs. Escombe & Co. and defendant and appellant was represented by Japanese Counsel.

This was an appeal against an order of the Tôkiô Saibansho made 28th December last for payment of *yen* 14.90, certain expenses incurred by Mr Escombe.

Mr Cope stated:—The original claim is for $1,000 due on account of certain machinery bought by defendant from the plaintiff, and proceedings were commenced in October 1876. The case was set down for hearing on the 18th December, 1876, at 10 a.m. and the plaintiff attended with his witnesses. The defendant however did not appear, but at 11.30 on that day his Counsel sent word to the Tôkiô Saibansho that he was prevented by other business from attending to the case at issue for the present, and requested that it might be adjourned to some future date. The Judge (Mr Yamamoto) informed Mr Escombe that he must comply with this request, as by Japanese law, judgment could not be given by *default*, but that Mayeda Kenkitchi would be punished for contempt of Court, and after some correspondence on the matter, the Court made an order that Mayeda Kenkitchi should pay the amount expended by Mr Escombe for attending that day at Court. This amount was eventually paid on the 16th March, and on the 19th March Mayeda Kenkitchi filed his petition of appeal.

Mr Cope called the attention at the Court to the fact that the original case had been in Court since October last—nearly six months—and that he was unable to obtain a hearing, notwithstanding that he had made numerous applications to that effect. He thought therefore that it was a very arbitrary proceeding on the part of the Court to allow this appeal to be put forward, in fact to hurry it on and totally neglect the original case. He asked therefore that the Court would dismiss this appeal and order the lower Court to set down the case of Escomb *v.* Mayeda Kenkichi for immediate hearing. This request was refused by the President of the Court, who stated further that he could not control the proceedings of the lower Court in any way except in hearing appeal cases.

The Counsel for Mayeda Kenkichi then addressed the Court but his remarks were not translated.

Adjourned till 1.30 p.m.

A prolonged discussion then took place as to why other expenses should be allowed to Mr Escombe, the attorney stating that business in the appeal Court had prevented him from attending the Tôkiô Saibansho on 18th December 1876, and that he had not been able to inform plaintiff to this effect, and that he did not think it any matter of consequence now for Mr Escombe and his witness to have been brought to Tôkiô for a few hours and therefore no expense should have been allowed. Further that he had never before seen a list of expenses claimed and must therefore ask for an adjournment till after the 19th instant in order to examine same and file a note of his objection.

Mr Cope protested against this: having already been called from time to time to Tôkiô on this question, but the President of the Court overruled the objection, at the request of the appellant, and ordered the case to be adjourned until next month, and that the appellant should file his objections to the claim, which will be forwarded to respondent through H. B. M.'s Consul.

STAGE-STRUCK LADIES.

(The World.)

Most country-house visitors will be able from experience to form some idea of the discomfort and misery involved in the preparation for private theatricals. To arrive on the scene of action and to hear that an entertainment of this kind is impending is to know that one is condemned for a period to all the horrors of domestic disorganisation, unseasonable noises, irregular hours, and whatever else can make life a burden. If one's host is the proprietor of a palace, these evils are minimised. The amateur stage rises, indeed has risen already, with as little of disturbance as the temple of Solomon, and from the agonising contagion of bustle there is relief to be found in the multitude of rooms. Unfortunately there is no rural residence, however humble, which the dramatic mania does not haunt, making the whole place as uninhabitable as the presence of a pair of lovers renders a drawing-room. One apartment cannot be entered because there is a rehearsal; another is hermetically sealed because it is the receptacle of the properties and wardrobes; a third is closed at special hours because the occupant thereof is engaged in the 'study' of his part. Breakfast is abnormally early, luncheon late, and dinner at no time in particular. The hostess is in a flutter of excitement, the host is sulky, the guest is told to look after himself. When the members of the amateur company assemble round the board, they are engrossed with the characters allotted to them; their conversation is pointed with stage allusions and esoteric jokes; they reproduce the catchwords and phrases of the piece in which they are to appear. It is well if there are nothing more than these wearisome ineptitudes. Private theatricals are the prolific source of every kind of private spite and quarrel, and rival amateur-actors love each other almost as well as rival theologians. A compliment paid to one strikes like a dagger at the heart of the rest. The prevailing atmosphere is one of mutual and embittered hostility, and if the stranger is wise he will persistently hold his peace or confine his observations to the weather.

Yet there can be no doubt that the ordeal which is distressing to the outside spectator is a pleasure and satisfaction to those whom it chiefly concerns. The strolling players of society—and their name in the present day is legion—go from house to house, put themselves to infinite trouble, submit to many discomfitures, involve themselves needlessly in all sorts of feuds. The occupation, which must be intolerably monotonous, never seems to grow stale. There are the same familiar faces in the audience and among the 'artists,' and if excitement were impossible without novelty there would be no excitement. These persons are easily distinguishable wherever they may be met. Their talk never varies; their estimates of their fellow-creatures are taken from one immutable standpoint—that of capacity or incapacity for the performance of certain stage parts. If a strange name is mentioned, they recollect or imagine that it belongs to some one with whom they 'played' in the *Lady of Lyons* three years ago; or if a new arrival among their circle is rumoured, they wonder whether he or she will help the cast. In the course of time the dramatic distemper disappears, or the disease comes to a fatal head. Fresh spheres of activity may open themselves, or the energies may continue stubbornly to run in the same grooves. In the latter case the malady gradually grows hopeless, and existence becomes one perpetual rehearsal for stage appearances. The amateur *artiste* wearies of the applause of admiring friends, and appeals to a wider and more discriminating public. As a step towards this there comes, first the performance at some public building, specially hired for the occasion; next that at some bijou theatre in a metropolitan suburb; then the periodic appearance for some end of charity on the regular metropolitan stage. Our non-professional actress now declines to be judged by reference to an amateur standard. She challenges comparison with the paid *artistes* of the day; she apes

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

their manners and graces; even affects their society, and complains that injustice is done to her own dramatic powers unless they are exercised in conjunction with professional players. It is rumoured that she has adopted the stage as her calling, when an announcement suddenly appears in one of the journals of 'society' that the report is premature.

There is nothing at all new in these phases of the gradual development of the stage-struck lady. The experience is one as old as Juvenal, and invites precisely the same treatment at the hands of the moralist and the satirist as it did then. But there is a side to the question on which Juvenal himself was silent. The amateur heroine cannot be divested of all social belongings and responsibilities. She has a husband, she has daughters. These are as fairly entitled to their opinion on the subject as the audiences whose favour she courts. She has a home, and the duties of home are as well defined as the peremptory calls of the stage. Her lord and master may nip her artistic aspirations in the bud, or he may be compelled to endure their expression and fulfilment. In the latter case he will be the most long-suffering of men. His troubles will be but inadequately shadowed forth under the image of those which were the lot of Mr. Jellyby. Mrs. Jellyby was almost a model wife and mother in comparison with the amateur actress *à la mode*. Mrs. Jellyby's husband was never quite the dejected mortal that is to be witnessed in the person of the husband of the stage-struck lady. The first indications of the malady which alarm him are the apparition of strange faces in his drawing-room, and the announcement that appointments at odd hours have to be kept. Both appointments and faces are connected with the theatrical mania of the wife of his bosom. At first these interruptions in the domestic routine are fitful and infrequent. Soon they become chronic. The unhappy man cannot call his house his own. His manner is subdued to a profound melancholy; he gradually suffers himself to be bound to the chariot-wheels of his irrepressible wife, and the lord of creation trembles at the nod of the stage-struck lady.

If the husband who passively endures all this is worthy of contemptuous compassion, what pity can be too profound for the children? A feverish flightiness and a melodramatic affectation are as mischievous an example as could be imagined for young girls There are a few actresses in London who, when they are in private life, succeed in entirely laying aside stage habits and airs. This is not the case of any of our stage-struck ladies. Consciously or unconsciously, they attitudinise in season and out of season, arch their eyebrows, throw their heads on one side, intersperse their domestic dialogue with lines culled from their favourite parts. The amateur actress, who thoroughiy devotes herself to her hobby, reveals herself at once by a thousand tricks of manner and speech which are ridiculous in the eyes of the non-sympathising spectator, melancholy to her husband, and noxious, on a variety of accounts to her children. As years advance, the manifestations of the histrionic fanaticism become more pitiable and more absurd. The husband is with his regiment in India; the daughters are rapidly ripening into womanhood; the mother, affect though she may the airs of giggling sixteen, displays signs not merely of age, but of haggardness. The excitement of the mock-stage life has become a necessity of her existence. She compromises the position, and mars the prospects, not so much of herself as of her daughters. She turns her house into a species of exaggerated greenroom. And all this time she is deliberately engaged in the attempt to surrender that which a woman should most value—respect. She struts and declaims and poses, and cannot perceive that the whole world is sneering at her in its sleeve. Society, husband, children—she has sacrificed so far as without technical criminality she can, not, as she would herself say, to passion for art, but to an insatiable vanity, and a morbid carving for display. When the Roman plebs thronged the circus to witness the public appearance of patrician dames in pantomimes and combats with wild beasts, does any one suppose that it was on account of the superior prowess which was then exhibited? When the stage-struck ladies of modern England draw crowded houses, do they think that the attraction lies in their own artistic accomplishments, or in the opportunity which their presence affords to the applauding crowd of a new social sensation?

The Dutch Academy of Arts and Sciences held a meeting at the Hague last week in honour of Spinoza. Prince Alexander of the Netherlands was present. The president, General van Limburg-Stirum, recalled the fact that Holland owes the honour of counting Spinoza among her children and the right of raising a statue to him, to the tolerance which at the time of the wars of religion, the house of Orange proclaimed and practised in the Netherlands. M. Ernest Renan defended at length the memory of the philosopher against the unjust attacks which have been levelled against him, and celebrated him as the man who in his time had the highest idea of God and of Liberty, which was the first and the last word of his religious philosophy.—*Pall Mall Budget.*

REUTER'S TELEGRAMS.

[Supplied to the "China Mail."]

(By Southern Route.)

London, 4th April, 1877.

Prince Bismarck has sent in his resignation of the Imperial Chancellorship to the Emperor; the latter refuses to accept it, but has granted leave of absence.

London, 7th April, 1877.

The Powers have submitted their Protocol to the Porte: the latter, however, expresses displeasure with it and will probably refuse to disarm its present force. Meantime Montenegro persists in her demands, and a feeling of great uncertainty as to the result is prevalent.

London, 11th April, 1877.

Turkey has replied to Russia, distinctly refusing to adhere to the Protocol of the Great Powers.

The action on the part of Turkey is considered at St. Petersburg as rendering war inevitable.

Straits Times Extra.

London, 27th March.—It is stated that the Goverment of Perak and Larut has been finally settled, and that a Blue Book is expected, given details.

London, 28th March.—There is a hopeful feeling. The Cabinet has been summoned. Russia is apparently disposed to make concessions.

London, 29th March.—The Cabinet continues to negotiate with Russia. Turkey continues to repudiate Foreign intervention.

London, 19th March.—In the House of Lords to-night. Lord Derby, in replying to a question, said General Schouvaloff had to-day presented the reply from his Government, with reference to the amendments introduced by England into the Russian protocol, Russia, in this reply, proposes to make further alterations and amend the protocol and these alterations are now under the consideration of the cabinet.

Sir Henry Elliot is not to return to Constantinople till he has taken further rest. Meanwhile a temporary substitute will perform his duties.

The Minister Plenipotentiary of the China Embassy, replying to a deputation of the Society for the suppression of the Opium Traffic, said China was anxious to abolish the opium trade, but that it was impossible to do so unless other countries besides England co-operated.

Constantinople, 19th March.—The Turkish Parliament opened to-day. The speech from the throne admits that the gradual decline of the Empire is owing to a disregard to Justice and a want of respect to the laws. Heavy armaments, it is stated, have exhausted the treasury, and a reduction in the interest on Turkish Stock has injured the country's credit. It is now proposed to offer to the creditors solid guarantees. The speech dwells on the reforms promised, and trusts that the issue of the negotiations with Montenegro may be peaceful.

Constantinople, 20th March.—Warlike preparations are being made at Erzeroum, Kars and Batoun by the Turks, who have also placed strong garrisons along the Russian frontier. Vengeful fighting is renewed in Bosnia.

London, 20th March.—In the House of Commons this evening, Sir Stafford Northcote said the Government had not yet had time to consider the alterations made by Russia in the protocol as amended by England.

The *Daily Telegraph* states that the engagement on the part of Russia to demobilize her forces is the absolute condition of England's signature to the protocol.

Lord Hamilton, replying to a question, said no fresh arrangement had been made with the Ameer of Affghanistan.

The *Times* to-day announces an agitation among the Softas at Constantinople, 3,000 of whom are armed.

Admiral Luard succeeds Admiral Macdonald as Commander-in-Chief of the East India Station.

London, 21st March.—The Queen received General Ignatieff at Windsor Castle yesterday. The Prince and Princess of Wales will leave England on Saturday next for a cruise in the Mediterranean. A meeting took place at the Mansion House yesterday, with the object of establishing the Indian and Colonial Museum in London. The House of Commons have agreed to the motion for the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

royal commission of enquiry into the working of the stock exchange.

Constantinople, 20th March.—Special delegates sent by the Prince Nikita to arrange peace have been instructed to waive demands on Montenegro for the cession of territory, except the plain of Nicksich is still asked for.

Rome, 20th March.—In the consistory held at the Vatican to-day, the Pope delivered an allocution violently attacking the Indian Government. (?)

London, 19th March.—Stock markets are recovering and buoyant. Consols 96⅞. Bar Silver 54.

London, 21st March.—It is generally reported that Russia refuses to make a positive engagement to demobilise, but that she promises to do so when the following conditions are fulfilled ; namely :—

The signature of the protocol by the powers.

The disarmament of Turkey, and the conclusion of peace between the Porte and Montenegro.

London, 21st March.—In the House of Commons to-night, Lord Hamilton declined to make a statement of of the negotiations pending between Sir Lewis Pelley and the Ameer.

London, 22nd March.—The Cabinet requires a distinct pledge to demobilise, from Russia, before considering the Russian amendments to the protocol.

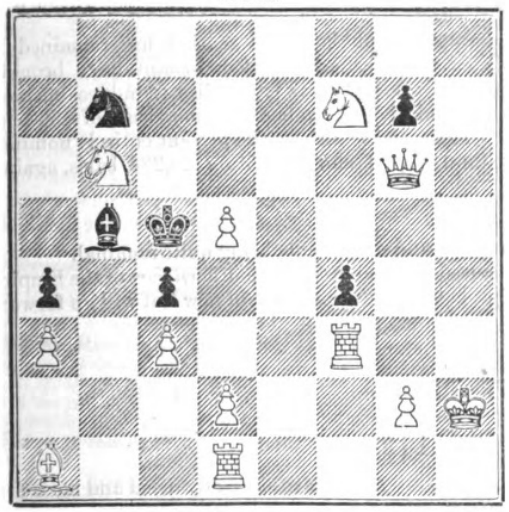
Constantinople, 22nd March.—The Porte refuses to accede to the conditions proposed by Montenegro.

London, 22nd March.—The Chancellor of the Exchequer will introduce the Budget on the 12th April.

London, 22nd March.—In the House of Lords, to-night, Lord Derby, replying to a question, said that the Cabinet was still examining the text of the Russian protocol, and the conditions under which it would be signed at all.

London, 22nd March.—General Ignatieff has gone to Vienna.

Constantinople, 22nd March.—The Porte has prolonged the armistice with Montenegro till the 12th of April.



London, 24th March.—Mr. Courtney has postponed his motion for a resolution to the effect that the injustice, corruption and cruelty of the Ottoman rule have released England from any obligation at any time contracted to maintain the independence and integrity of the Ottoman Empire.

A debate took place on the motion of Mr. Fawcett in favour of bringing pressure to bear on Turkey for the better government of her Christian subjects. The House approved of the adjournment of the debate.

PRIZE PROBLEM.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—A moderate business has been done since our last, but at the close there seems to be less animation and the market is quiet. *Yarns*:—During the past fortnight a fair business has been done in 16/24; now the demand seems, to some extent, to be satisfied and dealers are working off their purchases and contracts; prices are firm. More attention seems to be given to 28/32, which show a slight improvement, while 38/42 continue neglected. *Shirtings* are in moderate demand, and quotations are showing an upward tendency. For *T. Cloths*, there is some request, whereas *Velvets* and other articles are dull and unenquired for.

Grey Shirtings:—						White Shirtings:—	
7 lbs.	38½ yds.	39 in.	per pce.	$1.47½ to $1.82½		60 to 64 reed 40 yds. 35 in. per pce.	2.20 to 2.40
8 lbs.	38½ yds.	44 in.	„	1.65 to 2.25		Turkey Reds 24 yds. 30 in. 2—3 lb. per lb.	0.67½ to 0.85
8 lbs. 4 to 8½ lbs.	38½ „	39 in.	„	1.65 to 2.37½		Black Velvets	7.25 to 8.25
9 lbs.	38½ „	44 in.	„	2.05 to 2.57½		English Drills 15 lbs. 40 yds, 30 in.	2.65 to 2.85
T. Cloth 7lbs.	24 „	32 in.	„	1.50 to 1.70		Taffachelass 12 yds, 43 in.	1.70 to 2.15
„ 6lbs.	24 „	32 in.	„	1.10 to 1.25			

Yarns.—

No 16 to 24	per picul	$28.75 to 32.50	No. 38 to 42 per picul	$34.00 to 39.00
No. 28 to 32	per picul	$30.50 to 34.25	Reverse Twist 16-24 „	

Woollens.—Our market is very quiet and business has been on a rather small scale since our last, with nominally the same prices as then quoted. *Mousselines de Laine* are weaker, and the demand for *Blankets* has somewhat receded.

Plain Orleans	40—42 yds.	32 in.	5.50 to 7.00	Figured Mousselines de Laine	30 yds. 30 in.	0.25 to 0.30
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.25	Multicolored „	30 yds. 30 in.	0.30 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy	48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.24 to 0.31	Presidents	54 in. to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots	54 in. to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16.50 to 17.50	Union	54 in. to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green	6 to 8 lbs.	per lb	0.40 to 0.47
Plain Mousselines de Laine	—30 yds.	30 in.	0.17½ to 0.19				

Sugar.—Owing to considerable receipts of *Formosa* sugar its value has somewhat fallen, and buyers are inclined to hold off, waiting further arrivals. Stocks in Formosa are, however, now very much reduced and rates high owing to a good demand for China and Europe, so holders in this market are consequently firm. Rates for *China* sugar are rather higher.

Sugar:—Takao in bag	per picul	$4.30	China No. 4 Kook-fah	per picul	$6.20 to $6.50
„ in basket	„	$4.10	„ No. 5 Kong-fun	„	$5.70 to $6.15
Taiwanfoo in bag	„	$4.15	„ No. 6 E-pak	„	$5.20 to $5.50
do. in basket	„	$4.00	Swatow Brown	„	$3.60
China No 1 Ping-fah	„	$8.00	Daitong	„	$3.75
„ No. 2 Ching-pak	„	$7.30 to $7.80	Japan Rice	„	$1.95 to $2.05
„ No. 3 Ke-pak	„	$6.60 to $6.90	Kerosene Oil	„	$4.40

Kerosene Oil—The market continues quiet at $4.40, the stock being estimated at under 30,000 cases.

EXPORTS.

Silk.—Under the influence of the several causes enumerated in our last, this market has remained in a state of great depression. The political and commercial advices received since the 12th instant have brought transactions to an almost complete standstill; further concessions offered by holders have failed to induce business in Oshiu Silks, which form the bulk of the stock. Some Sinchu Hanks have been bought on a basis of $600 for medium grades; but settlements being on the whole only 25 or 30 bales, prices are for the present entirely nominal.

The shipments of the fortnight are 72 bales, making the total export since 1st July 20,284 bales, against 12,477 last year for the corresponding period.

The stock is estimated at about 1,400 bales.

Tea.—Our Tea season may now be considered closed, arrivals and settlements being quite nominal.

Owing to the interruption of the native lines of steamers, caused by troubles in the southern part of the Empire, early arrivals of New Crop Teas will be much restricted, and probably no large amount of new leaf will go forward before the first steamer in June.

EXCHANGE AND BULLION.

Exchange.—In the early part of fortnight rates kept very steady, but have since advanced and close firm at quotations.

Rates close as follows:—

Sterling—Bank 6 months' sight	4s 1½d.	On Shanghai—Bank sight	74

NEW ADVERTISEMENTS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

Hot Climates.

24, GREAT CHARLOTTE STREET, LONDON, S.E.

Yokohama, April 7, 1877. 52ins.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

Yokohama, April 7, 1877. 26ins.

THE BEST INVESTMENT OF THE DAY FOR A SMALL OUTLAY.

And where there is no previous knowledge of the business required, is a Lemonade, Ginger Beer, and Soda Water Machine, as the public taste is so much on the increase for Aerated Drinks. The book of 90 pages of illustrations and information forwarded free.

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

On the 22nd instant, at Takanawa, Tôkiô, the wife of ALFRED MILNES, Esq., B.A. (Lond.), of a son.

Notes of the Week.

There is little news of interest from the South concerning the war. Everything appears to be at a stand still. It is now a common rumour that the Government is anxious to bring about a compromise and this report is borne out by various facts that have of late become known. It is safe to assert, however, that no compromise will be entertained by Saigo and his army which bears the form of a pardon. To accept a pardon would be to acknowledge a defeat, which Satsuma is by no means likely to admit. If a compromise be effected we may feel sure that Saigo will get nearly all that he wants. Otherwise the fight must be carried out to the bitter end. The *Mainichi Shimbun* states that a letter written by a paymaster in the Army at Kumamoto on the 15th instant to his friends at Yokohama, says that the killed and wounded in the garrison at Kumamoto were over six hundred. When relieved the garrison was in a very distressed state, being reduced to eating raw rice, barley and millet, as their fuel was entirely consumed. In one of the engagements Lieut.-General ° ° (Tani ?) was shot through the breast and, though not dead, is in a dangerous state. Goto Shojiro has returned to Tôkio. Itagaki is at Tosa amusing himself by *hunting*. We may possibly one day hear of his having put up large game.

In whatever light the action of Saigo may appear, the fact that he is a military leader of rare ability is acknowledged alike by friend and foe. His masterly retreat from before Kumamoto with an army, variously estimated at from twelve to eighteen thousand men, has compelled admiration from those opposed to him, and proved that he is indeed a foeman worthy of their steel. It must be remembered that he had to keep up three fronts. One toward the garrison of Kumamoto; one toward the southern army, and one towards the main army of over twenty thousand men. Unknown and unsuspected, he quietly drew off the whole of his forces. Not a dead body, not a wounded man, not a single arm or scrap of provision left behind. What is still more remarkable is that it took three days for the Imperialists to discover that their opponents had vanished, and when at last they advanced toward the castle, they found only the ashes of the Satsuma camp fires, and as the *Chôya Shimbun* most expressively puts it "the birds in peaceful possession of the trees." Not only do we wonder at the skill displayed in the movement, but it is a singular proof of the perfect discipline of the men, and their devotion to their leader and his cause, that amongst his army, not one was found faithless enough to convey to the Imperialists the least hint of the intended retreat. From this movement arose the rumour that Saigo was dead, but the skill with which it was conducted is, we think, almost conclusive proof that he alone could have organized it. The Duke of Wellington said that there were only three Generals in England who could take ten thousand men out of Hyde Park without getting them into confusion. Here we have an army of considerably more than that number placed in a difficult country, vanishing mysteriously in the face of a force of more than double its strength. Certainly Saigo is not dead.

Some time since we spoke of a rumour that had reached us of dissensions in the Cabinet. We have every reason to believe that the disruption increases, and that a portion of the Administration are bitterly opposed to continuing a conflict which, in their opinion,—and it is an opinion shared by most on lookers,—is not waged on behalf of the rights of the Nation at large, but which has been brought about, and is carried on, solely for the gratification of the personal enmities and interests of two or three of the members of the Central Government. We know that Generals Kuroda and Yamagata have sent in their resignations, and that the Emperor has accorded them permission to retire from their posts. Such withdrawal at so critical a time must excite the greatest surprise. It is said that there is mutiny in the camp of the Imperialists, and that the soldiers have refused to be driven any longer like sheep to the slaughter, but it appears more probable that both Kuroda and Yamagata will no longer consent to fight for a cause that is not sustained by the unanimous opinion of the Administration. Were it otherwise; were the cause that of the Emperor and the Nation, is it reasonable to suppose that a man like Kuroda would request to be relieved from his command, urging as an excuse that certain land matters in Yezo required his superintendence? As well might Sir Colin Campbell during the Indian mutiny have resigned on the plea that he wanted to go home and look after his kitchen garden. It is rumoured that some of his colleagues have told Okubo that if he wants to continue the war he may go into the field and command the army in person. We see, however, a ray of hope that an attempt at some compromise is meditated. Saigo Yorimichi, the acting Minister of War, and brother of Saigo Takamori has gone hastily to Kiôto. At the present time neither side is in a position to dictate terms to the other, but an effort might surely be made to bring about a peaceable adjustment. No one could be more fit to be entrusted with the mission than Saigo Yorimichi. We

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

hope that this is the object of his going to Kiôto. It is thought by some that he will be requested to take the place of Kuroda, but we trust that the nation may be spared the grievous spectacle of brothers—certainly two of the ablest and most deservedly honoured men in Japan—leading armies against each other.

What has become of Ôyama the Ex-governor of Kagoshima? Why is his trial not proceeded with, and why in justice to itself does not the Government give incontrovertible proof of his treachery and disloyalty in arresting Nakahara and his choice band of colleagues? Where by the bye are these garrulous gentlemen?

The hysteric and impotent rage displayed by the *Tokio Times* towards those who feel it their duty to expose the constant *suggestio falsi* and *suppressio veri* to which it has to resort to support its mercenary and parasitical existence, affords a lamentable proof of its utter prostitution of talent and principle. It is an entire believer in the unmanly expedient of soiling others in order to make itself look clean. Its attacks on ourselves we can well afford to pass over in contemptuous silence. As for its threats as to what it or its friends may do to us, we can say with Brutus that there is no terror in them:—

> "For I am armed so strong in honesty,
> That they pass by me as the idle wind,
> Which I respect not."

We at least never seek to

> "Contaminate our fingers with base bribes,
> And sell the mighty space of our large honours
> For so much trash as may be grasped thus."

But when in every expression of opinion, in the chronicling of the simplest event, it garbles statements and falsifies facts in a base endeavour to slander Englishmen and everything English, we feel it our duty to expose its trickery, and to point out to the Japanese, to whose interests it is avowedly devoted, that it is a journal which no Englishman and no American, but those who are swayed by the same venal and mischievous motives as itself, speaks of but in terms of derision and scorn. Let its Japanese readers beware of giving ear to its toadying bepraisements, its misleading blandishments, and deliberate falsifications. The warning is perhaps scarcely needed, as we credit the Japanese with too much good sense to believe that they cannot perfectly fathom the causes of its sickening flattery of themselves and the persistent malignity shown towards England. But it is as well to let them know that such a journal and its supporters will certainly prove to be the worst friends and the most insidious enemies of the nation. Honesty of purpose and dignity of opinion seem unknown to it but by name. Actuated solely by motives of self interest, Judas-like it would sell its best friend for a few pieces of silver,—but there the comparison must cease, for unlike Judas it would never have the conscience to return the bribe and go and hang itself.

We are glad to see that the motives which have led to the present disturbance in Satsuma are rightly understood in England. In the last number received of the *Pall Mall Budget* some remarks on "The Japanese Troubles" conclude as follows.

> In any case the movement is not a rebellion. It is, as we are informed, an armed protest against certain unpopular members of the Government, this being the only existing method of effective opposition. The constitutional safety-valves which we possess are still wanting in Japan. Opposition, if serious, must be shown by fighting—not directed, indeed, against the Mikado, though against the Government forces, the object being to disturb and overthrow unpopular Ministers.

An individual signing himself "Flaneur" and writing to the *Gazette* of April the 23rd, takes exception to a little essay of ours, in which borrowing as foundation a text or two from advertisements of Holloway and Cockle, we ventured to erect thereon a superstructure so airy, we had fancied, and so transparent, that no human being could possibly be found unutterably stupid enough to suspect it of any greater density than that of—what it was and nothing more—a bubble.

We find, however, that we were mistaken, and although we cannot say that we care to address ourselves particularly to persons of the mental capacity of "Flaneur," yet we solemnly assure him, that on any future occasion in which we may feel ourselves at liberty to indulge our fancy a little, we would—were we not afraid of offending the understanding of our other readers—premonish and advise him beforehand, at the head of every article, of the light in which we intend it to be regarded. Although, even in such cases, we might despair of making him comprehend our meaning,—as his capability of understanding even the simplest language may fairly be doubted, when judged by the total inability he manifests to understand what is a little obscure—yet mindful of that charity which is not above explaining a joke to a dull brother, and regardless of the anguish involved therein, we should then have the mental satisfaction of feeling that we, at best, have left no measures unattempted to prevent "Flaneur's" doing, what, after all, may be a superfluous act on his part, namely writing himself down, a ninny.

The *Tokio Times* has several times expressed itself "totally at a loss to understand" certain remarks in our columns. We can quite believe its failing to comprehend any fair, straightforward and unbiassed statement. We shall at all times be happy to provide the *Times* with information, but it must not expect us to find it in brains.

According to the terms of the shooting licenses granted to foreigners, all pursuit of game ceased on the 15th instant, and with very few exceptions foreigners tacitly agreed, as might have been expected, to shoot no pheasants after the 28th February. It is rather too bad to find, that failing the issue by the Japanese authorities of any regulations enforcing a close season, the market has been stocked with pheasants up to date. Only a day or two ago a gentleman visiting the market counted upwards of forty pheasants exposed for sale, and any one passing down Water Street at an early hour on one day of this week, might have observed a servant, belonging to the hotel at the end of the bund, carrying a large number of pheasants to the larder of that establishment. It is a great deal too bad that the native authorities should accept a fee for licenses to shoot, and do nothing whatever towards the proper preservation of game, but it is still worse that foreigners, by purchasing game so decidedly out of season, should encourage the Japanese in what we are rightly taught to look upon as wanton destruction.

The *Hôchi Shimbun* states that since yesterday the examination of newspapers previous to publication has been done away with. The *Tokio Times* must rejoice exceedingly, as it will now be permitted to express itself more freely, and be no longer compelled to resort to the same tricks of concealment practised by the rest of its native contemporaries. We wonder that it has not, before this, appeared with blank spaces. It would have been for more dignified than trying to fill its columns with abusive twaddle, and nauseous flattery. But the leopard cannot change his spots.

From the *Hôchi Shimbun* we are enabled to glean some particulars of the life of Kawaji Toshiyoshi, the Chief Inspector of Police, whose name has been brought into such undesirable notoriety through the confessions of Nakahara and his accomplices as to the intended assassination of General Saigo. He is by birth a Satsuma man, and a member of a family of the lower class of *samurai*. He was formerly known by the name of Shônoshin. From his youngest days he showed signs of ability remarkable in a child. He was early taught Chinese literature and the art of fencing, that indispensable part of a *samurai's* education, and made rapid progress. When the Lord of Satsuma came to Yedo he was much struck by the excellence of the foreign military system of drill, which was then being introduced into the country, and on his return sent a number of young men to the capital to be therein instructed. Kawaji was selected to look after them, and on his arrival in Yedo, first heard of the different civilisations that existed in countries beyond the seas, with which he sought to make himself acquainted by the study of European books.

Just before the restoration of the Mikado he was advanced to the ranks of the higher *samurai*, and shortly after was placed in command of a body of troops composed entirely of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the lower *samurai*, all of whom were Satsuma men. He was in many engagements, of which the most notable took place at Niigata, Nagaoka and Aidzu. In the second year of Meiji he was appointed to the office of Superintendent of Arms in the Satsuma *Han*, and two years later was promoted to the office of *Daisakan* (Secretary of the Tôkiô *Fu*). The following year he was made Chief Superintendent of Police, and in that capacity travelled throughout Europe, examining into the organisations of police in the various countries. On his return to Japan he adopted certain of the ideas learned abroad in the formation of the native police force, and continues to hold the position of Chief Superintendent, with an addition to his rank, made in March last, of Lieutenant General in the Army.

The *Hôchi Shimbun* states that Shinowara, one of Saigo's principal Generals, is not dead, but at the head of his command. A little time since his funeral, it was reported, took place at Kagoshima. Truly this world seems terribly given to lying.

The letter on the currency from our correspondent "W." which will be found in another column, brings out in still stronger relief the disadvantages under which the foreign commerce of this country, and indeed of the East generally, necessarily labours from having no better monetary standard than the Mexican dollar. Nothing that he advances, however, tends in the least to weaken the position to the establishment of which we are devoting so liberal an allowance of space in our leading columns, namely, that the question of monetary reform is one that primarily concerns the Japanese Government, with whom alone rests the power of effecting an amelioration of the present highly unsatisfactory state of affairs. Once the native currency is placed on a convertible basis the question will have entered into an entirely new phase. Until that is done no such palliative as calling in the *yen* to supplement the dollar, even if possible, would be either effectual or permanent.

From the "Japan Mail Daily Advertiser."

Monday, 23rd.

The Gaiety Theatre was fairly well filled on Saturday night when Professor Vanek gave his first representation of the magician's art. Although there was nothing new in the tricks done, they were exceedingly well received on account of the extremely clever neatness and finish which characterized all that the Professor did. Any future entertainments given by this renowned prestidigitateur deserve to be well attended, though we trust the Professor will then think fit to give as more of his magic art and less of the wonderful agioscope.

From the *Chôya Shimbun.*

A telegram despatched from Kumamoto at 6 a.m. on the 20th instant announces that the Imperial forces continue to advance. Mifune was taken by the police. The garrison troops have advanced as far as Shimaboba but whether they have been victorious or not is yet unknown. The division under Oyama had taken possession of Hotokubo, Shinnanbu, and Shimonambu, and that under Miura had taken Otsukuji. No reports have been received from the other commands. The insurgents are vigorously defending themselves, as before.

A telegram which reached Tôkiô at 4.30 p.m. on the 21st instant reports that the Imperialists marched from Katashida at dawn of the 20th instant, and after overcoming the insurgents at several places entered Mifune at about noon. The Imperialists have encamped in favourable positions at Marumata, Jidaya, and Makumisaka. The insurgents were completely beaten on this occasion, many were killed and a large quantity of munitions of war was captured.

The loss on the Imperial side was seven killed and thirty-seven wounded.

From the *Mainichi Shimbun.*

A telegram which left Osaka at 0.20 p.m. on the 22nd announces that on the 21st instant the first and second divisions under Generals Nodzu and Miyoshi attacked Koyama by night, and took possession of it. The rebels who held the position have fled to Yabe.

The following was telegrahped from Kumamoto at 2.15 p.m. on the 22nd instant :—

The Kumamoto garrison troops attacked the rebels at Takenoya. The fighting lasted throughout the night, and by morning the rebels were put to flight.

Tuesday, 24th.

This morning's *Mainichi Shimbun* contains telegraphic news from Nagasaki, dated the 22nd instant, announcing continued successes on the part of the Imperialists, who, under the command of Yamada, Kawaji and Takashima, attacked the rebels in their new entrenchments near Mifune, Iidayama and Koyama. In all these engagements the rebels were worsted and put to flight.

From the *Nichi Nichi Shimbun.*

A telegram was received at the Department of the Imperial Household on the 21st instant, to the effect that the Empress Dowager would leave Kiôto for the capital about the middle of next month.

Kuroda having marched his troops into Kumamoto has requested the Government to permit him to resign his post of adviser to the Commander-in-Chief of the Imperial forces, and to return to his duties in the Kaitakushi Department. This request was granted on the 22nd instant.

Since the relief of Kumamoto, the Imperial forces have occupied the country from Higashi-waifu to Yashiro a distance of about twenty *ri*, where they are now entrenched against the rebels.

From the *Hôchi Shimbun.*

Ôkubo, Kido, and Itô were hitherto staying at Osaka, but have now returned to Kiôto.

The poor in the neighbourhood of the seat of war, on those days when no fighting takes place, go out and dig up cannon balls, which they sell to the rebels at about seven *yen* for one *kuamme* (about 8 lbs).

Though Saigo is a rebel his abilities in warfare must be acknowledged. When, on the relief of the Kumamoto castle, he retreated he left no dead, wounded, arms or amunition on the field, but took everything away with him,

From he *Akébono Shimbun.*

A certain rebel named Katsurayemon in four days collected a force of three thousand men at Kagoshima and sent them to the seat of war. The wounded are all sent to Kagoshima and as soon as they get well they return in haste to the field.

From the *Chôya Shimbun.*

The *Sakai Shimbun* states that the sons of Shimadzu Saburo went to Kiôto for the purpose of explaining that the members of the house of Shimadzu had tried by all possible means to prevent the Satsuma *samurai* from taking up arms against the Imperial authority, but that notwithstanding all the influence brought to bear their advice was not heeded.

Two men-of-war, the *Riojo Kan* and the *Kasuga Kan*, have been despatched to the coast of Satsuma. One of them will be stationed at Sadowara, while the other will cruise in the neighbourhood of Sakura-shima.

From the *Mainichi Shimbun.*

Lieut General Tani, who was for about fifty days beseiged in Kumamoto, will, accompanied by General Yamagata, proceed to Kiôto for the purpose of explaining his views as to the best way of prosecuting the war.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Wednesday, 25th.

As our contemporaries reported yesterday evening, the P. M. Company's steamer *City of Peking* ran on shore at Rubicon Point yesterday morning while on her way down the bay, the accident being attributable to the dense fog which prevailed at the time. The *Massilia*, with cargo boats in tow, left for the stranded vessel

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

at 2 o'clock, and the U. S. S. *Alert* at 4 p.m., having made all preparations for attempting to tow the steamer off shore if necessary. We are glad, however, to say, that the fears that were freely expressed that the steamer had sustained serious damage, are entirely unfounded. After taking out about 800 tons of cargo, and lightening her water tanks of about 400 tons of water, she floated off about half-past three this morning, requiring no aid but t hat of her own screw. The *Massilia* was anchored about two cables' length from the *City of Peking*, waiting to take a hawser on board for the purpose of towing the latter off, as requested by Captain Tanner, and the P. & O. tug was actually alongside the *Peking* ready to pass the hawser from one vessel to the other, when the engines of the *City of Peking* were turned astern, and coming off shore suddenly, she ran stern first right into the *Massilia*, knocking down the deck houses on the port side before the paddle-box, breaking an iron support of the sponson, and smashing a lot of lamps, etc., in the lamp-room. Mr. William MacDonald, Lloyd's Surveyor, states that he has thoroughly examined the vessel and that he cannot detect the slightest sign of strain or damage of any kind. A diver will, however, be employed to examine her keel before she resumes her voyage. She is now lying just off the entrance to Yokoska where she will reload her cargo, and will probably proceed on her way to Hongkong this afternoon. It is both by good fortune and good management that she went on shore where she did. When in the dense fog Captain Tanner sighted the shore, seeing that stranding was inevitable, he ran her on to the sandy beach at the small village of Isemachi, about half a mile this side of Kanonsaki. A couple of ship's lengths either way would have put her on a dangerous reef of rocks, where she must have sustained most serious damage. We cannot but express our surprise, however, that she should have left harbour in such a thick fog, and be allowed proceed at a rate of speed which took her from the light-ship to where the struck,—a distance of fourteen miles—in fifty-two minutes. Her actual speed at the moment of striking was about four and a half knots.

On hearing of the accident, M. Conil, the Agent of the M.M. Company, immediately offered the services of the *Tibre* to the P. M. S. Co.'s Agent, Mr. Foster, and Mr. MacRitchie, on behalf of the Light-house Department, was no less prompt in placing the *Meiji Maru* at the disposal of the Company. The U. S. S. *Tennessee*, with Admiral Reynolds on board, proceeded to the scene of the disaster early this morning, but as, fortunately, her assistance was not required, she returned again to the anchorage about half-past six o'clock.

The s.s. *Viking* left this morning for Shinagawa to load for Amoy.

We would recommend to our readers the perusal of the first part of the Report of the China Merchants' S. N. Co., which we publish to-day, as being a most remarkable production. The conclusion of it will appear to-morrow.

The following advertisement, which we take from a San Francisco paper, is worthy of the famous George Robins, and shows that what is usually a matter of fact announcement may partake largely of the romantic :—

"A RURAL HOME IN OAKLAND.—On Fifth Street, between Market and Myrtle, three minutes' walk from the Market Street Station. A comfortable house of five hard-finished rooms and a good cellar, with lot 25 x 100 feet, comprising a garden of native and exotic plants, umbrageous trees, whereon the feathered songsters of the wood alight and carol forth their songs of praise to the giver of all good gifts. A perennial fountain sends a charming spray of liquid pearls, beautifying the scene into enchanting loveliness, and all this for the pitiful sum of $1,800, one-third of which may remain on mortgage for two years. Title perfect. Apply to * * * Real Estate Agent, First Street, San Francisco."

From the *Akébono Shimbun*.

Major General Saigo, now Acting Minister of War, intends to leave for Kiôto to-day (the 24th) by the *Massilia*.

From the *Chôya Shimbun*.

Two hundred and six policemen enlisted from the *samurai* of Takata, in Niigatâ *ken*, arrived at the capital on the 22nd instant, and again on the 23rd instant another force of one hundred and fifteen from Niigata, and thirty-five from Shidzuoka *ken*, arrived at Tôkiô. On the 26th instant about twenty-five more are expected from Niigata.

Large numbers of wounded continue to arrive here from the South. The *Sumida-maru* brought four hundred on the 18th and the *Kanagawa-maru* two hundred and fifty on the 19th, both lots being from Nagasaki. From these arrivals, however, nothing can be gathered as to recent casualties, as most of these sufferers are convalescents.—*Hiogo News.*

Thursday, 26th.

Professor Vanek gave a second representation of his mystic art last night at the Gaiety Theatre, which we were sorry to observe was not so well filled as the performance itself deserved. The decapitation feat was the great event of the evening, and to many people present seemed painfully real. But why, O shade of Handel! should the artist who presides at the piano be allowed to perform the "Dead March in Saul" when this trick is being done? The varied resources of the Professor will no doubt enable him to give an entire change of programme at his next entertainment, but we hope to see the decapitation feat repeated.

Having completed her reloading, the *City of Peking* proceeded on her voyage to Hongkong at half-past four yesterday afternoon.

The following was circulated yesterday by Wm. McDonald, Esq., Lloyds' Surveyor at this port.

Copy.

Being informed that the P. M. S.S. *City of Peking* was stranded on the mainland inside and half a mile from Cape Kannonzaki in this gulf, I yesterday came on board and found her on the beach, bows on, having got on the shore during the fog. She was on hard sand and took the ground evenly fore and aft. I remained on board during the night, and after they had lightened her about 1,200 tons in cargo and water, succeeded in getting her off at half-past three this a.m. I sounded the compartments fore and aft half an hour after she floated, and found she was making no water, and from the position in which she was on the ground, together with the water being perfectly smooth, I am of opinion she has received no damage to her hull and consider her to be a *First Class Risk* to prosecute her voyage.

(Signed) WM. McDONALD,
Surveyor for Local Offices, and Government Surveyor for British Shipping.

On board *City of Peking*, off Yokosuka,
Yedo Bay, April 25th, 1877.

According to the *Mainichi Shimbun* no less than 18,652 stand of arms supplied to the Imperial troops have been rendered useless through some cause or another since the commencement of the war. Of these, 12,500 stand have burst, principally on account of the raw recruits which form the bulk of the army using them, cramming two or more charges into their rifles during the excitiment of an engagement. The efficiency of the troops may be judged from this statement.

From the *Akébono Shimbun*.

The amount spent by the Okurasho upon the present Satsuma affair up to the middle of this month was 9,869,781 *yen*.

From the *Chôya Shimbun*.

Some fifty *samurai* from Fukushima *ken* arrived at Tôkiô on the 24th instant, to be enrolled in the police force. Five hundred more recruits are expected to arrive from Akita and Miyé *ken* in a day or two.

From the *Mainichi Shimbun*.

The following Notification was issued at the Imperial headquarters at Yashiro, at the beginning of this month.

"Those who were compelled to join the rebels against their will, on satisfactory proof of the same in examination before the authorities, will be acquitted by the government."

From the *Hôchi Shimbun*.

The insurgents are now stationed about one or two *ri* from Kumamoto castle, and are holding consultation as to the best mode of attacking the Imperialists.

The Imperialists in the neighbourhood of Yashiro and Udo number about 7,000, while the insurgent force is only about 1,700.

As the *Kucho* and *Kocho* of Kagoshima *ken* are members of the School Party, they are now individually enlisting many young men for the rebel army, pretending that they are thereby following out the orders of the *Kencho*. The recruits so obtained are at once sent to Hitoyoshi, in Higo.

From the *Nichi Nichi Shimbun*.

A number of Osaka fencers, calling themselves the *Gekken-tai*, who were granted permission to go to the seat of war, and there fight for the Imperial cause, left their homes not many days ago to proceed to Kobe, but before they had arrived at that port took too much *saké* and behaved themselves very shamefully on the road. They were in consequence arrested, and instead of going to the war they were bound with ropes and consigned to prison.

The Bureau of Police at Tôkiô is about to send about five thousand suits of clothes to the South for the police force in the field.

Original from UNIVERSITY OF CALIFORNIA

Friday, 27*th*.

Telegrams have been received which no longer leave any doubt of war having commenced between Turkey and Russia.

We were in error in stating that the report on the *City of Peking* was circulated by Mr. Wm. McDonald, Lloyd's Surveyor, as will be seen by his letter which we publish elsewhere. The report was handed by him to the P. M. S. S. Co. as usual, and was circulated by the Company for the information of the public, though there was nothing on the circular to indicate by whom it was issued.

We may, according to native accounts, look for the arrival of the first of the New Season's Tea by steamer from Shidzuoka about the 2nd proximo.

Mr. Henry Thorburn, Acting Manager of the Chartered Bank at Hongkong, died suddenly from an attack of appoplexy on the 19th instant.

The O. S. S. Co.'s steamer *Deucalion* was to leave Singapore for Hongkong on the 20th instant. The P. & O. steamer *Zambesi* left Singapore on the 17th instant, Mr. Pope Henessey, the new Governor of Hongkong, being a passenger. The steamer *Glenecagles* left Singapore for Hongkong on the 15th instant.

From the *Hôchi Shimbun*.

The rebel forces were on the 14th instant drawn up in order for a retreat from Kumamoto, there being then 8,000 of them stationed at Uyeki, 3,000 at Kawajiri, and 2,000 round Kumamoto. Though battle was offered by the Imperialists the rebels did not seem inclined to accept it, and it is thought they are maturing plans of their own.

Saigo is said to be at Koyama and actively engaged in giving orders to his men posted in different positions in that neighbourhood.

From the *Akébono Shimbun*.

The number of wounded at the army hospital at Osaka is 2,810. More than 100,000 eggs are monthly consumed there.

From the *Chôga Shimbun*.

A fire broke out at Yotsuya, Tansumachi, Tôkiô, at 10 p.m. on the 24th instant which destroyed sixty-five houses.

The *Shario Maru* of the Mitsu Bishi Company is to be despatched for the south to-day with a cargo of arms, ammunition, and thirty horses.

From the *Nichi Nichi Shimbun*.

Major General Kuroda has embarked on the *Genkai Maru* at Nagasaki, which left that port for Kobe at 3 p.m. on the 26th instant.

Her Majesty the Empress Dowager will leave Kiôto on the 7th of next month for the capital, travelling overland.

From the *Mainichi Shimbun*.

A fire broke out at Banchô, Tôkiô, at 11.40 p.m. on the 24th instant and destroyed twenty-five houses.

A fire broke out at 2.10 a.m. on the 26th instant at Tachibana-chô in Riogoku, Tôkiô, and spread as far as Wakamatsu-chô, destroying in all two hundred houses.

A telegram which left Kumamoto at 3.50 p.m. on the 25th instant announces that Admiral Kawamura and Lieut. Generals Ôyama and Takashima, with a detachment of artillery and two battalions of infantry, are to embark for Kagoshima shortly.

Saturday, 28*th*.

From the *Mainichi Shimbun*.

It has been decided that H. M. the Mikado will return in a few days to the capital, travelling by sea. His Majesty will land at the *Chinjifu* (Naval Station) Hatoba, at Yokohama. The necessary preparation for H. M.'s arrival will commence to-day.

A telegram which was despatched from Kiôto at 10.05 a.m. on the 27th instant announces that the insurgents who were posted at Yabe have retreated to Hitoyoshi and to Hiuga. Shimadzu Saburo has been summoned to Kiôto, for reasons as yet unknown.

From the *Nichi Nichi Shimbun*.

The name of the son of Saigo who was reported to have been killed was Kikutarô, and was born at the time that his father was banished to Ôshima. He became a Government student under the Kaitakushi and was sent to Europe to complete his education, returning to Japan some two or three years ago.

It is reported that Saigo has established his headquarters at Takachiwo, in the province of Hiuga.

From the *Chôya Shimbun*.

Mr. Nakamura Chutarô, the editor of the *Kinji Hiôron*, was summoned to the *Saibansho* yesterday to be examined about an article published in No. 42 of the issue of that paper, to the effect that the *samurai* of Owari were specially allowed by the Government to wear swords. The action against him has been instituted by the Governor of Aichi *ken* (Owari).

The number of killed and wounded among the troops who were besieged in Kumamoto is over 450. This is accounted for by the frequent sorties they made.

A new army hospital, covering 800 *tsubos*, has been erected within the castle at Osaka, and there are now 3,200 wounded in it.

From the *Hôchi Shimbun*.

The *Nisshin Kan* is now at Kagoshima. The *Todai Maru* and *Takawo Maru* are ordered to proceed to the same place.

On the 25th instant five men-of-war, having on board four battalions of troops and seven hundred policemen, proceeded from Nagasaki to Kagoshima.

Mr. Pope Hennessy was on Saturday presented with the freedom of the city of Cork by the mayor and corporation. In course of his reply Mr. Hennessy said:—I am enabled now for the first time since I have returned to this country to refer to what has passed in Baradoes, and to declare that in all my experience I was never in a community where there was such deliberate oppression of the masses as in the community of Barbadoes, and I did feel in the struggle in which I was engaged that it was my duty to expoes to the public opinion of England, and Scotland the real state of the case. I felt in that struggle and in the performance of that duty I would be supported by every man of right feelings at home, and especially that I would be supported by my fellow-citizens. It will be gratifying to you, no doubt, to know that the exertions of your fellow-townsman in Barbadoes have been productive of good result, and that the expose that has been made of the state of things in that colony has led to a fixed determination, not on the part of her Majesty's Government alone, but of all the leading men there, and all the men of weight in the House of Commons, that the urgently needed reforms must be carried out in that distant colony.—*Pall Mall Gazette*.

The Peninsular and Oriental Company has contracted with Messrs. Caird and Co., of Greenock, for the construction of a steamer of 4,200 tons register, with engines of 700-horse power nominal, to carry over 200 passengers and a large cargo.

POPULAR GOVERNMENT.

IN a recent article in one of the native papers a translation of which we published last week under the heading "A Warning from Past Events"—the writer urged upon the people the necessity of reforming the administration, rectifying certain abuses in the selection of officials, and having the power established in the central Government under the monarchical form. This article is only one, and not by any means the most noticeable, of many that have lately appeared in the columns of the native press, pointing out the urgency of immediate reform, and is one of the most unmistakeable signs that the spirit of inquiry is awakening among the people. Their cry for a system of popular government, for some form of administration that, instead of the gratification of personal ambitions and individual enmities, shall tend to the promotion of the general weal, is becoming louder and more vehement, and it would be well for the rulers to give ear thereto.

A native writer recently dared to say, "It is evidently useless for us to think that anything can be accomplished by depending upon the Government. If we want to do away with the evils of centralization, it must be done by ourselves, alone." Bold words these to publish at the present time, in the face of an angry Government, but words that—as far as we know—uphold the very motive which has induced Saigo to assume his present defiant position. He complains—and it cannot but be admitted that there is justice in his accusation,—that the present administration has been guilty of such acts of tyranny and faithlessness that the condition of the community required the opposition of power to power; the restraining of one class of interests by the counteraction of other, and he asserts that by such considerations alone has he been moved to his present effort. His banner has been inscribed "New Government," and thus amid the clamour for reform the question naturally arises as to what mode of Government is best suited for the welfare of the nation.

A political moralist would, under the most favourable circumstances, find great difficulty in describing absolutely the form of Government preferable to all others, which must depend upon the existing condition of a community. In Japan the task is rendered doubly difficult.

Some five years ago an article in our columns concluded with these words.

"The more we see of this country, the more we are made to feel that we can apply no European guage to it. We may take our stand on ultimate irresolvable facts having our common nature for their basis, but when we begin to generalise and predict we are generally wrong, and until we know much more than we now do about the people, their history, their customs, instincts, and ordinary modes of thought, we are perhaps wiser in concluding that their Government may safely do that which it dares to do, and that it is not endangering its own existence, still less the stability of the Empire, by enacting measures, the effect of which upon the minds of the people we are not in a position to estimate."

With regard to any actual or definite knowledge of the workings of the Japanese mind, we seem almost as far off to day as we were when these words were written. The actual motives that sway the Government and those who from time to time array themselves against it are impenetrable even by those who are in the best position for observing them. At times it has seemed as though a clue were discovered, but almost immediately it is lost again in a labyrinth of mystery and contradiction. But it can no longer be maintained that the Government may do with safety whatever it dares to do. It is plain from past and present events that it has dared too much, and that its own existence and the well being of the nation have been so far grievously imperilled by a number of arbitrary and ill considered measures, that a change of policy must be the unavoidable result.

While to assert that a monarchical form of Government would be the best for Japan, or indeed to specify any form for adoption, is to assume a position that we do not feel at all warranted in taking up, it may not be out of place to express a few plain views on the general principles which should direct a people in their choice, which may not be devoid of interest to our Japanese readers.

The form of Government then, like the administration of power should be conformable to the public wish. A nation is likely to prefer that form which accords best with what may be called its national genius, and thus a form that may not be actually the best in an abstract sense, or even desirable for other nations, may in reality be the best adapted to their peculiar wants.

The nature of a Government is the chief factor in forming this national genius. A tyrannic, mysterious, and treacherous Government will reflect its vices downward through the nation, and its subjects will become servile, cunning and unpatriotic; but as a famous writer has said, "present to a people a constitution that shall put them into a simple and intelligible method of directing their own affairs, adjudging their contests among themselves and cherishing in their bosoms a manly sense of dignity, equality, and independence, and you need not doubt that prosperity and virtue will be the result."

The native writer, above referred to complains rightly of the officials of the administration being appointed through influence, and not according to tested merit. To a Government which has taken up the reins of power in a country where discontent, arising from sweeping changes, has been and is so wide spread, the power to bestow offices is indispensably necessary. Those who possess patronage and they who are enriched and elevated by its bestowal, oppose themselves to those who would introduce changes that would diminish their wealth or imperil their position, and support the administration which exercised that patronage on their behalf. Until rulers are influenced by purer motions, and the Government becomes more impersonal it is useless hope that the abuses of patronage will cease.

Whatever be the from of Government, one quality above every other is desirable, and essential to practical excellence—that it should lend itself readily to peaceable change. It is the interests which so many have in keeping up the present state of things, which make them struggle so hard against any alteration, and it is this very struggle to keep the position of personal influence, regardless of the wishes of the country, which induces such necessary evils as the armed protests of Eto Shimpei, Mayebara and Saigo. Remove such personal interests, take away the provocations that induce such calamities, and the desired improvement will be gradually and peacefully wrought out. Any legislator who has really at heart the good of his country, and perceives that certain changes are necessary for its well-being, would willingly concur in any reasonable reform that the voice of the nation might call for. Nay! he should go further, for seeing its urgency he should himself inaugurate the wish for the necessary change. Unfortunately, the present Government has preferred to attempt to strangle all efforts made to extend a knowledge of political truth, and it has been its interest to maintain things as they are, and to silence as far as possible the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

public voice. Small wonder then if it make itself heard, not in the gentle but earnest tone of respectful representation, but in thunder of connon, and the in cries of slaughtered thousands.

The science of Government, like other sciences, requires a constant accession of light. The mind of the people is unfolding, slowly it is true, but the bud that shall blossom and yield abundant fruit is visible. Those then who are earnestly seeking to accomodate present institutions to the new condition of things, and to bring about improvements which the growing requirements of the nation demands, should remember that any form of Government adopted should afford sufficient facility for further reform by peaceable and virtuous means. To regret improvement is absurd; to render ourselves incapable of adopting it is absurd also. It is surely no unreasonable sacrifice of vanity to admit that those who succeed us may be better judges of what is good for themselves than we can be for them. To sum up the general rule by which a form of governmemt should be regulated "Accommodate the form to the opinion of the community; whatever that community may prefer. Adopt institutions such as will facilitate the peaceable admission of alteration as greater light and knowledge become diffused."

THE CRISIS IN THE FRENCH SILK MANUFACTURING TRADE.

THE following is a translation of the Report forwarded at the beginning of March last by the Lyons Chamber of Commerce to the Minister for Agriculture and Commerce. This important document throws much light on the crisis which so deeply affects the Japan silk trade.

"The unusually strong excitement which has been got up in reference to the stoppage from which our working classes are now suffering, the polemics, the public subscriptions, to which it has given rise, make it incumbent upon us who are the nearest witnesses of this crisis, whose duty it is to study its causes and fathom its effects, to bring forward our own evidence in the present inquiry and submit to you our views on the subject.

The origin of this crisis has, we believe, to be sought neither in the competition offered by Conventual establishments, as none of them since the year 1848 keeps one single loom, nor in the reduction of salaries, since salaries as regulated in 1868 by a common accord between employers and workmen have been subjected to no change whatever. Nor is it to be imputed to the competition for work between country and town. The emigration of the weaving looms to the rural districts commenced nearly twenty five years ago, and gradually increased because town labor it too costly for most of the plain fabrics which now form the bulk of the Lyonese production. Let the manufacturing of those cheap articles in the country cease, it is not the city of Lyons that will inherit it, it is Switzerland and Germany.

Out of 100,000 or 120,000 looms employed by the Lyons' manufacturing trade, 28,000 or 30,000 only are to be found within the precincts of the town. To demand that the conditions under which weaving is carried on in the rural districts be altered and and brought on a level with town rates is to demand a sheer impossibility and shake to its foundations the most substantial part of our silk industry.

The true cause of the present crisis lies in an excess of production which coincided with a decrease in consumption.

For the last five years the Lyons manufacturers have been working unremittingly. More fortunate than their competitors, they have steered clear of those commercial crises which alternately afflicted the United States, Germany and Austria, and they have the less hesitated in displaying their full power of action as large supplies of cheap raw material were lying close at hand. That raw material for which they had sometimes to pay so dear was, during the last few years, offered to them at steadily declining rates. In fact, its value towards the end of 1875 fell as low as it did in the year 1848.

But it is not, in the long run, without serious risks that an industry thus forces its production. Consumption was meanwhile moving in an entirely different direction. Turning its back against silks it seemed disposed, for a time at least, to grant its exclusive patronage to Woollens, and the disproportion between production and consumption gradually became so great that in the spring of 1876 a crisis in the silk trade was almost unavoidable.

A most unexpected fact then occured which, though it brought no change in that condition of things, created a powerful diversion. We mean the failure of the European silk crop. Doubted of at first, it soon became an acknowledged fact that the deficiency in the supply of cocoons was really a deep one. An unprecedented rise then took place with the violence and suddenness of an explosion. In the space of three months prices advanced 80 to 100 per cent for silk, 30 to 40 per cent for silk goods. The trade, in all its degrees from the silk importer down to the retail dealer was dragged by the same whirlwind of speculation. As, however there was no material alteration in the general circumstances which have been described above, the illusion was short lived. After three or four months of fever heat manufacturers had to acknowledge that consumption had remained indifferent amid so much excitement; rumours of war intensified their misgivings, and the winter season opened under the most unfavorable auspices. Considering the attitude of consumers, and the price of raw silk which, though it had receded since November stood nevertheless much higher than it was before the great rise, manufacturers took the only course which imperative circumstances left open before them. They slackened speed. They gradually reduced the number of their looms, first in town where labor is more expensive, and then in the country. The crisis thus commenced almost unperceived, slowly increasing in October, November and December till it reached its climax at the end of January.

The cry of alarm which was then so untimely raised, the subscriptions which were opened with so much display, the excitement which followed aggravated the crisis by exposing it to the broad day-light and proclaiming it all over the world. Greater caution, more discretion was required in such a delicate conjuncture and example ought to have been taken of other countries which, smarting under the same misfortune, have refrained from such manifestations. Towards the end of January orders had been received from the English market and important transactions were in progress. This was a symptom which however light had been welcomed here as showing some improvement. It has altogether disappeared; those orders have been withdrawn; all buyers of silk and silk goods wait in hope that increased misery in our manufacturing trade will bring them more profit.

The stoppage, as far as we can ascertain, now affects nearly one half of the looms in town. Compelled to reduce production, manufacturers proceed of course with the greatest caution. They begin by the workshops which contain several looms so as not to deprive a whole family of its livelihood. The same course is followed in the dyeing shops when hours first and then days of work are gradually reduced. The effects of the crisis are nevertheles highly painful. The returns of the saving Banks and "Sociétés de secours mutuel" do not as yet reveal any noticeable change in the situation of the working classes; they bear witness to their orderly habits which persevere through the most severe ordeals.

Our manufacturers, our working classes, Sir, are deeply moved by the feeling of sympathy of which they are the object. We hope that the zeal of public benevolence will not slacken and may even increase if, which God forbid! the crisis were to last much longer."

Since the above was written war has been declared by Russia against Turkey, a war the duration, extent and ultimate effects of which no one can foresee. Of the silk crops now in progress the result cannot be known before the end of July. Therefore on two of the facts which must have the greatest influence on the future course of prices it would be idle to make any comment at present.

It appears that the immediate cause of the withdrawal of orders for silk goods which is mentioned in the above report was a speech made at the French tribune by one of the Deputies for Lyons. In so far as that speech and other manifestations checked an avowedly very slight improvement in the demand, we can understand the bitter complaint of which they are the object. But the same report most emphatically declares that the root of the evil is the abiding neglect in which silk is left by consumers, which is quite true. It seems therefore that the more glaring is the light thrown upon the misery of the silk trade, the more loudly it is proclaimed before the world, the sooner and the more efficiently will the only one simple, obvious remedy be applied to it. Every one knows when and why the wool mania originated in France. Now we have no doubt that, catching the new note with their usual quick understanding, French women will know how to reconcile fashion with charity and patriotism. In the papers just received we notice signs of an incipient crusade on behalf of silk. We notice at the same time that manufacturers are warned not to defeat it by their own fault, and once for all to bring down that stupid practice of loading silk in the dye which has done so much to disgust consumers, and bring their industry into disrepute. As war breeds poverty, the present is perhaps not an opportune time for the restoration of silk; but fashion is not amenable to common laws, and we trust that once more patronised by her in France, silks will soon become fashionable everywhere else.

THE SPECIFIC INDUCTIVE CAPACITY OF GASES.

By John Perry and W. E. Ayrton.

Professors in the Imperial College of Engineering, Tôkiô, Japan.

Read at an Extraordinary Meeting of the Asiatic Society of Japan, April 18th, 1877.

It was formerly supposed that because a gas offered less and less resistance to the passage of an electric spark as its density was diminished, therefore a very rare gas would offer an extremely small resistance. The invention of the Sprengel Pump enabled the fallacy of this conclusion to be apparently proved, and it is now well known that no visible spark can be sent between two platinum points very near together in a perfect Sprengel vacuum even by means of a powerful Ruhmkorff coil.

As regards the specific inductive capacity of gases, the only series of experiments with which we are acquainted is that of Faraday. The means in his power, however, of obtaining a perfect vacuum, and of measuring induction, were far inferior to those which now exist, and we must not conclude that the result obtained by him "the specific inductive capacity of all gases at all pressures is constant" either expresses an exact physical law or forms any criterion of what is to be expected in a perfect Sprengel vacuum. The theoretical conclusion, therefore, deduced in our paper on "The Viscosity of Dielectrics," that since a perfect Sprengel vacuum has the greatest known Resistance it may be found to have the smallest Specific Inductive Capacity it is very desirable to test carefully, although this conclusion, at first sight, appears to be in direct opposition to the results obtained by so careful an experimental philosopher as Faraday.

That no visible spark can be sent by a powerful Ruhmkorff coil between two platinum points very near together in a Sprengel vacuum might be due to the vacuous space offering *not* an extremely *great* resistance but instead only a very *small* resistance; for it is well known that no optical or heating effect is produced by an induction coil unless there is a decided break in the continuity of the secondary circuit. To examine this a hermetically sealed Alvergniat's tube was selected, in which the platinum points were about half a millimetre apart and between which no spark was producible by a Ruhmkorff coil, which through ordinary air gave sparks 8 centimetres long. The outside of the glass was chemically cleaned and the insulation of the tube tested by means of an electrometer. The platinum wires terminating outside in little brass rings, the tube was suspended by one of these rings S (Figure 1) from the insulated electrode of a delicate quadrant electrometer. S^1 being to earth, and a charge being given to S, it was found that the insulation of the space P P^1 was very great; hence it is the extremely great and not the extremely small resistance of the vacuous space which prevents the production of a spark.

To test if there was any induction between P and P^1 (this is always taken for granted, but we have thought it well to make an actual test) the tube S S^1 (Figure 1) was left suspended by S to the insulated electrode of the electrometer, the whole being completely surrounded by the metal case A B C D G H connected to earth, and with the other electrode of the electrometer. A stiff wire W from P^1 S^1 projects through a hole in the case, without touching the case, so that by means of W any charge may be given to P^1. To prevent induction outside the tube between the brass caps S, S^1 there is a sheet of metal A B C D which acts as a screen dividing the metal case into two compartments, the hole E F, in this screen, being very little larger than the tube. The platinum wire P, the cap S, and the electrode were, therefore, shielded from all induction except through the vacuum from the platinum wire P^1. A leaden cup L L contained strong sulphuric acid to keep the space under cover quite dry so as to prevent surface conduction along the tube between the brass caps. On charging the wire W there was a motion of the spot of light which returned nearly to zero again on discharging the wire. This showed that there was induction through the mass of the glass or else through the vacuum. As, however, with this apparatus we could not determine how much was due to each of these causes we proceeded to make the apparatus shown in figure 2. Although devised for experiments on the Sprengel vacuum, we have only up to the present time used it to measure the specific inductive capacities of gases at different pressures. The apparatus about to be described has, during our investigation, undergone a variety of modifications; we shall, however, describe it as it is now, and indicate some of the changes experience has taught us to make. A B C D, E F G H (Figure 2) is a brass box $22\frac{1}{2} \times 19\frac{1}{2} \times 6$ centimetres, composed of brass plates $3\frac{1}{2}$ millimetres thick and strengthened with ribs. Eleven brass plates 18 centimetres square are fixed and kept at 3 millimetres apart, as shown in the figure, by means of ebonite racks, shown in section in I J, fitted into the two ends of the box. At the bottom of the box the plates rest on a strip of ebonite K L, which, as well as the racks, was chemically cleaned and paraffined before being fitted into the box. The plates 1, 3, 5, 7, 9, 11 are all connected with each other and with the brass box by soldered copper wires; 2, 4, 6, 8, 10 are connected with each other and with a long platinum wire W W by soldered copper wires. These two series of plates form our condenser. The platinum wire passes through a glass tube $35\frac{1}{2}$ centimetres long, chemically cleaned and paraffined, and very carefully cemented into a brass tube which forms a part of the top of the brass box. At T^1 this glass tube is hermetically sealed and it is at this point only that the platinum wire touches the tube. M N is a metal cap containing cap cement, so as to render the joint between the brass and the glass quite air tight. P Q is another metal cap containing cap cement, to prevent motion of the top of the platinum wire breaking the hermetically sealed joint in the glass tube. R R R is an iron tube soldered quite tight into the brass box, and open at its lower end for connection with the Sprengel or other air-pump. The special form given to this iron tube was to prevent any irregularity in the working of the Sprengel pump sending the mercury into the condenser, an accident which occurred in the early part of the experiments, when the iron tube had a different shape, and which necessitated the taking to pieces of the brass box to remove the mercury.

The three conditions to be fulfilled in the construction of this apparatus were:—

1.—The plates 2, 4, 6, 8, 10 should be perfectly insulated from the plates 1, 3, 5, 7, 11 and from the box.

2.—The condenser should be quite air tight.

3.—The relative positions of the plates should not be in the least altered by any yielding of the box, etc., on exhausting the air.

Simple as it might at first sight appear to be to satisfy these three conditions, it has nevertheless taken us several months to fulfil them all simultaneously. Sometimes (possibly from want of care on the part of the workmen) the final soldering up of the box spoilt the insulation of the ebonite inside, at other times the insulation would be good, but a small air leakage would be produced by the sight distortion of the box produced on exhausting the air; various contrivances tried for leading out the platinum wire by means of a tightly fitting ebonite collar quite failed; after many trials, conditions (1) and (2) were satisfied when it was found that condition (3) was not, for in order to get a condenser with as large a capacity as possible it was the set of plates 1, 3, 5, 7, 11 that were originally the insulated set and connected with the platinum wire W W W, while 2, 4, 6, 8, 10 were connected with the brass box, the box itself thus forming a part of the condenser; but it was found that after many trials the sides of the box approached the plates 1 and 11 a very little on exhaustion, thus increasing the capacity of the arrangement. However, by connecting 1 and 11 with the brass box as described above and making 2, 4, 6, 8, 10 the insulated series, this difficulty was removed.

Passing over one or two unfortunate fractures of the long glass tube, we ultimately succeeded in getting the arrangement quite satisfactory, at any rate for the best vacuums that could be obtained with a large continuous-acting Bianchi's air-pump (and we have not gone beyond this at present). The insulation too is also so good that there is no appreciable loss of charge in about one minute, when the difference of potentials between the coatings is two or three volts.

The mode of accurately measuring the capacity of our condenser when filled with air or other gases at different

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

pressures had next to be considered. The first method we employed was as follows :—

A current from a battery of some 200 Daniell's cells joined in series was sent constantly through a large resistance U V (Figure 3). One coating of our condenser was connected with one coating of a $\frac{1}{3}$ Micro-Farad condenser, made by Messrs. Warden (of paraffined mica it is believed), and with one point S of the resistance coils. Two wires U and V attached to the two ends of the coil were used to charge the other coatings of these condensers respectively. The point of attachment of the wire S to the coil was moved until it was found that when the two condensers were discharged into one another after the removal of U and V there was no remanent charge. Then if X be the capacity of our condenser

$$X = \tfrac{1}{3} \times \frac{\text{resistance of V S}}{\text{resistance of U S}} \text{ micro-farads.}$$

The remanent charge was measured by discharging the condensers through a Thomson's very delicate reflecting galvanometer, adjusted so that one volt through a resistance of 120 megohms gave 130 divisions on the scale at one metre distance. As it was found very difficult to adjust S so that there was absolutely no remanent charge, we adjusted it until the deflection on discharging was small, then keeping the ratio of V S to U S constant, *m* say, we made 15 observation of the remanent charge, obtaining a mean reading of, say, *a* scale divisions. Now, with another ratio of V S to U S, say *n*, we made 15 more observations, obtaining a mean reading of, say, *b* scale divisions. Then since *a* snd *b* are small

$$X = \tfrac{1}{3} \times \frac{a\,n + b\,m}{a+b} \text{micro-farads.}$$

The disadvantage of this method was, that since the capacity of our condenser with very small compared with one third of a micro-farad, the difference of potentials between V and S was very small even when 200 cells were employed. To overcome this objection we adopted an improved, and somewhat novel, method of testing. The wire S was attached nearer the centre of the coil, the $\frac{1}{3}$ micro-farad condenser charged with the wire V and insulated, the air-condenser was charged with the wire U insulated and discharged into the $\frac{1}{3}$ micro-farad condenser, separated and again charged with the wire U and again discharged into the $\frac{1}{3}$ micro-farad condenser (which of course had not again been charged with the wire V), the air condenser was a third time charged with the wire U and again discharged into the $\frac{1}{3}$ micro-farad condenser, etc. By adjusting S properly and by charging the air-condenser say ten times, and ten times discharging it into the $\frac{1}{3}$ micro-farad condenser, the remanent discharge could be made nought. Or rather, having adjusted until the remanent charge after such an operation was very small, we were able, by taking the means of a number of observations to find what adjustment of S would have made the remanent charge exactly nought by a calculation similarly to that given above. This being done, it may easily be shown that the value of X may be found by eliminating nine unknown quantities from ten equations. A disadvantage of this method is that some very small portion of the charge of $\frac{1}{3}$ micro-farad condenser may be lost on account of not perfect insulation, since some short time must elapse between the first and the tenth discharge of the air-condenser into it. A more serious and unexpected difficulty, however, was found to arise from an extremely slight absorption of charge that took place in the $\frac{1}{3}$ micro-farad condenser, and after many experiments we were compelled to abandon this method also, as unlikely to furnish accurate measurements of the extremely small difference in the specific inductive capacity of gases, the existence of which Faraday had not been even able to detect. From the experiments, however, made in the manner above described, it appeared that a vacuum had a less specific inductive capacity than air, but the method was not sufficiently exact to determine the exact amount of this difference.

It was, therefore, necessary to use for our standard condenser an air condenser of which the capacity would remain quite constant. W (Figure 4) is a stiff brass plate 3 millimetres thick 42·6 centimetres wide, and 42·6 centimetres long, strengthened at the back with brass ribs ; this is supported on three clean and paraffined ebonite levelling screws, pointed at the bottom, and resting on a very firm stone pillar Y, Z is a piece of hard wood, coated on its upper surface with tin foil and forming the earth coating of this standard condenser. The whole is covered in with a metallic box not shown in the drawing, and which is connected with Z. By raising or lowering the levelling screws the capacity can be diminished or increased. The whole, therefore, forms an air condenser of adjustable capacity, but which may be expected to keep a perfectly constant capacity as long as the levelling screws are untouched. The wooden tin foil covered plate Z was used in preference to a stiff brass plate from motives of economy. Our measurements, however, became so exact that the yieldings of the tin foil, although very slight, could be detected: in future investigations, therefore, we intend to substitute a stiff brass plate. We shall call the condenser just described the open air condenser, or simply "the open," to destinguish it from the closed air tight condenser, shown in figure 2, previously described, and which we shall call "the closed."

The method of comparing their capacities was as follows:—The uninsulated coatings of the two condensers were connected with the outside of a very delicate quadrant electrometer, with one pair of quadrants, and with the earth. A battery of 87 Daniell's cells arranged in series was employed to send a constant current through a resistance coil of 10,000 ohms, the two ends of which were connected with a reversing key, by means of which either of these ends could be connected with the earth or with the insulated coatings of either one of the condensers. The object of the reversing key was to enable us to charge the condensers successively with the *whole* battery, the one receiving a positive charge in its insulated coating, and the other a negative charge. The condensers then being connected with one another their remanent charge was measured by measuring its potential with the electrometer. The use of keeping the battery constantly connected with the resistance coil was so that its electromotive force could be measured in scale divisions, by observing the deflection corresponding with the one hundredth part.

Full precautions were taken to ensure, first good insulation of all parts of the keys employed, secondly protection from induction by our bodies, &c., on the leading wires, metals portions of the keys, &c. Between every pair of observations both condensers were always short circuited for 30 seconds. The interval between two successive series of observations was about 3 minutes, but as the substances experimented on, dry air, vacuum, &c., were taken in turn, the interval between two sets of experiments on the same substance may have been considerable. The specific inductive capacity of dry air having always been regarded as unity, we took this as our standard substance. A set of experiments on dry air was, therefore, made *immediately before and after* a series of experiments on any other substance.

In the following tables the deflections given are each the mean of ten observations, with the exception of the first number, which is the mean of eight observations. A positive deflection means the closed has a greater capacity than the open, or

$$\frac{c}{o} > 1,$$

and a negative deflection

$$\frac{c}{o} < 1.$$

The ratio of *C* to *O* given in column 3 of the following table is calculated as follows :—

Let *d* be the deflection of the electrometer corresponding with a difference of potentials equal to one hundredth of the electromotive force of the battery, let *p* be the mean deflection given in column 2 for any one of the substances dry air, vacuum etc., then

$$\frac{c}{o} = \frac{100\,d + p}{100\,d - p}.$$

All the gases used in all the experiments were very carefully dried before introduction into the condenser.

			Mean	-38·74

$$\frac{c}{o} = \frac{20210 - 38{\cdot}74}{20210 + 38{\cdot}74} = 0{\cdot}99617$$

The probable error of one of these observations, as calculated by the method of least squares, is 5·19. The probable error of the result (38·74) is 1·6, or about 4 per cent. Similarly the mean error of each set of ten observations may be taken as about 4 per cent. Now as the battery did not alter appreciably during one day's experiments we have merely got to consider how much the ratio of C to O will be affected by an error of 4 per cent in the mean of one set of ten observations. Using 40·3 instead of 38·74 we find

$$\frac{c}{o} = 0{\cdot}99602$$

instead of 0·99617 obtained by using 38·74 showing a probable error of only 0·00015 in the ratio.

OBSERVATIONS CONTINUED.

March 4th, 1877.

The open condenser readjusted:

Dielectric.	*Potential of Remanent charge. Mean of 10 Observations.*	$\frac{C}{O}$	*Remarks.*
Air	+43·36	1·0043	
Vacuum	+21·53	1·0021	Pressure about 20 millimetres.

One one-hundredth of the battery gave a deflection 201·0.

March 5th, 1877.

The open condenser slightly readjusted.

Air	+13·88	1·0013	
Vacuum	- 6·05	0·9994	Pressure 29 millimetres, slowly increasing.
Air	+20·70	1·0019	
Vacuum	+ 7·03	1·0006	Pressure varying from 24 to 95 millimetres.
Carbonic dioxide.....	+23·90	1·0022	Diluted with a little air.
Carbonic dioxide..	+17·60	1·0016	Diluted with a little air.
Air	+11·52	1·0011	
Air	+25·79	1·0025	
Carbonic dioxide.....	+33·15	1·0032	Diluted with a little air.
Carbonic dioxide.....	+39·90	1·0038	Diluted with a little air.
Air	+39·00	1·0037	

As the exact amount of air in the carbonic dioxide of the previous experiments was unknown, we repeated the experiments with purer gas.

Air	+19·18	1·0018	
Carbonic dioxide.....	+27·01	1·0026	
Carbonic dioxide.....	+13·64	1·0013	
Air	+ 4·35	1·0004	

March 7th, 1877.

The open condenser readjusted. Slight leakage in india-rubber connecting tubes partially remedied.

One one-hundredth of the electromotive force of the battery gave 209·75.

Dry air	+ 4·50	1·0005	
Hydrogen	+ 9·41	1·0009	Diluted with air.
Hydrogen	+25·17	1·0024	Diluted with air.
Air	+22·98	1·0022	
Coal gas.....	+22·86	1·0028	
Coal gas.....	+36·9	1·0035	
Air	+34·23	1·0032	

One hundredth of the electromotive force of the battery gave 206 and after some time 210.

Air	+14·76	1·0014	
Vacuum.....	+16·08	1·0015	Pressure varying from 5 to 74 millimetres.
Air	+40·67	1·0039	
Hydrogen	+41·96	1·0040	Moderately pure.
Air	+52·04	1·0050	
Sulphuric dioxide.....	+75·13	1·0072	
Air	+47·89	1·0046	

March 11th, 1877.

One one-hundredth of the electromotive force of the battery gave a deflection on the electrometer scale of 210·5.

The open condenser slightly re-adjusted.

Dielectric.	*Potential of Remanent charge. Mean of 10 Observations.*	$\frac{C}{O}$	*Remarks.*
Air	-22·64	0·9978	
Hydrogen	-29·65	0·9972	Moderately pure.
Air	-29·01	0·9973	
Vacuum.....	-56·17	0·9947	Pressure about 5 millimetres, increasing.
Air	-53·93	0·9949	
Hydrogen	-46·20	0·9956	Moderately pure.
Air	-39·99	0·9962	
Waited about ten minutes.			
Hydrogen	-46·82	0·9955	
Air	-49·12	0·9954	
Sulphuric dioxide	+10·15	1·0009	
Air	-37·83	0·9964	

One one-hundredth of the electromotive force of the battery gave a deflection on the electrometer scale of 205.

By dividing the value of $\frac{c}{o}$ for any one of the substances by its corresponding value for dry air, we obtain the specific inductive capacity of the substance, that of air being called unity. As in all cases (with a few exceptions quite at the beginning) a set of experiments for dry air was made at about equal intervals of time before and after the set of experiments corresponding with any other substance, the division we have employed in each case in obtaining the following table was the arithmetic mean of the two values of $\frac{c}{o}$ obtained with dry air. This eliminates the error that would otherwise be produced by the slow alteration that occurs during each set of experiments in the value of $\frac{c}{o}$ for dry air.

In the last column in the following table we have given

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

approximately the weight which in our opinion ought to to be given to each result.

Vacuum.	*Carbonic Dioxide.*	*Hydrogen.*	*Coal-gas.*	*Sulphuric Dioxide.*	*Weight of Result.*
0·9984					3
0·9980					½
0·9985					2
	1·0003				0
	1·0004				0
	1·0008				2
		1·0003			0
			1·0004		2
0·9988					2
		0·9997			2
				1·0024	2
		0·9996			2
0·9986					2
		1·0000			2
		0·9998			2
				1·0050	2

The close agreement of the results for the vacuum and of those for hydrogen show that when the nature of the dielectric is nearly the same in all the trials the probable error is very small. Thus the probable error of the mean 0·9998 for hydrogen is 0·00005 as calculated (by the method of least squares) from the four observations on which dependence can be placed, the first result for hydrogen being useless, as we knew that the hydrogen was diluted with air. The probable error of *each* of the above four observations, as calculated from them alone, is 0·0001, and this is not very different from 0·00015 previously found for the probable error of ten single observations for a vacuum. It would seem, therefore, that the errors are not so much due to differences in the purity of the hydrogen employed as to other unavoidable errors in the apparatus.

Taking the proper means by using the weights given in the last column of the previous table, we find

Substance.	*Specific Inductive Capacity.*	*Remarks.*
Air.....	1·0000	Taken as standard.
Vacuum	0·9985	The vacuum was always less in specific inductive capacity than air, even single observations showing a less capacity.
Carbonic Dioxide...	1·0008	When air was allowed to mix with the carbonic dioxide the specific inductive capacity more and more approached 1·0000.
Hydrogen	0·9998	
Coal Gas.....	1·0004	
Sulphuric Dioxide..	1·0037	

Thus there seems to be a connection between condensability, diffusivity, viscosity, high index of refraction, and specific inductive capacity of a gas.

The method of measuring the specific inductive capacity which we have employed is susceptible of any amount of accuracy, depending on the battery power used. If we can succeed in the plan we have been endeavouring to arrange, of using an electrical machine with our delicate electrometer, we shall be able to measure the specific inductive capacity with still greater accuracy. For a vacuum, however, in consequence of the facility with which electricity of high potential escapes an electrical machine will probably give less accurate results than a battery.

We have to express our thanks to one of our students, Mr. Kawaguchi, for assistance rendered by him in the early portion of this investigation, and to another student, Mr. Nishikata, for aid given us towards the conclusion.

Induction in a Sprengel vacuum which was the original object of our investigation, and for which our apparatus was specially designed, will form, we hope, the subject of a subsequent paper.

Three steamers which arrived at Liverpool on March 5th from America brought altogether 4,485 quarteres of beef and 430 carcasses of sheep. This is the largest consignment that has hitherto reached this country on one day.

ASIATIC SOCIETY OF JAPAN.

A ordinary meeting was held in the Society's Library, Tôkiô. Dai Gakko, on the 25th instant, Sir Harry S. Parkes, the President of the Society, in the chair.

The minutes of the last meeting having been read and approved, the Secretary announced that at last council meeting the following gentlemen were duly elected members of the Society :—Dr. Donitz, President of the German Asiatic Society of Japan, Professor Chaplin of the Tôkiô Dai Gakko, Dr. Anderson, Dr. Willis, Lieut. James of the Kaigunsho, Mr. T. Tomita, and Rev. Julius Soper. A contribution from Mr. Joiner "On observations taken at the Imperial Meteorological Observatory in Tôkiô" was acknowledged: also it was agreed that such meetings as were held last week, called 'A meeting of the Physical Section' should be held from time to time by order of the Council and be called extraordinary meetings.

The Library Committee reported receipt of the Proceedings of many Societies, and also of the Daily Bulletin of the Signal Service, U.S.A., for 1873.

The papers read were

1.—Some Meteorological Observations in Japan, by Rev. Dr. Veeder of the Tôkiô Dai Gakko.

2.—The Importance of a General System of Simultaneous Observations of Atmospheric Electricity, by Professors W. E. Ayrton and John Perry, of the Kobu Dai Gakko.

After some discussion the President, in thanking the authors of the papers on behalf of the Society, said he need only refer to the Daily Bulletin of the Signal Service U. S. A., to show the importance of the work in which they were engaged. This bulletin contained three meteorological maps for each day, and the comparison of the columns of Probable and Actual Events showed what incalculable benefits to mankind had been already obtained through the labours of meteorologists. He earnestly hoped that the publication by the Society of the work of the few labourers in the Meteorological field here would help to induce the Governments of China and Japan to establish a chain of Meteorological Observatories similar, to what has been already done in America.

AMATEUR ATHLETIC ASSOCIATION.

From the aspect of the weather early yesterday morning fears were entertained that the sports on the first day of the Amateur Athletic Association's Spring Meeting would have been marred, but before the time of meeting the day was clear and bright, and a hot sun and a stiff breeze so far counteracted the effect of the rain which had fallen on the previous evening, that the course was in very good order. The Grand Stand was well filled by ladies, but the general attendance was hardly so good as usual, and though the entries were better filled that had been expected, still there ought to have been many more competitors for the various events than there were. From some cause or another athletics do not seem to be in such favour with the young men of this settlement as they should be, and Yokohama now always fails to be properly represented by competitors for the olive or parsley chaplet. The fact that some of our naval visitors entered largely into the sports conduced greatly to the success of the meeting. We are again led to ask how it is that the large German community at this port takes no part in these sports? By the kind permission of Captain Colomb and the Officers of H. M. S. *Audacious*, the band of that vessel was in attendance and played through an interesting programme. The various events occurred as follows :—

FIRST DAY.

Friday, 27th April, 1877.

1.—100 YARDS FLAT. Handicap. Two Prizes.

1ST HEAT.

A. J. Smith, 7 yds..... 1
F. O. Pike, R.N., 4 yds 2

Smith won by a good yard in 11 secs., never having been headed.

2ND HEAT.

A. T. Watson, scratch 1
E. B. D'O Aplin, R.N., 3 yds 2
A. H. Dare, 2 yds..... 3

This was a close race as Watson only just managed to pass his opponents. Time 10½ secs.

3RD HEAT.

F. Walker, 5 yds..... 1
J. Dodds, 6 yds..... 2
E. F. Kilby, 6 yds..... 3

Walker won this without difficulty in 10½ secs.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

2.—Throwing the Hammer, 16 Lbs. One Prize.

A. J. Smith, scratch 1
A. Lingham, R. N., scratch 2
A. Ouston, 8 feet 0
E. B. D'O. Aplin, R.N., 8 feet 0
H. A. Vincent, 10 feet 0

The two scratch men could not be approached, and after some varied competition Smith won by a throw of 75 ft. 8 ins., being followed by Lingham with one of 74 ft. 5 ins.

3.—150 Yards Flat. Handicap. Two Prizes.

1st Heat.

F. Walker, 5 yds 1
A. T. Watson, scratch 2

Watson made a bad start, and in consequence soon gave up all attempt to catch Walker, who ran the course in 16 secs.

2nd Heat.

A. Lingham, R.N., 5 yds 1
E. F. Kilby, 8 yds 2

Lingham succeeded in passing Kilby and winning a good race by a yard and a half. Time 16¼ secs.

4.—Griffins' Race. 440 Yards Flat.

Open to Competitors who have never won a Race at a previous meeting of this Association. One Prize. Presented.

A. Barry, R.N 1
H. A. Vincent 2
F. O. Pike, R.N. 0
F. Vivanti 0

Vivanti started off with the lead but soon fell behind, allowing the two Naval officers to forge ahead. At the top turn Barry took a decided lead which he increased at every stride, and won as he liked, Vincent being the only one besides who completed the course. Time 63¼ secs.

5.—Throwing at Wickets. One Prize.

The entries for this event were rather numerous, but all failed to hit the wicket at all with the exception of Walker and Scott, who tied with two hits each, Scott winning in the throw off.

6.—Ladies' Purse. 600 Yards Flat. Handicap.

Open to Members of the Association only. One Prize—"The Purse."

A. T. Watson, 25 yds 1
A. H. Dare, scratch 2
A. Ouston, 30 yds 0
F. Walker, 15 yds 0
A. J. Smith, 50 yds 0
E. F. Kilby, 40 yds 0

This, the principal event of the day, brought out six competitors. Walker made the pace hot and succeeded in reaching Smith, who then retired, but was immediately passed by Watson who kept the lead well and won by plenty to spare in 79¼ secs., Dare coming up well for second place. The winner was shortly afterwards led up to the Grand Stand to receive the purse from Mrs. Cobden, who appropriately congratulated Mr. Watson on winning the prize, and expressed her gratification at presenting it on behalf of the Ladies. Mr. Watson made a neat little speech in reply, and concluded by saying that he despaired of winning, until on entering the staight the sight of so many fair faces on the Stand added wings to his feet and enabled him to persevere and win.

7.—100 Yards Flat. Handicap.

For Boys under 12 years of age. Entrance Free. Three Prizes.

Tom 1
Braga 2
Charley 3

A large number started, with the above result.

8.—Hurdle Race. 120 Yards over 10 Flights. Handicap. One Prize.

A. Barry, R.N., 10 yds 1
A. H. Dare, scratch 2
A. J. Smith, 3 yds 0
A. Lingham, R.N., 5 yds 5

This was a good race, as Dare came well up from scratch and cleared the last hurdle together with Barry, but the latter recovering himself more quickly just beat Dare in the run in. Time, 19¼ secs.

9.—High Jump. Handicap. One Prize.

J. Martin, R.N., 7 inches 1
A. J. Smith. Scratch 2

Martin won by his handicap allowance, having cleared 4 feet 6 inches, whilst Smith failed to jump more than 5 feet.

10.—880 Yards Flat.

For Non-Commissioned Officers and Men of the men-of-war in port. No entrance fee. Three Prizes.

R. Pinfield, H. M. S. *Audacious* 1
J. Ruse, ,, ,, ... 2
J. Johns, ,, ,, ... 3
A. Keats, ,, ,, ... 0
E. Botting, ,, ,, ... 0
J. Gilbert, ,, ,, ... 0
H. Clements, ,, ,, ... 0
J. E. Sullivan U. S. S. *Tennessee* 0
D. MacDonald, ,, ,, ... 0
J. P. Johnson, ,, ,, ... 0

A good field started and, as usual, the pace was made hot at first, which soon effectually settled the larger number of the competitors, leaving the two first named to make a good race of it. The winner ran well throughout and eventually won easily in 2 min. 31½ secs.

11.—Half Mile Flat. Handicap.

Two Prizes. 1st Prize, "Secretary's Cup." Presented.

A. H. Dare, scratch 1
F. Walker, 20 yds 2
A. Ouston, 40 yds 3
A. J. Smith, 60 yds 0

This, the last event of the day was likewise the best contested race. Smith and Walker soon retired, leaving the race to the other three. Dare, who was the favourite, gradually decreased the gap between himself and his opponents, and on passing the dressing room the second time took the lead, which he increased at once without apparent effort. A spendid race ensued down the straight, but Dare could not be caught, and won by several yards in 2 min. 10¾ secs., Walker securing second place.

Second Day.

Saturday, 28th April, 1877.

The day broke gloomily, but before nine o'clock every cloud was dispelled, and a hot sun was drying up the rain which fell during the night, aided by a strong wind which set in and continued all day. The attendance was much better than on the previous day, perhaps because Saturday afternoon is generally made a holiday, and perhaps because this afternoon the prizes won on both days were to be publicly given away.

The Grand Stand was brilliant with a large gathering of the fair sex, among whom was Lady Parkes, who had kindly consented, at the conclusion of the sports, to present the various prizes to the successful competitors. Sir Harry Parkes was also present as were also Admiral and Mrs. Reynolds, Captain Colomb of the *Audacious*, Captain Young of the *Tennessee*, and Sir Henry Norman. By the kind permission of the Admiral Reynolds and the officers the band of the U.S.S. *Tennessee* was in attendance, and added in no small degree to the attractions of the day.

12.—Final Heat. 100 Yards Flat.

F. Walker, 5 yards 1
A. T. Watson, scratch 2

This was a good race, but Watson, though he made a game effort, could not catch Walker, who won by 2 yards in 10½ secs.

13.—Fencing (Foils.) One Prize. Presented.

A. Lingham, R.N. 1
A. J. Smith 2

Only two contended. Lingham scored most hits, although the play was rather too rough to be commendable.

14.—Final Heat. 150 Yards Flat.

F. Walker, 2 yards 1
A. Lingham, R.N., 5 yards 2

Walker was never in doubt, and Lingham gave up before the goal was reached. Times, 16½ secs.

15.—Throwing the Cricket Ball. One Prize.

Some visitors who tried a throw beat those who had entered, C. P. Hall being first with 80 yards, which certainly cannot be considered a good throw, considering that a strong wind favoured the thrower.

16.—440 Yards Flat.

Two Prizes. 1st Prize, Champion Cup. Presented by J. J. Dare, Esq. Open to Members of the Association only. To be won three times at Half-yearly Meetings of the Association before becoming the property of the holder. No Handicap. A Silver Medal will also be presented to the winner at each meeting.

This was a walk over for Watson, no one appearing against him. This was certainly a pity, and rather a farce considering that the prize was the "Champion" Cup, and the lack of competition for it may, indeed, be looked upon as reflecting unfavourably on the pluck of the others who were entered for this event.

17.—150 Yards Flat. Handicap.

For Honorary Members of the Association and Visitors. One Prize.

Mr. Dodgson, R.N., 7 yds 1
,, Vernon Harcourt, scratch 2
,, Anson, scratch 3
,, Armstrong, 3 yds 0
,, Court, 3 yds 0
,, Hodgkins, 5 yds 0

This was a good race. Dodgson, who got the greatest advantage in the handicapping, was never headed, and won by 6 yds., the rest being all well together.

18.—One Mile Flat. Handicap.

Two Prizes. 1st Prize presented by Lady Parkes.

Smith gave up before the first lap was completed leaving Ouston and Walker to finish the race, just when Walker took a lead which he never lost; and though Ouston kept well up and pushed Walker

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

hard down the straight, the result was never in doubt. Times, 5 min. 30 secs.

19.—Long Jump. Handicap. One Prize.

This event was passed by as no competitors were forthcoming.

20.—Tug of War.

Open to Teams of 12 Men from the men-of-war in port.

A team of *Tennessee* men,—who appeared on the field with their faces blackened and wearing conical caps bearing a device of scull and cross-bones as typical of their determination for "Death or Victory"—first tried their luck against the *Audacious* men and quickly pulled them over the line. A *Vigilant* team then put in an appearance, but had also to succumb to their sable opponents, though they made a more prolonged struggle for the prize than the *Audacious* men. At the conclusion the dark visaged winners generously gave three cheers for the vanquished.

21.—Consolation. Once Round.

For all who have started but not won a Prize at this meeting. One Prize. Presented by the winners at this meeting.

E. B. D'O. Aplin, R.N. 1
F. O. Pike, R.N. 2
J. Dodds 0

Aplin started off with the lead which he gradually increased, and eventually won by several lengths. Dodds gave up before he had gone half-way, but Pike ran the entire course.

22.—Steeple Chase. Handicap. Two Prizes.

A. Lingham, R.N., 60 secs 1
E. F. Kilby, 60 secs 2
A. Barry, R.N., 80 secs ..... disq.
A. H. Shirley, R. N. ..... ,,
A. Ouston, 60 secs 0
F. Walker, 60 secs. 0

This race caused the usual amusement, though those running did not come to grief enough to please all, as some spectators did not fail to audibly express. Barry actually reached the post first and Shirley second, but some objection was raised that he and others did not pass over the proper course, and after due enquiry the judge awarded the first prize to Lingham.

At the conclusion of this race a return was made to the Grand Stand, where Lady Parkes proceeded to distribute the prizes, prefacing her donation of the first by an expression of the pleasure she felt in being called upon to bestow upon the athletes of Yokohama the prizes they had so ably contended for, adding that although living away from the settlement she never failed to take great interest in the sports and pastimes of the residents. As each winner came forward to receive his prize Lady Parkes offered some appropriate congratulatory remarks, receiving very varied answers in return, some being content with a blush and a bow, a few with a brief acknowledgement, and one or two with a reply embodying a scintillation of wit. Mrs. Dare delivered to Mr. Watson the "Champion" prize which was presented to the Association by Mr. J. J. Dare, rightly enough expressing a hope that it would be *contended* for at the next meeting. Three cheers were then given for the Ladies and three more for the officers and men of the *Audacious* and *Tennessee*, and so ended the Spring Meeting of the Amateur Athletic Association.

On the whole the Meeting was a very successful one, and if the interest which the Ladies take in these sports has the effect—as it undoubtedly ought to have—of inducing a larger number of athletes to join the Association and contend for its prizes, the Autumn Meeting should show a greatly increased number of entries.

A correspondent writes to the *Athenæum*:—"An expedition to explore the buried cities of Central Asia is being talked of in Bombay and elsewhere in India. That treasures like those at Mycenæ may be found in the sands of Mongolia is at least possible. If tradition be of any value—a tradition, too, which has persistently clung to one locality through the lapse of centuries—the tomb of Ghengiz Khan is yet, with its fabulously rich treasures, to be found (as Colonel Prejevalsky was told by the Mongols) to the south of Lake Tabasum-Nor. Dr. Bellew established the fact some time since that we shall probably have several of these buried cities revealed shortly, in a similarly natural manner to that in which they here primarily concealed from the sight of man. The sands of the deserts of Central Asia regularly move and dirift from east to west, and even now the eastern borders are being denuded widely of all soil that can be torn away and borne westwards by the violent winds that rage with incredible fury many months of the year in those regions."

Full details have been received of the burning at sea of the iron clipper ship *Teviotdale*, of Glasgow, which sailed from Dundee for Bombay on the 27th of July with a cargo of coals. A fire broke out on board at 5 a.m on the 31st of October, and the ship was abandoned on the 2nd of November, when it was ablaze fore and aft. The crew took to their boats, and steered for Diego Garcia, the southernmost island of Chagos Archipelago. Hard rowing for several days and nights, during which they were exposed to a heavy swell and tropical rains, brought them to the island, on which they remained for fifty-four days, their chief food being the fish caught. They were ultimately rescued by the Cape Town schooner *Barso*, Captain Christiensen, and landed all well at Port Louis on the 5th of January.—*Pall Mall Gazette.*

ENTRIES FOR THE YOKOHAMA RACING ASSOCIATION.

SPRING MEETING.

First Day.

Wednesday, 16th May, 1877.

1.— .—For China Ponies that have never won a flat race here. Weight for inches. Entrance $5. One mile.

Raethia (late Ta Phairson), Antidote, Davenport, The Minister, The Consul, Hoolet (late Hoozee), Maccaroni, Dusty Miller, Satisfaction, The Snark, The Boojum, Chance, Tennessee, Sport, Telephone, Mongolian Brave (late Transit), Mongolian Chief, Mongolian Lamb.

2.—Griffins' Plate.—A Sweepstakes of $10 each (with $50 added) for Japan Ponies being *bonâ fide* Griffins. Weight for inches. Five furlongs.

Spendthrift, Professional, Exile, Rebel, Shizoku.

3.— .—For all Ponies. Weight as per scale. Entrance $5. Three quarters of a mile.

Title Deed, The Judge, The Minister, Hoolet, Braemar Mavis, Lintie, Maccaroni, Mohstotz, The Snark, Mandarin, (late Cocheco,) Chance, Dibs, Chief Mongolian, South Mongolian, Telegram.

4.—Professional Cup.—Presented, value $. For Japan Ponies. Winners of any open Race excluded. Weight for inches. Entrance $5. Half a mile.

Spendthrift, Jim Hills, Distemper, Moscou, Exile, Nick, Doctor, Heimin (late Stalemate).

5.—Association Cup.—Presented value, $100. For China Ponies. Weight for inches. One mile and a half. To be won by a Pony the *bonâ fide* property of a member of the Association at the date of presentation.

Trustee, The Sheik, The Dwarf, The Raven, Maccaroni, Satisfaction, Sovereign, Dibs, Gladiateur, Mongolian Chief, Mongolian Wolf, Mongolian Owl, South Mongolian.

6.—Akindo Cup.—Presented, value $. For Japan Ponies. Weight for inches. Entrance $5. Three quarters of a mile.

Daimio, Jim Hills, Typhoon, Mohstotz, Lodi, Moscou, Oyama, Shizoku, Heimin, Kickapoo.

7.—Hachi-ban Cup.—First Prize, Presented, value $100. For China Ponies. Winners of three Races in Japan, in 1876, to carry 12 stone 10 lbs Winners at this meeting 12 stone; other Ponies weight for inches. Entrance $5. One mile and a quarter.

Crusader, Raethia, Maccaroni, Satisfaction, Sovereign, Gladiateur, Sport, Favori, Mongolian Chief, Mongolian Wolf, Telephone Antidote, The Sheik, The Dwarf, The Raven.

8.— .—For Japan Ponies. Winners of two Races at any previous meeting, 12 lbs. extra; other winners, 8 lbs. extra. Weight for inches. Entrance $5. Five furlongs.

Sandboy, Spendthrift, Daimio, Jim Hills, Mohstotz, Lodi, Moscou, Moor, Rebel, Shizoku.

9.—Celestial Cup.—Presented, value $. For China Ponies, being *bonâ fide* Griffins at date of meeting; winners at this meeting excluded. Weight for inches. Entrance $5. Half a mile.

Bébé, The Sheik, The Consul, The Ghost, Maccaroni, Dusty Miller, Skedaddle, The Snark, The Boojum, Tennessee, Bravo, Chance, Mongolian Wolf, Mongolian Owl, Mongolian Lamb, Telegram.

Second Day.

Thursday, 17th May, 1877.

1.—Community Cup.—Presented, value $150. For all Ponies. Weight as per scale. Entrance $5. One mile.

Raethia, The Judge, The Consul, The Minister, Tallapoosa, Lintie, Braemar, Maccaroni, Mohstotz, The Snark, Dibs, Chance, Tennessee, Sport, Mongolian Chief, Chief Mongolian, Mongolian Brave (late Transit), Mongolian Lamb, South Mongolian.

2.— .—For Japan Ponies that have never won a race. Weight for inches. Entrance $5. Half a mile.

Black Sorcerer (late Moh-ichi-do), Daimio, Exile, Professional, Moor, Rebel, Shizoku, Griffin.

3.—The Mitsu Bishi Challenge Cup.—Presented, value $200. To be won at two consecutive meetings by a Pony or Ponies, the *bonâ fide* property of the same owner or owners; to be held by the last winner at each meeting until finally won. For China Ponies. Weight for inches. Entrance $5. One mile and three quarters.

Trustee, The Raven, The Sheik, The Dwarf, Tallapoosa, Braemar, Gladiateur, Dibs, Sport, Mongolian Owl, Mongolian Chief, Mongolian Wolf.

4.—Ladies' Purse.—Presented, value $ For all Ponies. Weight as per scale. Entrance $5. Half a mile.

Bébé, Title Deed, Davenport, Antidote, The Judge, The Minister, The Ghost, Mavis, Mohstotz, Lodi, Exile, Dusty Miller, The Snark, The Boojum, Mandarin, Chance, Tennessee, Chief Mongolian, South Mongolian, Mongolian Lamb, Telephone, Telegram.

Original from UNIVERSITY OF CALIFORNIA

5.—Naval Cup.—Presented, value $ For all Ponies, being *bonâ fide* Hacks and that have never won a flat or a hack race. Ponies entered are disqualified from entering for any other race at the meeting except for Nos. 1 and 6 on the third day. Weight as per scale. Entrance $5. Three quarters of a mile.

Doncaster.

6.—Hachi-ban Cup.—Second Prize. Presented, value $100. For China Ponies. Winners of three flat Races in Japan, 12 stone 7 lbs.; of No. 1 this day, and of two races at this meeting, 11 stone 7 lbs.; and of one race and non-competitors at this meeting 7 lbs. extra. Weight for inches. Entrance $5. One mile and a quarter.

Bébé, Raethia, Davenport, Antidote, The Raven, The Sheik, The Consul, The Dwarf, Hoolet, Maccaroni, Satisfaction, Sovereign, Favori, Sport, Chance, Mongolian Chief, Mongolian Wolf, Mongolian Brave, Telephone.

7.—Ledger Cup.—Presented, value $ For Japan Ponies. Winners of any open race 12 lbs. extra: other winners 7 lbs. extra. Weight for inches. Entrance $5. Three quarters of a mile.

Sandboy, Black Sorcerer, Spendthrift, Daimio, Jim Hills, Typhoon, Lodi, Muscou, Moor, Shizoku, Heimin, Kickapoo.

8.— .—For China Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Crusader, Trustee, Title Deed, Raethia, Davenport, The Judge, The Minister, The Sheik, The Consul, Mavis, Lintie, Braemar, Maccaroni, Dusty Miller, Satisfaction, The Snark, The Boojum, Chance, Tennessee, Favori, Mandarin, Dibs, Bravo, South Mongolian, Chief Mongolian, Mongolian Owl, Mongolian Lamb, Mongolian Wolf, Telephone, Telegram.

9.—Club Cup.—Presented, value $ For Japan Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance $5. Five furlongs.

Sandboy, Black Sorcerer, Spendthrift, Daimio, Jim Hills, Typhoon, Distemper, Mohstotz, Lodi, Moscou, Professional, Exile, Oyama, Moor, Nick, Doctor, Shisoku, Heimin, Griffin.

10.— .—For China Griffins at date of of meeting. Winners excluded. Weight for inches. Entrance $5. One mile.

Bébé, The Sheik, The Consul, The Dwarf, Maccaroni, Satisfaction, Dusty Miller, Skedaddle, The Boojum, Sport, Tennessee, Chance, Bravo, Mongolian Wolf, Mongolian Lamb, Mongolian Owl, Telegram.

Third day.

Friday, 18th May, 1877.

1.—Hurdle Race.—Value $. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance $5. Once round and a distance.

Raven, Antidote, The Dwarf, Hoolet, Moscou, Doncaster, Doctor, Tim Whiffler, South Mongolian, Shizoku, Mongolian Owl, Kickapoo.

2.— .—For all Ponies. Weight as per scale. Entrance $5. Three furlongs.

Black Sorcerer, Exile, Professional, The Snark, Mandarin, Tennessee, Chief Mongolian, South Mongolian, Mongolian Owl, Raethia, Title Deed, The Judge, Antidote, Davenport, The Minister, The Sheik, The Consul, The Ghost, Mavis, Mohstotz, Lodi.

3.—Owners' Cup.—Presented, value $. For all China Griffins beaten at the meeting. Weight for inches. Entrance $5. Three quarters of a mile.

Bébé, The Sheik, The Consul, The Ghost, The Dwarf, Macaroni, Dusty Miller, Satisfaction, Skedaddle, The Snark, The Boojum, Sport, Chance, Bravo, Tennessee, Mongolian Wolf, Mongolian Lamb, Mongolian Owl, Telephone, Telegram.

4.— .—For China Ponies. Compulsory on winners on first and second days at this meeting. A sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5 to go to the fund. Entries to be made on the course at the close of the second day's racing. 1st Pony to receive 75 per cent; 2nd Pony 25 per cent. Weight for inches. One mile and a quarter.

5.— .—For Japan Ponies. Compulsory on winners on first and second days at this meeting. A sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5 to go to the fund. Entries to be made on the course at the close of the second day's racing. 1st Pony to receive 75 per cent; 2nd Pony to receive 25 per cent. Weight for inches. One mile.

6.— .—For all Ponies, being *bonâ fide* hacks and that have never run in a flat or won a hack race. Ponies entered are disqualified from entering for any other race at this meeting except No. 5 second day and No. 1 third day. Winners of the hurdle race and of number 5 on the second day excluded. Weight twelve stone. To be ridden by Jockeys who have not had a winning mount at the meeting. Entrance $5. Half a mile.

7.— .—For all beaten China Ponies at this meeting. Weight for inches. Entrance $5. Once round and a distance.

Crusader, Raethia, Bébé, Trustee, Davenport, Antidote, Raven, The Judge, The Minister, The Consul, The Sheik, The Dwarf, Hoolet, Braemar, Tallapoosa, Lintie, Maccaroni, Dusty Miller, Satisfaction, The Boojum, Sovereign, Dibs, Favori, Gladiateur, Mandarin, Sport, Chance, Bravo, Tennessee, Mongolian Brave, Mongolian Wolf, Mongolian Lamb, Mongolian Owl, South Mongolian, Telephone, Telegram.

9.— .—A Handicap for all Ponies. To be handicapped by the stewards at the close of the second day's racing, when entries will be received. Winners of Nos. 4 and 5 of this day excluded, and winners of any other race after the publication of the handicap 3lbs extra. Entrance $10. Second Pony to save entrance fee. One mile.

8.— .—For all beaten Japan Ponies at this meeting. Weight for inches. Entrance $5. Five furlongs.

Sandboy, Black Sorcerer, Spendthrift, Daimio, Jim Hills, Typhoon, Distemper, Exile, Professional, Tim Whiffler, Oyama, Doctor, Moor, Nick, Rebel, Shizoku, Heimin, Kickapoo, Mohstotz, Lodi, Moscou.

Correspondence.

THE CURRENCY.

To the Editor of the "Japan Weekly Mail."

Yokohama, April 25th, 1877.

Sir,—While very glad that so many pens have dealt with the currency question and have contributed the result of so much thought to its ventilation, I am unwilling to leave the discussion in its present shape. Scarcely a single individual with whom I have conversed on the subject has but readily admitted the abstract position that it is desirable that the currency of Yokohama should be the same as that of Japan, nor do I see among your various correspondents any serious attempt to dispute it. It has been advanced in palliation of the present state of things that two black made one white, and I am not prepared to argue against that. It has been hinted that it is but a parallel case with that of foreign Exchanges: this I must altogether deny. Foreign Exchanges are a natural flow and ebb, healthy for the most part, and restoring the balance of trade, although subject to abnormal disturbances: but that the Exchange between my office and that of my native friend in the Benten Dori should be 3, 5, or even 8 per cent., either par or discount, is altogether a different thing, and I maintain no more like to the process of a natural equalization of trade, than a cyclone is like a zephyr.

That the Mexican dollar is—has been—exceedingly useful, all must admit, but what I would contend is that there is no reason why we should not try to make it a secondary coin, instead of, as now, the sole standard, and I appeal to the fact that at this very time an agitation is going on in Hongkong with the object of inducing the British Government to supply a standard dollar alongside of which the Mexican dollar shall circulate for that Colony:—and further the Chamber of Commerce in Shanghai is agitating for the supply of a Chinese dollar. And what is at the bottom of these agitations? Simply the strongly felt conviction that the Mexican dollar is insufficient for the purposes of foreign trade in China, and inconvenient withal. Foreign merchants feel that although they have been compelled to make it a "sheet anchor," yet that ever and anon it gives an ominous warning of insecurity.

It is, moreover, not a legitimate thing that our standard coin should play into the hands of the army of shroffs, by reason of its irregularities and varieties. "T" naively remarks that the foreign Bankers might resist the introduction of the *yen*, because they "earn a small but regular profit in selecting and distributing the Mexican dollar over Japan and China." Just so, and out of whom does this profit come? Of course, out of traders, and "T" could not have illustrated more weightily the need there is for a reform.

At this very time, too, business is seriously hampered in Hongkong, by one of those frequent disputes about chopped dollars. However, "A. Z." has so fully dealt with this subject that it is not for me to add more, than that I look in vain in your leading article for *any reason* why the dollar should not circulate side by side with the *yen* here. Certainly such a procedure is considered feasible in Hongkong, and I have grounds for saying the intro-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

duction of the *yen* could not now meet with at any rate so much opposition as upon a former occasion.

Leaving, however, these considerations, I am anxious once more to call attention to the general readjustment of the currency in Japan. In my communication of the 24th ultimo, I sought to point out that such a step was imperatively necessary before the *yen* could be introduced into foreign trade. This point has scarcely been noticed by any of your correspondents, but the principal item therein—that of the inconvertible paper money—has been ably dealt with in Paper "No. VI," which you printed in your last issue.

It has been argued in your columns that the present inconvertible paper money is accepted throughout Japan without demur—indeed preferred often,—suggesting the inference that there is the less reason for disturbing it. Without doubt the confidence in it, or rather want of distrust, is extraordinary—one of the many extraordinary financial phenomena which Japan has shewn during the past few years. The explanation of much of it may doubtless be found in the facts that so large a proportion if it is in subsidiary amounts, fractions of a *yen*—which are very convenient; and in the general ignorance, conbined with the helplessness of the people. We cannot, however, suppose that those who hoard money, lay by paper. We may be pretty sure that they prefer gold or silver *yen*.

"The power to issue inconvertible paper has never "been conceded to any man or set of men without being "carried to excess," and if by reason of the peculiar circumstances of Japan, the evils sure to follow on an inconvertible paper, as pointed out in your "No VI," have not yet overtaken Japan, we may be none the less assured that they are hatching, and will in due time appear.

Other elements in the re-adjustment of the currency, must be a limitation and regulation of the issues of gold, silver, and convertible paper, and the establishment of the Branch Banks throughout the country in the chief centres of trade, where paper might be cashed, and coin deposited. You have shewn in your last issue that the Government might without fear be prepared to cash its notes, and the fact of the wonderful facility and confidence with which *satzu* now circulate should shew that there is no serious cause to be afraid of such a step. Not an unimportant result of such arrangements would be to draw out from their hiding the present hoards of gold. Some thirteen million of gold *yen* are unaccounted for, and in all probability they are lying dead and unproductive, lost to the country, in smaller or larger sums, stowed away for safe keeping in the corners of the dwellings of country folk.

With all diffidence, then, I would say that I see no reason why the "consequences of such an anomalous monetary situation" should not be faced, if but a thorough re-adjustment of the whole system be undertaken along with it. This re-adjustment must be done sooner or later if the country is not to be in a chronic state of financial disorder or even insolvency; and why not at once? I admit that it is a large programme, a very important task, but all of us have seen as thorough and as great changes during the past few years.

Very possibly it *was* a far seeing recognition of the extreme difficulty, amounting to impracticability of this change, which deterred the members of the Chamber of Commerce from assembling to discuss the question; and not the recurrence of the Emperor William's birthday, nor the drawing for newly arrived griffins: but if we admit the paramount importance to the country and to foreign trade of radical reform, we shall do better to strive after that reform, than to succumb to the lions in the path.

I am, Sir,
Yours obediently,
W.

VOICES OF THE NIGHT AND MORNING.

To the Editor of the "Japan Weekly Mail."

Sir,—Is there anything in this world that a man can call his own? Are the rights of property, which we are accustomed to hear so much about, as unreal as the existence of John Doe and Richard Roe, as doubtful as the authorship of Ossian's poems or Junius' letters? I am induced to make these enquiries of you in consequence of an unwarrantable interference with, or perhaps I should more properly say, a series of successful attempts which have now for some time back been made, to deprive me of my lawful sleep. Yes, sir! to filch away from me, a quiet and inoffensive individual, that repose which I claim a right to make use of and enjoy when it seemeth good and pleasant to me.

I am a middle-aged gentleman much given to study, of a nervous temperament—irritable, if you insist upon it,—that is to say irritable in a physiological sense, susceptible of irritation—not irascible as my enemies would have it believed. I am wont to pursue my literary and scholastic avocations in a great measure by lamp-light, and confess to a "creepy" feeling after nightfall, and an irresistible impulse to peer anxiously into shady corners, to regard with an uncomfortable suspicion a window curtain unusually folded, and to keep a good look out behind me when it so happens that my elbow chair has not been placed before a solid article of furniture, or against the wall. For this constitutional timidity—I prefer to call it idiosyncrasy—I may as well tell you, to the end that you may the better comprehend my case, I am indebted to a wall paper of a pattern ingeniously, nay diabolically involved, which fell into figures hideous and unearthly beyond description when the feeble nightlight that shed a sickly ray upon my infant couch waned or flickered, but more particularly, perhaps, to a nurse, the land of whose nativity lay not in the direction of the Antarctic circle, and whose enlightened plan of early education consisted chiefly of tales of evil spirits and Calvinistic promises of future punishments, all told in a dry unmusical accent never to be forgotten and anything resembling which I can never hear to this day without a shudder.

After this preamble, Sir! you will find no difficulty in understanding why, when the hour of midnight is approaching, and that vital force which is said to be at at dead low water in the little hours begins to ebb, my nervousness should be beyond control, and myself completely at the mercy of slight jars and shocks. At such a time the scamper of a rat along that frail diaphragm which does duty in my residence for a ceiling, sends my heart into my mouth. The melancholy discord of the firebells so often, unfortunately, heard of late, gives me such a shaking palsy, that I may be said with truth to jangle in unison with their frightened clangour; but all this, after all—anguish though it be Sir!—is a pleasant and agreeable excitement to what I suffer at the hands of an assassin—I can call him by no milder name—who prowls by night and inflicts his cruel wounds where they are least expected.

This murderer of sleep is armed with some kind of engine, from which he manages to extract noises that when the winds are low and everything is hushed, are indescribably sharp and startling. This hideous machine by long practice, or from innate ingenuity in villainy he has learned to work so dexterously as to produce the greatest possible amount of agony in his hearers. To be obliged to listen to a series of sharp reports at *regular* intervals is sufficiently distressing, but can be endured patiently enough, since the ear soon learns the time and the individual is not distressed by waiting and wincing in ignorance of when he should expect the next succeeding report. Evidently well aware of this fact, nothing will content the unfeeling monster but that he should put in practice the converse to it by gradually diminishing the intervals between the explosions—rhythmically quickening his strokes—until he has reached, as it were, the apex of a triangle, with exquisite cruelty winding up the while his victim, against his will, until one turn more and the strain would inevitably give way. Stopping just short of that turn he then descends again, moving more and more leisurely as he goes, until he has once more reached the base of the imaginary triangle from whence he started,—to begin anew as before. And so he continues, gradually stretching and relaxing the nervous system of your unhappy correspondent, until he has thereby rendered him prostrate and unfit for mental or bodily exertion.

Having endured these horrors for some half hour or so—fortunately for my sanity the fellow takes himself off in about that space of time—I am generally permitted a short period of repose. This I usually employ in taking harts-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

horn,—a remedy which I have found very soothing to the nerves—and in arranging my tossed and tumbled pillows, in the hope that I may be able, perhaps, to obtain a brief interval of oblivion before I am again stretched upon the rack. Vain hope! Illusory and transparent self deception. For no sooner, do I begin to sink into a peevish and fretful slumber, than as regularly as day succeeds the night, I am suddenly snatched back again into wakefulness and watching. Not gently touched upon the shoulder, as it were, nor even roughly shaken, but literally *dashed* into consciousness so to speak, by an infernal *chink chank, chink chank*, for all the world like the rattling of a gigantic bunch of keys, carried by some malignant impersonality. For there is never on these occasions the ghost of a footfall to be heard so as to justify an opinion that the circumambulant jingler is human. What I suffer under this new form of torture I despair of being able to communicate to you. Suffice it to say that these metallic sounds have so deeply affected my brain as to have almost taken complete possession of it. I am obliged to carry them into my slumbers and they mingle with my dreams. All day they are clashing in my ears—now fainter and now louder—a veritable *tinnitus aurium*. Am I not indeed an object of commiseration? Would the Prevention of Cruelty to Animals Act touch my case, Sir?

A few feverish hours of troubled and unrefreshing sleep is all that I can ever obtain, for my repose as I shall shew you is scandalously shortened at *both* ends. For at the first faint streak of dawn, I regret to say—as I hate to be obliged to see the sun rise—I am once more rudely awakened, this time—as exhausted as when I laid me down to sleep,—by the piercing and ridiculous cry of "*Oh! my eye-e, Oh! my eye-e.*" Now was ever a fellow creature so cheated of his rest as I am, and by such a monstrous abuse of language as "*Oh! my eye-e?*" It brings no ray of comfort to me to be told that this puerile sentence proceeds from an industrious locksmith and is meant for "*Jô, ga yoi.*" Is meant for, forsooth! What better am I of that? Will it lower my excited pulse a single beat to know that the man who lengthens out his "*eye*" in so disgusting a manner, converting a neat *mono* into a *dis*-syllable with a useless and misplaced ultimate '*e*,' is merely soliciting custom for his locks?

And even admitting for a moment that the latter view *is* the correct one, why should he suppose it possible that at the break of day any human being *could* be in the position of requiring a lock. No! no! I refuse to admit anything but that he is actuated solely by a wicked desire to make himself as disagreeable as possible.

Close upon his heels follows another noisy rascal. A bull-voiced advertiser of some devil's mixture, who is pleased to designate his rubbish as "*Inkney, inkney yeh.*"

Both, as you can readily believe, are sure to be in good wind after their night's repose, and to it they go, "*Oh! my eye-e*" and "*Inkney inkney, yeh,*" one down, t'other come on, then both together in different keys, until they are joined by a third who introduces himself as "*Ah! wee, Ah! wee,*" with, as it seems to me, so much of the "here we are again" air of the clown in a pantomime, that despite my chagrin I am often compelled to smile and admit to myself that the "*Ah! wee*" man infuses somewhat of a comic air into the unseasonable matins of the other two.

I have hardly time to think of this or anything else, however, when I usually observe that the trio is overwhelmed and temporarily drowned by a sepulchral groan of "*Deh! Deh!*" hoarsely bellowed out as if through a speaking trumpet. An unutterable bass it is, quivering as the tremuloso pedal of a great church organ. A volume of sound which rolls wave after wave against your tympanum and stuns you, and upsets your circulation so, as almost to throw you into an apoplexy. To me, nearly childish, and unable to direct my thoughts from exhaustion and want of sleep, it seems ever to have a strange effect upon the contending trebles. I am possessed by the quaint resemblance which it bears to a wet blanket thrown upon a petroleum fire. At first is seems to drown it altogether. Then a tongue of flame breaks out here, and another there. By degrees the flames are seen all round it, and finally the fire prevails upon the would-be extinguisher, which burns up in time and diffuses itself and mingles with the blaze it had at first obscured.

And in such wise precisely, are the shriller voices previously described affected by the howl of *Deh!* At first completely overpowered by its thunder they cannot be distinguished at all. Then by degrees as the ear becomes more tolerant and better accustomed to the ***basso profundissimo***, a syllable or two in a high key makes itself heard, a struggle then takes place for mastery, and finally all the voices are mingled and lost in a confused medley.

You can imagine by this specimen of my intellectual condition what a wreck of a—formerly strong minded—elderly gentleman such things have produced. My glass heretofore—for I have lately had it removed the better to save myself the affliction of beholding my altered features, and to the same end have given up shaving, and have even had the few remaining locks, which vexation has spared to me, cut so close as to require no parting—that honest mirror—as I commenced my sentence by observing—which used formerly to exhibit the reflection of what it pleased me to believe was a placid and not unbenevolent physiognomy, has latterly so shocked and disappointed me, that I now content myself with receiving my ideas of my personal appearance from my friends, who are wont to say—in these matters friends are always candid—that I am so changed they doubt if they would be able to recognize me except for a certain snuff coloured suit (which color it is my wont habitually to affect as having a scholarly air), that they have known any time these ten years past, and have hitherto been accustomed to associate with me, only. My face has acquired, they further tell me, a constantly "good gracious" expression, and the corrugators of my forehead, they are ready to wager, are the best developed muscles in my attenuated body.

But I have already trespassed too long upon your goodnature, and trenched upon your space. If I have succeeded in securing your interest however, I am satisfied, and will trouble you no further than by begging you to consider whether I have no redress Sir? Could His Honour the Law Secretary, for instance, do nothing for me? How would it do to suggest a clause in the Treaties when their revision comes on, making it punishable by death in the most lingering manner to rob a poor man of his rest?

And hark you, Sir! A word in your ear. If you know of anybody in want of a desirable suburban residence, well situated and very cheap, communicate with me instanter, I beseech you, but for your life say naught about "*Oh! my eye!*" "*Inkney, inkney, yeh!*" "*Ah! wee!*" "*Deh! deh!*" and above all keep very silent concerning that appalling clapper and the bunch of keys.

Yours faithfully,

PAUL PRY.

The following letter has been forwarded to us by the Corresponding Secretary of the Asiatic Society for publication.

Osaka, Shiakudjo, 3rd February, 1877.

To Professor Ayrton,

The Corr. Secretary of the Asiatic Society.

Dear Sir,—In the month of December last year, I paid a visit to Arima, in order to determine the quantity of free Carbonic Acid in the water of the hot chalybeate spring, about which I wrote you before. There are a few more springs in and around Arima, more or less important, which at the request of the Government I also examined. The situation of the hot spring and its baths are well known to visitors and by the description of Mr. Geerts and others. I may add, however, that the buildings with their bathing-places and all the surroundings are not proportionate to the value of the water. This is really to be regretted, and I am sure that if the accommodation at these baths was better many more visitors would avail themselves of their use.

The spring is situated about 350 metres above the level of the sea and takes its source in the town of Arima

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

itself. During the six days I stayed there the water was always turbid, and when poured into a glass quickly deposited a brown-red, flocky powder of protoxide and sesquioxide of iron. No odour of sulphuretted hydrogen could be perceived, nor was I able to prove its presence in a large quantity of the water by means of lead-paper. According to the testimony of some Arima officials, who were very kind in assisting us in every way, the water is always clear during the summer season.

At the warmest place, about ¼ metre under the surface, the temperature was 38,3° Cels. = 101° Fahr. The specific gravity at the temp. of 23° Cels. = 73,4° Fahr., was 1,0118 (in August, 1875, I found at the same temp. 1,0115).

The turbid state of the water made me already suppose that no free carbonic acid was present, a supposition which the analysis afterwards confirmed.

The quantity of whole and half bound carbonic acid amounted to 2 × 0,0048 grm. CO_2 a litre.

It is therefore proved that the water did not contain free carbonic acid in December 1876, and even less carbonic acid was present than is necessary for dissolving the carbonates of iron and manganese, as bicarbonates, according to the analysis of the summer water.

Finally the specific gravity of the summer and winter waters proves that the whole amount of solid substances must be almost equal in both.

Cold Spring of Arima called "Teppo Sui."

This spring is found in the neighbourhood of Arima at the height of about 400 metres above the level of the sea. The water springs up in a square basin made of rough stones, having a superficial area of about 1 square metre. A wooden dwelling, like a small temple, built over the basin, prevents the rain from falling into it.

The temperature of the spring was found on the 14th December, 1876, to be 16,8° Cels. = 62,2° Fahr., while the thermometer in the open air indicated the temp. of 6° Cels. = 42,8° Fahr. Now and then some bubbles of gas were to be seen, which were dissolved afterwards by the water. According to the statements of the residents those bubbles are much more numerous in the summer time.

Properties.—The water is colourless and clear, but a few days after being quietly kept in an uncovered glass, it deposits a little red sediment of proto and sesquioxide of iron. It reddens litmus-tincture and tastes somish, not salty. The presence of a small quantity of sulphuretted hydrogen was proved both by the smell as well as by means of lead-paper. It effervesces by heating, and after boiling for a long time a little sediment of carbonate of lime, etc., is deposited. The specific gravity is almost I. The solid matters were determinated three times viz. in the summer water of 1875, in the spring of 1876 and in the winter water of 1876, and amount on an average for 10 *litres*, after being dried at 120° Cels. 1,362 grm., 0,03 grm. of which are lost through a moderate ignition. The residue gives with water an alkaline liquid. The quantitative analysis of the salts, below mentioned, is that of the summer water of 1875 and of the spring water of 1876, sent to the Osaka laboratory. The determination of the free, half and whole bound carbonic acid took place in December 1876 at the spring itself.

The solid matters contained in 10 *litres* of this water are as follows:

Bicarbonate of Soda	1,210 grm.
Chloride of Sodium	0,038 „
Chloride of Potassium	0,076 „
Sulphate of Lime	0,077 „
Bicarbonate of Lime	0,266 „
Bicarbonate of Magnesia	0,043 „
Oxide of Aluminium	A small quantity.
Bicarbonate of Protoxide of Iron	0,125 grm.
Bicarbonate of Protoxide of Manganese	0,021 „
Silicic acid and indissoluble Silicates	0,065 „
Organic matter	A small quantity.

The free carbonic acid amounted at 16,8° Cels. = 62,2° Fahr., and the barometer of 730 m.m. in *one* volume of the water 0,689 volume of CO_2.

The amount of half and whole bound carbonic acid was found to be a little below the calculation drawn from the above-mentioned analysis.

I was told that foreign visitors like to take the waters as a cooling beverage.

I remain, dear Sir, with due respect,
Your obedient servant,
B. W. DWARS.

To the Editor of the *Japan Mail Daily Advertiser.*

Yokohama, 26th April, 1877.

Dear Sir,—In your issue of to-day, you give me credit for circulating the survey report on the *City of Peking.* I did not do so. I gave the survey report in question to the agent of the P. M. S. S. Co., who I believe caused it to be circulated, that being his business and not mine.

Yours truly,
WM. McDONALD.

Law Reports.

IN H. B. M.'S CONSULAR COURT.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

Thursday, April 26th, 1877.

Chew Ah Sine *v.* Fred. Howard.

This was a claim of $50 damages for assault.

Both parties appeared.

Plaintiff stated:—On the 27th February, after counting some cargo on the hatoba I told defendant that one package was short and asked him to count it over. He said he was not going to count any cargo, and said I must give a receipt for the full complement of cargo He came soon after and asked where my bamboo men were. I said I could not trust Japanese to count. He looked round the sugar and then returned and asked what I was doing? I should not stand with my hands in my pockets. Then he struck me, and I fell down. I said I would sue him. He said he did not care and I would not get more than $5 for my trouble. I went to the Consulate but it was closed, and then up to the office and reported the affair to Mr. Manley. Neither Mr Howard nor Mr Harman were there. My eye was swollen for three or four days. I got a Chinese pill and put it on my eye. It cost 25 cents. Then I went to see Dr Tripler. My nose bled off and and on for two or three days. I paid the doctor $20. Mr Howard would not pay the bill.

F. H. Tripler, medical practioner, of No. 12, sworn:—Plaintiff came to me on the morning of the 28th February and I examined a contusion on his face. It lay about the left eye and the nose. I gave him an evaporative lotion and sent him away. He returned in the evening and upon examination I found quite a free hemorrhage from the left nostril. I plugged it up, but his nose bled at intervals for a day or two. His nasal bone was slightly affected also. My fee was $20, received.

Ito Kanshichi, a Japanese, said he had seen the assault. A dispute arose between the two and defendant knocked plaintiff down. Plaintiff's eye was black next day.

Ah Cheong, godown keeper, also witnessed to having seen the assault. He did not see plaintiff's nose bleed.

Henry O'Hara stated:—When plaintiff called my attention to it, I noticed his nose was swollen. He complained of a pain about his nose and right eye.

Emile Henry Russell Manley, sworn:—I live at No. 85 Bluff. I deny that plaintiff reported the case to me. He came into the office and, noticing his face was flushed, I asked what was the matter. I think I did see him next day, but don't recollect particularly. The first thing I heard was that he had been to Dr. Tripler. I advised him to let the case drop and say nothing about it.

His Honour said that he found there had been an assault. The only question was as to damages. Defendant should have paid the doctor's bill and have got rid of it. Judgment given for $25.25, Doctor's fees, and $3 costs.

IN H. I. R. M.'s CONSULAR COURT.

Before A. Pelikan, Esq., Vice-Consul,

And

Messrs. W. C. Van Oordt and Al. Bogomoloff, Assessors.

Wednesday, April 25th, 1877.

George Hansen, a native of Finland, was charged with endeavouring to utter certain forged bank notes of $500 each, of the Hongkong and Shanghai Banking Corporation.

Mr Ernest Ebell acted as interpreter for the Court.

Mr Ness appeared as Counsel for the defence.

His Honour requested all the witnesses to retire after their names were called, with the exception of Mr Walter, whose evidence was the first to be taken. The Court further notified that the witnesses who had sworn to their evidence in relative hearings in the other Courts would not be required to take the oath in the present case.

Original from UNIVERSITY OF CALIFORNIA

Mr Walter said that he knew Williams was caught passing forged notes, and it was through what Williams said that prisoner was arrested. Mr Walter went to No 97 with Mr Elmer and Sergeant Loxton and saw him arrested.

Cross-examined by Mr Ness:—I have no personal knowledge that prisoner tried to pass these notes.

Alfred Henry Charles Haselwood, 30, stated:—Of my own knowledge I don't know that prisoner passed forged notes.

Mr Ness said that after that statement he had no questions to ask.

Anton Williams, a native of Sweden, but claiming American protection, stated:—I am at present in the American gaol. I know that prisoner lived in the same house with Hansen, and that he went to Tôkiô one day with several $500 bills to try and get them changed. I don't know whether he succeeded or not. I knew that these people were making forged notes. Prisoner knew it also, because Bennett brought them to the two of us (prisoner and myself) one night to show them. Bennett told us he had made them, that he wanted them changed and asked me to try one. I think that was the evening of the 6th of February. Bennett gave Hansen five notes; so Hansen told me. I did not see it. I have always been on good terms with prisoner. I met him on board the *Tennessee* first about two years ago.

Cross-examined by Mr Ness:—Prisoner was told that these notes were forged when the three of us were together. Bennett showed them. Prisoner went to Yedo after twelve on the 6th.

The Court asked directly to prisoner the day on which he went to Tôkiô?

Prisoner was going to answer, when Mr Ness objected and said that such questions should come through him as Counsel.

His Honour said that according to Russian law the prisoner was entitled to combat every successive statement of any witness; but to save time this would be passed over. His Honour then repeated to Mr Ness the question just put to prisoner.

Mr Ness objected to answer.

Witness to Mr Ness:—I have been accused of passing forged notes. I do not know whether I am to be released or not for giving this evidence. I expect I may be released if the rest are convicted because I had less to do with it.

Mr Ness now said that he was quite willing that prisoner's statement that he went to Yedo at 12 o'clock on the 5th should be accepted.

To the Court:—I did state in the English Court that Bennett showed George Hansen and me the bank notes. I do not know why prisoner first got a good note to change and then the bad ones. These are the notes Bennett showed me (produced).

To Mr Ness:—I am sure these are the notes shown me then. There are no distinguishing marks on them. I do not know that these are the notes prisoner took to Tôkiô.

Anton Bennett, or Kirckorff, a Dane, stated:—When prisoner left the *Tennessee* he came to live with me and stayed with me till arrested. During the last week he was implicated in this forging transaction. I gave him five notes to change but he did not succeed; I don't know why. He had some instruments of mine which he took to Tôkiô to sell but brought them back. That night I was arrested. Williams was present when I showed the note to prisoner. I did not use the word "forged" because I did not know its meaning then, but I said I had made them myself. I cannot swear that he understood that I made them; I told him so. I showed him them because he was a friend of mine. I showed them to him I daresay eight days before I gave him the five. I did not tell him *why* I made them. I don't know if he was surprised to see so many notes in my hands. Hansen and I were together when Williams came to see us. I did not speak to prisoner about bank notes till that day. I showed them just as a curiosity. I had made them myself. Prisoner got these notes in my house on the 6th February, the day on which I was arrested. He said he wanted to change them.

Cross-examined by Mr Ness:—It was not on the 6th of March I told prisoner the notes were forged. Williams, prisoner and I met eight days previous to my arrest. We were all together every day. I gave prisoner the notes on the day of my arrest. I had not given him a real note to change; Gerhard Hansen did. I did not know of it when I gave him the five. He had several notes of my make before. I gave him these five. I have no personal knowledge of what he tried to do with them. I did not tell him anything about making money. I cannot swear that he knew the notes I gave him previous to the five were false.

To the Court:—I made the three notes I gave prisoner previous to giving him the five. I did not mention having given him exactly *three* notes. I do not remember how many I had then. I made eight altogether, Anton Williams got one; the other two remained in the drawer. These three were then put beside the other five, and from the combined eight I gave him five; I cannot say however if these three were of the five I gave him. He returned the three he could not change at first. I don't remember the reason he gave. I gave him the five notes because he asked for them.

Prisoner begged to say that he never received more than five notes from Bennett.

Witness said:—Prisoner told me in the prison that when he knew I was arrested he tore two of the notes up and put them down a water closet.

Prisoner denied having spoken to Bennett in the prisoner.

Witness:—I can't recognise these notes (produced). They were all the same shape. At present I cannot swear that these are two of the five prisoner had. As far as I recollect, when prisoner returned from Tôkiô he said the instrument maker was from home. He did not say anything about the bank-notes. I did not feel so much interest in them as to ask about them. He expected $500 from Gerhard Hansen for changing the notes. I can't say that prisoner is concerned in the "forgery" at all. I did not propose to him to change the notes. I do not know who introduced Gerhard Hansen to prisoner. I was not present when the former promised $500. According to prisoner's own statement, he changed the original note. I do not know the reason.

Anton Williams, re-called:—Bennett showed us the notes to see if we thought they were good enough for changing. I said I did not know because I had never seen a genuine one. We "meant business" by that conversation. I don't know what prisoner thought about it.

Adjourned till 2 p.m.

Court resumed at 2 o'clock.

Yam Pow King, 23 years of age, a native of Ningpo, was called, but the old difficulty of making him understand presented itself. Witness said he had obtained the services of a compradore to interpret, but as this gentleman did not appear, nothing further was done and Yam Pow was dismissed.

George Elmer, 26, deputy marshal of the U. S. Consulate, stated:—I don't know much about the case, only that I assisted in the arrest of most of the persons implicated. When Williams was arrested he said nothing about prisoner. We searched prisoner's effects but found nothing; he was in bed then. We had to go through his room to get to Bennett's.

Walter Loxton, 28, police sergeant, stated:—I did not arrest prisoner. I searched Bennett's room. Prisoner was there at the time, but I did not speak to him.

Wm. Toms, 25, police-constable:—I arrested prisoner.

Peter Gerhard Hansen, 40, a British subject, sworn:—I am a crown prisoner at present and it is not for me to say anything that can be brought me against afterwards. I don't know how to start. I have known prisoner since December. I was boarding at Peter Clausen's and I met him there. I had no conversation with prisoner about bank-notes. I believe Bennett did introduce me to prisoner. He came to my house about eleven at night and told me Bennett and Williams had been arrested for trying to change notes. I do not recollect the number of the note I gave him to change. I never told prisoner that I was wealthy. He got to know through boarding at the same place. It was generally know that I had money. In the morning Anton Bennett came to me and said 'you had better get that $500 bill changed to-day." I said I did not like to do it myself. Bennett said I should come up to his place and give it to prisoner, with whom he had made an arrangement, and he would change it. I went in the afternoon. I don't believe I'm justified in giving my reasons for not changing it myself. Prisoner did not assist in forging these notes.

To Mr Ness:—It is untrue that I ever offered prisoner $500. Bennett asked Williams in the prison to tell lies in the English Court. I did not hear it myself.

Jerry Mansbridge, turnkey:—This conversation did not take place to our knowledge. All these men were kept as far apart as possible.

Bennett, recalled:—It is quite untrue that I prompted prisoner to tell lies.

Gerhard Hansen:—Oh! you can't believe *him*, you know.

Sekiya Heikichi a Japanese, stated:—I recognise prisoner. He came to our store one day and asked change for a $500 note. I could not meet it and went to a money-changer's. I did not know it was a forgery. I did not see him again till called to the English Court. When the money-changer refused to change the note, he went away.

Omoto Kisaburo, 43 years of age, a Japanese watch maker, of Tôkiô:—I recognise prisoner. He came to my shop and after looking at several watches fancied one worth $90 and gave me a $500 bill. I had no change and sent him with a boy to an exchange shop. I did not see prisoner before he entered the shop.

Cross-examined by Mr Ness:—Prisoner spoke to one of my shopmen, not to me. There was no special conversation. I see him for the second time to-day. I am not *quite* sure about his identity. Prisoner is very like the man who came to my shop.

Peter Clausen, 36, a Swede, stated:—I do not know anything about this case. I saw prisoner several times during the day on the 6th February. I think he left my house for the last time about seven.

Sekiya Heikichi, recalled:—Prisoner came about five o'clock on the 6th.

Williams, recalled:—I did not say Bennett and I met prisoner on the 6th at five o'clock.

This closed the evidence for the prosecution.

Mr Ness said he had no witness to call nor had prisoner any statement to make. In the usual order of things he should, as Counsel, have summed up for the defence; but the difficulty of language intervening, Mr Ness begged the Court to accept a written statement from him which he would have prepared at once.

This proposal was accepted and the Court adjourned till 10 a.m. this morning.

Thursday, 26th March, 1877.

Mr Ness, in summing up for the defence, said:—

To justify a conviction it is necessary to prove two things against the prisoner; 1st, an attempt to utter a false note, and 2ndly, t knowledge on his part that the note alleged to have been presented

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

for exchange was false. In both of these points the case has conspicuously broken down. On the first point no note is produced and recognised by any one as having been presented for exchange by the prisoner; and whether he presented any note or not it is impossible to say that he attempted to utter a false one. It is true that a Japanese witness says he saw the prisoner in his shop and heard him enquire about exchanging a $500 note, but whether that note was good or bad he can't tell. It has not been produced in evidence, nor has it been in any way traced. If it has been traced, and had the Japanese witness been able to say definitely, which he refused to do, that the prisoner was the man who passed it, doubtless it would have turned out that the note in question was the good one Gerhard Hansen gave him. Another Japanese witness states that the prisoner went to his house also to exchange a note, but in this instance also the note was not identified, and indeed the witness says he does not know it to be false; and this too was no doubt the good note referred to. But it seems from the evidence of these two Japanese that they have mistaken the man: they both say they saw him on the evening of the 6th, while Williams and Clausen both testify to his being in Yokohama at that time, and in this respect confirm the prisoner's statement. On the second point, that of attempting to utter false notes, knowing them to be false, if (as I maintain it has been shown) he did not attempt to utter false notes at all, of course he did not utter them knowing them to be false; but I would nevertheless point out that by the evidence he never had any knowledge of the existence of false notes until after the arrest. The only testimony tending to show any such knowledge is Williams', but his may be dismissed with the remark that he is interested in a conviction, for it depends, he says, upon the conviction of the prisoner and others whether he himself is released or not; besides, his statement shows that the prisoner's knowledge of the existence of false notes dates from the interview with himself and Bennett, being posterior to the alleged attempt to utter. The only statement in Bennett's evidence tending to prove such knowledge is the allegation that the prisoner told him Gerhard Hansen had promised him $500 for exchanging notes, but this is flatly denied by Gerhard Hansen and the prisoner, and it seems in the highest degree improbable that so large a sum would have been offered. The only evidence which the Court can look at in considering the question of the prisoner's guilt or innocence is that which has been produced in Court before them to day. That evidence fails to prove the existence of false notes at all; it fails to connect any notes, good, bad, or indifferent, with the prisoner; and it fails to establish any knowledge on his part even of the existence of false notes previous to the date of the alleged utterance. On one and on both of these grounds the prisoner is entitled to claim his release.

After prisoner had refused to answer the following questions, 1st —Did you go to Tôkiô in February last and try to pass a $500 note of the Hongkong and Shanghai Bank in the shops of Sakiya Heikichi and Omoto Kisaburô, Japanese subjects? 2nd—Did you know this note was forged, and with this knowledge endeavour to change it? His Honour said the Court would take it upon themselves to answer these questions, and found that prisoner had tried to pass a $500 note of the Hongkong and Shanghai Bank in Tôkiô and that he knew it was counterfeit.

Sentenced to 3 months' imprisoment, previous confinem nt taken into consideration.

IN THE DANISH CONSULAR-GENERAL COURT.

Before E. Bavier, Esq., Acting Consul-General.

Saturday, April 21st, 1877.

Richard Connor *v.* E. Ewalt.

This was a claim of $20 for damages done to the pilot boat of plaintiff on Friday the 13th instant.

Plaintiff said:—My statements can be proved by witnesses whom I intend to call. My principal standpoint is that defendant's boat had none of the lights which it should have carried according to regulation.

James Cook, sworn:—I was in charge of Mr Connor's boat at the time and was on board. I am in his employ. On the evening of the 13th about 12 miles from Cape Idzu, a pilot cutter ran into us and carried away our jib boom and did other damages. I thought it was the *White Cloud* and found I was right in my conjecture; for next morning I passed close to him. He showed no lights when he ran into me.

To defendant:—I only found out next morning that the boat was yours. It was in sight all the while. I endeavoured to avoid collision by luffing up. There was something to prevent us steering a straight course, because you crossed our bow.

To Court:—We could, although it was dark, see the loom of her sails.

Examined by plaintiff:—Our masthead light was hoisted directly after sundown. The collision took place between half past seven and eight. The red light was visible. The boat was on the larboard tack, and to leeward. If we had not luffed, the *White Cloud* might have run into us a midships. I saw no light on board her after collision. I could have seen it had there been one.

Plaintiff's head Japanese boatman stated that on the evening of the 13th instant the boat *White Cloud* collided with the *Eddie* and carried away her jib-boom. The *White Cloud* seemed to be going to pass clear, but changing her course suddenly the collision was inevitable. The *Eddie* tried to keep clear but failed. The *White Cloud* showed no lights. They saw her coming. The collision occurred through this sudden change of course.

Richard Wilkinson, master of the American ship *Haze*, sworn:—I saw these two boats run right under the ship's bows. One of them had lights, the other had not. I was afraid the ship would run foul of them, and I ordered the man at the wheel to put her hard down and luff her up. The wheel was then turned up again so that the ship would not round altogether. In the meanwhile one of the boats hailed me and almost immediately afterwards the pilot came on board. It was defendant, and he took charge of the ship. In a few minutes the other man came on board and claimed that he had hailed me first and wanted the other man to go. I had engaged the Dane however because he got on board first. The collision I did not see nor did any one on board the ship. Plaintiff went back to the boat that had the light, so I suppose it was his.

Charles Albert, seaman on board the *Haze*, sworn:—Two pilot boats hailed us on the 13th April, one of them, Connor's, having lights, the other none. The one with the light hailed once, the other did not, though the owner came on board first and piloted the ship up to port. Defendant's boat had no light.

Two of plaintiff's *sendos* now gave evidence, much to the same effect as that of the other boatman.

This closed plaintiff's evidence. Defendant called

Zenchino, *sendo* on board the *White Cloud*, who stated:—Both boats left Nanatsu on the 13th instant at 4 o'clock. We saw a ship at some distance and sailed in her direction. When about 1 *cho* from the ship we both steered straight for it. The *Eddie* got in our way and we ran foul of her. The collision took place about seven o'clock. Our boat had no light up because it was not dark enough. We were about 5 feet from the big ship at the time of the collision. I did not look for lights on board her. I did not hoist a light after the collision. I saw a lamp on board the other pilot boat. We were in sight of each other up till the time of the collision.

Another Japanese sailor corroborated the testimony of the previous witness in every particular, except with regard to the light. He did not know whether the other boat had a light or not.

Judgment reserved.

IN THE JUDICIAL COURT OF KANAGAWA.

Before Mr. Asaina Kansui, *Vice-President*.

Saturday, April 21st, 1877.

C. Braun *vs.* Kajiro Shokitsu.

The plaintiff claimed that the defendant be compelled to take delivery of certain goods to the value of $6,000.

Mr Dickins appeared for the plaintiff.

This case was resumed this morning from the 28th of March, when it was adjourned for the production of a witness for the plaintiff.

On the Court assembling Mr Dickins expressed his regret that the case should have taken so long, and on behalf of the plaintiff he was willing to abide by the decision of an arbitrator if the defendant was equally bound, if the Court should think fit to make such an order. The witness for whose presence the case had been suspended was now in Court and could be examined if necessary.

The proposition made by Mr Dickins being put to the defendant be declined to entertain it.

The Japanese witness Echizenya was then examined and deposed that Kashiwo had offered to take the goods if a reduction of 25 cents was made. The witness told him that he himself had no power in the case, but he would report the offer to the plaintiff which he did, but he plaintiff would not entertain such a considerable reduction. He said that he had seen the goods and compared them with the sample produced by Kashiwo and they were on the whole as good, though some four or five out of fifty might have been inferior. He corroborated the statement about the goods not being purchased by any single sample, but by the average of the 500 pieces. It was very difficult to get a large quantity of shirtings without any difference.

The examination of this witness concluded the evidence.

Mr Dickins arguments, which were in writing, were to the following effect, viz., that in this case the only question was, were the goods tendered of the kind contracted for? It was plain that they were. The contract said "goods same kind as those bought in July 1876." Those bought in July 1876 were of the same mark, same weight and were by the same manufacturer, as those in question. There was nothing said in the contract about "quality." and the plaintiff had nothing to do with quality; nor was any mention made of any sample, so that it was ridiculous to contend that the goods were bought on sample. But even if the plaintiff was concerned as to quality and had sold on sample, the defendant was in no better position. The defendant had even then to prove that the goods tendered were not equal to sample, and on that point he had given no evidence whatever. He had said that some of the goods tendered were not equal to one particular piece which he alleged was a piece taken out of the 500 pieces bought in July 1876, but which he did not produce. Neither did he attempt to prove that the piece in question was taken out of the 500, and the plaintiff denied that it was. When the 500 pieces were bought there was no thought of the present contract, and why, then, should a piece out of that lot be retained to compare with those bought under a contract not then contemplated? But even if the piece in question really was one of the 500 the defendant's position was no better. It certainly was not true that the present contract was made on that or any other one piece —even if by sample—but on the whole 500 pieces, or at least some 50 or a hundred taken at random out of the 500 should be produced for comparison with the goods now tendered; and if those now tendered are on an average below those so bought for comparison, then if the contract was on sample let the plaintiff lose, in the reverse case, let him win. The defendant had said that it was hardship that he should be required to produce the whole or a great

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

number of the 500 pieces for comparison, but it was a much greater hardship for the plaintiff to have the goods he tendered refused because they did not happen (if such is really the case, which has not been proved) with one single selected piece, probably accidentally superior pieces, for in all masses of goods there are invariably a few pieces here and there much better than the rest. Besides, the defendant could not complain of his own contract composed and written by himself. He had got what he chose to contract for, shirtings of a certain mark, weight, etc., any how he must prove that the shirtings offered were not what was contracted for. It was plain that he was the only person who could prove anything about that matter, as the 500 pieces of shirtings passed into his hands. As to the alleged offer by the plaintiff to make an allowance, Mr Dickins said, that in the first place never in any way admitted any inferiority in the goods tendered; and, next, what he had said was that he would abide by any allowance Echizenya might think proper if the defendant would bind himself to accept his decision. But the defendant had refused this. The offer of the plaintiff was made not because of any inferiority because none existed, but simply because it is always better to compromise a dispute than fight it out in Court; and also because he felt some compassion for the defendant as the market had gone down very much. The evidence of Nazomi was almost entirely false as shown by the statement of Echizenya and the plaintiff. As to the letter of the *banto*, the plaintiff had nothing to do with it. He never authorized it, and never even knew that it was written until quite lately, and the *banto* had stated that it was written in the defendant's own house and under the defendant's influence; and the fact that he had placed the matter in his lawyer's hands before the letter was written, showed that he could not have authorized any such letter. Besides, after all, the letter meant nothing. It simply referred to the possibility of some allowance being made. Nothing was easier and it was a common trick all over the world—than to repudiate a contract in a falling market, by saying the goods were not up to the sample, etc, but in all such cases the repudiator is bound to prove by ample and certain evidence that the goods were not up to sample; and of this there was absolutely no proof whatever offered by the defendant.

The plaintiff regretted very much to have had to bring this case into Court, and was quite willing if the Court should think fit to nominate Echizenya as arbitrator to accept the decision of that gentleman, the defendant being equally bound to accept such decision. The want of confidence felt by foreign merchants in Japanese merchants, owing to the constant practice of the latter of repudiating contracts whenever the market falls, was very serious, and greatly injured trade. It was to be hoped that the firmness and justice of the Court would deter the Japanese merchants of Yokohama from continuing so baneful and dishonest a practice.

Judgment reserved.

THE INAUGURAL.

(Boston Journal.)

If we were to call the address of President Hayes a Model Inaugural we think we should not only express our own feelings, but that of more than three-fourths of the thinking people of the country, regardless of partisan lines. In fact, so sound and self-evident are the principles laid down, so sensible and pertinent the suggestions made, and so liberal, high minded and patriotic the whole tone of the address, that it will be hard for most readers to have any partisan thought in connection with it. It is the appropriate invocation to his countrymen of a Chief Magistrate who, at his entrance upon an arduous term of service, desires to acquaint them with the principles by which he will be guided and the objects he has in view, leaving to every one the responsibility of receiving it in the same spirit in which it is given.

Nearly half of the address is devoted to the pacification of the country, which fact alone will serve as the augury of the new departure that may be expected to characterize President Hayes's administration. It is a proof of the foresight, as well as of the stability of the man, that now after the lapse of nine months marked by a national election and the rapid development of Southern affairs, President Hayes renews substantially the positions taken in his acceptance letter on this topic. If any Republican, owing to recent rumors, has fallen into any momentary fears that the great Republican doctrines fought for under Lincoln, and applied under Grant to the work of reconstruction, might be abandoned under Hayes, he has only to read this Inaugural, not only to see the folly of such doubts, but to have this own faith strengthened and confirmed. Every freedman at the South will feel that another friend and guardian of his rights, as inflexible as any in the past, is now sitting in the Presidential chair—one, too, with facilities for affording protection to life and property never enjoyed before.

At the same time equal justice, and all the consideration and sympathy which patriotism requires, will be extended by the new administration to the white citizens of the South. A policy is to be steadily sought which shall promote the interests of the Southern community as a whole. The local government in each State "must be a government which guards the interests of both races carefully and equally;" it must be a character which shall constitute the "true resource of those States for the promotion of the contentment and prosperity of their citizens" and while the material development of the South must be carefully fostered by the National Government, it must never be forgotten that the basis of all prosperity, there as well as elsewhere, lies in "the improvement of the intellectual and moral condition of the people." These are truths as sound as they are pertinent. To be sure, they are general, as was to have been expected in an inaugural; but they logically include and lead to the measures which the times demand. Anything different would have been inauspicious. Having thus started right, the country will await the full development of President Hayes' Southern policy with candor and confidence.

On the subject of civil service reform the language of President Hayes is as correct and firm as the great mass of disinterested citizens could desire. Appointments to office, he says, were not, in the view of the framers of the Government, to be made as the mere reward of partisan services, "nor merely on the nomination of members of Congress as being entitled in any respect to the control of such appointment." That is the key of the whole battle-field in this great contest which is to come; and we may be sure that the man who can point it out so unerringly and so bravely will never flinch when the trial comes. He will have the support of the masses, and can always safely appeal from any insolent official to the honest and irresistible constituency behind him. "He serves his party best who serves the country best"—words which, as President Hayes uses them, deserve to be written in letters of gold, and are sure to fall at this time like good seed on good ground.

With regard to our financial interests, the President remains true to his declarations at a time of greater trial than the present. He will evidently do all in his power to promote a speedy return to specie payments. In briefly commenting upon our foreign relations, he pays a just tribute to his predecessor in connection with the Geneva arbitration, and pledges himself to try the same policy again should occasion for it arise. His remarks upon the late political contest and the method by which it was brought to a close are judicious and in good taste. His closing appeal rises to solemnity and will be responded to by the conscience of the American people, who, among other causes of gratitude in such a grave exigency as we have been passing through, will rejoice that our institutions have again brought to the front a representative so creditable and worthy of respect at home and abroad.

REUTER'S TELEGRAMS.

LONDON, 15th April, 1877.

The belief that War is imminent is so general that a panic prevails in London.

A Russian army is advancing on Jassy (in Moldavia) across the Pruth.

Persia has advanced claims to Bagdad.

ARRIVAL OF THE FRENCH MAIL.

TELEGRAMS.

London, 1st April.—England, having signed the Protocol on condition that Russian "demobilizes," revives the prospect of an Agreement with Montenegro.

The Porte is displeased with the Protocol and will probably refuse to disarm.

Montenegro maintains her demands.

Great uncertainty prevails with respect to the course of events.

It is believed that the negotiations between Russia and England have failed.

Rome, 26th March.—The Pope is very feeble, and his condition causes great anxiety.

Bombay, 20th March.—There are now 223,763 people on relief works in the Bombay Presidency, showing a decrease of 36,000 in a fortnight and of 120,000 in two months.

The *Goa News* says that the new commercial treaty between the Portuguese and British India Governments will result in the construction of a railway from Goa to one of the adjacent Collectorates in the Bombay Presidency.

London, March 28th.—A renewed hopeful feeling exists. A Cabinet Council has been summoned. Russia apparently is disposed to make concessions, meeting the views of England. General Ignatieff, who has been at Berlin, now returns to St. Petersburg.

OBITUARY :—The Editor of the *Economist*.

London, 27th March.—The departure of the Prince and Princess of Wales for the Mediterranean is deferred for a few days, as the Prince is suffering from a boil.

Constantinople, 26th March.—The Montenegrin delegates have broken off the negociation with the Porte, and will probably leave here on Saturday.

St. Petersburg, March 26th.—The Russian Press accuse the British Government of leaving Russia the choice of dishonour or war.

Constantinople, March 26th.—The garrison here has been changed, and replaced by Syrian troops. The Softas are agitating for the recall of Midhat Pasha.

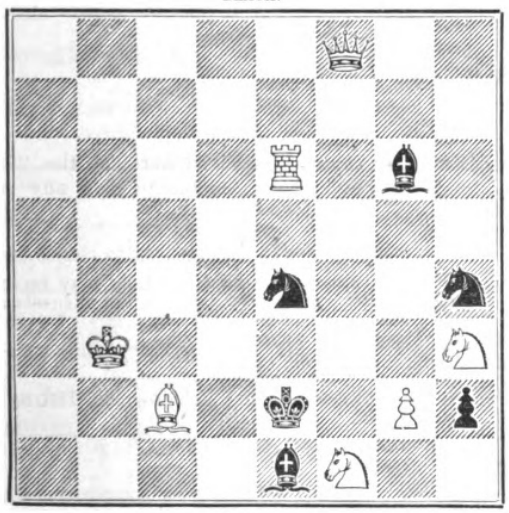
Constantinople, 27th March.—Turkish deputies yesterday in discussing address in reply to speech from throne unanimously repudiated idea of foreign intervention in internal affairs of Porte.

Washington 28th March.—President Hayes has sent commission to Louisiana and invited rival parties to settle their disputes.

London, 27th March.—An animated debate took place in the House of Commons to-night on the conduct of Sir Henry Elliot, during which Sir Stafford Northcote said the Government objected to the policy of coercion with Turkey, because it would neutralize the efforts being made by the Porte in favor of its Christian subjects.

Replying to a question by Lord Hartington, Sir Stafford Northcote said that negotiations were still proceeding between the Great Powers respecting the Russian protocol, and that the principal question was as to the conditions on which it should be signed. Parliament has adjourned for the Easter recess.

OBITUARY.—Field-Marshal Fitzgerald.



London, 22th March.—Cabinet Council to-day resolved to favourably consider counter proposals made by Russia and sign protocol, but on the understanding that England would regard it as not binding in case of failure on the part of Russia to demobilize her forces.

London, 29th March.—Prince of Wales is recovering. At cabinet council yesterday it was unanimously resolved to continue negociations with Russia. English Government sanguine as to result.

PROBLEM.

This problem by Mr. HEALEY gained the prize for the best 3 move position in the British Chess Association Tourney.

BLACK.

WHITE.

White to play and mate in 3 moves.

SOLUTION OF F. HEALEY'S PROBLEM OF LAST WEEK.

REPORTS.

The *Tanais* reports having experienced strong Easterly winds, a heavy cross sea with rain and fog, from noon of the 23rd till the evening of the 26th.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market is rather quiet and in some instances prices show a decline. In *Yarns* a moderate business has been done; 16/24 have been sold at a slight reduction; 28/32 continue firm, whereas 28/42 are neglected. *Shirtings* are firm. *Velvets* and other articles do not attract much attention and are nominal.

Grey Shirtings:—							
7 lbs.	38¼	yds.	39	in.	per pce.	$1.47½	to $1.82½
8 lbs.	38¼	yds.	44	in.	,,	1.65	to 2.25
8 lbs. 4 to 8¼ lbs.	38¼	,,	39	in.	,,	1.65	to 2.37½
9 lbs.	38¼	,,	44	in.	,,	2.05	to 2.57½
T. Cloth 7lbs.	24	,,	32	in.	,,	1.50	to 1.70
,, 6lbs.	24	,,	32	in.	,,	1.10	to 1.25

White Shirtings:—					
60 to 64 reed 40 yds. 35 in.	per pce.			2.20	to 2.40
Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb.			0.67½	to 0 85
Black Velvets				7.25	to 8 25
English Drills 15 lbs. 40 yds, 30 in.				2.65	to 2 85
Taffachelass	12 yds, 43 in.			1.70	to 2.15

Yarns.—

No. 16 to 24	per picul...	$28.50	to	32.50
No. 28 to 32	per picul...	$30.50	to	34.50
No. 38 to 42	...per picul...	$34.00	to	39.00
Reverse Twist 16-24	,,			

Woollens.—In the absence of any demand our market remains exceedingly quiet and prices, with the exception of those for plain *Mousselines de Laine* which are decidedly lower, must be quoted nominally the same as last.

Plain Orleans	40—42 yds.	32 in.	5.50	to	7.00
Figured Orleans	29—30 yds.	31 in.	4.25	to	5.25
Shimagoro	30 yds.	30 in.	4.00	to	5.25
Italian Cloth	—30 yds.	32 in.	0.24	to	0.31
Camlet Cords	29—30 yds.	32 in.	5.75	to	6.00
Camlets Asstd.	56—58 yds.	31 in.	16.50	to	17.50
Lastings, Japan	22—30 yds.	32 in.	12.00	to	13.00
Plain Mousselines de Laine	—30 yds.	30 in.	0.17½	to	0.19

Figured Mousselines de Laine	30 yds.	30 in.	0.25	to	0.30
Multicolored ,,	30 yds.	30 in.	0.30	to	0.36
Cloth, all wool plain or fancy	48 in.	to 52 in.	0.80	to	1.20
Presidents	54 in.	to 56 in.	0.60	to	0.65
Pilots	54 in.	to 56 in.	0.45	to	0.55
Union	54 in.	to 56 in.	0.60	to	0.75
Blankets, scarlet & green 6 to 8 lbs.	per lb		0.40	to	0.47

Sugar.—The market has been very quiet and hardly anything has been done, but prices are almost unchanged and holders of *Formosa* demand higher rates than those quoted.

Sugar:—Takao in bag	per picul...			$4.30	
,, in basket				$4.10	
Taiwanfoo in bag				$4.15	
do. in basket				$4.00	
China No 1 Ping-fah				$8.00	
,, No. 2 Ching-pak			$7.30	to	$7.70
,, No. 3 Ke-pak			$6.60	to	$6.80

China No. 4 Kook-fah	per picul...		$6.20	to	$6.40
,, No. 5 Kong-fun			$5.70	to	$6.10
,, No. 6 E-pak			$5.20	to	$5.40
Swatow Brown			$3.60		
Daitong			$3.75		
Japan Rice			$1.95	to	$2.05
Kerosene Oil			$4.40		

Kerosene Oil.—The market is a trifle weaker under forced sales, quotations being 4.30 @ 4.40 nominal.

EXPORTS.

Silk.—Telegrams reporting war declared between Russia and Turkey were received here on the 25th instant. The market is of course duller, if possible, than it was before, and we are unable to give any reliable quotations.

Deliveries since the 20th instant are about 50 piculs.

Tea.—Business in this staple is for the present suspended, but arrivals of New Crop Leaf may be expected about the 2nd or 3rd prox.

EXCHANGE AND BULLION.

Exchange.—The past week has been more than usually quiet with slightly easier rates.

Rates close as follows:—			
STERLING—Bank 6 months' sight			4s. 0½d.
,, Bank Bills on demand			3s. 11¾d.
,, Private 6 months' sight			4s. 1d.

MISCELLANEOUS.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun..

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15.0.0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

MISCELLANEOUS.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTH.

May 1st, 1877, at No. 220, Bluff, the wife of Mr. CHARLES D. Moss, of a daughter.

Notes of the Week.

For some time past we have had little or no news from the seat of war. It is known that the rebels occupy in force positions on the borders of Higo and Satsuma in the neighbourhood of Hitoyoshi, and as a strong force of Government troops has effected an undisturbed landing at Kagoshima, it is probable that a simultaneous advance will be made from Kumamoto and Kagoshima against these rebels. H. I. H. Arisugawa-no-Miya has issued a proclamation offering pardon to all those who lay down their arms and submit to the Government, which has been responded to already to some slight extent, and the continuation of such commendable leniency on the part of the Government may do more to stop this deplorable strife than continued levies of youthful conscripts could effect.

The Government may happily receive some assistance in the suppression of the rebellion, if it is true, as reported, that a split has occurred in the camp of the rebels. Not only does there appear to have been a difference of opinion among the insurgent leaders as to the position which it was most advisable to occupy on the retreat from Kumamoto, but there seems also to have been a serious defection from the rebel cause on the part of the Higo *samurai*, who were looked upon as strong allies of their neighbours. In particular is the resentment of the Satsuma men excited against the *samurai* of Yashiro, who, it appears, at the outbreak of the war strongly expressed their adherence to Saigo's cause and their intention of firmly resisting any attempt on the part of the Imperialists to land at Yashiro, but who, on the appearance of the Government troops forsook their allies, and not only failed to offer the opposition they had pledged themselves to, but betrayed the plans of the Satsuma men to the Imperialists, and gave them such topographical information as enabled them to march with certainty against the rebel entrenchments.

An instructive illustration, confirmatory of some remarks which we recently made on the subject of the currency question in this country, is afforded by a circumstance recorded in the native journals. It is well known that when Saigo's forces were beleaguering Kumamoto castle, they obtained their commissariat supplies from the farmers of the neighbourhood, paying for them in paper promises bearing the stamp of the Satsuma Commander-in-Chief. Soon after the commencement of the seige, however, Saigo was deprived of his rank and office, and himself and his followers were proclaimed traitors and rebels; and now the Imperial authorities are reinstated in the district. Yet the paper promises of the proclaimed and worsted rebel continued to pass current as money under the very noses of the Government officials. As a matter of course a notification was issued by the local authorities forbidding the use of the obnoxious currency; and it is here that the singular feature of the case comes in. The people disregard the command of the authorities, and continue to accept the prohibited paper in exchange for their commodities. Is this political obstinacy or is it sheer ignorance? Or is it a combination of both? In any case it is certainly not that enlightened self-interest on which the science of western political economy is built.

A correspondent of the *Akébono Shimbun*, whose effusion will be found elsewhere in our columns, is apprehensive lest Japan—and, indeed, Asia generally—may in some indefinable way be involved in the Turkish imbroglio. He may calm his patriotic fears. The possibility of such an extension of the Eastern question as that would be, has never, it may safely be affirmed, entered into the calculations of the most far-sighted European statesman. Another more tangible cause of annoyance he finds nearer home in the attitude of China in respect of the Loochoo question. That Great Empire seems as little inclined to forego its claim to suzerainty, as the little insular Kingdom is to withdraw its allegiance. It is just possible that the Loochoo question may soon be brought into prominence again, for there have been several indications in the native press of late, that an attempt is being made to induce the Government to divert attention from domestic dissensions, by plunging the country into a war with a foreign state, either Corea or China, whichever may be considered to afford the more plausible pretext. But it is to be hoped that the lesson taught by the hollow and evanescent nature of the results of the Formosan expedition has not been thrown away on the statesmen of this country. A miserable money pittance and an admission that the troops despatched by the Japanese Government were not to be deemed freebooters, formed but a sorry equivalent for the lives and treasure wasted in the territory of the Bootan savages.

It is not in the capital and in large cities and towns only that the impoverishing effects of the civil war are making themselves felt. The depression caused thereby is universal, and nowhere is it more noticeable than at the favourite spring

resorts of the Japanese of all classes, except the lowest,—the various bathing establishments for the use of the natural hot springs. The falling off in attendance at these places is said by the proprietors of the hotels to be distressingly great, and where, in former years, the visitors have been unable to find accomodation owing to the crowd of bathers, there are empty houses by the dozen. Long are the faces and bitter the complaints of "mine hosts," who truly say, that those visitors who used to be most free with their cash, namely the official and military classes, have either left their positions or gone to the war, while the merchants can no longer find the money to take their wives and families on a pleasure trip, or are unwilling to spare it in these hard and unpromising times. There is a remarkable absence of all those sounds of revelry by night which generally make a fashionable native watering place so full of life and mirth. No lights in the windows; no merry dancing shadows on the paper screens. The shutters remain undrawn, and the houses sleep in joyless gloom. There is no sound of singing men and singing women. The *samisen* hangs silent on the wall, consigned to the dismal solitude of a paper bag. The makers and sellers of the little toys and wooden mementoes that form the staple commodities of all places where bathers most do congregate, maintain a gloomy watch over their unvisited stock. Even the cocks and hens—that peculiar antediluvian breed of bony and adamantine fowl, which seems set apart for the service of those guests who occasionally indulge in the extravagance of a *tori knabe* or the dissipation of a bowl of chicken broth—move with a more secure air, as if conscious of the likelihood of their continuing to exist and, if possible, increase in toughness and muscular development. A grey quiet appears to have replaced the usual rosy tint of Japanese life, and even the *shikata ga gozaimasen* seems to have lost some of its resignation, and taken a slight tone of the murmur of complaint.

In our present issue we publish the entries for the approaching Spring Meeting of the Yokohama Race Club, having published the entries for the Association Meeting in our last. For both meetings the entries for handicap races and the Griffins' Plate remain open until the 10th instant. The entries for the Y R. A. amount to more than $1,900, while those of the Y. R. C. barely exceed $1,100, a falling off on the part of the older institution which may be accounted for by the fact that many of the best ponies are debarred from running altogether, and also on account of the preference which has been given in its programme to the subscription griffins. Some members may think with Helena that

> "Oft expectation fails, and most oft there
> Where most it promises."

The Association have a decided advantage in being first with their races, besides the fact that so many crack ponies will contend for their prizes, that it cannot fail to be a most interesting meeting. We wish both Club and Association fine weather and good sport, and sigh to think of the glorious meeting we might have boasted of had the amalgamation—apparently so universally desired been feasible.

The Club Regatta which occurred last Thursday was by no means the success it might have been, had a little more good management been displayed in arranging it. From various causes the Club itself is weak, and could only send out two crews for a race for Canton Fours, to be followed by a race between two boats for the Champion Pairs. Naturally enough the public exhibited little or no interest in these proceedings, and passers by on the bund would hardly stop in their walk to watch the struggle between the contending boats. There are five men-of-war lying in our harbour at present, and a boat race between crews from two of them, the *Audacious* and *Tennessee*, is actually projected to take place next week. Why then could not the committee of the Amateur Rowing Club have arranged a programme which would have included this and such other races as could have been made up for boats from merchant vessels in port, private gigs and compradores' boats? Had an effort been made in this way a successful regatta might have been achieved that would have claimed the interest of the community, and proved worthy of the glorious weather we enjoyed on Thursday afternoon.

It is now two months since the arrangement for lighting the streets of this settlement was settled with the Gas Company, on the basis of doing so on such nights during the month that the moon did not shine, and the agreement was circulated among the residents in order to obtain by subscription the amount required per month to cover the cost of this partial illumination, which amounted to $349. It is hardly credible that in a community like this—a community which subscribes generously to relieve the sufferers by a fire at Tôkiô or famine in Shantung, and liberally supports amusements of all sorts—are so apathetic about what is considered one of the first necessities of any settlement, that it is only by most strenuous efforts on the part of the Committee that the subscriptions amount to $320, —$29 short of the actual amount required. The Gas Company offer to commence the lighting at once if the Committee will personally guarantee the amount that is short, but it is hardly to be wondered at that this is declined on their part, considering the shameful want of support afforded them by the residents. So the matter stands at present. Our streets remain in darkness because this community *will* not provide the paltry sum of $29 per month, and the probability is, that notwithstanding all that is said or written on the subject, so they will continue to remain. There are no end of people living here who do not hesitate to abuse the authorities, and condemn the police as inefficient, if so much as ten cents' worth of property is stolen from them, and yet who consider it no part of their duty to pay one iota towards supplying an effectual means of lessening the chance of robbery being successful. Perhaps it is that the characteristic of Englishmen is too prevalent in this settlement, and that the residents do not wish a good cause for grumbling to be taken away from them. The whole system of our municipal government is at fault, and we despair of ever seeing a change for the better until the Ministers take the matter in hand, and frame a set of simple land regulations which will be law to their respective nationals.

The dust storm on Tuesday last sorely tried the temper of all who were of necessity exposed to it, and yet the discomfort we were then subjected to might have been greatly mitigated had our streets been watered. The summer, too, is fast coming upon us, when cool, well watered streets are not only a luxury but a necessity for health, and all this can be obtained for a similar cost per month as it will take to light the settlement. But who would be bold enough to say that for such purposes $700 per month could be collected in Yokohama?

We observe from the San Francisco *Evening Bulletin* that Mr. Eli T. Sheppard, formerly U. S. Consul at Tientsin, has been appointed to the post of assistant legal adviser to the Japanese Foreign Office. From the little we have heard respecting this gentleman we rejoice to believe that the Foreign Office has been more fortunate this time in its selection than it was on the first occasion of its filling the appointment. We are much mistaken if Mr. Sheppard is the sort of man who would assert that the diplomatic relations of this country constitute a grievance, or that not one foreigner in ten has been murdered who ought to have been murdered. The position Mr. Sheppard will be called upon to fill is one of high trust and importance, and we venture to anticipate that he will find the most faithful and consciencious discharge of his duties towards his employers, to be compatible with impartiality of judgment and tolerance of speech in respect of the foreign communities and the foreign officials resident in this country.

It has been announced that His Majesty the Mikado will leave Kiôto for the capital on the 17th instant, embarking at Kobe on board the *Meiji Maru*. H. E. Okuma, the Minister of Finance, is expected to arrive in Tôkiô in a few days, and, it is said, will shortly be followed by all the Cabinet Ministers at present in Kiôto.

We have received from the *Japan Gazette* office a reprint of the Convention of Yedo of June, 1866, which also includes the revised Custom's Tariff and the Bonded Warehouse Regulations, the whole forming a pamphlet which will be extremely useful to houses of business in Japan.

The "Centennial Wanderers" of the U. S. S. *Tennessee* intend to give a performance at the Gaiety Theatre on Monday evening in aid of the funds of the Temperance Hall. A varied programme is offered which is fully up to the standard of such performances, and we have no doubt that the audience will be charmed by many a good joke and

"The sad burden of some merry song."

We hope, for the sake of an institution which has unobtrusively done an immense deal of good in this settlement that the dusky "Wanderers" will be rewarded by a full house

---

We have been informed to-day by the Agent of the Great Northern Telegraph Company that the cable between Shanghai and Amoy is out of order, and it was only yesterday that the Russian land lines were reported as interrupted. That this break in our telegraphic communication should take place just when a great European war has broken out is most unfortunate, and we can only hope that the lines will be speedily repaired.

From the "Japan Mail Daily Advertiser."

Monday, 30th.

The following will illustrate the wonders of telegraphy:—

A telegram was forwarded through the Great Northern Co. at 6.30 p.m. on the 27th to Europe by a firm here, who on the morning of the 28th instant at 11 a.m. received the reply dated 27th instant 3.30 p.m., the answer apparently having been sent before the telegram was written. The difference in time here and in Europe —9 hrs. 20 min.—explains this anomaly, but the actual time between the despatch of the message and receipt of the reply, sixteen hours and a half, shows how closely the telegraph now connects the most distant parts of the globe, and reflects great credit on the working of the Great Northern line.

From the *Hôchi Shimbun.*

Six battalions of infantry, a detachment of artillery with eight field pieces and a body of engineers, under the command of Takashima, Kawamura and Oyama, left Takahashi on the 25th instant for Kagoshima.

From the *Akébono Shimbun.*

A rebel named Uyeda who was captured near Kumamoto, has made the following confession:—On the 2nd of this month when the rebel hospital at Kawajiri was to be removed to Koyama and Mifune, the wounded who were removed numbered in all 1,800, while between four and five hundred who were too seriously wounded to be removed were put to death.

From the *Mainichi Shimbun.*

Two policemen of Nagasaki *ken*, having their hands and legs fettered, arrived here by the *Hiroshima Maru*, in charge of six other policemen of the Hiogo *ken* and Tôkiô *Fu*. When the two prisoners were being transferred to a boat from the steamer in order to land, they contrived to jump overboard fettered as they were, and of course sank at once, but the *sendos* were immediately ordered to dive for them and succeeded in rescuing them in an insensible state. They were immediately taken to the hatoba, where animation was restored, and were subsequently sent on to Tôkiô by train. It is supposed that these two men must have been acting as spies for the rebels.

From the *Nichi Nichi Shimbun.*

There has been of late no news of the war in the South. This is accounted for by the fact that the insurgents retreated towards the province of Hiuga after the relief of Kumamoto, and have not yet taken up any definite position. Whenever they attempt to entrench themselves they are attacked by the Government troops.

From the *Chôya Shimbun.*

The following letter was sent by the rebels to the besieged troops in Kumamoto Castle, by means of attaching it to an arrow:—

"As the Government have connived at assassination, and violated the constitution of the country, General Saigo and two other leaders placed themselves at the head of an army and took the field, in order to enforce explanations. But the garrison of Kumamoto unreasonably closed the castle gates against this army, and thereby caused much distress to the people, besides so exciting the troops forming this army that they threaten to wholly exterminate the garrison. As we feel pity for those who have been compelled to remain in the castle against their will, we will pardon them if they will at once throw down their arms and submit to us. The Imperial troops at Yamaga and Takase have been thoroughly beaten, and risings against the Government are taking place in various *ken*. Such being the case it is useless and dangerous for you to defend this single castle any longer, and if you persist in doing so be prepared for your fate."

Since the relief of Kumamoto Saigo has been raising money from the merchants in the province of Hiuga.

Tuesday, 1st.

Professor Vanek gave another entertainment at the Gaiety Theatre last night at prices reduced so as to specially attract a native audience. The theatre was fairly well filled, and the Professor's magical skill seemed to afford unbounded delight to all present.

From the *Mainichi Shimbun.*

The *Sangi* who some time ago left Osaka for Kiôto, have now returned to the former city.

One of the rebel commanders named Katsura Yemon assumed the office of Governor of Kagoshima, and having established himself in the *Kencho* obtained large supplies of rice and ammunition from the people of the provinces of Satsuma and Osumi, alleging that he was acting officially. The supplies thus obtained he forwarded to the rebel army, during last month supplying them with 1,500 bags of rice and three and a half million of cartridges.

From the *Nichi Nichi Shimbun.*

Kuroda arrived at Kobe on the morning of the 28th instant.

From the *Akébono Shimbun.*

The *Chôya Shimbun* published a report to the effect that Lieut.-General Nodzu had been wounded by Kirino, and that the latter was subsequently shot down by Major Murata, both of which statements were untrue. Nodzu is a well and as vigorous as ever. The *Osaka Nippô* also stated that Lieut.-General Tani was about to visit Kiôto, but this also is untrue, as he has been wounded, though not seriously, and is now about to undergo an operation at the hands of the surgeons.

At 10 p.m. on the 29th instant a fire broke out at Shinagawa, which destroyed thirty-three houses before it was extinguished at 11.20 p.m.

At 1.45 a.m. on the 29th instant a fire broke out at Iwamotochô, Kanda, Tôkiô and destroyed three hundred and thirty-eight houses.

From the *Hôchi Shimbun.*

The Government has instructed the Minister of Justice that the trial of Ôyama Tsunayoshi, ex-Governor of Kagoshima *ken*, is to be carried on according to orders received from H. I. H. Arisugawa-no-Miya, the Commander-in-Chief of the Imperial army.

The *Tsukuba Kan* left on the 25th and the *Seiki Kan* on the 26th instant for Kagoshima.

It is said that Kawaji has reported to the Emperor that Lieut.-General Yamada, the Vice-Minister of Justice, has been conspicious in his devotion to the Imperial cause, in aid of which he has rendered most efficient service.

Wednesday, 2nd.

Paper money which has been made by order of Saigo is circulating in the neighbourhood of Kumamoto, and although the *Kencho* authorities have forbidden its use, the prohibition has had no effect in decreasing its circulation.

A telegram is said to have been received from Nagasaki stating that three foreign vessels entered the harbour of Mimidzu, in the province of Hiuga, on the 27th instant, but this report has not yet been confirmed.

It is rumoured that the Army Department of Tôkiô will be removed to Osaka.

From the *Mainichi Shimbun.*

A telegram which left Nagasaki on the 30th ultimo announces that at dawn of that day, the *Kasuga, Ringô, Tsukuba, Seiki* and *Teibô*, with seven thousand troops and police, arrived at Kagoshima, and a landing was immediately effected. Arimatsu Sukenaga was at once arrested, and the city patrolled by troops for the purpose of arresting all rebels or suspected persons.

From the *Chôya Shimbun.*

The rebels have constructed batteries at Takachi-o, in the province of Hiuga, and have garrisoned the place with their new-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

ly enlisted troops. They have also stationed their men at other various strong points.

A telegram which was despatched from Kiôto at 1.50 p.m. on the 30th ultimo, states that the insurgents who had at first taken up a position at Yashiro have strongly intrenched themselves about half a *ri* from Sashiki, on the borders of the provinces of Satsuma and Higo, and very frequently visit that city, in order to try and ascertain something about the movements of the Imprialists. The rebels have stationed out-posts on the hills south of Hinaku, while their re-inforcements from Yabe have advanced as far as Suge, on the border. The Imperialists have taken all possible advantage of the country to advance their out-posts, so that the movements of the rebels can be watched.

From the *Akébono Shimbun.*

Kawamura, Oyama and Takashima arrived at Kagoshima on the 27th ultimo. Since the Special Envoy of the Mikado visited that place many irregularities have taken place in the Government of the *ken*, so that the three above named are invested with power to put matters on a strictly satisfactory basis.

SECOND NATIONAL BANK.

Thursday, 3rd.

We understand that telegraphic advices have been received of the issue by Her Majesty the Queen of a proclamation of neutrality in respect to the war between Russia and Turkey.

After leaving Kobe the *Tokio Maru* met with bad weather, and on reaching the Isumi Strait was obliged to anchor for seven hours.

From the *Mainichi Shimbun.*

The Government has decided to send criminals sentenced to penal servitude to Yezo, where they will be employed in the cultivation of the soil, or in some of the industries which have lately been introduced there. Special laws for this purpose are now being compiled by the *Naimusho.*

The Mitsu Bishi Co's steamers now in the Government service, are being gradually returned to the Company.

Since yesterday the Government has permitted the transmission of telegrams on private business.

Kuroda will arrive at Yokohama to-day or to-morrow.

From the *Akébono Shimbun.*

As matters are getting settled in Higo now, the strict rules hitherto enforced in the police force are being relaxed, and constables are granted leave to visit their homes or the capital.

A telegram sent from Kumamoto at 11.55 a.m. on the 30th ultimo states that the old officials at Kagoshima are issuing orders in the name of the *Kencho* to collect recruits for the rebels army. Yesterday several of the above officials were arrested. The new officials sent from Tôkiô have arrived at Kagoshima and are to commence their duties from to-day (the 30th). All the *Kucho* and *Kocho* are to be strictly watched, and great pains are to be taken to prevent the Satsuma residents assisting the rebels in any way.

From the *Chôya Shimbun.*

On the 28th instant Kuroda had an interview with H.M. the Mikado at Kiôto, and gave His Majesty a description of the seat of war, after which he was invited to dine with the Mikado.

A report from Nagasaki has been received to the effect that the Commander-in-Chief of the Imperial forces has issued a notification to various *ken*, that lenient treatment will be shown to those rebels who submit at once. Already about 300 have taken advantage of this notification and given themselves up.

The two sons of Shimadzu who went to Kiôto to have an interview with H.M. the Mikado, left Kobe on the 28th instant for Nagasaki.

Friday, 4th.

The weather cleared up beautifully for the Club Regatta yesterday afternoon, and the water was smooth, a combination of circumstances rarely to be found here on such occasions. With the unpunctuality which distinguishes aquatics, the Canton Fours made their appearance at the starting point nearly three-quarters of an hour late, Mr. Jeyes' boat, the red flag, having paddled up to the stake boat, while Mr. Milsom's boat, the blue flag, was towed there by the steam launch which carried the starter. On the word being given both boats got well away, Mr. Jeyes' having a slight advantage which was kept to the creek, where Mr. Milsom put on a spurt and succeeded in obtaining a very slight lead. Both crews were rowing exceedingly well, at the rate of 32 strokes a minute, and so close were they together, and so fully was a spurt by one crew acknowledged by a spurt from the other, that the result was doubtful until the stake boat was nearly reached, when Mr. Jeyes' boat forged ahead and passed the winning post barely half a length ahead of their plucky opponents. The time was 7 min. 20 secs., which was not bad considering that the course, though nominally a mile, exceeded that distance by fully 150 yards. We should like to see this race rowed again when No. 2 of the blue boat is in better condition than at present, and while we deplore the falling off from various unavoidable causes in the number of competing crews, we must congratulate the Club on being able to put forward the two who rowed yesterday.

CANTON FOURS.

2.—J. S. Van Buren,	,,	11	0
3.—H. A. Towse,	,,	13	7
A. Milsom, stroke,	,,	11	0
H. B. Henley (cox)	,,	9	2.....2

The next race was for the Champion Pairs, and as one of the entries was scratched at the last moment, only two boats appeared at the starting point. At the start the blue flag had the best of it, and Towse having caught a crab off the creek made the blue's steadily increasing lead a certain one. From this point, indeed, the occupants of the red boat seemed completely demoralized, while those in the blue boat rowed steadily and with a good swing, winning in 10 min. 5 secs., by 2½ lengths.

Mr. Dodds officiated as Starter and Time-keeper and Mr. J. J. Dare as Judge.

Professor Vanek gave another performance at the Gaiety Theatre last night to a well filled house, and mystified the audience as completely as ever, to their no small satisfaction.

From the *Chôya Shimbun.*

It is rumoured that the Japanese officials in Corea have been insulted by the natives, and also that rice which was in charge of the Japanese Government agents has been stolen. Another rumour is current that certain influential officials of Loochoo have fled from that country to China.

It is said that Saigo has become unpopular among the insurgents, and that Kirino is now their real leader.

From the *Hochi Shimbun.*

A telegram which was received from Kiôto at 2. p.m. on the 1st instant announces that four of the Fukuoka rebels have been beheaded, ten of them sentenced to 10 years' penal servitude, and three hundred and fifty to 1 year's hard labour.

The expense incurred in suppressing the present rebellion in the South up to the end of last month amounts to 10,275,981 *yen.*

H. E. Okuma, the Minister of Finance, is expected to return to the capital in about a week.

A large fire took place in the woods of Toga district, in the province of Kadzusa, on the 13th of last month, which burnt out an area of 3 *ri* in length by 1 *ri* in breath. The fire originated

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

from a charcoal kiln, the door of which was left open during a gale of wind. Not only were thousands of good trees destroyed but also houses, temples, etc., and one man was unfortunately burned to death.

From the *Akebono Shimbun.*

The Navy Department is going to enrol a force of five hundred Marines by the 10th June.

From the *Mainichi Shimbun.*

H. E. Iwakura is said to have telegraphed to Kiôto about the 8th of last month, to the effect that he thought that H. M. the Mikado might return to the capital.

Saturday, 5th.

The agent of the Great Northern Telegraph Company yesterday informed us that the Russian land lines were interrupted beyond Omsk.

We publish below a table of the relative ranks of Japanese Naval and Military officers, which some of our readers may find useful for reference.

RELATIVE RANK OF THE OFFICERS OF THE NAVY AND ARMY.

Navy.

1.*—Admiral of the Fleet.
2.—*Taishô*, Admiral.
3.—*Chiujô*, Vice-Admiral.
4.—*Shôshô*, Rear Admiral.
5.—Chief Inspector of Machinery of 3 years, and Inspector General of Hospitals and Fleet of 3 years standing.
6.—Captain of the Fleet.
7.—Commodores 1st and 2nd class, Chief Inspector of Machinery under 3 years, Inspector General of Hospitals and Fleet under 3 years service.
8.—*Taisa*, Captain over 3 years standing, Secretary to Admiral of the Fleet.
9.—Inspector of Machinery after 8 years, Deputy Inspector General of Hospitals after 5 years service.
10.—*Chiusa*, Captain under 2 years, *Staff Captain (nav), Chief Inspector of Machinery under 8 years, Deputy Inspector General of Hospitals under 5 years service.
11.—*Shôsa*, Commander, Staff Commander (nav), Chief Engineer of 15 years seniority, Fleet Surgeon.
12.—*Tai-i*, Lieutenant of 8 years seniority, Navigating Lieutenant of 8 years seniority, Chief Engineer of 8 years seniority, Staff Surgeon.
13.—*Chiu-i*, Secretary to Commodore 2nd class, Lieutenant under 8 years seniority, Navigating Lieutenant under 8 years seniority, Chief Engineer under 8 years seniority, Surgeon.
14.—*Shô-i*, Sub-Lieutenant, Navigating Sub-Lieutenant, Engineer.
15.—Chief Gunner.
16.—Chief Boatswain.
17.—Chief Carpenter.
18.—*Shoi Ho*, Midshipman, Navigating Midshipman, Assistant Engineer.

Army.

1.*— Field Marshal
2. — *Taishô*, General
3. — *Chiujô*, Lieut.-General
4. — *Shôshô*, Major General
} Executive Officers according to date of commission.

6 and 7.—Brigadier General, according to date of commission.
8.—*Taisa*, *Paymaster in Chief, Colonel, according to date of commission.
9.—Colonel, retired.
10.—*Chiusa*, Secretary to Commander-in-Chief after 8 years service, Lieut. Colonel, according to date of commission.
11.—*Shôsa*, Secretary to Commander-in-Chief under 5 years service, Paymaster of 15 years seniority, Lieut. Colonel, but Junior.
12.—*Tai-i*, Secretary to Junior Flag Officer, Paymaster of 8 years seniority, Major, according to date of commission.
13.—*Chiu-i*, Paymaster under 8 years seniority, Captain, according to date of commission.
14.—*Shôi*, Assistant Paymaster, Lieutenant, according to date of commission.
16.—Lieutenant, but Junior.
18.—*Shôi Ho*, Clerk, Sub Lieutenant, according to date of commission or order.

From the *Mainichi Shimbun.*

Most of the rebels are now in the province of Hiuga, but some of them have taken up positions at Tsunoki and Hitoyoshi, in Higo. The 4th division of the Imperial Army started for Kagoshima yesterday, and on their arrival at that port, the Imperial troops now in Higo will advance towards Hiuga, and fighting will then be renewed.

From the *Mainichi Shimbun.*

Her Majesty the Empress Dowager will leave Kiôto for Tôkiô on the 7th of this month.

From the *Chôya Shimbun.*

It is said that certain differences have occurred between the rebels of Satsuma and those of Higo.

NOTE.—Those marked with an asterisk are titles of courtesy.

Heavy rain fell in the Kaisai district of the province of Owari, commencing on the 25th ultimo and lasting for three days. The banks of the Sayagawa, to the extent of one hundred yards, were carried away, and thirty neighbouring villages flooded, six houses being swept away entirely.

From the *Akébono Shimbun.*

His Majesty the Mikado is expected to return to Tôkiô on the 17th of this month.

At the time that the rebels were about to retreat from Kumamoto they were divided in opinion. Saigo urged that they should retreat to Satsuma, while Kirino said they should take up a position in the province of Hiuga, and as the majority of the leaders agreed with Kirino a retreat into that province was effected.

From the *Hôchi Shimbun.*

The following are the rules existing in the rebel army:—

1.—That they should obey the commanders and fight faithfully.
2.—That they should refrain from quarrelling among themselves.
3.—That they should not drink wine to excess while in camp or on the march.
4.—That they should never obstruct the field occupations of the farmers or the trade of the merchants.
5.—That their conduct should be courageous but not reckless.
6.—That they should not kill any cattle belonging to the people.
7.—That they should refrain from all acts of lewdness and such-like misconduct.
8.—That they should not take by force any property belonging to the people.
9.—That they should, in either advancing or retreating, show no recklessness, yet always act with promptness.
10.—That they should be as economical as possible with their supplies, as the war was suddenly entered upon and consequently neither provisions nor money were plentiful.

The expenses of the new police force specially enrolled for the present war have reached the sum of *yen* 527,500.

From the *Nichi Nichi Shimbun.*

The number of the killed of the insurgent army is supposed to have been as follows, while of course a much larger number have been wounded :—

In the neighbourhood of Tawarazaka	about	500
,, ,, Yamaga	,,	290
Around Kumamoto Castle	,,	130
In the neighbourhood of Suizenji, Takenomiya and Hodakubo	,,	130
Mifune and its vicinity	,,	50
Hinaku and Yashiro	,,	500
Died at Kawajiri	,,	1,400
Total killed..	about	3,000

STUART ELDRIDGE, M.D.
Surgeon-in-charge.

A collision took place during Wednesday night between the *Tamaura Maru* and the *Bertha* near Odutsi, about 100 miles down the Inland Sea, whereby the stem of the *Bertha* was a good deal damaged and the *Tamaura Maru* had three holes knocked into her. The latter came on here—her destination—and the former has since made Hiogo Bay. It is very fortunate matters were not worse, as the *Tamaura Maru* being loaded with wounded, the loss of life might have been lamentably great.—*Hiogo News.*

A Meeting was held yesterday at the Municipal Hall to reorganise the Municipal Council, which was done, Mr. Klein being elected President on Mr. Annesley declining the office. The elected members were introduced and took their seats, office bearers were elected and a quantity of arrears of business got through. Mr. Newwitter protested against the proceedings as being illegal, and then left the room. Our usual report will appear in our next.—*Hiogo News.*

THE PACE THAT KILLS.

WHATEVER be the issue of the present struggle between the forces of the administration and the *samurai* of Satsuma, one good result can hardly fail to follow from it. It will teach a much needed lesson to the whole class of Japanese statesmen and politicians. It is unquestionably desirable that old abuses should be reformed, that justice should be done to all ranks and classes of the people, that ignorance and sloth and poverty should be supplanted by enlightenment and enterprise and wealth. But nearly everything depends on the mode in which it is sought to obtain these ends. Ought the work to be done for the people or ought the people to be permitted and assisted to work out their own advancement? There can be no doubt as to which alternative has been chosen and acted upon by the present administration. The patriarchal theory of Government has had it all its own way. That the Government is all-wise, as well as all-powerful, has been the fundamental assumption underlying all its innovations, which have been multifarious and precipitate, and all its enactments, edicts and departmental notifications, which have been as the sands of the sea shore innumerable. And that, conversely, the people are a foolish herd, incapable of forming correct opinions or managing their own concerns, is surely the implication involved in such measures as the gagging of the Press, the reduction of the expenditure on national education, and the open avowal of hostility to representative institutions by leading members of the governing oligarchy.

Having settled, then, that everything in the way of national advancement is to be done for the people and not by the people, it was an easy step for the present incumbents of office to the conclusion that the sooner everything is done the better. And the test chosen of the goodness or badness of measures has been not so much heir suitability to the requirements of the governed millions, as their capability of contributing to the glory of the governing few. The aim has been to win the admiration of foreign nations rather than the approval of the people of the country. And the success in each direction has been exactly in proportion to the efforts respectively made to attain it; on the side of the outer world, prolonged congratulation and applause, on the side of the native population, dissatisfaction and perpetual insurrection. It is but a sorry excuse for this state of affairs to say that the administration means well. No doubt its intentions are good, and in its early days, at least, it achieved much work which will redound no less to the benefit of the nation than to the credit of the individuals who have played the leading parts in it. But with some few exceptions they have enjoyed an uninterrupted tenure of office for close upon nine years, and there are, and for some time past have been, indications neither few nor slight that the country thinks it would be benefitted by a change.

The uprising of SAIGO is by no means the first, though it is undoubtedly the most serious of the manifestations of dissatisfaction with the men who have so long monopolised the counsels of the Sovereign and the emoluments of office. So long as these outbreaks were looked upon as due merely to popular ignorance, to feudal and anti-foreign prejudices, and dislike of beneficial reforms, the Government was entitled to and received the support of all friends of progress in the nation, and the hearty sympathy of foreign observers. But the frequency of the risings of the peasantry gave unmistakeable evidence that there must be something seriously at fault in the Government mode of operations, and the Press—then just beginning to rejoice in the freedom of a fresh and vigorous youth—did not fail to indicate the weak spot in the working of the political machinery. The Government was going ahead too fast, and was not carrying the people with it. The fly-wheel was revolving too rapidly, and a check was required. The check needed was some form of popular representation; some assembly in which the wants and wishes of the country could make themselves felt in the capital. A clear perception of the value of public discussion and the necessity of representative institutions took possession of the national mind, and the men in power were forced to yield the boon so unmistakeably demanded by the country at large. Exactly three years ago the foundations of constitutional government were laid in Japan by the decrees constituting a Senate, a Deliberative Assembly of the Provincial Authorities and a Judicial Establishment. The corner-stone of that foundation had been laid six years before, when in the presence of his assembled nobles and high officers, the Mikado swore a solemn oath that henceforth all measures should be submitted to public opinion and discussion. Now the heaviest indictment that can be brought against the present Ministry is, that in nearly every instance they have disregarded the plighted oath of the Sovereign, and acted as if there were no such thing as public opinion to be consulted or conciliated. The principal Government measures have been launched like thunderbolts from a clear sky. What trouble was taken to enlighten the farmers as to the reasons for the change of calendar and smooth the way for its acceptance? Absolutely none. Was the question of the despatch of an expedition to Formosa submitted even to the *Sa-In*, the consultative section of the Council of State? No. Did the scheme for the capitalization of pensions receive the preparatory consideration which its importance deserved? Was the change in the mode of assessing and levying the land-tax such as the best intellects of the nation approved of? And so we might proceed down the long list of sweeping changes crowded into the short space of the last few years, and show that, with very few exceptions, they have been insufficiently considered and too precipitately carried out. No doubt the task of consolidating the scattered elements and forces and welding them into national unity was one which often required promptitude of decision and vigour of action, and the credit due to the leaders in the work has been accorded to them in no stinted measure. But there are limits even to the feeling of gratitude for the efficient discharge of public duties, and in the case of the dominant oligarchy these limits have long since been overpassed. Had they kept faith with the nation and loyally carried out the letter and the spirit of the Sovereign's plighted oath, the support of the people might always have been reckoned on in their contests with the forces of anarchy and the assumptions of privileged faction. But if they fell from power to-morrow none but their own following who share with them the spoils of office would lament their fall.

It is with unfeigned regret that we find ourselves compelled to write thus of an administration which in its earlier years achieved so much and gave hopeful promise of better things. But it is idle for it to attempt to disguise from itself the fact that it has largely lost the confidence and alienated from itself the sympathy of the people. And when we speak of the people we mean not merely a portion, or even a majority, of the people, but include both the gentry and the commoners. On both the governing clique has laid its heavy hand, under the mistaken idea that the aggrandizement of the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

administration is synonymous with the civilization of the masses. Their long tenure of power seems to have blinded the holders of office to the widening distance that separates their interests from those of the people they rule. If they open their eyes to the necessity of so far moderating their pace in the race for civilization as to admit of the nation itself keeping up with them, they will have learned, if not too late, the lesson to be gathered alike from the long series of agricultural outbreaks and the last insurrection of the *samurai*.

SPIRIT OF THE JAPANESE PRESS.

How should the rebels be treated?

(Nichi Nichi Shimbun.)

The first portion of an article appeared in the *Chôya Shimbun* of the 21st, which was continued in its issue of the 22nd, and is not yet finished. Without having seen the end of it, we can, from what has already been published, infer the object of the writer's argument.

We maintain that the *Chôya* is quite in the wrong, and that it has no clear idea of the causes which have brought about the great change in the times. The views that it expresses are absurd.

It says, "Peace cannot be obtained by punishing many with death, and that in putting an end to the present disturbances, it is necessary that every possible leniency should be shown, and that (the Government) should act in such a manner, as to show the hot-headed fellows who have risen in rebellion, or are meditating doing so, the folly of their acts, and of their violent opinions, and open to them a way which shall lead them to a better understanding.

"In the year of the Restoration, when the Imperial forces brought into subjugation the feudal lords of the north-eastern provinces, the rebels, with the exception of one or two of the leaders, were not punished by death, but spared to repent them of their misdeeds. This was the case with Enomoto, and others who surrendered to the Imperial power, and the result is that Enomoto has raised himself to his present high position. This was, we maintain, opening the road to repentance. The present insurrection in Kiushiu is the most important that has occurred since the Restoration. The civil war of ten years ago placed the power formerly possessed by the *samurai* in the hands of the Imperial administration, and the issue of the present war will be to destroy the remnants of that power, and to quell for ever the evil spirit of the feudal times. In the treatment of unexpected evils we cannot always act according to existing laws, and we therefore hope that the Government will act with all leniency in settling the present Satsuma difficulty, and follow out the same policy as it exercised towards the north-eastern provinces.

"The Saga, Kumamoto and Hagi insurgents tried to excite all the hot-headed men in the country, but they were put down before they could achieve any success. Now whether such men as these were severely punished or not, was a matter of no moment to the people at large. But there were bodies of discontented men throughout the country, who were anxious to see a state of complete anarchy, and had the Government shown womanly pity, the fate of those who suffered would not have acted as a warning to those who were all ready to rise and ravage the land. General confusion would have resulted, which it would have been beyond the power of the Government to control. Thus their punishment was fully justified.

"But the present Satsuma affair is altogether different. When this disturbance is subdued, an end will be put to the *samurai* in future taking up arms against the Government. The reason that the Saga, Kumamoto and Hagi attempts failed was owing to the *samurai* of those provinces, who themselves possessed but little power, trusting to the Satsuma *samurai*, whose strength they well knew, to rise and help them. But now that fifteen thousand of these powerful *samurai* have been defeated, there are no longer any who can think of taking up arms against the Imperial authority. Although the Satsuma men have ever been ready to resist the Government, they have always been instigated thereto by one or two cunning leaders, and if these were punished with death there could not be the least fear of any further such attempts being made."

Now these are the arguments of the *Chôya Shimbun*, and we think them very shallow, and very unlike its usual style. We certainly agree with the opinion that peace cannot be purchased by the punishment of the many by death. But to compare the present civil war with that of the Restoration, and to state that laws may be set aside in emergency, is altogether wrong. In the first place, whom does the *Chôya Shimbun* mean by the leaders of the north-eastern rebellion? From what we remember of the affair, none were punished with death as being the leaders of the insurrection.

The *daimios* of the provinces of the northern confederation were deprived of their rank and had their pensions reduced; all this was managed in accordance with the feudal system, and certainly it would have been far different had the present laws then existed. At that time the *daimios* were not subject to the judicial branch of the Government. In this respect do the two events differ. It may be thought that Enomoto's attitude against the Imperialists at Yezo was something similar, but such is not really the case. At that time the Shôgun's Government had only just been overthrown and the Imperial authority was not thoroughly established. The effort (of Enomoto) was made with a view to reinstate a Government which had been overthrown, and under which, up to that time, he had served. Acknowledging that it is the duty of all the people to be loyal to the Emperor, Enomoto and his followers can be called nothing but traitors; but if we examine their motives with an impartial mind, we can sympathize with them, and understand how they endeavoured to support by force of arms, a cause which it was not entirely unjust for them to endeavour to maintain. But granting this, were we to treat the present rebels as we did those under Enomoto, it would be manifestly unjust. * * * * * * All offences against the nation in general are judged by the Emperor. We know how crimes like the present have been punished in these later times, and it now become an acknowledged statute* and the penalty cannot now be well avoided. The *Chôya* says that when unexpected evils—such as the present rebellion—arise, existing laws may occasionally be set aside; that the Saga, Kumamoto and Hagi outbreaks were settled according to the law laid down, in order to deter others from rising, etc., etc. Now it seems to us that the *Chôya* is contradicting itself, for though these several rebellions were put down and punished as they were to prevent the recurrence of such acts of violence, the present Satsuma insurrection has not been prevented. Does the *Chôya* mean that sufficient severity was not displayed in the punishment of these rebels? On what principles does it conclude that if only the ringleaders of the Satsuma rebellion be executed, and that the rest treated with all possible leniency, there is no further fear of disturbances taking place?

We assert that if we have established laws, they must be administered with justice, and be observed under all circumstances. It is neither desirable nor just that a Government should show excessive laxity in their administration. Suppose a powerful robber is captured, and although he has shown great powers of resistance, after his capture becomes so broken down, that it is obvious he will never be able to return to his evil courses. Should we on that account release him? Certainly not. Moreover it is absurd to say that Satsuma is all we have to fear.

As we said before, although we have not yet seen the whole of the *Chôya's* article, we have read enough to show us that we cannot agree with it, although we wholly grant that peace cannot be established by wholesale execution. We maintain however that the laws must be administered in a manner neither too lenient nor too severe.

A Plea for the Samurai.

(From the Osaka Nippô, 29th April.)

Our Government is not necessarily composed of the *samurai* exclusively but yet we see that the occupants of our Government offices are mostly of that class. What is the reason of this? It is simply because the *samurai* possess the ability for official life which the *heimin* are devoid of, and it thus becomes evident that it is not on account of the mere rank of the *samurai* that they are selected as our officials.

Unfortunately no definite regulation exists in the country by which officials are appointed. They are neither elected by the people, as in Western countries,* nor chosen on account of their literary ability as in China, but failing these methods are appointed by the Cabinet Ministers or Chiefs of Departments. Now some people decry this system as savouring of partiality, inasmuch as the heads of the Government naturally favour the class to which their friends belong, and that it is for this reason that all subordinate Government posts an exclusively filled by *samurai*.

* The writer here refers to the punishment by death of the ringleaders of the recent rebellion.—[Ed. *J. W. M.*]

* This is a statement rather wide of the mark.—[Ed. *J. W. M.*]

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

But such opinions are entirely erroneous. Even if the present mode of official appointment were discontinued what better system should we have to replace it?

And as regards the charge of partiality, that can easily be disposed by a comparison between the men composing the *samurai* class and those of the *heimin* class, when it would be at once apparent which possessed the greater amount of ability and education, and from which, therefore, our officials should be drawn.

Our men of learning nearly all belong to the *samurai* class, and that they are not subservient to class prejudices is shown by the fact that, since our country was opened to foreign intercourse, they have boldly advocated a just consideration of the rights and liberties of the people. Those who have edited works upon Western arts, science and learning are *samurai*, and those who have attended public assemblies with the object of diffusing Western knowledge and ideas among our people are of the *samurai* class. And, moreover, this very diffusion of Western ideas and knowledge proves that the *samurai* have no selfish ends in view, as they are actually denouncing their own former class privileges, and condemning the principle of receiving pensions from Government for inadequate services. They are led to this course by an honest desire to promote the welfare of the country, although at the expense of their own comfort and position. Thus the *samurai* are the liberal protectors of the Japanese people.

Again, at least nine-tenths of those who are interested in politics are *samurai*, while the *heimin*, on the contrary, with but very few exceptions, are profoundly indifferent to the action of the Government, or the changes which this country is undergoing. If the latter thus take no interest in the administration of the country, it is hardly to be wondered that they really care nothing about their own rights and liberties, though every possible road is open to them by which they might strive to obtain them.

All this is strange indeed, but is to be accounted for by the fact, that through their acquirement of the knowledge of Western progress, the *samurai* know full well that by receiving pensions from the Government for doing nothing they were hindering the advancement of their country to a great extent, and so generously decided to resign them. But for the *heimin*, however much they are urged to strive for their rights and liberties they do absolutely nothing, and are content with their present condition.

Enough has now been written to prove that the *samurai* are the flower of the Japanese nation, and that they alone are fit to be entrusted with the important posts of Government officials, or who exhibit the qualities which prove that they will faithfully serve that Government.

Impending Troubles.

(By a Correspondent to the Akebono Shimbun of 1st May.)

Before the Imperial forces succeeded in relieving Kumamoto the insurgents boasted of their power, which fact caused me great anxiety. But now the relief of Kumamoto has been effected, and the rebels driven to despair, for not only have they failed to capture this solitary castle, but certain destruction awaits them. My anxiety on this account has therefore ceased, but other affairs have taken such a turn that the nation is just as much troubled as before. And what is it that causes fresh anxiety? It is the present financial condition of the country and the position we are brought into by foreign intercourse.

I do not profess to know more about our financial position beyond the fact that it is not flourishing, so for the present will put that question aside, and will content myself by a review of the difficulty into which our foreign intercourse has brought us.

The chief cause of my uneasiness during the past year has been the Eastern Question (in Europe). Everyone knows that the eagerness with which the European Powers are watching the occurrence of events in Asia is not of a day's growth, and it is this which first caused me anxiety, which was greatly increased when it was known that a telegram had been received from Kawase, our Minister at Rome, announcing that war had been declared between Russia and Turkey. I am not aware what effect this news had on the people of this country, but, for myself, I fear that Asia generally cannot avoid being involved in the difficulty.

In view of any such calamity awaiting us as that of being complicated in this war, how sad it is to think that our nation is divided against itself; that two rival parties should be striving for power in this country by means of a deplorable fratricidal war.

There is still another trouble which foreign intercourse has brought upon us, in which Japan is more directly involved. Okubo visited China in 1874, and there settled the differences which existed between that country and Japan with regard to Loochoo, it being then admitted that China had no claim to the vassalage of that state and should leave it unmolested for the future. But we now hear that the question we thought settled has been re-opened, and that China puts forward her old claims to tribute from Loochoo.

Now I am unacquainted with the details of the discussion which took place at Peking in 1874, but it will not be out of place to say a few words on the general question. If the Chinese Government were at present to put forward any unreasonable claim, is there no course open to Japan but to combat it by mere discussion? Of course, if China were in the right and we were in the wrong we should have to frankly admit it, and so the matter would end; but if China should persist in endeavouring to force us to submit to such unreasonable terms as she chose, there would be no honourable course open to us but to take to arms and defy her.

Now such is the state of the Loochoo question at present, and I am therefore led to point out to our people that we should do our best to finish our suicidal civil war and amalgamate our forces in readiness to resist a foreign enemy.

Turkey is a feeble nation, despised by other Powers, but when another nation acts towards her in such a way as to affect her dignity as an independant country, her people fly to arms, their Sovereign places himself at their head, and they hasten to meet the foe. Then let our people show a similar disposition, in order, at least, to show that they are not a jot less patriotic than the Turks.

THE IMPORTANCE OF A GENERAL SYSTEM OF SIMULTANEOUS OBSERVATIONS OF ATMOSPHERIC ELECTRICITY.

By W. E. Ayrton and John Perry,

Professors in the Imperial College of Engineering, Tôkiô, Japan.

Read before the Asiatic Society of Japan on the 25th April, 1877.

The great practical value of simultaneous meteorological observations is the assistance they afford us in enabling fairly accurate predictions of the weather to be made some hours in advance. It is unnecessary for us to enter fully into what is being done, and what has been done in this direction. The weather maps that are issued three times a day by the United States War Department accompanied by, 1st. the table of records of observations, 2nd. the synopsis of these reports, 3rd. the table of probable rain and wind, 4th. the list of facts verifying or disproving the probabilities issued with the previous map, are evidences of the great labour that is bestowed on meteorology by the United States Signal Office, and of the great utility of this work.

But all these observations are derived from instruments like the barometer, thermometer, etc., which are only affected by the air or other bodies in their immediate neighbourhood. A disturbance produced in the higher regions of the atmosphere cannot possibly affect a barometer or thermometer until this wave of disturbance has travelled down to the lower air strata, whereas electrical and magnetic instruments are instantaneously sensitive to disturbances produced at great distances: the Pneumatic Despatch and the Electric Telegraph may, in their difference of speeds, be taken as fairly analogous with the sluggish barometer and the ever-watchful electrometer. Now Dr. Veeder has this evening pointed out to us what great effects on the weather are produced by such disturbances in the higher regions, and why, therefore, in consequence the United States Government observers are specially instructed to observe, and record, the motion of the clouds in the *upper* regions. These instructions, however, they, of course, are utterly unable to carry out when the lower regions are also cloudy. Dr. Veeder has also drawn our attention forcibly to the fact that even surface winds, although they affect the weather, produce no changes in the barometer.

Now since the value of all storm warnings increases with the time by which they precede the danger, the day may come when electrical and magnetic observations may not only aid, but actually supplant, barometric observations.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

But if an electrometer arranged to measure atmospheric electricity be always varying in its indications, then it may be objected at the outset that we cannot make any use of such observations, for where are the laws which connect wind and rain with the electric potential of the atmosphere. As well, however, fifty years ago might it have been objected that, as storms were very complicated phenomena and as their connection with atmospheric pressure, temperature, etc., was very vague, it was quite idle to make systematic meteorological observations. Had such objections, however, been allowed to carry weight then, the regular reports of the United States Signal Office and of other similar offices (which reports, we think, we are right in regarding as among the triumphs of modern science) would have had no existence. But we may go even farther than this. Not only has experience hitherto always shown the wisdom of making regular observations even when their practical value could hardly have been foreseen, but in the case of atmospheric electricity, or rather in the case of its allied subject, natural currents in telegraph lines, one of our greatest meteorologists, the late Admiral Fitzroy, has testified to their value in his forecasts of the weather. Mr. Cromwell Varley, the well known electrician, having noticed that on several occasions earth currents were followed by a change of weather, communicated this fact to Admiral Fitzroy, who found such information of so much assistance to him in predicting the coming of storms, that he requested to have it regularly supplied. "On some occasions" says, Mr. Varley, "Admiral Fitzroy could see the approach of a storm "days before the barometer or thermometer indicated "anything of the kind."

As the time has now arrived when it appears to us to be becoming the duty of all civilized peoples to coöperate in a general system of simultaneous observations of atmospheric electricity, it may be well to consider—first, what observations have been made, and what has been learnt from them; secondly, what is the proper way to make such observations.

Our present knowledge of this subject may be summed up nearly in the words of Sir Wm. Thomson in his address as President to the Society of Telegraph Engineers. Suppose for a moment that there were no electricity whatever in the air—that the air was absolutely devoid of all electric manifestation, and that a charge of electricity were given to the whole earth. For this no great amount would be necessary. Such amounts as we deal with in our great submarine cables would, if given to the earth as a whole, produce a very considerable electrification of its whole surface. We know the comparison between the electro-static capacity of one of the Atlantic cables, with the water round its gutta-percha for outer coating—and the earth, with air and infinite space for *its* outer coating. For since the earth's radius is about 630 million centimetres, its capacity is about 630 micro-farads, or about that of 1,600 miles of cable. Well now, if all space were non-conducting—and experiments on vacuum tubes seem rather to support the possibility of that being the correct view—if all space were non-conducting, our atmosphere being a non-conductor, and the rarer and rarer air above us being a non-conductor, and the so-called vacuous space, or the interplanetary space beyond that (which we cannot admit to be really vacuous), being a non-conductor also, then a charge could be given to the earth as a whole, if there were the other body to come and go away again, just as a charge could be given to a pithball electrified in the air of this room. Then, I say, all the phenomena brought to light by atmospheric electrometers, which we observe on a fine day, would be observed just as they are. The ordinary observations on atmospheric electricity are precisely the same as if the earth were electrified negatively and the air had no electricity in it whatever. In rainy weather, however, the potential of the atmosphere referred to that of the earth is sometimes positive and sometimes negative.

Observations made everywhere in the northern hemisphere tend to show that the potential is greater in summer than in winter, but the months of maxima and minima appear to differ at different places. Observations made at Kew and at Windsor in Nova Scotia show distinctly two maxima in the year, those at Brussels and Kreuznach only one. Both the Kew and Brussels observations show in addition two maxima daily at 8 a.m. and 10 p.m. in July, at 10 a.m. and 7 p.m. in January, and at about 9 a.m. and 9 p.m. in the spring and autumn. Although, therefore, all the tests made at different parts of the earth's surface in fair weather (except some of doubtful meaning made at the Peak of Teneriffe in the early days of the study of this question) have shown the earth's surface to be negatively electrified, the amounts of the electricity existing at the same time at different places will be very different; and this difference manifests itself in a manner often extremely disagreeable to the Telegraph Engineer—in natural line currents.

The country in which these natural line currents have been most carefully studied is undoubtedly British India, since the uniform system of land line testing employed in the Government Telegraphs throughout that country causes the accurate measurement of these currents to be daily carried out. From the results of 10,000 such measurements it is seen that in India the direction of the current is far more constant than its magnitude, and on the whole there appears to be a marked preponderance of currents of positive electricity flowing from the east to the west, that is with the sun; and such a current the laws of electro-magnetism tell us would be consistent with the earth's magnetism.

Observations made on the Atlantic Cables tend to show that when there are no unusual disturbances the earth currents at one end have two positive maxima and two negative maxima daily. Submarine cables, however, even when long are far less disturbed by terrestrial currents than land lines, which may possibly be due to the sea having a far greater electric conductivity than the land.

Since the early days of telegraphy a large number of observations of natural currents have been made at the principal London Office in Telegraph Street, the results of which were communicated to the Astronomer Royal. These tests seemed to show that natural currents in land lines were the continuations of the submarine currents which were arrested by the comparative non-conductivity of the land, for on Mr. Varley's endeavouring to find the neutral, or equipotential line, for the currents on the east coast of England, he found it to coincide approximately with the shore line.

Attempts have been made by private people to observe terrestrial currents on short telegraph lines of a few hundred yards which they have erected for this purpose. All such efforts, however, have been comparatively useless, for the following reason:—The copper *earth-plates* which are buried at the two ends of a telegraph line will, on account of their slighty different electric state, depending on the amount of moisture, oxidation, etc., almost invariably produce a current. This current on a long telegraph line will be insignificant compared with the current due to atmospheric causes, but on a short line it will often completely overcome, and mask, the latter. For observatories, therefore, an experimental line should be at least 6 or 7 miles long, and two such should be erected at right angles to one another so that an idea of the true direction of the current may be formed. Long telegraph lines, however, may even be expected to give better results when a proper instrument, such as will be described further on, is employed for the systematic registration of the natural currents.

During auroras these currents become extremely strong, sometimes as great as can be produced by the employment of a battery of 2,000 Daniell's cells, and occasionally even exceeding this. Of such currents the most extensive set of simultaneous observations that have been made was during the remarkable aurora of February 4th, 1872; but as on that occasion these observations were not the result of any general system of measurement but owed their origin to the fact that the currents became so strong as to interfere with the working of all the telegraph lines throughout the world, it cannot be expected that any large amount of information can be derived from the mass of records made on that day. At first sight it might be presumed that the times at which the strong currents made their appearance on the different lines would determine the rate at which the phenomena propagated itself over the earth's surface, but if it be remembered that the delicate instruments employed at observatories would be affected long before those used in land-line-telegraph offices, and that the receiving instruments used on submarine cables, although

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

much more sensitive than the land line instruments, are by Mr. Varley's plan of using condensers so arranged as to be extremely little affected by natural currents, it will be seen that the recorded time of these appearances of the strong currents on the different lines is useless for scientific purposes; also it must not be forgotten that, as the stoppage of a telegraph line represents so much loss of money, the signallers at the commencement of imperfect writing are all busily engaged in attempting to restore communication and have no time for making scientific entries in note books. One point, however, can be learnt from the observations made on February 4th, 1872, and that is this. First the general direction of the positive currents was from east to west, that is with the sun; secondly, along lines running north and south the currents were comparatively weak.

It is well known that auroras are accompanied by magnetic disturbances, and as Sir E. Sabine has pointed out the years of maximum sun spots are those of greatest disturbances in terrestrial magnetism: we may, therefore, conjecture that atmospheric electricity and sun spots will be found connected.

There seems to be no doubt now that earthquakes are preceded, or accompanied by, unusual strong natural currents in telegraph lines. As far as we are aware attention was first drawn to this by one of the writers of this paper in a communication made to the Asiatic Society of Bengal in June 1871, in connection with the Indian earthquake of February 16th of that year. The Indian earthquake again of December 15th, 1872, was preceded with such strong earth currents during the evening of December 14th in the land lines from Valentia to London that, in order to send messages it was necessary to loop the lines by means of which the current in the one line was made to neutralize that in the other. The Egyptian earthquake of January 12th, 1873, was preceded for some days by equally strong natural currents. This earthquake was also accompanied by an eruption of the volcano Shaptar Jokull in Iceland, which lasted from January 9th to January the 12th, and it is interresting to notice, as Mr. Graves of the Atlantic Cable Co. has pointed out, that a direct line drawn from Cairo to Iceland crosses the telegraph wires from Valentia to London. Again the Italian earthquake of March 17th, 1875, was accompanied by great disturbances on the land lines of Italy. One case published by Mr. Varley in 1873 of a momentary current observed by him in 1864 in a cable coiled up in in a tank, simultaneously with a slight earthquake shock in England must, of course, not be included in the above list, as here the momentary current was produced by the actual tilting of the cable tank and not by a great difference between the earth's potential at two remote places. Such a current as that observed by Mr. Varley is generally noticed during the laying of a submarine cable each time the ship pitches in consequence of the cable being thus moved backwards and forwards across the earth's magnetic lines of force. When the systematic testing of natural currents is introduced into the Japanese telegraphs and this, judging from the progress made in that department during the last few years, we hope to see at no very distant date, then the scientific world may expect to receive such a fund of information on the connection of these currents with earthquakes as will remove this subject from the realms of conjecture and place it in the region of certainty.

In what has preceded we have briefly indicated our reasons for conducting with a fair amount of certainty that (1) atmosphere electricity, (2) auroras, (3) earthquakes, (4) magnetic distances, (5) natural currents in telgraphic lines, (6) sun spots, and (7) wind storms, are all linked together, and we feel that if this is shown nothing more is needed to induce thinking people to interest themselves in the subject of this paper.

As regards the methods of measuring the atmospheric potential we have not much to add. Sir Wm. Thomson's quadrant electrometer, combined with his water dropping collector, forms a very delicate measuring apparatus for observatories, and can easily be made self recording; his portable electrometer and burning match may be used instead by travellers, or when neither very delicate observations nor automatic records can be taken. Full instructions for the use of this latter instrument were supplied in the manual furnished to the officers who accompanied the late Arctic expedition, and can be obtained by any one desiring to use the instrument.

Concerning natural line currents a mass of information could be collected if telegraph operators everywhere would, when no messages were being sent or received, make frequent observations of a moderately high resistance tangent galvanometer placed between the line and the ordinary receiving instrument, or between the receiving instrument and the earth plate. Although this would entail but very little extra work on the signallers, it is possible, nevertheless, that considerable difficulty might be experienced in inducing private Telegraph Companies to issue rules giving such duties to their employés. Government administrations, however, might, in view of the very important information to be gained, be prevailed upon to issue such regulations, and it is the duty of scientific men to urge the matter. But better results would probably in all cases be obtained if the Royal Society, the British Association, and other similar scientific societies, would furnish telegraph offices with self recording instruments, guaranteeing, of course, that their use would not interfere with the ordinary working of the telegraph line. Such an instrument might be cheaply made, and we would suggest the following as a possible form:—Between the telegraph line and the receiving instrument let there be inserted, on every line in all important offices, a long wire forming a coil about 15 centimetres internal diameter with its plane parallel to the magnetic meridian. Turning on a pivot fixed at the centre of this coil is a thick short magnet about 2 centimetres long, or a system of magnets, carrying a brass disc about 12 centimetres in diameter and of such thickness that the time of oscillation is about 5 seconds. A strip of photographic sensitized paper, such that it requires about 5 minutes to be decidedly blackened under such diffused light, whether sunlight or lamplight, as may be available, and about 12 centimetres broad is moved along underneath and parallel to the disc at the rate about 10 centimetres per hour, and so that the centre line of the paper passes under the centre of the brass disc. A round hole 2 millimetres in diameter with bevelled edges near the circumference of the disc, allows diffused light to blacken a small portion of the sensitized paper. The magnitude of the steady natural current will, therefore, be always registered, while rapid variations of the current produced by the signalling will have no effect in consequence of the large moment of inertia of the disc. The rollers on which the paper is wound might be moved by a very simple clock going for, say, 15 hours, but which would be regularly wound up every morning and evening at which time the signaller would make a pencil mark on the paper. These marks would be of great assistance in measuring time along the paper when it was examined, and would also check any great irregularity in the going of the roller clock. The sensitized paper ready wound on the rollers would be supplied in closed tin boxes, each box containing sufficient paper for one month's use. The box would be put in position underneath the disc, the projecting axle of the roller being connected with the clock by means of a catch, and a sliding tightly fitting door opened in the top of the box to allow the light which passes through the hole in the galvanometer disc to fall on the paper. At the end of the month the slide would be closed and the box returned to the person who had charge of the investigation, who would then fix the photograph, and refill the roller with fresh paper. Removing one box from underneath the galvanometer and substituting another would not, of course, stop the working of the line, even for a second, since the line and galvanometer connections are not interfered with.

It might be objected that not only would sudden changes in the current produced by signalling leave no record on the paper, but sudden variations in the natural current would also pass by unrecorded; undoubtedly if the changes in the natural currents were comparable with the making and breaking of the signalling current both as regards rate and intensity of change this would be the case, and it is difficult to see how any instrument could be devised in which it would be otherwise. But this objection is not a serious one, since such sudden changes are only produced during a magnetic storm, and it is not from such

observations that much information can (at any rate at the commencement of the study of the subject) be gained.

We have not on this short paper referred to the medical value of systematic observations of atmospheric electricity, but we are informed by well known Doctors that they believe the electric state of the air has no small effect on the general health of the public.

It may be well to remark that any suitable *simple* recording arrangement would be exceedingly valuable if applied to a Thomson's improved ship's-compass. Such an arrangement working, say, in the captain's cabin, would give a complete record of the course of the ship during a voyage.

MORE ABOUT TORTOISES.

The compassion which moves a man to protect a dumb animal with such vigour and determination, that he is prepared not only to take away the life of another individual in its defence, if necessary, but even to sacrifice his own in the same good cause, is of so noble a quality as to be worthy of record. Nor will the recital of the story in which it appears be perused, perhaps, with the less interest, when it is remembered, that the matters of which it treats are those of many centuries ago, concerning which opinion is divided as to whether they deserve to be dubbed the "barbarous ages" or "the good old times."

At Okazaki, in Sanshiu, there lived an old man named Nagoyemon, of a virtuous and upright disposition. To his house there came one day, whilst he was absent, a friend and neighbour named Takejiro, bearing in his hands a parcel wrapped in straw, which, having deposited upon the kitchen floor against the wall, he asked the old man's wife to keep her eye upon, until having transacted some little business in the village, he should come again to claim it of her. Hardly had he taken his departure, however, when Nagoyemon returned, and his attention being attracted by the package, he was not a little startled to observe that it was in motion.

To his enquiries as to what it was and how it came there, his wife was unable to afford him any further information than that good man Takejiro had left it in her keeping and (female curiosity, evidently, not yet having come into fashion) she had not examined it, and had therefore no idea what it contained. Not so her husband, however, for, seeing that the parcel had taken unto itself legs and was evidently making off towards the garden, he was hardly to be censured, if, whilst securing the moveable property of his friend, he thought it no harm to have a good look at it.

And notwithstanding what exception may be taken by the very proper, to such an inquisitive proceeding on his part, it cannot be denied that at a period when witchcraft so commonly prevailed, it showed no lack of courage in Nagoyemon to lay hands upon a walking bundle. For popular opinion, in those days, would undoubtedly have decided off-hand that such a wriggling sheaf of straw was beyond dispute bedevilled. But he had a hardy soul beneath his blue cotton coat, and an enquiring one withal, which made him want to know the "reason why" for most things. On which account it came to pass, that many moments had not elapsed before he made it out that friend Takejiro had left in charge a tortoise. Nor did he spend much time thereafter, in coming to a conclusion—for he had a ready wit, and never failed in guessing eggs if he only saw the shells—that friend Takejiro aforesaid was bent on eating it when he got it home. Quickened by such suspicions, accordingly, the good old man determined, that as far as he was able to prevent him, he should never get it home at all. So he carried it to the pond in his back garden, and having divested it of its straw envelope, he set it free. Not without much remonstrance, however, upon the part of his ancient partner, who begged him to remember that Takejiro had left his property in her charge, and would assuredly expect her to deliver it back to him in the same condition as when she had received it.

To this the old man made answer, that an animal entering his house assumed at once the character of a guest, and that the laws of hospitality in every country, afforded to such security against molestation. For which reason, sooner than the tortoise should come to any harm he would defend it, if necessary, at the risk of his own life.

He had scarcely finished delivering himself of these noble sentiments when Takejiro reappeared and demanded the restitution of his parcel, adding that he was in a great hurry and would like to have it back at once. Nagoyemon thereupon, without any hesitation or preamble, informed him of what he had done with the tortoise, and repeated for his edification the speech with which he had favoured his wife, to the great anger and annoyance of Takejiro, who protested vehemently that Nagoyemon wronged him grievously if he fancied that he desired to eat the tortoise simply because it was good. For he was suffering from a disease, he told him, which the doctors had averred could only be cured by partaking of tortoise flesh, and it had taken him six months, and cost him an infinity of trouble besides, to procure that which had just been taken away from him without so much as "by your leave," and that for his part he called it a most unwarrantable piece of busybodyism and would be much obliged by having his dearly-bought property forthwith returned to him.

Moved apparently by his entreaties, Nagoyemon relented of his action in so far that he undertook to hand over the reptile in dispute to its owner at 4 o'clock, if Takejiro would come back at that hour to receive it.

This arrangement having met with Takejiro's approval, Nagoyemon went to the pond in which he had put the tortoise and called out in a loud voice saying, "Tortoise that I set free a short time ago, Takejiro is very angry at my action and says I must return you to him, so please come back again. If I give him some advice, however, when I place you in his hands, I think he will not desire to kill you, but if it should so happen that notwithstanding that he still persists in his intention of taking away your life, I will slay him and then disembowel myself. Unless I return you, however, I cannot justify myself to him, so please come hither."

When he had made an end of his harangue the tortoise rose to the surface of the water, and swimming over towards the bank on which Nagoyemon stood, crept out at his feet, and placing itself upon a handkerchief which he had spread out to receive it, submitted quietly to be taken up and carried off by the old man, who was so moved at the trust reposed in him that he burst into tears, and remarked that anybody who could find it in his heart to do a violence to an animal which had behaved in such a manner, and had shown more nobility of soul than many a human being, must be a devil.

Takejiro, according to arrangement, made his appearance at the hour appointed, and found Nagoyemon waiting for him with the tortoise wrapped in the handkerchief ready to be carried away. But he likewise noticed another little circumstance, namely, that the old man held in his hand a drawn sword,—although he was much too polite to pretend that he saw it. This, perhaps, somewhat damped the ardour with which he was advancing to repossess himself of his property, and may have had some influence in increasing the patience and respect with which he listened whilst Nagoyemon delivered himself of the following speech. "Be pleased to hear what I have to say, Takejiro." Here he moved his weapon somewhat so that a sun-beam which had found its way in through a hole in the paper window flashed along its edge, and climbed up to its glistening point in such a sudden and disagreeable way, that Takejiro shuddered involuntarily and discovered that his eyes were so weak as to oblige him to turn his head away. "Be pleased to ponder well the words I am about to speak." And here the sunbeam ran down along the flashing steel from point to hilt and seemed to climb up Nagoyemon's nervous arm (which was bared to the shoulder), and find its way into his eye and there remain, for a strange light shone there during the remainder of the interview. "When you exhibited so much anger at what I had done with regard to your tortoise, and demanded its restitution so determinedly, I went to the pond in which I had put it, and informed it of the whole affair, and had hardly made an end of speaking when I observed it swimming towards the bank on which I stood, up which it climbed and placing itself quickly upon the handkerchief which I had spread out ready to receive it, allowed me to take it up without making the least resistance or manifesting the smallest want of confidence in my integrity. Now, honesty and gratitude so remarkable have so overwhelmed me

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with shame and admiration,—shame that we men should be outdone in generosity by a tortoise, and admiration for the fortitude it has manifested—that I have made up my mind if you are still determined to take its life to kill you sooner than that should come about, and then to disembowel myself; so take your course."

Here he pointed to the tortoise with his sword, and hitching the sleeve upon his shoulder a trifle higher so as to give his arm full play if necessary, he grasped the handle of his weapon with both hands and awaited friend Takejiro's reply—the sunbeam in his eye glowing and blazing fiercely the while. So fiercely indeed, it might be said, that Takejiro did not care to look upon it, but fixed his gaze instead upon the tortoise, which having poked its head out of the handkerchief was retreating as fast as its four little legs would permit it, under the impression, apparently, that the conference was ended, as indeed it was for all friend Takejiro cared to prolong it.

For that worthy man no sooner heard his neighbour out than he hastened to assure him that he had not only quite given up any intention which he might have harboured of injuring so excellent an animal as the tortoise had turned out to be, but that he then and there resolved never to deprive anything of life for the future. Upon hearing which Nagoyemon sheathed his sword and drew down his sleeve, and the two going out together, amicably replaced the noble tortoise in the pond.

YOKOHAMA RACE CLUB.

SPRING MEETING.

First Day,

Thursday, 24th May, 1877.

1.————————For China Ponies, subscription griffins only; weight as per scale. Entrance, $5. Three-quarters of a mile.

Liddesdale, Don Carlos, Faust, Kittywake, Wilhelm Tell, Vandal, Sequel, Sugarplum, Pegasus, Premier, Talisman, Kismet, Corbie, Jack O' Lantern.

2.—The Griffins' Plate.—For Japan Ponies, *bonâ fide* griffins; weight for inches. Entrance, $5. Five furlongs.

Snake, Silverspring.

3.—The Trial Plate.—For China Ponies that have never won a flat race here up to date of entry; weight for inches. Entrance, $5. Once round.

Bonny Doon (late Skylark), Don Carlos, Grey Friar, Telephone, Not Proven (late Tartar Emetic), Kismet, Hoolet (late Hoo-ze).

4.—The Spring Stakes.—For Japan Ponies. Winners of one race in 1876, and winner of No. 2, 5lbs. extra; winners of two or more races in 1876, 10lbs. extra; weight for inches. Entrance, $5. Half a mile.

Annandale, Drift, Sorcerer, Distemper, Sandboy, Spendthrift, Dazzle, Jim Hills.

5.—The Challenge Cup.—for China Ponies; weight for inches. Entrance, $5. One mile and a half.

Bonny Doon, Hoolet, Faust, Lintie, Crusader, Vandal, Not Proven.

6.————————For Japan Ponies; winner of No. 4 excluded; winner of No. 2, or of any race previous to this meeting, 10 lbs. extra; weight for inches. Entrance, $5. Three-quarters of a mile.

Jim Hills, Annandale, Distemper, Typhoon, Dazzle, Sandboy, Silverspring, Spendthrift, Planet (late Sirius).

7.————————For China Ponies: subscription griffins only; winner of No. 1 excluded. Entrance $5. Half a mile.

Kittywake, Sequel, Don Carlos, Faust, Wilhelm Tell, Liddesdale Vandal, Premier, Corbie, Sugarplum, Kismet, Talisman, Jack O' Lantern.

8. The Mitsu Bishi Challenge Cup.—Presented by the Mitsu Bishi Company. For Japan Ponies. To be won at two consecutive meetings by the same stable. To be held in the meantime by the last owner. Entrance, $5. Once round and a distance.

Sandboy, Kickapoo, Silverspring, Spendthrift, Planet, Distemper, Dazzle, Annandale, Typhoon, Jim Hills.

9.————————For China Ponies; winners at this meeting excluded. Weight for inches. Entrance, $5. Once round.

Hoolet, Lintie, Bonny Doon, Mavis, Crusader, Don Carlos, Vandal, Alpha, Telephone, Dick Swiveller, Not Proven, Saracen.

Second Day.

Friday, 25th May, 1877.

1.—Celestial Cup.—For all Ponies; weight as per scale. Entrance, $5. Three quarters of a mile.

Faust, Don Carlos, Vandal, Sequel, Sugarplum, Hoolet, Bonny Doon, Liddesdale, Grey Friar, Lintie, Mavis, Telephone, Dick Swiveller, Talisman, Not Proven.

2.—The Maiden Stakes.—For Japan Ponies that have never won a race; weight for inches. Entrance $5. Half a mile.

Dazzle, Silverspring, Snake, Dumfounder, Young Rapid, Annandale, Sorcerer.

3.————————.—For China Ponies, *bonâ fide* Griffins at date of meeting, winners excluded; weight as per scale. Entrance $5. Once round.

Faust, Vandal, Sugarplum, Don Carlos, Sequel, Kittywake, Wilhelm Tell, Corbie, Dick Swiveller, Liddesdale, Telephone, Premier, Pegasus, Kismet, Talisman, Jack O'Lantern.

4.—The Ladies' Purse.—Presented by the Ladies of Yokohama, and Yedo. For all Ponies. Winners of any race under a mile at this meeting, 7 lbs. extra; winners of more than two races at this meeting excluded; weight as per scale. Entrance $5. Half a mile.

Don Carlos, Grey Friar, Mavis, Wilhelm Tell, Vandal, Not Proven, Crusader, Spendthrift, Surgarplum, Jim Hills, Liddesdale, Kittywake, Dick Swiveller.

5.————————.—For Japan Ponies; winner of No. 4 (first day), 14 lbs. extra; other winners at this meeting, 10 lbs. extra; weight as per scale. Entrance, $5. Three-quarters of a mile.

Sandboy, Distemper, Dazzle, Jim Hills, Kickapoo, Grayling, Typhoon, Planet, Spendthrift.

6.————————.—For China Ponies; winner of the Challenge Cup, and winners of two races at this meeting excluded; winner of one race 7 lbs. extra; weight as per scale. Entrance $5. One mile.

Grey Friar, Hoolet, Lintie, Faust, Vandal, Mavis, Crusader, Telephone, Telegram, Bonny Doon, Kismet, Saracen.

7.————————.—For China Ponies, subscription Griffins only; winners excluded; weight as per scale. Entrance $5. Three-quarters of a mile.

Liddesdale, Don Carlos, Faust, Wilhelm Tell, Vandal, Corbie, Sequel, Sugarplum, Kittywake, Pegasus, Kismet, Talisman, Jack O' Lantern.

8.—The Hack Stakes.—For all *bonâ fide* hacks, which have not been entered for any race since the Spring Meeting, 1876; weight as per scale. Entrance, $5. Half a mile.

9.—The Criterion Stakes.—For China Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 10 lbs., of two races 14 lbs. extra. Ponies that have run twice and have not been placed allowed 7 lbs.; weight for inches. Entrance $5. One mile and a quarter.

Third Day.

Saturday, 28th May, 1877.

1.—Hurdle Race.—For all Ponies; over six hurdles; China Ponies, 10st 7lb.; Japan Ponies, 10st. Entrance, $5. Once round and a distance.

Annandale, Hoolet, Kickapoo, Premier, Pegasus.

2.—The Merchants' Cup.—A handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5. Compulsory. Open also to beaten Ponies at the meeting. One mile and a quarter.

3.—The Nippon Handicap.—A handicap for all Japan Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance $5. Compulsory. Open also to beaten Ponies at the meeting. Once round.

4.—Subscription China Griffins' Handicap.—A handicap for all subscription China Ponies only. To be handicapped by the stewards at the close of the second day's racing. Entrance, $5; compulsory. Once round.

5.—The Scurry Stakes.—For all Ponies; weight as per scale. Entrance, $5. Three furlongs.

Drift, Don Carlos, Faust, Grey Friar, Sorcerer, Dazzle, Kittywake, Spendthrift, Mavis, Dick Swiveller, Sugarplum, Not Proven.

6.—The Solace Cup.—For all beaten Japan Ponies at the meeting; weight for inches. Entrance, $5. Five furlongs.

Sandboy, Dazzle, Distemper, Typhoon, Sorcerer, Kickapoo,

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Jim Hills, Spendthrift, Silverspring, Annandale, Snake, Grayling, Drift, Planet.

7.—THE CHINA CONSOLATION PLATE.—For all beaten China Ponies at the meeting; weight for inches. Entrance, $5. Once round and a distance.

Wilhelm Tell, Faust, Don Carlos, Grey Friar, Sugarplum, Crusader, Vandal, Sequel, Bonny Doon, Hoolet, Lintie, Liddesdale, Mavis, Kittywake, Corbie, Telephone, Telegram, Dick Swiveller, Pegasus, Premier, Saracen, Talisman, Kismet, Not Proven.

8.—THE SAYONARA STAKES. A handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No. 2 (third day) excluded. Winners of the Nippon Handicap, and the Subscription China Ponies' Handicap, 7lbs. extra. Winners of any other race after publication of the handicap, 3lbs. extra. Entrance, $10. Once round.

Correspondence.

THE CURRENCY.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 4th May, 1877.

SIR,—I did not intend making any further observations on the currency question, having, as I think, clearly demonstrated that the defects which exist in the currency used by foreigners in Japan are remediable by foreigners alone.

But the article in your issue of 21st ultimo on "The desirability of reform in the Japanese Currency," and the letter of "W" in your last number on the general question of currency, seem to me so likely to confuse the public mind that I venture once more to draw attention to the points really at issue.

The question of a reform in the *currency of foreigners* in Japan appears to me entirely distinct from that of a reform in *Japanese currency*. The one is wholly in our own hands. The other is beyond our reach, and is complicated by circumstances which we are incompetent to analyse.

Foreigners in Japan are free to choose their own currency—no Government compels us to accept any coin that we do not not approve. Consequently our currency is of our own selection, and if it is an inconvenient and expensive one (as it unquestionably is), we have only ourselves to blame. And we have a simple and efficient remedy at our command, as I have shown in former letters.

It is quite useless for us under these circumstances to quarrel with the currency of the Japanese. We are not asked or required to deal in that currency. We are at liberty to do our business in whatever money we prefer and the Japanese accommodate themselves to our choice. This Government has offered us good money at a fair price and we have deliberately refused it in favor of the Mexican dollar, preferring to be at the mercy of our shroffs, rather than to depend on the good faith of the Japanese Mint officers.

Let us fairly recognize this fact in our discussions, for otherwise we shall arrive at nothing. Whatever reform is required in our currency, it must be effected by agreement among ourselves. The Japanese undoubtedly apprehend this, and cannot be expected to listen to our propositions respecting their currency until we have reformed our own.

It is regrettable that your article and the letter of W, which are excellent in many respects, should overlook this essential point and should deal mainly with a currency which we do not use, and with which we have practically no concern.

If we were in America, Austria, or Russia, and required by the laws there to accept a depreciated currency, our case would be quite different, and arguments against inconvertible paper or debased coin might be at least pertinent, though they would hardly have much effect. But of what avail are they here in Japan where we have no other "legal tender" than that which we choose to establish for ourselves?

Granting that the Japanese Government is doing a wrong to its subjects by issuing inconvertible paper, in what respect are we injured by it? We are not its subjects, and are not obliged to take its paper. Why then carp at it as if defects in the Japanese currency excused defects in our own?

What has been said respecting the dangers of over issue of paper in Japan is wholly reasonable. Inconvertible paper must finally produce here the same evils that it has produced everywhere else. And if we had our own currency properly arranged our warnings on this point might have much weight. But how can we expect the Japanese Goverment to heed these warnings while we not only reject their money, but refuse to employ any other than such Mexican dollars as our Chinese shroffs shall deign to approve?

It is the fashion to call upon the Government to give some "guarantee" that its coins shall not be depreciated. But if this guarantee were given what would it avail? When we practically had it did we use Japanese coins? Does any one now seriously doubt that the new coins are good coins, and do we not reject them all the same? Yet we have in our own hands perfect protection against any possible debasement of them. By agreeing that any coin containing 416 grains of standard silver shall pass as a dollar, and that no coin inferior to that shall so pass, we can at once enjoy whatever benefit the Japanese Mint can give us, and thoroughly guard ourselves against any debased coins. Is it not then somewhat absurd in us to insist on "guarantees"?

And supposing the Japenese Government to be so different from Governments generally, and so regardless of its own dignity, as to accord such a 'guarantee,' to whom shall it be given? To our Chamber of Commerce, Board of Consuls, Ministers, or to individual Bankers or merchants? Which of these by accepting it would bind this community?

Do Englishmen in Russia, Italy or America demand such guarantees from those Governments as a condition of using their coins? Are we not in fact, in our exemption from the laws of Japan, far less in need of such security here than foreigners are anywhere else?

My feeling is that all this clamour for guarantees is childish and useless, and that in making it without taking any steps to deliver ourselves from our shroff currency we simply excite the ridicule of the Japanese and neutralize whatever influence our opinions about their own currency might otherwise have.

It would be easy for some of us to show the Japanese authorities that they are pursuing a very dangerous path in issuing inconvertible paper currency and in exhausting their metallic reserves, and nowhere would fair and disinterested criticism from foreigners on such a matter be more likely to gain attention than here. But I confess that I should think any Japanese Minister very poor spirited to listen to such criticism while foreigners hold their present attitude, and I do not believe that any of them will do so.

If we expect them to attend to our advice we must first put our own currency in order and then be reasonable in regard to theirs. Inconsiderate denunciation of their acts, and arrogant demands for impossible guarantees, are sure to do more harm than good, particularly while those who make them are themselves clinging tenaciously to one of the most absurd currencies the world ever saw.

A. Z.

TRAINING NOTES.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 4th May, 1877.

SIR,—It is almost impossible for me to attempt any training notes, for unless one lives at the course one cannot see all the numerous animals take their constitutional. In fact, from daylight till dark various specimens of the "*Mokus Japonica*," or the "*Griphynne Nankinensis*," may be tracked on nearly every path, field, and paddock in the neighbourhood of the Race Course. There is certainly more fun at the Stand in the early mornings, and were our Pious Jones an early riser he would find many interesting subjects for his apt pencil. Various athletic feats have been performed at times to the amusement at least of the spectators, although on more than one occasion I have no doubt that the (unwilling) performer would rather have been elsewhere.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

The entries for the Y. R. A. Meeting are fuller than the most sanguine supporters of that Club could have anticipated, and by the action of the few principal opposers of the *Amalgamation Scheme*, in entering their ponies so fully throughout the meeting, the Committee of the Y. R. A. have the satisfaction of congratulating themselves on having won the point they have so strongly contested.

But to proceed with my training notes. As this must naturally be my last letter on the subject before the meeting of 16th, 17th and 18th instant, I must try and make them interesting as usual. With regard to the old ponies I can only say that with one exception they look remarkably well and healthy. *Dibs* is the exception. He is almost as fat as his trainer and a little less food and more work would do them both good. All Mr. John Robertson's other ponies look better than I have seen them for many meetings, and I have a shrewd suspicion that the trainer has taken advantage of the useful hints I have given him in the course of my former letters.

Mr. Morrison has a very fine pony in *Hoolet* (late *Hoosie*) which did his mile on the outside course the other morning *easily* in 2.29½, with full weight up. *Lintie* is in very fine form, but, like his stable companions, *Tallapoosa and Braemer* take their gallops at such an early hour that I have not yet seen them perform.

A fine black griffin was tried to-day by this stable and did the 5 furlong distance in 1.26. Many of those who remember *Delight* will be struck by the similarity between the two ponies.

I cannot speak very highly of Mr. Sindbad's stud. Continual change of diet, hours of exercise, and riders is hardly the way to get ponies into racing trim, and although *The Dwarf* was a valuable addition to this stable, the occasional differences of opinion with his Celestial rider do not improve either his style or temper. Had the races been about a fortnight ago, *The Raven* would doubtless have kept up his Hongkong reputation, but now—"Quoth the Raven, never more!"

The ponies in charge of the "Bone" are among those that I cannot say much about. They appear healthy and fat, and are, in this respect, the reverse of their *Chargé d'Affaires*. I have wonderful reports of the *Dusty Miller's* performances over the three furlongs, but of this we can judge better on the Race days.

The *Snark* and the *Boojum* will doubtless "*Swiftly* and *Suddenly* vanish away" long before the races. Col. Forrester is always willing for a "pow," notwithstanding the very hard state of the course, but as he remarked yesterday, "They were got over to gallop and if they don't know how they must be taught, and trotting won't do it."—*Verb. Sap.*

Mr. Earnest's string has not been much improved by his numerous additions. *Bébé* however may turn out a good pony for the Celestial Cup if not too much physicked and petted. *Raethia*, *Title Deed* and *The Trustee* will perhaps come out in better form at the Autumn Meeting.

The Steamboat Stable, which boasts the ownership of *Telegram* and *Telephone*, will probably be among the winners at the meeting; both are likely looking ponies, and it is very difficult to tell *t'other from which*; but the owner has yet to learn that *gargling oil* and *galloping* don't mix well together.

The Mongolian Stable has been considerably increased, and notwithstanding the change of ownership still remains under the same management,—part of the stud being trained in Tôkiô. Of those which appear at the race course it can only be said that they look in thorough racing form, and fit to meet the Tartan stable at any distance. The *Owl* I think the best griffin of the lot, but I rather doubt his staying powers.

In addition to his magnificent string of Japanese ponies, Mr. Nicolas was lucky in his draw of *Maccaroni*, and the great experience and thorough knowledge this gentleman possesses in all matters partaining to pony treatment, has enabled him to bring out in splendid form a pony that at first appeared decidedly groggy on his fore-legs. Of the Japanese ponies *Moscou* is decidedly in best trim, and will doubtless fill the place which it is almost time was vacated by his stable companion *Mohstotz*.

With the exception of Mr. Robertson's Japanese ponies and *Jim Hills*, the others presented to our daily view are scarce worth noticing. *Shizoku* and another small bay are supposed to be very fast, but will doubtless follow in the steps of *Finale*, as they are both too small for the course.

The Doctor of course is about, in fact very much so, but Japanese ponies are apt to get sick both of the course and the whip, and it certainly won't be the Doctor's fault if his ponies have not had enough of both of these long before the Races.

There are the usual number of *outside* ponies, too numerous too mention, and there are a good many riders who apparently would be more at home if they could take an *inside* billet. These must be seen to be appreciated, and taking into consideration the low rate at which refreshing beverages are supplied by the powers that be, I can only wonder at the very small attendance at the course and hope that the coming week will bring larger houses.

TRITON.

THE SHANTUNG RELIEF FUND.

To the Editor of the *Japan Mail Daily Advertiser*.

Yokohama, 4th May, 1877.

Sir,—I am requested by the Committee of the Shantung Relief Fund to tender to you their best acknowledgements for the valuable aid you have rendered to this object by the daily publication in your columns of the appeal for aid, and of the List of Subscriptions.

I may add that the Committee have now closed the list with a total subscribed of $3,474.52, of which $3,300 has already been remitted to Shanghai. The Honorary Treasurer, Mr. J. Walter, would still, however, be willing to take charge of any donation.

An acknowledgment of the first of the remittances has been received from Shanghai, and the Shanghai Committees desire to offer their best thanks to the Yokohama Community for the pecuniary aid contributed.

I am, Sir,

Yours obediently,

A. J. WILKIN,

Hon. Sec. Shantung Relief Fund.

Law & Police

IN H. I. G. M.'S CONSULAR COURT.

Before Ed. Zappe, Esq., Consul,

and

Messrs. E. Grosser and E. Schmid, Assessors.

Thursday, May 3rd, 1877.

Robert Druse *v.* Bridget Walker.

Some time ago His Honour heard and settled a claim in the case of *Walker v. Druse*, defendant having acknowledged its validity. The present is a counter-claim filed by the defendant against the plaintiff in the same case, and is for $198 88 with interest from 1873 till 1876, for provisions, &c., supplied to her. Defendant (Mrs Walker) disputes in her answer the greater part of this claim, only acknowledging $61.42, and brings forward a further claim for $191.11, for tiffins, dinners, &c., supplied to plaintiff. Plaintiff now reduces his counter-claim to $52 46, but disputes defendant's last claim *in toto*.

Plaintiff not appearing at this hearing, defendant's representative, Mr Anderson, applied for a dismissal of the case, and the Court considering the application a just one decreed accordingly.

IN THE KANAGAWA SAIBANSHO.

Before Mr Asaina Kansui, *Vice-President*.

Friday, May 4th, 1877.

The Chartered Mercantile Bank of India, London and China *v.* Tong Hing Hong.

This was a claim for $5,000 and interest on a Bill of Exchange.

The case was adjourned on Wednesday morning last, the 2nd instant, on account of the non-attendance of defendant. To-day Mr Kirkwood appeared for plaintiffs, defendant being present in person.

In answer to the Court, Mr Kirkwood stated that he had not received defendant's answer to the petition. His Honour said it had been forwarded to H. B. M.'s Consulate on the 9th April, and it was to the effect: that defendant had been in commercial inter-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

course for 10 years with Yuen Fat Hong, the drawer of this bill in Hongkong, where it was drawn on the 9th February. On the 19th of February it was presented to defendant by the bank. Defendant said that the bill was drawn on goods to arrive, by contract, but as no goods had arrived he was quite out of funds and did not know what to do. By arrangement with the *Kencho* and Consulate, at the request of the Bank, the bill was returned to Hongkong on the 26th March, in order that payment might be obtained of the drawer. Consequently defendant did not think he need notice the bill after all these arrangements. Such was briefly defendant's answer. The letter sent to the drawer was written at the request of the director of the bank though he was not present when it was writtten.

Mr Kirkwood said this defence did not absolve defendant from responsibility. The bank had never agreed to release him. He was told to get the money from the drawer if he could, but was still held responsible. The bill, dated Hongkong, February 9th, was presented to defendant and accepted by him on the 19th February. Being payable 30 days after sight it became due on the 24th March (including the usual days of grace) and was duly presented to him for payment on that day, under instructions from the British Consul. The reply to this demand was "I no can pay." Defendant was summoned to the *Kenrei's* office, and being again requested to pay, his answer was that he could not; in evidence of which Mr Kirkwood put in a protest signed by the Governor and two witnesses. Since then, payment had not been made.

Defendant said that this writing on the bill meant that he had seen it, but could not pay. He had not received an answer to his letter of the 26th March to Hongkong. He recognised the validity of the claim, he said, but having made enormous payments into the bank of late he was left with no resources, and must again request plaintiffs to look towards the drawer in Hongkong.

Mr Kirkwood said his instructions were to sue defendant. What did plaintiffs know of the relationship existing between defendant and Yuen Fat Hong, the drawer in Hongkong?

His Honour said that he considered defendant liable to pay the $5,000, with interest, and at present would give judgment to that effect verbally, reserving the official one till to-morrow, when it it will be delivered at 11 o'clock in the forenoon. Immediate payment to be enforced.

THE MINERAL WEALTH OF JAPAN.*

By Henry S. Munroe, E. M.

(The Engineering & Mining Journal.)

(Continued from the last.)

GOLD.

According to Japanese historians, gold was first found in Japan in the year 749 A. D., about eighty years after the discovery of silver. When we consider the frequency with which gold is brought to view in grains or nuggets by the natural action of running streams, and the ease with which it may be obtained by gravel washing, while silver, on the other hand, but rarely occurs native, and requires a complicated metallurgical process for its separation, this commonly received statement, that gold was discovered at so late a date and after the discovery of silver, is certainly open to doubt.

During the ninety years in which the Portuguese exported gold from Japan in such large quantities, the gold mines must have been taxed to their utmost to keep up the supply. This export averaged three and a third millions of dollars per year; and with the most ample allowance for the supply derived from the hoarded gold of centuries of non-intercourse. It is also probable that the mines reached their maximum of production during this time; for so great a demand must of necessity have stimulated the supply. Indeed, we find partial confirmation of this supposition in the steady increase for a long period of the amount exported, which at one time reached the sum of twelve million dollars for a single year.

From the present knowledge of the character of Japanese gold deposits, it is evident that this great yield was obtained from placer workings. These, being shallow and of small extent, were quickly exhausted; and the attention of the miners was then turned to the quartz veins, which thereafter yielded small but more constant returns. When, however, the imperial edict of 1671 put a stop to the exportation of bullion, this exhaustion of the placers had hardly begun to show itself; for the annual exportation of the Dutch between 1649 and 1671 averaged nearly three millions—but little less than that of the Portuguese in the previous century.

The yield of gold in 1874 is estimated by Mr. Godfrey at 100 *kan*, about 12,000 ounces troy. From this we see that there has been a great falling off in the production of this metal. 12,000 ounces are worth but about $250,000—a very small portion of the average annual export of former times.

Gold occurs in about one-half of the ken and fu of Japan; but in most cases the deposits are not now worked. The records of the Mining Office show that permits were granted in 1874 for the working of fifty-eight gold mines. Of these mines I can learn of but six, worked solely for gold, which produced notable amounts of bullion; and of the six, three together produced, in that year, but fifty ounces. Most of the gold now comes from mines worked for silver. Five such mines have already been described.† Mines producing gold alone are, as a rule, not worth working.

Gold occurs in Japan in quartz veins and placer deposits, as well as in association with silver and other ores, as already described. The placer deposits are generally of fluviatile origin, and the gravel beds are thin and of limited extent. They are often found covering the terraces of the river valleys. These placer deposits are uniformly poor. The richest gravel found in Yesso yielded less than seven cents to the cubic yard; while the average of even the best field was only five and a half cents. From information gathered from various sources I infer that this is about the usual richness of similar deposits—even the most celebrated—in other parts of the country.

The quartz veins, as a rule, are also very poor. Rich quartz is found only in small and thin deposits. The usual yield is about one-third to one-half an ounce ($7 to $10) to the ton. In exceptional cases the yield may be as much as $90 or $100; but the veins are then so thin that the extraction of the ore becomes very expensive.

The methods employed in the separation of gold from the quartz of the veins and from the gravel of the placer deposits are exceeding interesting. The method of extraction is, in either case, purely mechanical. The gold-bearing quartz is first crushed, and then ground with water, repeatedly and in small quantities, between heavy millstones moved by hand, until reduced to an impalpable slime. This, as it issues from the mill, is largely diluted with water and conducted over a series of short and narrow boards covered with numerous diagonal saw-cuts. These boards, which collect the gold and other heavy metals very perfectly, are frequently cleaned in a tank; and the concentrated material so collected is washed with great care and skill on the board or *batea* of the gold-washers.

According to careful experiments made by the late Mr. Carlyle while in charge of one of the Government gold mines, this process extracts, at the first working of the ore, sixty-five per cent. of the assay value, and the reworking of the slimes yields an additional fifteen to twenty per cent. Before the material is considered by the Japanese to be exhausted, it is treated a third time by the same process; bringing the proportion of gold saved to fully ninety per cent. of the assay value.

The method of washing employed in the working of the gravel deposits has already been described in my report on the gold fields of Yesso. Briefly, it is as follows: Ditches are cut from convenient streams in such a way that the water flows over the bed rock through the gravel deposit. A certain quantity of gravel is brought into the ditch by undermining the bank. The larger stones are carefully washed by hand and thrown out of the ditch, and the smaller ones separated with the aid of proper tools. The rapid current at the same time washes out the clay and fine sand, leaving a bed of fine gravel only in the ditch. When this has reached a thickness of about one foot, two or three small straw mats are placed side by side in the bottom of the ditch near the head of the working; and the gravel, a little at a time, is hoed carefully over them. As the gravel is swept over the surface of the mats by the force of the current, the heavy gold and the iron sand sink between the thick twisted strands of straw, and are so retained. From time to time the mats are moved a few feet down stream, and the new material, exposed by their removal, is hoed over their surface in the same manner until finally all the gravel has thus been several times subjected to treatment. During the operation, the mats, as they become charged with gold, are taken from the stream and others substituted. The concentrated material collected by the mats is finally washed with great care on the *ita*, or washing board, for the separation of the gold.

Gold Fields of Yesso.—A description of some of the Yesso gold fields, condensed from my report to the Government, will serve to illustrate the general character of the placer deposits of Japan. Gold-bearing gravel is found on the island in many of the river valleys, apparently divided in every case from the metamorphic strata of the immediate vicinity. These deposits in each of the more important fields are found in the wider portion of the valley, where the river passes through some soft and easily eroded formation, and where a large reservoir has thus been formed to receive the gravel. Where the valley is wholly in metamorphic strata, it is, as a rule, quite narrow, and the deposits of gravel, though perhaps not poor, are of little value because of limited extent. Again, where in the gold regions the valley is entirely within the limit of the soft strata, the gravel will be composed chiefly of fragments of sandstone and shale, and will contain little or no gold.

These auriferous gravels everywhere afford unmistakable evidence of having been deposited in running water; and the direction of the old current, which can usually be determined from the position of flat stones in the beds, coincides, as a rule, with the general course of the present river valleys.

The most important gold field of Yesso is in the upper valley of the Toshibets River, in the province of Iburi. The river here passes through the Toshibets series of clay rocks and tufas, and the valley is wide and deep. The gold occurs in the river gravel, and the deposits extend for a distance of five or six miles along the valley. The hills on either side are eight to nine hundred feet high, and a thousand to twelve hundred feet above the sea.

The bottom of the valley lies in three or sometimes four terraces, which are about 12, 40, 85 and 260 feet respectively above the level of the stream. Each of these terraces is underlaid by clay rock, and represents a former bottom of the valley. They are covered by beds of gold-bearing river gravel, which are usually nine

* A paper read before the American Institute of Mining Engineers at the Philadelphia meeting, June, 1876.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

to twelve, but sometimes as much as thirty or forty feet in thickness. The gravel, in turn, is covered by yellow sand and loamy silt, usually only a few feet in thickness, but in the case of the highest terrace, fully fifty.

The gold is found to be concentrated in the lower layers of the gravel beds and next the bed rock. This concentration is probably due to the repeated stirring and re-washing of the gravel as the old river shifted its bed from one side of the valley to the other. The richness of the gravel also increases very perceptibly as we ascend the stream—indicating the probable source of the gold. Numerous tests were made in different parts of the field by a modification of the Japanese method of gold-washing. In each case several cubic meters of gravel were treated. These tests yielded from 68 to 136 milligrammes of gold per cubic meter of gravel washed, representing a richness of three to six cents per cubic yard. The average value of the gravel, for the whole field, would seem to be about three and three-fourths cents per cubic yard; and for the upper and more productive part of the valley, perhaps five and two-third cents.

On the Musa river, in Oshima province, is another large gold field, similar to that of the Toshibets, but much poorer. The upper valley of the river is in metamorphic strata, and is quite narrow and deep, the hills on either side being several thousand feet high. The lower valley is in the soft strata of the Toshibets and Chingkombe groups—clay rocks and shales—and is quite wide, and surrounded by low hills. The transition from the narrow ravine to the broad valley is very abrupt, and marks sharply the line of junction between the hard and soft strata.

The gold field comprises the upper five or six miles of the broader portion of the valley. The gravel covers the terraces and the bottom of the valley in regular beds averaging eight feet in thickness—varying between five and thirteen feet in different localities. As on the Toshibets, the gravel beds are everywhere covered with sand and silt, three to ten feet thick. The gravel is composed of pebbles of metamorphic rock; and from its composition, seems to have been derived from the similar metamorphic rocks of the upper valley.

The results obtained from the washing of over a hundred tons of gravel from many different localities, show the field to be very poor. The richness of the gravel varies between 8 and 32 milligrammes to the cubic meter; though in one case we obtained 148 milligrammes. Omitting this exceptional result, the gravel steadily decreases in value from the upper end of the valley to the lower. The average richness is about 16 milligrammes to the cubic meter, or but three-fourths of a cent's worth of gold to the cubic yard.

Near Esashi and near Matsumai, in Oshima province, and near Kudo in Shiribeshi province, are small gold fields; but these are even poorer than the Musa field. Near Uragawa, in Hitaka province, and extending thence to the Tokachi river, in Tokachi province, is a large gravel formation, probably covering an area of over a hundred square miles, which in some places contains gold, but in infinitesimal quantity.

The remains of old workings are to be seen in all these localities; and it would seem that in former times the Musa and the Toshibets fields must have been extensively worked. Indeed there is a tradition that about the year 1205 A.D., a party of several hundred miners from Chikuzen, a province of Kinshiu, came to Yesso while the island was still in the hands of the barbarous and warlike Ainos, and worked the gold deposits of the Musa valley and other places in the vicinity. From data obtained in our survey of the Musa field, it appears that these old gold-washers must have obtained about $21,000 worth of gold from that locality alone; and, as they remained on the island thirteen years before they were massacred by the Ainos, they must have secured quite large amounts of the precious metal.

From the extent of the old workings on the Toshibets, this field also must, in former times, have yielded much gold; but there is, in this case, neither record nor tradition of the old workers. The Toshibets field was, however, worked in a small way about twelve years ago by the government of the Shôgun. A few men only were employed, and the total yield was quite insignificant and hardly paid the expense of working.

Kanaba Gold Mines—Okuzo, Akita kôri, Akita ken. At the time of my visit, these mines were under the direction of Mr. Robert G. Carlyle an engineer of the Mining Office. Since the death of Mr. Carlyle, the mine has been under the superintendence of Mr. R. J. Frecheville, of the same office.

These gold mines have been worked for many centuries, and hundreds of tunnels and adits penetrate the hills in every direction. A number of these old workings have been found, and drifts and stopes innumerable,—all driven with imperfect tools, before the time of gunpowder; and affording, especially in the carefully dressed walls and squared corners of some of the larger tunnels, evidence of slow and patient labor. One of these tunnels is said to have been the scene, many years ago, of a desperate hand to-hand fight between the rival miners of two provinces, whose workings driven from opposite sides of the mountain, met in this place. The connecting winze was afterwards blocked up; and has been only recently re-opened, for ventilation.

The gold occurs in small veins, traversing a porphyritic rock. The veins vary in thickness from three feet to a mere sheet. The gold is associated with copper and iron pyrites, blende and galena. The thin veins contain the richest ore, while the larger veins are usually too poor to be worked. These large veins contain copper and lead; but neither are they rich enough in these metals to be worked. These large fissures are quite regular; run north and south, and dip from 45° to 70° W. They are usually filled with decomposed porphyry, often in the form of a plastic clay. The copper ore occurs in local deposits of a limited extent, near the foot-wall.

The large veins intersect and cut off the smaller gold-bearing veins; these latter being either branches of the main fissures, or faulted to a considerable extent by them. Mr. Carlyle was inclined to adopt the former view. There seems to be little parallelism between these gold veins, though the general direction is about east and west.

The average richness of the ore, as hand-picked and prepared for treatment by the Japanese process, is about $99 per ton (containing 44 ounces of gold). Forty miners produce, of such ore, only about one-third of a ton per day. Including all expenses, the cost of mining reaches nearly $38 per ton (of 2,000 lb.)

A ten-stamp mill, of the California pattern, with a capacity of fifteen tons of ore per day, has been erected by the Mining Office. At the time of my visit it was not finished, but has, I believe, since been put in operation. In working the mine on the scale necessary to supply this mill, the cost of getting out the ore will be greatly reduced; but, at the same, it will be impossible for the miners to select, as heretofore, the best places and the richest mineral. The average richness of the ore mined will not probably be more than $20 per ton, if indeed it reaches that figure. The cost of treatment by the Japanese process is but $8.65 per ton of 2,000 pounds—and by the stamp mill will probably be much less; so that the question is whether the cost of mining, now so large, can be reduced to a figure that will permit a profit. The solution of this problem will perhaps determine whether any of the gold deposit of the country can be worked with profit; for this Okuzo mine, though perhaps not the richest, is better than the average of Japanese gold mines. We shall therefore await with interest the result of this experiment.

Yamagono Gold Mines—Kuwabara kôri, Kagoshima ken. These mines are owned and worked by a private corporation, the Satsuma Mining Company. A fifteen-stamp mill, built in France, and originally ordered, I believe by the advice of M Coignet, is being erected here, under the superintendence of a Japanese machinist from the Ikuno mines. The mill will be run by a large turbine, and will treat 24 tons of ore per day.

There are several mining districts in this vicinity. The mines of Nagano, in the neighborhood of the mill, are at present flooded, and work has been suspended, pending the completion of a new drainage tunnel. This with its branches, it is said, will be about two and a half miles in length, and will require thirty years for its construction. The mines which will be drained by this tunnel are reported to be very rich.

In the meantime the supply of ore is drawn from the mines of Yamagano and Musoyama. The gold occurs in quartz veins traversing a stratified tufa rock. This tufa, which is quite soft, alternates with a hard, dark blue crystalline quartzite, and in the vicinity are beds of sandstone and shale. Both the quartzite and the shales contain in places leaf prints of maples and other deciduous trees. The strike and dip of the gold-bearing veins correspond usually with the strike and dip of the stratified rocks, and they are apparently bedded veins, though without doubt true fissures. The general direction is east and west, the dip towards the south.

At Yamagano the veins are rarely more than one-tenth of a foot in thickness, and when thicker, are too poor to work. The average yield of the ore is about three-tenths of an ounce, or six dollars to the ton of 2,000 pounds, which, it is said, does not pay expenses.

At Musoyama there is a vein five to six feet thick, filled for the most part with fragments of wall-rock, cemented by thin seams of gold-bearing quartz. The yield of this ore is nearly one-half of an ounce of gold, or $9 70 to the ton. As the vein is so exposed that it can be quarried in the open air, twenty-five workmen, mostly boys, produce six tons of ore per day. At another mine, Yamanokamiyama, small quantities of ore are obtained, which is said to yield 158 Oz., or $28.80 to the ton.

At both Yamagano and Musoyama there are large deposits of gravel containing gold quartz. These deposits are washed for gold and the quartz picked out by hand. One cubic yard of this gravel yields about eleven cents worth of gold by washing, and the quartz picked out, when crushed and treated by the Japanese process, yields about as much more.

Sado Gold and Silver Mines.—The mines of the Island of Sado are said to be the richest and most valuable in Japan. They have, it is said, been worked for more than a thousand years, and formerly yielded much gold. The bullion produced by the mines at present is mostly silver, gold occuring in small proportions, only. It would seem proper, therefore, to class the mine among those of silver; though describing it in this place. They are now in the control of the Mining Office, and under the superintendence of Mr. Alexis Janin.

From a short account of the principal mines given by Mr. Gubbins, of the British Legation, in a paper read before the Asiatic Society in April, 1875,‡ I extract the following details.

The mines are situated near Aikawa, towards the southern extremity of the island. The old workings, which are very extensive, are of the most primitive kind, and the mines have, for the most part, been abandoned for the want of means to control the water. About sixty years ago three hundred miners are said to have lost their lives by a sudden flooding of one of the principal mines, perhaps caused by accidental tapping of a large body of water collected in some older working.

Of the character of the deposits the richness of the ores and the nature of the work now going on, Mr. Gubbins gives no information. He mentions a little episode, however, which illustrates the difficulty sometimes attending the introduction of labor-saving machinery and new methods of working. It seems that a few years ago a tramway was constructed to bring the ore from the mine to the works. Its use, however, has recently been discontinued, because of difficulties of

‡ Trans. Asiat Soc. of Japan, vol. III, part II, p. 96.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

working, frequent accidents, etc.; and it proves better policy and quite as economical to employ women at four cents a day to carry the ores on their backs.

The principal problem at present is to drain the mines and put them in proper working order. It is estimated that it will take five years and a considerable outlay of capital to accomplish this. There is, however, ore enough on hand to keep the new smelting works§ running for two years. In the meantime, for various reasons, the mines are being worked at a loss. This is in part due to the unproductive work now carried on, and in part to the Japanese system of administration. In one year bullion to the amount of $60,000 was sent to Tokio from the mines, but the expenses (in part capital invested?) for the same period were $75,000.

From the catalogue of the Japanese Section I extract the following additional details‖:

The ore occurs in two large veins running north and south. These veins divide into a number of smaller branches which alone were worked in former times. Of the many old adits, but six are in working order: these following veins from three to twenty feet thick. The ore contains gold, silver, copper, lead, and in some places antimony.

It is proposed to sink three shafts, two for hoisting the ore and one for pumping and hoisting combined. One shaft is to have a depth of 668 feet, with four horizontal galleries 2,000 feet long, at intervals of 100 feet. Another shaft will be 900 feet deep, with three galleries 2,500 feet long. The whole work will be completed within 12 years. It has been estimated that 300,000 tons of ore will be obtained in this time, and in the three years following an average of 60,000 tons per year.

At present the whole of the ore mined cannot be treated, as the smelting works are incomplete. In 1873 fully 60,000 tons remained from the working of former years, and during the same year, an additional amount of 1,857 tons was produced. Of this but 1,217 tons were treated, producing 24·549 oz of silver and 592·27 oz. of gold, which would be worth at present prices of bullion about $40,000. The ore would thus seem to average nearly $33 per ton (2,240 lb.?), and to be rather an ore of silver than of gold.

TIN.

Tin is found in but three of the thirty-five ken of Japan. According to Mr. Godfrey, the total yield in 1874 was 16,800 pounds. In the same year four permits were granted for tin mining. In two of these tin was apparently of secondary importance, being associated in the one case with copper and in the other with lead.

Tin occurs in Japan, so far as I know, only in veins; though in 1874 two permits for exploration were granted to parties who claimed to have discovered deposits of stream tin.

Taniyama Tin Mine.—Taniyama kori, Kagoshima ken. Nearly the whole of the tin produced in Japan is from this place. The mine is said to be owned by the Prince of Satsuma, but is under the control of the company that works the Yamagano gold mines. There are twenty-one distinct veins of tin averaging one and a half feet in thickness, but varying from a few inches to four feet. These veins traverse a series of sedimentary rocks similar to the formation at Yamagano, composed of soft tufas, shales, and sandstones with occasional beds of hard, dark-blue quartzite. The surface is almost everywhere covered with a deposit of modern pumice, and exposures of volcanic rock are of common occurrence.

The general direction of the veins is northwest and southeast, while the strike of the rocks is northeast and southwest, sometimes approaching an east and west direction. The veins are sometimes bedded between hard and soft strata, but usually traverse both. The ore is cassiterite, found in almost microscopic crystals scattered through a gangue of quartz. As mined, the average richness is twelve to thirteen per cent. of tin, though specimens of nearly pure cassiterite are occasionally found. One rich specimen, assayed by one of my students, yielded 56.7 per cent. of metallic tin. The ore is crushed, and is ground between millstones in the same manner as ores concentrated by washing on the *ita* to a richness of about fifty per cent. The first grinding and washing yields about fifteen per cent. of concentrated ore; the second, five per cent.; the third, two per cent.; and the final treatment, after two years exposure to the weather, one-half of one per cent. The boards used for washing are similar to those used in the treatment of gold. They are of circular form and very shallow—2.2 feet in diameter and 0.08 feet deep. This elaborate system of concentration is very expensive, requiring for the treatment of a single ton more than eighty days' work, nine-tenths of which is expended in the slow and laborious washing of the ore, a little at a time, on these wooden pans.

The washed ore is treated by the following process:

1.—Roasting of the ore in kilns.
2.—Fusion of roasted ore in low hearths.
3.—Re-melting of tin, in an iron kettle, for purification.
4.—Washing and re-melting of slags.

In the case of impure ores, the first roasting is sometimes repeated. In the fusion on the low hearth the ore is charged between dampened layers of old straw matting, and the operation is conducted with great care to avoid mechanical loss of fine ore. The slags from this operation and from the refining of the tin are quite pasty, and contain much metal in fine grains. They are crushed and washed before re-melting. The final refining of the tin is a simple remelting, though the surface is kept covered with fine charcoal to prevent oxidation.

The mine and smelting works give employment to about 120 men and boys. They are paid by the amount of tin produced, about sixteen cents per pound, partly in rice and partly in money: The yield of the mine, at the time of my visit, was said to be over 2,500 pounds per month. At this rate the production would be fifteen to sixteen tons a year, nearly double Mr Godfrey's estimate for the whole country. The statement, however, can hardly be correct, for the average daily earnings of the workmen would, at this rate of production, be fully double the wages ordinarily paid in this part of the country. From another source I learn that in 1870 the product was eight tons, which is probably nearer the average annual yield of the mine.

ANTIMONY.

Antimony is reported to occur in six of the ken of Japan. Four mines were producing ore in 1874, but only in small quantity. No one has, to my knowledge, been smelted in the country, and small shipments only have been made to England and elsewhere on speculation. I visited one of the most important localities, that of Takehama, on the Island of Amakusa, but found the deposit quite insignificant. The stibnite occurs in small and irregular veins, quite pure and free from gangue, and in seams one inch to one foot thick. The country rocks are hard sandstones and dark-blue shales. There are at work here three or four miners, who had several tons of dressed ore on hand awaiting the orders of their agent in Nagasaki.

MERCURY

According to Mr. Plunkett, cinnabar occurs in two localities, but neither of these deposits is now worked. One mine in the northern part of Nippon is said to be very promising, but the present proprietors are not now inclined to expend money for its development. The other mine is near Ainoura, on the peninsula of Hirado (not on the island of the same name), in Matsûra kôri of Nagasaki ken. Mr. Gower, who formerly superintended the working of this deposit, reports it to be valuable. The mine was opened under his direction some years ago, and a retort furnace was erected for the distillation of the metal from the ore. The furnace was worked successfully, and mercury was produced in some quantity. During the absence of Mr. Gower, however, the workmen, by careless firing, melted the iron retorts, and discouraged by this accident the owners decided to abandon the undertaking.

The cinnabar occurs here as a impregnation in sandstones of the coal measures, and filling small seams and fissures in the rock.

SULPHUR.

As might be expected from the volcanic nature of the country, deposits of sulphur are of common occurrence in Japan. It occurs in no less than seventeen different ken, and in four of the provinces of Yesso. It is found usually in superficial deposits in the craters and on the flanks of inactive volcanoes, and in solfataras. A small quantity is also found deposited from the water of certain hot springs.

In 1875 about six hundred and seventy tons were exported from Hakodate, Yokohama, Hiogo and Nagasaki. The annual production of sulphur, making allowance for that consumed at home, and that sent abroad from other ports, must be much more than this. In 1874 there were twenty-one productive mines, and three permits for exploration were issued by the Mining Office.

A description of the sulphur deposits of Yesso will serve to illustrate the manner of occurrence of sulphur in Japan. These deposits have been examined and descriced by Mr. Lyman, and the following notes are condensed from his reports¶:

Superficial incrustations, where the sulphurous fumes continually escaping from fissures in the mountain condense in the cooler earth and volcanic scoriæ of the surface, are found near the tops of three volcanoes, viz: Esan, in Oshima province; Tarumui, in Iburi province; and Iwanobori, in Shiribeshi province. The richer portions of the the sulphur-bearing earth yield about forty per cent. The sulphur is extracted by heating the earth in iron kettles, and is afterwards purified by repeated meltings in the same vessels. The beds are quite thin, and the amount of sulphur in sight at each place is very small. Mr. Lyman estimates the available amount of sulphur at these places at about 140 tons. At the time of his visit the deposit at Esan was alone being worked. Remains of old furnaces, however, were seen at the other places. The yield at Esan was about sixteen tons per year, though the work was carried on only in three summer months. The expense of working was very large; and, according to Mr. Lyman's data, the sulphur was produced at a large pecuniary loss.

Superficial deposits are also found in Horoleets kôri, in the province of Iburi, at Nuburibets and at Oil Lake in the immediate vicinity. At Nuburibets the sulphur is found in a small valley about 200 feet above the sea. Oil Lake is a large pool of boiling water, one quarter of a mile wide, apparently occupying an old crater. The sulphur is found on the banks of the lake. Mr. Lyman estimates the amount of sulphur at these places at 100 and 35 tons respectively.

Bedded deposits of sulphur occur at Kobui, in Oshima province, not far from the volcano of Esan, and about twenty-seven miles east of Hakodate. The sulphur, as a rule, is of a peculiar gray color; and, for this season, though quite pure, is not merchantable and has not yet been mined. A bed of yellow sulphur was found in the same vicinity, but has been exhausted. The beds appear to have been deposited from sulphur waters, and are probably of small extent. The bed of yellow sulphur was one foot thick, and was followed by a drift for a distance of two hundred and forty yards, when it became too poor to be worked. The gray sulphur occurs in a bed twelve feet thick, exposed for a distance of 100 feet. There are also exposures of small beds, two feet and four feet in thickness, of unknown, but probably small, extent.

§ Query: stamp-mill also?

Original from UNIVERSITY OF CALIFORNIA

The most remarkable deposit of sulphur in Yesso is that of Itashibeonai, in Shari kôri, in the province of Kitami, near the northeast extremity of the island. The sulphur is found in a small valley, about two miles from the coast. An area of about eight acres on the slope at the head of the valley is carried with a superficial deposit of sulphur, averaging six inches in thickness. In the center of this deposit, about 100 feet lower than the top of the ridge, is a large cavity, 100 feet in diameter and thirty feet deep, from which clouds of sulphur fumes are continually rising. These condense, and the sulphur is distributed over the surrounding earth. In the bottom of this cavity is a small crater, twenty feet by fifteen, apparently filled with melted and boiling sulphur of a dark brownish gray color, through which gas and fumes of sulphur are continually escaping with great violence.

Mr. Lyman estimates the sulphur in sight, on the surface of the ground, at 3,200 tons. He suggests, moreover, that an almost inexhaustible supply might be obtained from the crater by means of a proper derrick with a dredge-like scoop, "or perhaps by means of a pump."

RESUME.

Coal is, in our day, the main source of national power and prosperity; and few countries possess a richer supply of this mineral than Japan. Coal, as the principal generator of steam, moves the machinery which so largely multiplies the power and usefulness of human labor, and transports the products of the soil and of industry of land and by sea; coal aids in the extraction of the useful metals from their ores, and gives us heat, light and other comfort of civilized life. It has been estimated that the coal product of Great Britain is equivalent to the labor of one hundred and thirty-three millions of operatives working without wages for her enrichment.* Japan, in the Ishikari coal-field alone, has stored up and available for at least two centuries, use the labor of an equal body of men.

To secure the full advantage of this store of fuel, in the construction of the machinery by which the power of steam is utilized, no available substitute for this metal has been found. It is therefore fortunate that rich deposits of iron ore of the finest quality are so abundant.

Next in importance, perhaps, to coal and iron, are the porcelain clays, which form the basis of a very considerable industry. The deposits of sulphur, also, are by no means unimportant.

Of the metallic minerals other than iron, ores of copper and silver alone occur in considerable quantity, and in deposits that can profitably be worked. Lead and gold are found in many parts of the country, but the deposits are almost always poor—and as a rule, not worth working. Tin and mercury are of rare occurrence; while other metals, such as antimony, cobalt, etc., occur only in unimportant deposits.

The universal wealth of Japan, therefore, lies not, as was formerly supposed, in exhaustible deposits of the precious metals, but chiefly in its abundant stores of coal and iron.

REUTER'S TELEGRAMS.

London, 18th April, 1877.—Active warlike preparations continue. The Russian Embassy has been withdrawn from Stamboul.

The expulsion of all Russians from Turkey is daily expected.

Prince Gortschakoff has issued a circular in which he justifies the war.

The Czar has held an inspection of his army at Kischineff.

The report that the Persians lay claim to Baghdad is denied.

The Under Secretary of State has stated in reply to a question in the House that the papers relating to the Yunnan Mission are printed, and that they are only waiting Sir Thomas Wade's memorandum.

At the launch of an ironclad constructed for the Japanese Government, the Chinese Envoy attended and proposed the toast of the Japanese Navy.

Mr. Pope Hennesy's appointment has been gazetted.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

London, 10th April, 1877.—Russia has desired Turkey to reply to the Protocol before the 13th.

London, 10th April.—As Turkey declines to adhere to the Protocol war is now regarded at St. Petersburg as inevitable.

Constantinople, April 4th.—It is rumoured that the Porte sends a note to the Powers treating the Protocol as assembling (? assailing) the dignity of the Ottoman Empire.

Berlin, April 4th.—It is semi-officially denied that Bismarck has resigned. Over-work has caused his temporary retirement.

Trincomalee, April 5th, 10 a.m.—The ship *City of Berlin*, chartered from Glasgow to Rangoon with coal, got on fire off the Eastern coast of Ceylon. She signalled for a pilot off Trincomalee on Monday, and is now in the inner harbour. The fire is being got under by the engines.

H.M. Ship *Arab* is refitting, and has orders to proceed to the Maldives in search of a French vessel supposed to have been lost with passengers on board.

Bombay, 23rd March.—Major Barlow writes indignantly to the papers that the Egyptians will not allow him to reach Abyssinia to take command of the army of that State.

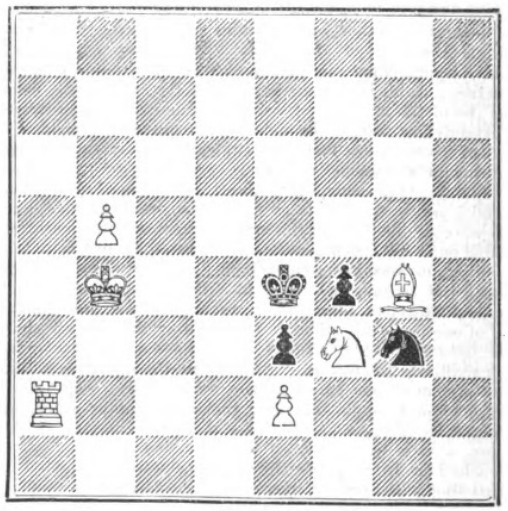
Constantinople, 5th April.—The Porte is displeased with the terms of the proposed protocol, and will probably refuse immediate disarmament. The Montenegrin delegates maintain their demands. Great uncertainty exists.

Allahabad, 29th March.—Mr. T. T. Cooper is reappointed to his political agency at Bhamo, and was to leave Calcutta on Monday, to relieve Captain C. B. Cook. In Bhamo as much as anywhere, the Government of India wants a strong and safe man; and Mr. Cooper not only fulfils these conditions, but has experience as well.

London, 4th April.—The Princess of Wales has started for the Mediterranean. The Prince follows her on Tuesday.

General Alexander Edwards has been appointed Colonel of the 2nd Queen's.

A semi-official provincial correspondent of Berlin states that Prince Bismarck will be relieved of the direction of the Foreign and Internal Affairs of the Empire.



Washington, 4th April.—President Hayes has withdrawn the troops from the Carolina State House.

London, 6th April.—The text of the Russian Protocol published recognises the necessity of maintaining the European concert, and favours the rectification of the Montenegrin frontier. It invites the Porte to replace its army on a peace footing, and takes cognisance of its promises of reform, and hopes for their energetic execution, which the Ambassadors of the six guaranteeing Powers at Constantinople will watch, and if disappointed the Great Powers will consider together the best means of securing the well-being of the Christians in Turkey and the general peace.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—Our market is rather quiet and in some instances prices show a decline. In *Yarns* a small business has been done; 16/24 have been sold at a reduction; 28/32 are unchanged whereas 28/42 are neglected. *Shirtings* are quiet and slightly easier. *Velvets* and other articles do not attract much attention and are nominal.

Grey Shirtings:—								
7 lbs.	38½ yds.	39 in.	per pce.	$1.45	to	$1.80		
8 lbs.	38½ yds.	44 in.	,,	1.65	to	2.25		
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.65	to	2.37½		
9 lbs.	38½ ,,	44 in.	,,	2.05	to	2.57½		
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.50	to	1.70		
,, 6lbs.	24 ,,	32 in.	,,	1.10	to	1.25		
White Shirtings:—								
60 to 64 reed 40 yds.	35 in.	per pce.		2.20	to	2.40		
Turkey Reds 24 yds.	30 in.	2—3 lb.	per lb.	0.67½	to	0.85		
Black Velvets				7.25	to	8.25		
English Drills 15 lbs.	40 yds,	30 in.		2.65	to	2.85		
Taffachelas	12 yds,	43 in.		1.70	to	2.15		

Yarns.—

No 16 to 24	per picul..	$28.50	to 32.00
No. 28 to 32	per picul..	$30.50	to 34.50
No. 38 to 42	per picul...	$34.00	to 39.00 nom.
Reverse Twist 16-24	,,		

Woollens.—There is no change to report since our last, the market is very dull and prices weak.

Plain Orleans	40—42 yds.	32 in.		5.50	to	7.00		
Figured Orleans	29—30 yds.	31 in.		4.25	to	5.25		
Shimagoro	30 yds.	30 in.		4.00	to	5.25		
Italian Cloth	—30 yds.	32 in.		0.24	to	0.31		
Camlet Cords	29—30 yds.	32 in.		5.75	to	6.00		
Camlets Asstd.	56—58 yds.	31 in.		16.50	to	17.50		
Lastings, Japan	22—30 yds.	32 in.		12.00	to	13.00		
Plain Mousselines de Laine	—30 yds.	30 in.		0.16½	to	0.18		
Figured Mousselines de Laine	30 yds.	30 in.		0.25	to	0.30		
Multicolored ,,	30 yds.	30 in.		0.30	to	0.36		
Cloth, all wool plain or fancy	48 in.	to 52 in.		0.80	to	1.20		
Presidents	54 in.	to 56 in.		0.60	to	0.65		
Pilots	54 in.	to 56 in.		0.45	to	0.55		
Union	54 in.	to 56 in.		0.60	to	0.75		
Blankets, scarlet & green	6 to 8 lbs.	per lb		0.40	to	0.47		

Sugar.—*Formosa* is quoted somewhat higher, as sales have been effected at $4.35 for Takao. Other kinds are unchanged.

Sugar:—Takao in bag	per picul..	$4.35						
,, in basket	,,	$4.15						
Taiwanfoo in bag	,,	$4.20						
do. in basket	,,	$4.05						
China No 1 Ping-fah	,,	$8.00						
,, No. 2 Ching-pak	,,	$7.30	to	$7.70				
,, No. 3 Ke-pak	,,	$6.60	to	$6.80				
China No. 4 Kook-fah	per picul..	$6.20	to	$6.40				
,, No. 5 Kong-fun	,,	$5.70	to	$6.10				
,, No. 6 E-pak	,,	$5.20	to	$5.40				
Swatow Brown	,,	$3.60						
Daitong	,,	$3.85						
Japan Rice	,,	$1.85	to	$2.05				
Kerosene Oil	,,	$4.40						

Kerosene Oil.—The market is quiet at last week's nominal quotations. Stocks in native hands are very trifling.

EXPORTS.

Silk.—We have to report an extremely dull market since our last. Settlements since them amount to 15 bales of Oshius only, as nothing whatever has been done in Hanks. Some 35 bales of Filatures have been delivered against contracts.

Dealers quote nominally $500, @ 4/1=18/6, for fair medium Oshius, and $450, @ $500,=16/9 @ 18/6 for medium Hanks.

Tea.—As we anticipated in our last issue, the first arrivals of New Crop Leaf came to hand on the 3rd instant from the province of Suruga, and speedily found purchasers at rates ranging from $3 to $4 higher than paid at a corresponding period last season.

The quality of parcels so far to hand averages *finest*, and prices are reported as being from $50 to $56 per picul. The total amount settled is about 145 piculs New Crop, equal to 400 half-chests, but the native merchants report that another steamer from Suruga is due here on the 5th instant with 500 piculs New Leaf, besides which moderate supplies are daily coming in by pack horses from adjacent districts.

The high rate at which our Tea market has opened is by no means warranted by advices from the American markets. The amount of New Leaf probably going forward per *Gaelic* on the 11th inst. will be about 2,500 half-chests, and the P. M. S. Ship *City of Peking*, to sail on or about 24th inst., will take nearly three times that quantity. Native producers are likely to be firm in their demands up country for the present, but the season, so far, has been fairly favourable and an average crop of 22 to 23 million pounds may be counted on. Rates, of course, must very soon drop.

EXCHANGE AND BULLION.

Exchange.—The past week has been again quiet, and rates have remained pretty steady.

Rates close as follows:—			
Sterling—Bank 6 months' sight	4s. 0⅝d.		
,, Bank Bills on demand	4s		
,, Private 6 months' sight	4s. 1d.		
On Paris—Bank Sight	5.05		
,, Bank 6 months' sight	5.12½		
,, Private 6 mts. sight	5.20		
On Hongkong—Bank sight	1 % dis.		
,, Private 10 days' sight	2½	,,	
On Shanghai—Bank sight	74½		
,, Private 10 days sight	75		
On New York—Bank Bills on demand	97		
,, 30 days sight Private	99½		
On San Francisco—Bank Bills on demand	97½		
,, 30 days sight Private	100		
Kinsatz	414		
Gold Yen	400

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15.0.0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

SNIDERS Military and Sporting. MARTINI RIFLES.

DOUBLE EXPRESS RIFLES .450, .500, .577 Bore.

SUPERIOR REVOLVERS.

Chief Address, Manufactory, Premier Gun Works, BIRMINGHAM, ENGLAND.

THE GREATEST

WONDER OF MODERN TIMES!

HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!

HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

Notes of the Week.

From the accounts that reach us through the native press, and the known actions of the Government which seem to be in direct contradiction of such accounts, it becomes simply impossible to arrive at any reasonable conclusion as to the position of the Imperialists and their opponents. Kagoshima is occupied by the Government forces, and fighting has been resumed with unabated vigour. It does not appear that any advantage has accrued to either side by the late encounters, except that many small towns and villages and a large portion of the city of Kagoshima have been destroyed by fire. This can scarcely be called an advantage to the Government, as the property destroyed is that of its own subjects, who will scarcely, if disloyal to the Administration, love it any better for its chastisement; or, if loyal, will not unnaturally look for compensation for the loss and misery entailed. We do not know what portion of the Satsuma army was engaged in the fight outside Kagoshima. Saigo's presence is not suspected, but of his whereabouts his opponents seem to be profoundly ignorant. They may be quite sure of one thing, and that is that he has turned to the best account the rest allowed him since his masterly retreat from before Kumamoto. It is still believed that an effort will be made, through the medium of his brother, to bring about some kind of compromise, but it is even more likely that Saigo and those who think with him, and are working to the same end will combine, and dictate their own terms for peace. The rumours of a split in the Ministry are thickening and Saigo and others are probably only waiting for the bundle of faggots to fall apart, when by united action they will be able to break up the obnoxious coalition.

Instead of any prospect of success crowning its efforts, and of a speedy return to a more peaceful state of things, the dangers that threaten to overthrow the present Administration seem to increase. The news from Tosa, and of the movements of Itagaki and the various parties of the *samurai* of whom he is presumably the head, bear an ominous likeness to the action of Saigo and the Satsuma societies. In a translation which we publish elsewhere the native writer begs the question of Itagaki's loyalty, and altogether scouts the idea that the so-called militia that he is enrolling is intended for any other than its declared purpose. But he that runs may read and comprehend that the writer does not in the least believe what, in fear of the press laws, he is compelled to preach, and that he fully appreciates the significance of Tosa's attitude. From the commencement of the present outbreak there has been a continually expressed fear that Itagaki would follow Saigo's lead, and that he was only biding his time when he could press his claims, with a certainty either of their being listened to with attention or enforced. From what we know of his antecedents he seems to be a man less conservative than Saigo, and without his military genius, or promptness of action. But for all that not one given only to "prate of rights and wrongs" without endeavouring to work for their accomplishment and abolition, but one who "loves the people well and loathes to see them overtaxed;" one who has openly expressed his firm intention of petitioning the Government to redeem the pledges given when it centralized the power of the *daimio*, the first and most important of which is the institution of a representative assembly. Should he not be allowed a hearing, or his petition be rejected, then he is determined to appeal to force, and will, like Saigo, risk his life in the cause. There can be no doubt of the openness of his intentions. He has been requested to disband his "militia" and to come to Kiôto. While he agrees to comply with the latter, he entirely refuses to accede to the former request, and it does not argue much in favour of the unity or power of the Administration that its demands are not enforced. Whether Saigo and Itagaki have any preconcerted and united plan of action it is not yet possible to learn. They are both men who have similar grievances against the present Administration. Itagaki has expressed his opinion that Saigo was forced to his present course by the action of Nakahara and his accomplices. Both retired from the Administration at nearly the same time and for similar reasons. Both wish to overthrow the personal power wielded by certain members of the Ministry, and to cause the withdrawal of these men, who oppose the establishment of a representative assembly, knowing full well that such institution will result in their immediate fall from their assumed despotism. If they unite they are irresistible. If, without actually combining, they move toward the same goal, the end they desire will not be long to attain.

To everyone who for a moment turns his thoughts to what was declared to be the impelling cause of the armed protest of Saigo and his friends,—namely the discovery of an attempt at their removal by assassination—it must seem strange in the extreme that Oyama, the ex-Governor of Kagoshima, remains untried and unheard in defence of his actions. All that is alleged against him is that he caused the arrest of the fellows who confessed to being agents, appointed by certain members of the Administration, to carry out a treacherous murder. If he did this he was doing only what was his plainest

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

duty to his country and his Emperor. If on the other hand he took advantage of his position to spread a shameful and lying report, he should be judged accordingly. But by all means let him be tried. By its silence and inaction with regard to any steps being taken to refute the accusation, we do not hesitate to say,—and we know that we express the almost universal opinion—that the Administration gives cause for damaging criticism. If the charge be without foundation, let the Government delay not in giving proof of its falsity. If one or more of its members have countenanced the murder of certain prominent leaders let the rest of the Administration hasten to give proof of their non-complicity. Circumstantial charges have been brought against them. Let them be as circumstantially refuted. This much the Government owes to itself and owes to the world. As long as Oyama remains untried, and Nakahara and his co-ruffians,—on whose confessions the Administration stands accused—remain at large, public opinion may well be excused if it forms unfavourable conjectures.

In reply to a remark which we made a fortnight ago, relative to this same matter—the delay in the trial of Oyama—we have received a letter from a Japanese gentleman, whose position is sufficient guarantee for the reliability of his information, in which he writes as follows :—

"Oyama, the former *Kenrei* of Kagoshima, still remains in prison, untried. Tamano was appointed to try him, but after a preliminary examination refused to proceed with the trial, alleging that it could not in justice be carried on. Oyama said to Tamano, 'Why did the Government send me an invitation to proceed to Kiôto from Kagoshima? Why was I treated as an honoured guest until I reached Kobe, and there without warning, disgraced, placed with well-known criminals on board ship, and made to occupy a pen intended for the occupation of beasts, when I had always done my duty and given my Government every satisfaction? If it was intended to degrade me, why was I not degraded at Kagoshima? Because I did my duty as *Kenrei* of the *Ken* and arrested assassins who were sent there by certain counsellors of the Mikado, to murder some of Japan's best friends, simply because they had petitioned for, and tried to procure the carrying out of certain sacred pledges made to the Nation, am I to be made the victim of this band of repudiators? Is it a crime in the eyes of this Government to punish assassins?' When Governor Oyama asked these questions Tamano was quite unable to answer them, and discontinuing his examination begged that some one else might be appointed to take his place. His successor, however, can no more reply to them than could Tamano, and I hear that there are many other reasons why the trial cannot proceed."

In view of the extra requirements for freight during the coming Tea season, the mercantile community will be glad to learn that Pacific Mail and the Occidental and Oriental Steamship Companies have each arranged for an extra monthly steamer, both from San Francisco and Hongkong. The times of sailing from the former port will be at intervals of about twelve days, while those from Hongkong will be from seven to ten days apart. This arrangement will continue in force at San Francisco until September 1st, and at Hongkong until October 1st, when the regular departures of two steamers a month will be resumed.

The Committee of the Yokohama Race Club have circulated among the members particulars of the scheme they propose for an amalgamation, which will be fully considered at the general meeting of the Club to be held next month. We think no one can cavil at the details of the proposition, which are liberal in the extreme, and if the Committee's efforts are met in the courteous and friendly spirit which should characterize racing matters among gentlemen, we shall have, after this spring, no such anomaly amongst us as a divided racing community, and may even be sanguine enough to hope that the rupture which has taken place may have a purifying effect,—may introduce liberal measures where conservatism has been too obstructive, and by judicious concessions induce members of the comunity to take an interest in racing for the sake of worthy competition, a friendly gathering and pleasant holiday, and, above all, for the pure love of sport.

We have just received from Messrs. Kelly & Co. a copy of a book entited "Waifs and Strays from the Far East" by Mr. Frederic Henry Balfour, which consists of a series of disconnected essays on matters relating to China. In an extremely modest preface the author claims neither originality nor profound research, but premising that at the present time all questions relating to China should have a certain attraction for the reading public, states that his work is intended for those readers "whose knowledge of Chinese matters bears an inverse ratio to the interest they take in the subject." We have not had time to do more than glance through the book, but it is evident that it merits more than a passing acknowledgment, and we shall take an early opportunity of noticing it more fully. There is one chapter in this book which we have read carefully as having special interest. It is entitled "Japanese Influence on China," and the remarks in the last paragraph are so true, and show so close an acquaintance with facts, that we venture to quote them at length.

It has been much the fashion lately to speak with unqualified admiration of the progressive policy of Japan, and evident desire to compensate, in as short a time as possible, for her long period of darkness, inactivity, and seclusion. The puerile features that have been manifested in the recent changes, the petty and harassing legislation, and the monkeyish mimicry of foreign dress and manners that have formed part of the Government measures are looked upon as unfortunate concomitants; but what is applauded is the spirit of candour and liberality displayed. Now when we survey these innovations; see foreigners and Japanese travelling cheek by jowl in a railway carriage,—residing in the Capital,—gazing unmolested, nay, invited, upon the sacred features of the once mysterious Mikado, in his unbecoming foreign uniform—and mutually fraternising upon terms of the most cordial intimacy, it seems almost incredible that, such a few short years ago, it was death not only to any foreigner who was caught upon the soil of Flowery Nippon, but to any Japanese who dared to leave it; that the very name of foreigner was to a native of Japan more exasperating than a scarlet cloth to a rabid bull; and that the Mikado was veiled in mystery from the vulgar gaze, while, in order that no unhallowed eye should pollute him with a glance, he never quitted the precincts of the Palace,—the very Sun being deemed unworthy to shine upon him. Japan was regarded as the emblem of all that was quaint, and unknown and vaguely beautiful. It was the Atlantis of the East, shrouded in mystic splendours, and invested with a keener and more delightful atmosphere of attractiveness from the extreme danger which attended the incursions of adventurers. Things were never quite so bad as this in China. Is there not something to encourage us in the contemplation of the fact? Nay, more: if China is likely to be slower than her flighty neighbour, she is all the more likely to be surer. And the influence of Japanese example is working upon her to a degree that foreigners do not and perhaps cannot appreciate. We don't expect, and we don't want, the Chinese to discard their chopsticks, repudiate the various elegances and excellences of their social life, and take to paper-collars and stove-pipe hats;—nay, Heaven forfend! but we do hope and believe that in course of time they will gradually be brought to see that, in the adoption of Western civilisation, in its highest sense, lies the safest and only way to power and freedom, and true and lasting welfare.

Would that the Japanese could but be brought to act upon the truths conveyed in these closing sentences.

We are indebted to the Statistical Department of the Inspectorate General of Customs at Shanghai, for a copy of the Customs Gazette for the quarter ending December, 1876. The total collection of dues and duties amount to Haikwan Taels 3,019,024, against collection for the same quarter of 1875, Tls. 3,023,211.

Any one resident in Yokohama must have frequently remarked the various parties of country people who have come 'to town' sight seeing, and who wander round, burdened with hats, umbrellas and bundles, under the charge, generally of an ancient, and invariably of an exceedingly grubby and garrulous guide. What this *cicerone* knows is scarcely worth knowing, but his powers of invention are inexhaustible and his mendacious descriptions of everything appertaining to the foreigner must be infinitely more entertaining to his open mouthed audience than the simple truth could possibly be. You will remark that he frequently, on meeting a foreigner, bids him a most familiar "good morning" or stops him and asks, in imagined English, the time of day. This is only done when some of his lambs ask their shepherd who the foreign gentleman may be who is coming along the street. "Oh," he says airily "a great friend of mine. Indeed I am on the most familiar terms with him. I am his guest nearly

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

every day. You will see that he cannot pass me without speaking." This impresses the followers most favourably and they cannot but reward with extra liberality a guide evidently so well informed and so highly connected. The writer was passing Messrs. Fraser's tea firing godown on the bund one morning, when a party of native tourists came up and stopping in front of the building inquired of their conductor what was its use. Without a moment's hesitation he replied that it was one of the foreigners' bath-houses, presumably connected with the hotel, and that the noise proceeded from the native servants who were engaged in assisting their masters and mistresses at their ablutions. "But no! unfortunately, I cannot take you inside, as foreigners have a singular dislike to be looked at by strangers when engaged at the bath!" But in their powers of invention the *jinrikisha* coolies are not far behind the *annaija*. A few days since came to our settlement, to see its wonders and admire its magnificence, three countrymen, fresh from the far interior. In seeking for a guide they fell into the hands of three *jinrikisha* men who persuaded them that they could render more efficient service than any guide in the place. The great ambition of the visitors was to view the interior and unknown splendours of a foreign dwelling, and this pleasure was at once promised, as one of the coolies, after consulting with his fellows, stated that he knew a pass word which would cause any foreigner to throw open his doors and admit a stranger as a welcome guest. Supremely content, did these sightseers three commit themselves to the polite attentions of their guides, and after having visited every part of the settlement called upon the swift-footed ones to show them the foreign house. An extra tip was asked and given, and then being told that it was not polite to approach a foreign house except on foot, they marched up to the bluff under the conduct of the initiated one who knew the mystic pass word. Arriving at the gate of one of our bluff residents the magic "open sesame" was carefully repeated until it was thoroughly known. Secure and rejoicing, in clattered the three visitors. Leaving their clogs at the foot of the steps and advancing half hesitatingly to the front door, they remained uneasily on the verandah until the master of the house—an irascible gentleman at best, and especially disliking to be disturbed at his tiffin—came out and inquired their business. The answer was a triumvirate bow to the ground, and a modest trio of "Dannasan owudogodamu." "What"! stammered the foreigner, aghast. Again more confidently than before but with intense respect, the same answer "Dannasan owudogodamu."

o o o o o o o

The only memorials that the gentleman retains of their visit is something like gout in his great toe, and three pairs of old clogs. But the visitors—well! if they can only find that *jinrikisha* man.

The *Osaka Nippô* says that the King of Loochoo is about to visit Japan. Does this means that the insular monarch has boldly determined to throw over China and seek protection from Japan? At any rate, if the royal visit should take place, it will doubtless hasten the solution of the vexed question of China or Japan's suzerainty over the insular kingdom, and perhaps precipitate the disagreement between the two nations who claim its allegiance, which a writer in the native press lately sighed for.

From the "Japan Mail Daily Advertiser."

Monday, 7th.

The *Viking* left for Amoy yesterday afternoon, taking a cargo of 38,000 piculs of rice.

Since the outbreak of the war the cost incurred by sending the police to the south has been 3,500,000 *yen*. The wages paid are as follows:—1st class sergeant, 25 *yen*; 2nd class do. 20 *yen*; 3rd class do. 15 *yen*; 4th class do. 10 *yen* per month. The constables are also divided into four classes, and receive respectively 10, 8½, 8 and 6½ *yen* per month.

From the *Mainichi Shimbun*.

Seven hundred police men of the Tôkiô *Fu* who were at Nagasaki, returned as far at Kobe on the 30th ultimo and will soon be back in the capital, as their services will no longer be required in the South.

Since the arrival of the Imperial troops at Kagoshima none of the merchants or mechanics of the place will do any work, saying that as soon as Saigo returns the struggle will re-commence.

From the *Chôya Shimbun*.

The rebels of Fukuoka *ken* who were contenced to hard labour are to be sent to various *ken* and *Fu* to work out their sentences, 50 to Osaka *Fu*, 30 to Hiogo *ken*, 63 to Sakai *ken*, 80 to Wakayama *ken*, 73 to Shidzuoka *ken*, and 49 to Kanagawa *ken*, in all 345 men.

Mr. Kanagaki, the editor of the *Kanayomi Shimbun*, was fined five *yen* at the *Saibansho* on the 4th instant, for publishing matter which constituted an offence against the Press-laws.

From the *Yôyôshadan*.

The following are particulars of the area of Japan, the most exact yet published, having recently been taken by one of the Government Departments. The Kurile Islands are not included.

Tuesday, 8th.

The Gaiety Theatre was extremely well filled last night when the "Centennial Wanderers" gave their entertainment in aid of the Temperance Hall, and it is pleasant to think how fully that institution will benefit by the minstrelsy of the coloured band.

Two men were brought before Mr. Dennison, the U. S. Vice-Consul-General, yesterday morning on a charge of drunkenness. One of them was discharged upon pleading guilty and expressing regret for his misdemeanour. He had never offended before and would behave himself in future. The other, a marine from the flagship *Tennessee*, also acknowledged the charge, but remonstrated against being put in goal. He begged His Honour to discharge him, for if he did not get on board at once he would lose rank by four degrees of merit. His Honour said he could only confirm his order and send prisoner to the lock-up till sent for from the ship.

The steamer *Argentino* left Singapore for Hongkong on the 23rd ultimo.

Mr. Pope Hennessy, the new Governor of Hongkong, has been duly sworn in. The ceremonies at the Governor's landing were distinguished by a series of inexcusable blunders, one salute from the shore being so carelessly given that it was thought advisable to fire it over again the next day, in order to make "assurance doubly sure." As the *China Mail* justly says:—

"It would appear, however, looking at the matter retrospectively, and impartially, that landing Governors is not our "forte." To judge by the blundering hap-hazard manner in which so many of these state ceremonies have been carried out, in our experience, it is somewhat astonishing that we have succeeded in getting our administrators conveyed into Government House at all."

From the *Akebono Shimbun*.

A telegram sent by Lieut. General Saigo from Kiôto at 5.05 p.m. on the 5th instant, announces that two bands of rebels, each numbering about one thousand, have advanced to Kajiki (in Ôsumi) and Gamô. The fourth division of the Imperial army, which had arrived at Kagoshima, will be sent against them.

Kuroda is expected to arrive at Tôkiô to-day.

From the *Hôchi Shimbun*.

The rebels have constructed strong batteries on the border of Hiuga and Bungo.

Hitoyoshi, in the province of Higo, where the rebels have posted themselves, is a place containing about eight thousand houses and is about 16 *ri* from Yashiro. There is a river, called the Kumagawa, flowing past it, connecting Yashiro with Hitoyoshi, and it takes but a single day for boats to travel from one town to the other down the river, though it takes fully three days to make the trip up the river from Yashiro to Hitoyoshi. There is a road running by the side of the river all the way, but it is narrow and inconvenient, although it is the only road between the two places. Hi-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

toyoshi is also 13 *ri* from Sashiki, and is connected with that place by a bad and tedious road. At the present moment five thousand rebels under the command of Kirino and Murata are stationed in the castle at Hitoyoshi.

From the *Nichi Nichi Shimbun.*

A Notification has been issued by the Department of the Imperial Household, to the effect that H. M. the Empress Dowager will start from Kiôto on the 7th instant journeying by the Tokaidô, and is expected to arrive at Tôkiô on the 21st instant.

Wednesday, 9th.

We hope for the sake of humanity that the statement published by the *Nichi Nichi Shimbun*, that after the fighting on the 5th instant at Kagoshima, the Imperialists set fire to and destroyed houses for the distance of about a *ri* and a half, is either exaggerated or wholly incorrect, as no excuse on the score of strategy would justify such wanton destruction.

From the *Nichi Nichi Shimbun.*

A telegram which left Kumamoto at 4.25 p.m. on the 7th instant announces that fighting has commenced at Kagoshima. The Imperialists have constructed a battery on a hill at the rear of Kagoshima castle, and about midway on the hill have built a stockade. The rebels made an attack upon the place on the morning of the 5th instant, when the Imperialists allowed them to approach until their features were plainly visible, and then fired a volley into them. Nosé Yakurô, who command the rebel attack, was shot down, and the rest of them then fled. Houses of the *samurai* and merchants for the distance of about one *ri* and a half were then set fire to and destroyed by the Imperialists.

A telegram which left Kiôto at 11.15 p.m. on the 6th instant, says that a force of about two thousand rebels advanced to Oyamada, Ishikigatake, Murata and Uyemura,—places in the neighbourhood of Kagoshima. It is also said that there are large numbers of rebels at Kajiki, Kokuba, Shikine and Fukuyama, and that they are also stationed at Yamazaki and Kawauchi. The Imperialists have reported that troops were to be landed at Akune, so as to endeavour to hem in the rebels. The Imperialists who were at Kagoshima advanced on the 4th instant as far as Demidzu, and their forces have reached Akune and Oguchi. Eighty *samurai* of Demidzu have surrendered.

From the *Chôya Shimbun.*

A telegram despatched from Kobe at 10 a.m. on the 6th instant announces that the insurgents are posted at Oguchi, and a body of them, numbering one thousand, are at Gamô and they are also stationed in many other places in the neighbourhood. Three thousand rebels were on the march at dawn this morning (6th instant) from Ishiki towards Taniyama, and an attack from them is expected every moment, the Imperialists being well prepared to receive them. The fourth division of the Imperial army arrived at Kagoshima this morning (6th instant), and are to be marched to Kajiki. The Imperialists find the advantage of having Kagoshima for the base of their operations. They intend to advance towards Kôsaku.

We hear that a report has been received from Kiôto that both the *samurai* and *heimin* of Tosa are in a state of agitation, and are insisting on raising the question of the peoples' rights and liberties. The Government is now consulting as to the best way of satisfying them.

From the *Hôchi Shimbun.*

Some officials of the Telegraph Department were yesterday ordered to proceed south for the purpose of constructing lines between Kumamoto and Kagoshima.

Thursday, 10th.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kiôto at 8.55 a.m. on the 8th instant, announces that at 11.10 a.m. on the 6th instant the Imperialists, under the command of Major Shidzuma, commenced an engagement with the rebels at Yamano in Kagoshima *Ken*. The result was that by 2 p.m., the rebels fled, leaving all their dead and wounded behind. Ten rebels and fourteen rifles were taken; but only three of the Imperialists were killed.

Kuroda safely arrived at Yokohama in the *Gembu Maru* at 3 p.m. on the 8th instant, and was received in Yokohama by H. I. H. Higashi Fushimi-no-miya, Iwakura and Ogi, and proceeded to Tôkio by the 3.45 train.

From the *Hôchi Shimbun.*

A telegram from Kumamoto, despatched at 11.10 a.m. on the 8th instant, announces that the Imperial forces advanced as far as Ishizaka, on the borders of Satsuma, on the 4th instant, and after an engagement of one hour they took possession of the town, and have since pushed on still further. Roports of guns at Nekodani were also heard.

From the *Chôya Shimbun.*

It is said that Enomoto has been relieved of his post of Minister at the Court of St. Petersburg at his own request, and will shortly return to Japan.

A reporter from the *London News* arrived at Nagasaki on the 28th of last month, to make investigations into the southern troubles.

Okuma *Sangi* returned to the capital on the 28th instant.

A telegram sent by Kawaji at 3.40 p.m. on the 27th instant says that, of the nine hundred policemen under the command of Hirayama three hundred are to be stationed at Kumamoto, and the rest will return to Tôkiô.

It is said that a great consultation of the Ministers was held on the 27th instant, but for what reason is unknown.

A number of policemen had been enlisted at Fukushima, Akita and Owaka *ken*, but the Government has now declared that their services are not required, so they, together with others who have already arrived at Tôkiô, will shortly be sent back to their homes.

From the *Mainichi Shimbun.*

H. E. Sanjô will accompany H. M. the Mikado to the capital, and H. E. Iwakura will then proceed to Osaka.

One battalion of recruits are to be sent to Kumamoto from the Hiroshima garrison.

The *Jijo-sha* of Tosa have, like the *Risshi-sha*, proceeded to enlist militia forces. The above has been reported with great haste from Osaka.

From the *Osaka Nippô.*

It is said that at the battle of Torinosu Saigo was wounded in the left hand.

The following letter has been forwarded to us by the Hon. Secretary of the Shantung Famine Relief Fund, and will doubtless be read with interest by all who subscribed:—

Shanghai, 20th April, 1877.

A. J. WILKIN, ESQ.,
Hon. Secretary,
Shantung Relief Fund,
Yokohama.

DEAR SIR,—Yours of 7th instant has come to hand, informing me of the telegraph of a further contribution to the above fund from your place of $1,200.

Mr. Cameron our Honorary Treasurer has also advised me of the receipt of the telegram.

Your enclosure of the list of subscriptions has likewise been received, and I have sent it to the *Daily News* office. It will appear in to-morrow's paper, I believe.

Your Committee and the community in Yokohama have done nobly, and your kind action in the matter is warmly appreciated.

There is every prospect of a good harvest this year in many parts of the country, and in the course of two months we expect the burden of the affair will have been got over. Meanwhile we seem to have ample funds on hand and in prospect to enable us to meet the wants of the people, and we have the gratification, acknowledged on all sides, of having saved thousands of lives.

The appeal from every quarter has been of the most liberal kind, far surpassing our expectation, but not greater than the exigency of the case. We doubt not much good will come out of it, and it is to be hoped that the Government and the country at large will recognize that we are really their best friends. Here abouts the natives express far greater confidence in us and in our form of working in this instance, than in the authorities. It is well perhaps that such as occasion has been furnished for doing what we have done, though it is dreadful the sufferings through which the people have passed.

In due time, all our operations will be published, and at present we are most thankful that our friends in Japan generally have been so helpful, and responded in such an excellent manner to our appeal.

I am, Dear Sir,
Yours very truly,
Wm. MUIRHEAD,
Hon. Secretary of the Shantung Relief Fund.

Friday, 11th.

The Mitsu Bishi Company's steamer is due from Shanghai on Tuesday next, the 15th instant. It is expected that the Company will be able to resume regular dates of departure and arrival, as per schedule, by the beginning of next month.

The Minister of War has addressed a circular to the officers and men of the Army in the South, calling upon them to zealously complete the defeat of the rebels.

From the *Nichi Nichi Shimbun.*

Lieut.-General Toriwo was relieved of the duties of the War Department, which he had undertaken as acting for Yamagata, the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

Minister of War, and the same were handed over to Lieut.-General Saigo on his arrival at Osaka, by a special order from the *Anzaisho*.

The number of wounded in the army hospital at Osaka on the 13th of last month was 2,952, for whom there were 726 attendants.

From the *Akébono Shimbun*.

In order to avoid being involved in any complications arising from the fighting which is now taking place at Kagoshima, Shimadzu Saburo and his two sons have gone to the hot springs of Itasugi, in the interior of the province of Satsuma. Saigo is said to have returned to Kagoshima, but there is no knowing if this report is true or not.

Matsukawa Mokuzo, the editor of the *Bunmei Shinshi*, was on the 9th instant sentenced to undergo imprisonment for three months for having violated the 2nd article of the Press-laws by the publication, in the 10th number of his issue, of an article on the disturbance among the people of the province of Mino.

From the *Hôchi Shimbun*.

The following notification was issued from the *Anzaisho* on the 9th instant.

Anzaisho NOTIFICATION No. 12.

To *Shi*, *Fu* and *Ken*.

It is hereby made known that as the Imperial forces having entered Kagoshima *ken*, all the ports and harbors in that *ken* are under strict surveillance, and no vessels, whether native or foreign built, will for the present be permitted to enter or leave any such ports or harbours. Any vessel violating these regulations will be seized by the Imperial men-of-war.

SANJÔ SANEYOSHI,
Prime Minister.

9th May, 1877.

The following notification was issued by the Adviser to the Commander-in-Chief of the southern expedition to all the divisions of the Imperial Army:—After fighting both day and night for the past fifty days, we have succeeded in reaching Kumamoto castle. But the insurgents, after retreating, have, it is said, posted themselves at Koyama, Yabe and Otsu where they have constructed batteries and are defending themselves persistently. We must therefore continue zealous and press onwards in support of our cause.

YAMAGATA YUHO,
Adviser to the Commander-in-Chief.

The *Gwalior*, with the next outward English mails, left Singapore on the 30th ultimo.

From the *Mainichi Shimbun*.

It is now stated that His Majesty the Mikado will return to the capital overland, in company with H. M. the Empress, because all the Imperial vessels are required for service in the southern war.

The *Gaelic* left for San Francisco this morning, taking 176 bales of Silk, and the following cargo of Tea:—

From	San Fran.	N. York.	Other cities.	Total.
Shanghai	—	304	—	304
Nagasaki	25	647	12	684
Hiogo	—	747	32	779
Yokohama	385	2,404	1,208	4,087
Hongkong	115	100	—	215
Total	525	4,202	1,342	6,069

Saturday, 12th.

The *Flying Spur* arrived early this morning from London, and though she had to put into Cape Verd Islands to repair some damage she sustained soon after leaving London, yet made the remarkably quick passage from the Islands of 99 days.

The base-ball match yesterday "Tôkiô and Yokohama" *versus* "The Fleet" resulted in favour of the former, as will be seen by the following score. Many ladies were present to match the progress of the game, and the band of the *Tennessee* was in attendance.

SCORE.

Umpire, Lieutenant Rich.

From the *Akébono Shimbun*.

A telegram despatched from Nagasaki at 1.55 p.m. on the 9th instant, says that the *Môshun Kan*, which was at Kagoshima, went to Shimonoseki on the 6th instant to take in coals. The *samurai* of Obi and Takanabe are now deserting the rebels and returning to their homes. Saigo arrived at Hitoyoshi on the 30th of last month.

A telegram came from Kumamoto yesterday announcing that on the 5th instant the Imperialists who advanced from Yashiro encountered the rebels at Ishizaka and dispersed them in one hour. The above troops, under Colonel Kurokawa, were expected to march upon Ogawa. Major-General Kawaji at the head of two companies of men advanced to Oguchi and a engagement took place at 11 a.m., when the insurgents were defeated and fled, fourteen of them and quantities of munitions of war being taken. The loss on the Imperialists' side was only three men. On the 7th instant the Imperialists drove the rebels from Nakamura and Shiraiwa, and some skirmishes took place between the towns of Ishiba and Hai. On the morning of the 8th instant about two hundred rebels commenced an attack, but were repulsed in two hours.

From the *Hôchi Shimbun*.

It is said that the loss of both the Imperialists and the rebels in killed and wounded from the commencement of the war amounts to over twenty thousand.

The amount expended by the *Okurasho* on the present war up to the 7th instant was 11,939,400 *yen*. The Government is now discussing whether or not the cost of this should be covered by a national funded debt.

From the *Nichi Nichi Shimbun*.

The farmers who raised a riot in Miyé *ken* last year numbered about sixty or seventy. They have been sentenced to pay a fine varying from 1½ to 3 *yen*, according to the degree of their guilt.

Mr. Sakuma, the acting editor of the *Hôchi Shimbun*, was sentenced to imprisonment for 15 days on the 7th instant for publishing false news about the mode of collecting taxes in Saitama *ken*, in No. 1484 of the issue of that paper.

CURRENCY.

VII.

WE recently endeavoured to set forth the necessity of placing the paper money issues of this country upon a convertible basis. And it seems to us to be desirable that we should now, in closing the series of articles upon the currency which have appeared in these columns devote some space to a statement of the grounds upon which we think that the gold standard of value ought to be abandoned in favour of the silver standard.

The position of the *metallic* portion of the currency of this country is very peculiar.

First.—There is the gold yen which is the present metallic legal tender, except between foreigners and Japanese at the treaty ports.

Secondly.—There is the silver yen or trade dollar, which is legal tender among the Japanese only, *for not more than* 10 *yen in any one payment.*

Thirdly.—There is the Mexican dollar, which is legal tender at the treaty ports between foreigners and Japanese, and is not legal tender to any extent, either there or elsewhere among the Japanese themselves.

Now it is clear that if the export and import trades were at all times in a condition of equilibrium as regards money value, the inconveniences which attend the use of the Mexican dollar as a medium of exchange would be of a minor character only. In such a state of things, the money to be received by the Japanese would, by the hypothesis, be exactly equal to the money to be paid by them, so that no question could arise, either of increase or of diminution of the quantity of the *metallic money of Japan itself.* But we need hardly say that this condition of equilibrium rarely exists. It is the normal state of things that there is a balance either on one side or on the other. Sometimes it is the exports which preponderate in money value; sometimes it is the imports. In the former case, the balance due to the Japanese passes into their hands in the shape of Mexican dollars, and this surplus of dollars—this excess in quantity over and above what is required by them to pay for imports—having no power of entering into, and thereby augmenting, the metallic currency of Japan, must, sooner or later, gravitate back into the hands of foreigners. For it is clear that even if the price of Mexican dollars should fall to a point at which more than an equal number of silver *yen* could be obtained by converting them at the Mint, such operations will only be entered into to a most limited extent, seeing that the holder, after the conversion has been effected, is in possession of coins which are legal tender in any one payment *to the extent of* 10 *yen only.*

When, upon the other hand, the balance is on the side of the imports, so that an export of bullion becomes necessary to pay for the balance, the remittance is, very frequently, made in *gold yen.* The adverse balance of trade has often to be adjusted by a bullion remittance to London, and whenever this is the case the banker selects *gold yen* if the price in Japan permits, because the price of gold in London is a *fixed price,* (£ 3,17,9 per oz., standard), whereas the price of silver is a *fluctuating price.* When the banker exports *gold yen* to London, he knows, with the utmost exactitude, how many pounds, shillings and pence they will realise, but when he exports *silver yen* or Mexican dollars to London he has no such certainty. He has then to take the chance of a fluctuating—and for the past 18 months a very depressed—market. It is easy to see therefore that the banker will always send away gold when he can, and will avoid sending away silver in any form. It would thus appear that when the balance of trade is in favour of Japan, that balance is usually paid in Mexican dollars which cannot, even if converted into silver *yen,* enter into and augment the currency *in mass,* and if the balance is against Japan, it is often paid in gold *yen* so that the *tendency* is towards a gradual depletion of the gold *yen.*

This condition of the metallic currency is obviously most unfavourable to trade. Moreover it is a state of things which tends to lead to issues of inconvertible paper, for a deranged state of the metallic currency of a country has proved, before now, to be the subtle but potent malady for the cure of which the specific of inconvertible paper money has been applied, but applied, we need hardly say, in vain. If the currency arrangements of any country are of such a nature, that it is impossible for it to obtain a sufficiency of metallic money even when the balance of trade is in its favour, sooner or later the scarcity of money will be likely to lead to inconvertible paper money issues. The obvious remedy is that the metallic currency of Japan should be legal tender at the treaty ports, and for reasons which we are about to urge, we think that the metallic standard of value should be of silver.

In the first place, if silver be adopted as the legal standard of value, the return to specie payments can be accomplished more economically than with gold. In most countries, there are large classes who hoard money, and most hoarders prefer coin to paper, but this is more especially the case in countries like India, China, and Japan. Now, returning to specie payments, it will be requisite to accumulate a redeeming fund for the discharge of such notes as may be presented for payment by these and other persons. And it is quite certain that if the medium of payment is gold, more notes will be presented than if it is silver, for the simple reason that gold is very much more easily and inexpensively transported than silver. In this country, where there are, comparatively speaking, no railways and only very bad roads, a sum as large as even 1,000 *yen* in silver, could not be conveyed for even a moderate distance without some expence, but the same sum in gold could be carried without any expence at all for very long distances. It is certain therefore that if the redeeming fund consisted of gold, it would have to be very much larger than if it consisted of silver. How much larger it is impossible to say. Certainly the difference would have to be counted by hundred of thousands of *yen,* and very possibly would have to be counted by millions. And this difference, if the redeeming fund were of silver, could be appropriated to productive employment. So much less of the capital of the country would be in a passive,—so much more in an active—state.

Secondly.—The geographical position of Japan is that of close proximity to silver-using and silver-absorbing countries. China and India together, probably contain more inhabitants than all the other countries of the globe put together. The metallic currency in both of these countries, and in some petty states which lie between them, is of silver, and there is no good reason to apprehend that they will change that currency. Already there is a considerable business going on between China and Japan. Japan takes sugar and cotton from China, and gives in exchange sea-weed and other products of the sea. And this interchange of productions is not equal in money value. The difference has to be transmitted in bullion or specie. As time goes on, these transactions will naturally become larger—most probably, they will become very much larger. It will then be of increased importance that these countries should use the same metal as currency. For the

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

oscillations in the rate of exchange will thereby be limited and transactions will be carried on upon a more secure basis. If, for example, we suppose the currencies of China and Japan to be both of silver it is evident that the rate of exchange can only move within a certain narrow range. No greater oscillations in the rate of exchange in such condition could occur than are represented by,

1.—The cost of transmitting the bullion both ways, including insurance.

2.—The mintage charge if the coins of one country are not legally current in the other.

3.—The charge for interest from the date of despatch of the bullion to the date when it is available as coin at its destination.

But if, upon the other hand, gold be the metallic currency of Japan, while silver is that of China, it is evident that in transmitting gold to China, over and above the charges for transmission, insurance, and interest, there is to be taken into account the fluctuations in the value of gold in China, for by the hypothesis, it is not *currency* there, but merely a *commodity*, yet a commodity at the same time dealt in by the few, and not by the many, and therefore most likely to suffer undue depression in price on the arrival of large quantities. Conversely, a balance of trade in favour of Japan, would have to be settled by the shipment of gold from China, a large demand for which would unduly raise the price in China. It is evident that the fluctuations in exchange, and the loss to this country in such a state of circumstances would be greater than in the first-named case. Nor would this be all. Sometimes it occurs that while Japan is indebted to England, the latter country is indebted to China, and in order to adjust these debts, two streams of bullion have to be set in motion—one from England to China, and one from Japan to England. But if the currencies of China and Japan were both of silver, the claim of England on Japan would be set off against the claim of China on England, and the double indebtedness would be settled by one remittance of silvver coin from Japan to China, and this would be a gain, for in place of having to pay freight and insurance on two shipments of bullion to and from London involving loss of interest on each for nearly two months, besides shipping charges, the freight and insurance on one shipment to China only would have to be incurred, with loss of interest for 6 or 7 days. With a gold currency in Japan, it is not likely that this could often be effected, for as we have said, gold in China is not a *currency* but a *commodity*, and like all commodities, it is subject to considable fluctuations in price.

Thirdly.—China is, as we said.—a *silver-absorbing* country. Taking periods of years, the balance of trade is always in its favour, bullion is always flowing in. And much of this bullion is in the shape of Mexican dollars. But we see no reason why the Japanese Government should not become the manufacturers of coin for the Chinese for some years to come. There ought to be no difficulty about it. Silver bars in course of transmission from San Francisco to China are detained many hours at Yokohama en route. A branch office of the Currency department established at Yokohama could give silver yen *immediately* in exchange for bars, so that the manufactured silver could go on to China without any loss of time. Of course the Currency department would charge the seller of the bars for mintage, interest, etc., and would get the bars converted into coin at its leisure. As to the possibility of getting the silver *yen* accepted in China, there can be no doubt whatsoever. It is already a legal tender at Singapore, at Canton and at Foochow. Colonel Freemantle, the Deputy Master of the English Mint, has more than once reported most favourably upon it, and has advised the Lords of the Treasury that the Governor of Hongkong has ample power to declare it legal tender in that colony. At this very moment, the mercantile community of Hongkong is, for the second time within three years, urging the Home Government to coin a British dollar for the use of the China trade, long experience having convinced them that no reliance can be placed upon regular supplies of coin coming from Mexico. But as the request was not acceded to before, it is more than doubtful if it will be acceded to now. If thorough reliance could be placed upon the Japanese Mint, there can be little doubt that H. M.'s Government would go a step further than they have yet done; instead of advising the Governor of Hongkong that he has the power, if he chooses, to make the silver *yen* a legal tender, he would be recommended to do so. The want of assurance of the trustworthiness of the Japanese Mint is of course the weak point. The *bankers* and *merchants* in Hongkong are themselves not unfavourably disposed towards the *yen*, but they object, very naturally, to request the Governor to declare it legal tender while it is still rejected by foreigners residing in the country where it is coined. But that there should be any insuperable difficulty in procuring the recognition of the silver *yen* by foreigners in Japan, seem to us to be in the highest degree absurd. As we have just said, the coins made at the Japanese Mint have been more than once most favourably reported upon by the Deputy Master of the Mint in England; the silver *yen* is superior in regularity both of weight and purity, and in artistic excellence to its rival the Mexican dollar; already the subsidiary coins are in free circulation, not only in Japan, but in some parts of China. The buildings, machinery, and appliances of the establishment at Osaka, are superior to those of the Mint in London. It was established at the request, or on the advice, of foreigners. In the Austro-Hungarian treaty there is a clause in which the Japanese Government undertakes to establish a Mint, and to improve its currency. Is it an unreasonable deduction that there is an obligation on the part of Austro-Hungarians at least to recognise the improved coinage? Surely the only difficulty that now exist—the want of assurance that the Government will neither capriciously alter the weight of the silver *yen*, nor tamper with its purity, is not one that will refuse to yield to serious efforts for its removal. Even as the matter stands at present, the guarantee for the maintenance of the weight and purity of the Japanese coinage is surely not far below that for the weight and purity of Mexican dollars. These have remained unchanged through a long series of years. Yet the Mexican Government is notoriously one of the worst governments in the world. The security we enjoy in taking the Mexican dollar is simply this:—The Mexicans are too well aware of the money value of sustaining the weight and purity of their coinage, to think of tampering with either. Is it unreasonable to argue that the Japanese Government may now, at this stage, be credited with at least an equal degree,—we will not say of honesty, but of sagacity?

Lastly.—Unless the Government can obtain the recognition of the gold *yen* at the treaty ports as legal tender, and can banish the Mexican dollar, it will not be possible to maintain a sufficient supply of the gold coins, for they will ebb away in payment of adverse balances, as we have already shown.

The only serious objection that we are aware of to the adoption of the silver standard in the peculiar circumstances of this country, lies in the existing depreciation

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of silver, and the possible increase of that depreciation in the future. Upon these points we must say a few words.

Firstly.—It is becoming more and more apparent every day that no great depreciation of silver is to be apprehended. The mines in Nevada are by no means flooding the market with silver as was expected, and a very large part of Germany's surplus silver has been sold and absorbed. Under these circumstances the price of silver is recovering.

Secondly.—A moderate depreciation in the value of silver will, in the peculiar circumstances of Japan, be positively beneficial in some respects. Cheap silver means a low rate of exchange on London. When the rate on London is low—when merchants can get more dollars in exchange for their bills than they used to get—they can either buy more produce, or buy the same quantity at higher rates. The effect of this is to stimulate production. Again, a low exchange on London discourages the import trade, so that cheap silver will tend to augment production, and to arrest the too rapid growth of importation. And in the peculiar circumstances of this country, this would not be an evil, but an advantage.

It is generally tacitly assumed by those who object to the silver standard because of the existing depreciation in the value of that metal, that no similar objection applies to gold. This is an entire mistake. The adoption of the gold standard by Germany and by Holland, has tended to appreciate gold. The Indian Government who have had under consideration a scheme for a gold currency in India, last year gave it as one of the conclusions at which they had arrived, that appreciation of gold has already set in. Now some benefits do flow in certain cases from a slight depreciation of metallic money, but we know of none that flow from appreciation. In the case of Japan the appreciation of gold would, if that metal is retained as the standard, encourage importation, discourage exportation, and would also, most probably, seriously harass the agricultural interest. For the farmers would get less gold for their grain, but would have the same taxes to pay as before. Doubtless this would be remedied in time, but much loss and discouragement of farming would ensue.

Our readers must now judge for themselves whether the views upon the currency which have been advanced in these columns are sound or not. We believe them to be so. The subject is of great importance, and we feel assured that the progress of events will, ere long, bring it prominently under notice.

Advices from Brisbane of 16th March state that the stranded steamer *Singapore* is still in a safe position, and that there are favourable reports of her yet being floated. It will be remembered that the wreck was sold for £355.—*China Mail.*

Disturbances are reported as having occurred at Kagoshima, and we are informed that about a week ago one of the men-of-war watching the town was fired upon by the insurgents from the shore. On Thursday troops left Higo for Kagoshima in two of the Mitsu Bishi steamers, and three men-of-war also left this the same day bound for the same port. The insurgents that were, up to the 22nd, fighting near Kumamoto have retreated towards Hiuga It may prove that this movement towards the south of Kiushiu is merely a feint on Satsuma side to draw off a portion of the Imperialists. The government has not very many men now in Kiushiu, and with a number of them in Bungo, others in Kagoshima, and only a few to watch Higo, Saigo's main-body may double back and proceed north uninterruptedly.—*Rising Sun.*

We hear that the Imperial Japanese fleet is in force at Kagoshima, and that they have landed troops and marines, who have thoroughly fortified the place and have trained guns to command the Town, which is now at their mercy. A thorough search was made on occupation, and an enormous amount of ammunition and arms was discovered in all directions, concealed in private houses.—*Cosmopolitan Press.*

SPIRIT OF THE JAPANESE PRESS.

What are Itagaki's Intentions?

(From the Osaka Nippô.)

To protect their lives, liberties and property is the common duty of all people of every nation, and when they are engaged in such defence they have no right to have difficulties thrown in their way. The protection of its people is naturally the duty of a Governmet, though on the other hand the people must not depend solely upon such protection. To this end militia are formed who, according to requirement, remain in their native provinces to protect their homes, or join the regular forces at the seat of war. Owing to prolonged peace, people seem to forget of their obligations toward their country. There is now a rebellion in the South, but the people look upon it merely as a quarrel between the Government and Satsuma, and there are none, who at their own cost and of their own free will, volunteer to fight against the rebels, or make preparation for their own defence. They continue to work at their respective callings, and are, apparently, faithful to the Government, but this is only in seeming, for they only wait to see how the war may terminate then and, are quite ready to yield obedience to which ever party may be victorious. Only the very faintest signs of the spirit of patriotism have been made manifest, where a few men have either volunteered their services to the Government, or made contributions of money and munitions of war.

The *Risshi-sha* has lately proposed to form a body of volunteers for the purpose of defending their rights and liberties, knowing that the Government has at present quite enough to do without being called upon to make the necessary provision for their protection. This act has given rise to certain suspicions that Tosa has made common cause with Satsuma, or that Itagaki has united with Saigo. And such suspicions are not unreasonable, seeing that this is the first occasion on which militia has been enrolled in Japan, for the protection of individual localities. But in countries like England, where there exists a strong spirit of patriotism, the enrolment of militia is by no means unusual. Thus there is really no reason to distrust the act of the men of Tosa. The influence of the ex-*Sangi* Itagaki is not so great as that of Saigo, but he possesses in a far greater degree the true spirit of patriotism, and love for the liberties of the people. Moreover he is not so obstinate and headstrong as Saigo. He is well acquainted with the formation of the governments of the various western nations, and the progress of their civilizations. In forming a militia, he has taken England as his model, and put into working that which to some may seem incomprehensible. People of sound views do not look with suspicion upon such an act.

It is true that we do not know whether Itagaki is actually a member of the *Risshi-sha*, or for what reason these men have been enrolled, but we hear it positively stated that he is himself the founder (of the soceity), and knowing him to be a faithful upholder of the peoples' rights, we feel sure that no harm will result therefrom. It is idle to suppose that he would unite himself with such a conservative as Saigo. The *Nichi Nichi Shimbun* stated some time ago that Itagaki had said, that in the event of the Government failing to bring Saigo to submission he would do so himself, but in so doing it will be necessary that a Representative Assembly be established. This confirms our views.

Some say that Itagaki is now trying to force into existence an institution that he has constantly urged upon the Government the necessity of establishing, and knowing that the Government has now all its power concentrated on Satsuma, he believes that his demands cannot be resisted. The *Gakumin Shinshi* has said that Itagaki is now waiting only to see which side shall be successful, and that he then intends to attack and subdue the victorious party. But all who give vent to such suspicions do not know the mind of Itagaki. He is a man gifted with wisdom and honesty of purpose, and agrees in opinion with such men as Goto Shojiro and Fukuoka Kotei. He cannot therefore be a man who would take a cowardly advantage of the present trouble in which the Government is involved. Neither can there be any reason that Itagaki should show any spirit of enmity towards the present Administration, which has always proved itself progressive, and is, moreover, far from being greatly weakened by the present struggle.

Itagaki's wish is to institute a Representative Assembly as soon as possible, and we agree with him in this. His enrolment of troops is merely for the purpose of defending the liberties of the people.

What is to be gained from the rebellion?

(Kinji Hiôron.)

Rear Admiral Kawamura and Major General Oyama, at the head of a large force of Imperial troops, have landed at Kagoshima, and are gradually arresting the insurgents. The Imperialists have in this manner got possession of the stronghold of the rebels, while more forces under other commanders are defending important position on the roads in the provinces of Higo and Hiuga, and are preparing to advance from all sides, so as to completely hem in the insurgents. Under these circumstances we cannot believe that it will be long before Saigo, in spite of his influence and his military abilities, will have to yield to the superior forces of the Government.

One good effect of the present rebellion will be the cessation of the evil of treating a powerful *Ken* differently from others, and when peace is again established we shall see the Government administered with equal justice throughout the Empire. While we rejoice to think that the outbreak will be fruitful of such good, we must remember that evils may also follow in its train.

Satsuma is a country that has never submitted itself to any external Government since the family of Shimadzu became Lords of the province. Toyotomi Taiko succeeded in bringing Satsuma into submission, but permitted the *Daimio* to retain his estates. Tokugawa pursued a similar course, and hence the Satsuma *samurai* have become utterly estranged from the people of other provinces, and entirely self contained. The boundaries of the province have ever been carefully guarded so that it has always been difficult, if not impossible, to enter the domains of the Lord of Satsuma. The Tokugawa party, with all its power, was unable to control the affairs of this province, and although there were in the Empire as many as two hundred feudal centres, Satsuma always held a position peculiar to itself. Its power thus became exceedingly great, and the clan was undoubtedly the strongest in the country, and did more in bringing about the Restoration than any other party. Since the Restoration the Government has been gradually abolishing old customs, and reforming its administration. But in Satsuma alone has there been no change. Everything has been carried on as usual in the old style and continual obstacles have been thrown in the way of carrying out Government reforms. But this state of things can last no longer, and it is well for us to consider what evils may accrue, or what benefits be swept away (by the acts necessary) to put an end to this hindrance.

But how is at that when certain existing evils are put an end to we are led to expect that some advantages may also disappear? The good that will be lost will be the influence of Satsuma, which has always given strength to the Government. But what ultimate good has come of such support? It has only retarded our progress in civilization, and done nothing to develope it.

It may be that the very obstinacy of the Sastuma clan has been productive of good, inasmuch as it has made the administration more zealous to carry out certain works of reform. But be that as it may, the obstructions hitherto thrown in its way by Satsuma will shortly be put an end to, and the question arises as to what incentive the Government will then have to carry on its work of progression. It has an ever present duty—a duty of no easy nature—to perform. The rights and liberties of the people and the constant demand for a proper representative assembly must be the stimulus (to the Government)that shall supply the place of the conservatism of Satsuma.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, HENRY ALLPASS.—To the Proprietors of NORTON'S CAMOMILE PILLS."

January 13, 1877. 13ins.

PHILADELPHIA EXHIBITION.—One of the most important awards at this exhibition is undoubtedly the one to Messrs. J. and P. Coats, of Paisley. In the heart of the cotton-producing country of the world, this enterprising Scotch firm were the only manufacturers who received an award for superior strength and excellent quality of spool cotton.—*Morning Post*

RURAL QUIET.

"Oh I have passed a miserable night,
So full of fearful dreams, of ugly sights,
That as I am a christian faithful man,
I would not spend another such a night,
Though t' were to buy a world of happy days."

"Nervous eh! and can't sleep? Humph! Take a trip in the country for a few days, and you will be all right! Go to any good quiet place, where you can't be bothered with business and where you can get good fresh air, and have a thorough rest. Hot bathing if you like, but don't overdo it."

Thus to me my doctor, and I take his advice. I don't know that I have anything particular the matter with me. As for nervousness, that is constitutional; my slumbers are always as sensitive to disturbing influences as an earthquake indicator, and sleeplessness is my frequent fate. However, a holiday 's a holiday, and off I go in search of sleep and quiet.

* * * *

What a charming little tea-house; clean, wholesome looking, rest-inviting! The journey has been somewhat long and tedious. To say nothing of the utter loss of dignity that is involved in being dragged and propelled in an adult perambulator by two lightly clothed and heavily perspiring fellow creatures, there cometh thereby a soreness to the shoulders and a weariness to the back, that renders the soft yielding mats inviting to the jaded frame. A kind welcome, too, from the plump damsels with the blackest of eyes and whitest of teeth, and—truth must be told—grubbiest of hands. "The gentleman is indeed welcome. He will deign to rest, for indeed, indeed, he must be tired. Such a long journey, and left Yokohama this morning? So indeed it will be! Be pleased to take one cup of tea. Truly indeed it is late. This is a small room but there several guests and if the gentleman does not mind for the one night. To-morrow he can have the best apartment. Bring the mattresses? Certainly at once. The gentleman is sleepy? To be sure, good night and she hopes he will sleep very well."

Now can anything be more hopeful than such a reception? At once I feel that this is indeed a haven of rest, and vow as I throw myself in extended ecstasy on the bed, that I have at last found "that lodge" in the world's "vast wilderness" for which the over fagged soul so constantly cries out, and that I have not one, but three or four fair Japanese spirits for my ministers whenever I choose to clap my hands like an Arabian night's hero, and summon them. Nay! they come without, for just as I am arriving at that state of mixed conciousness which precedes healthy slumber, one of my sliding panels opens with a distinct indistinctness, and some one asks me if I want anything more. To my reply in the negative a respectfully pitched voice states that a little more oil will be required to be brought for the lamp. In about five minutes enter two—I suppose for propriety's sake, though as my friends know I am more harmless than Boaz—maiden slaves of the lamp. Oil is poured in, and then a respectful duet again wishes "That the gentleman may sleep well" I think I shall, and I am just beginning to see the Prince of Wales dressed like a coolie applying oil to the wheels of a *jinrikisha*, when again the gentle gliding of the opening panel. "She had forgotten to ask at what time the gentleman would like to be called. Oh! it did not matter? He was not going to leave early? Very good, then she would let him sleep. Again may he sleep well."

I turn on my side and make preparations for going to sleep in good earnest. No more dallying with tired nature's sweet restorer. I feel that I have the whole night before me for undisturbed repose, and I am going to make the most of it. I begin to see nothing but *jinrikishas*, then rows of houses, and quite a procession of people passing, one of whom stops before me and calls out in a voice of unearthly shrillness "*Gomen nasai.*" Then comes that inexplicable return from the land of dreams to a waking existence, when the mind is something like a slightly incomplete dissolving view, the faint outlines of the dream picture being not quite obliterated by the more powerful tones of reality. Again "*Gomen nasai.*" Then I come to myself completely and ask rather sharply. "What is it?" "Please excuse him but it

Digitized by UNIVERSITY OF CALIFORNIA

is the shampooer; will I have a few rubs?" I answer angrily "No!" "Truly and indeed he has been very impolite. He thought it might be that the gentleman was tired and would like to be rubbed a little. No! did the gentleman say?" (The gentleman had said No, and had further strengthened the negative by a short, but potent phrase.) "He had most humbly understood, good night and may the gentleman sleep well!"

Surely now I shall be permitted to rest in uninterrupted peace. With an anathama on all shampooers in general and my late intruder in particular, I give my pillow, which consists of a native quilt rolled up into a bundle, a savage thump, which has the effect of causing its immediate unrollment. This necessitates my sitting up and remodelling it, which results in complete derangement of my bedding inferior and superior, so that by the time I have remade my bed, and with many a twist and kick and peevish grunt, have succeeded in getting once more into a comfortable position, I find myself wider awake than when I first lay down. Sleep is such a coy spirit. She will come all unasked, under the most unlikely conconditions, but neglect her advances for a moment, or unwittingly offend her in the slightest degree, and you find that, in a huff, she has taken away all her poppies and left in their place only nettles and thorns. Nettles and thorns? Ay, and something worse. Fleas by all that's odious! There's a legion advancing up my right leg; now throwing out skirmishers on my left. An active engagement has commenced between my shoulder blades. Like the grass, in the well remembered poem of my childhood, they come "creeping, creeping, everywhere." Were I a Briareus, my hundred hands would find more than full employment. But this can be endured no longer. Fortunately, warned by previous suffering, I have brought with me some Persian Insect Destroyer. Hastily getting up, I plentifully bestrew therewith my couch, and the circumadjacent matting. Then I relay my bed, refold my refractory pillow, and heaving a long and savagely patient sigh, once more court the longed-for slumber. No more fleas! Aha! the enemy is vanquished! I feel like the destroying angel that came down on the Assyrians, and I chortle to think that when they want to skip in the morning they will find themselves all dead corpses.

What can make my nose itch to such a frightful extent? Oh———Um-m-m. Rub-rub-rub. I shall probably effectually spoil the shape of it, but rub it I must or I shall go mad. It is that confounded Persian powder. My pocket-handkerchief? In my coat pocket. Shall I get up and get it? I hesitate; I try the quilt, but a Japanese *futon* does not lend itself readily to the soothing of the irritated organ. I even rub it on the mats, but they are open to a similar objection. There is no help for it; I must get up and procure my cambric. Again my folded pillow has flattened out and again must my pile of *futons* be rearranged.

Then I sit upon them, and gazing with a melancholy eye, and a reddened and justly exasperated nose, at my dim oil lamp, wonder whether it would not have been as well to have stayed at home. A chilly feeling about the legs warns me once more to enwrap myself in my quilt, and doing this I patiently, if not prayerfully, resign myself to whatever further trials a malignant fate may have in store for me.

I have not to wait long. My room is contiguous to the bath, and sudden splashings and sluicings and little hisses and cooings denoting intense enjoyment, tell me that some one is engaged in his or her evening ablutions. Ah! an Eve at the fountain; for being joined by a second nymph and now by a third, great become the splutterings and spatterings and gurglings, to say nothing of the chattering and laughing. Evidently three of the waiting maids indulging in their evening tub after the labours of the day. Oh! woman! woman! Be your country Greenland's icy mountains (no I forget; they don't wash there, and only undress twice a year), or India's coral strand, or Afric's sunny fountains, or Belgravia, or Saratoga; whether sitting, crowned with oderous flowers, on moonlit sands in some fair island of the southern seas, or taking out your pads and brushing your back hair, in the privacy of your luxurious dressing rooms; whenever two or three of ye congregate together, unrestrained by the presence of the harsher sex, the theme of your gossip is ever the same. It is always what he said to you or her, and what you or she replied to him, and here in a Japanese bath it is the old, old story. Two of my nymphs are evidently quizzing the third about a certain Mr. Chokichi, and she, by no means averse to the soft impeachment, retaliates with the names of a Mr. Kin and a Mr. Yasuzo, and then such rippling of laughter and such sluicing of water, and such thorough lightheartedness, that forgetting my sadly interrupted slumbers, I cannot find it in my heart to be churlish enough to call out, and put a stop to the innocent fun. So I lie still, and think about Lady Godiva and Peeping Tom, and wonder whether, if I put my finger through the paper screen and follow that low churl's wicked example, my eyes, before they could have their will, would "shrivel into darkness in my head, and drop before me." While I am meditating, the chattering fair ones leave the bath and peace and quiet again prevail.

Only for a brief space. I am beginning once more to see visions and dream dreams, when I am suddenly roused into more thorough wakefulness than ever by that—to me, —most dreadful of all dreadful sounds—a child's cry. Sitting up hastily I find that it proceeds from the next room. Yes! no doubt of it! louder and louder grows the wail. More thrilling and exasperating the screech! Now Mamma has rushed to the rescue, and begins to talk the usual soothing nonsense, which only has the effect of increasing the screams. Papa has wakened and in a grumpy bass adds his tones to the discordance. *Kalchup! kalchup! kalchup! Akka, Akka, Akka! Who o-o-o-p!* The miserable bantling has the whooping cough! Covering my head with the quilt I am suffocated; uncovered I am deafened. I make every excuse for Herod, and wonder why the law enacted for the slaughter of the innocents was ever repealed. I wish I was Robinson Crusoe. I wish I was the Last Man. I wish—There! the paroxysm has passed, and the sound has subsided to gentle whimpers. Mamma is crooning a tuneless cradle song; Papa is snoring an accompaniment. My self-willed pillow must once more be coaxed into serviceable shape and then again I lie recumbent and despairing,

Well! I suppose that

> "Some must watch while some must sleep;"
> "Thus runs the World away,"

but sleep being specially enjoined on me by my doctor, I wish I could procure the remedy. I will count up to a thousand. I do so and am more hopelessly awake when I achieve the feat that when I commenced. I will enumerate sheep jumping over a hedge. Not a baalamb can I conjure up. I feel like little Bopeep, but perhaps like her truant flock, if I let 'em alone, they will make their appearance. There, there they are! One, two, three. I'm dropping off. They are beginning to bleat. Sheep! gentle sheep! tired nature's sweet restorer baalamb sh——. I'm dreaming. That is not a sheep! That's an unmistakeable puppy! Yelp! Yelp! where the deuce is it? Outside the bath room door. Either tied up or shut in, or in some inextricable predicament or other. As Cox says, "zounds! confound it! dash it!—I can't stand this." I scramble up and open one of my panels. Yes! outside the bath room. "Oi! Nesan!" "Nesan" (fortissimo) "Nesan" (furioso). "Nesan". If I had but a tithe of the sleeping powers of these girls. Ah! that last shout roused them, for a faint and sleepy "*H-e-e-e*" comes back. But I've roused the house as well, as sundry slidings back of screens, and and various voices in tones of alarm ask if there is a fire or a robbery. The child has woke up in terror, and screams itself into a frightful fit of whooping. Amidst the din I manage to explain that something must be done to quiet the dog. In compliance with my request somebody goes out, and after about five minutes search with a broom handle, and a volley of *chikusho* and *baka* epithets, manages to hit the animal on some tender part of its anatomy with a well aimed missile, causing it to retreat under the floor of my room, where for a considerable time it sends forth a succession of the most piercing yells. After a long interval of misery, however, the house gets quieted down. More business, in stage parlance, with the pillow and bed clothes, and again I set off in search of the apparently unattainable.

If sleep would only cover me" all over, thoughts and

UNIVERSITY OF CALIFORNIA

all, like a cloak," as Sancho Panza says. A whistle! Another hideous destroyer of my peace! Now why in the name of all that's in—somnolent is that shaven-pated, dunder-headed sightless old dotard, the sham-pooer, permitted to perambulate the streets at this unearthly hour, making night hideous with his twin flutes? That horrible nerve-distracting whistle, sounding sometimes a flat sixth and sometimes a sharp seventh; the only effect wanting to complete the devilishness of Listz's demoniacal Symphony "L'inferno," and one which he certainly would have added if he had visited Japan before composing it. If I had an opiate I would take it. Opiate? Happy thought! My whiskey flask, which I always carry in case of an emergency. If the present isn't an emergency I don't think that one can possibly arise. I am a sober man, only one remove from Father Mathew, but under the present circumstances I believe myself fully warranted in drinking deep of the "leperous distilment." The lamp is burning very dimly, and in an evil moment I undertake to remedy the defect. The wick slides back into the oil and in an instant I am alone with darkness. I have no matches; I dare not again arouse the houshold, with the certainty that if I attempt it I shall wake up the baby and re-madden the dog. To endeavour to find my promised solace is absurd. I don't know where I put it, and if I could remember, I am utterly lost in the room. So there is nothing for it but to crawl about the floor in a caterpillar fashion until I can lay my hands on my bed. Having succeeded in finding that, I huddle myself on to it in some way or other, and then lie and think—wickedly.

Heavens! what's that. A peculiar scratching tells me that I am not alone. Pattering of little feet convey to my horror stricken mind the blood-curdling, goose-fleshing, hair-raising fact that there is *something* in the room, and that I and *it* are on the floor together. I am a brave man by daylight, when there is no immediate and patent cause for alarm, but in a room, at night, in Egyptian darkness, *alone with a rat*, my courage becomes even as water, and finds issue at every pore. Ugh! Four cold paws, and a "demd moist unpleasant body" pass over my face, and with a shriek of horror I bury myself under my quilts.

* * * * * * * *

I have a faint recollection of my agonised cry having roused up the child, who woke up the parents, who awakened the dog, which brought out the servant girl, and then I must have become insensible for a time. I am recalled to life by a frightful rumbling, which I at first take to be an earthquake, which has shaken down the house and buried me in the ruins. Cautiously I emerge from under the bed clothes. Broad daylight; the sun streaming in where the outer shutters are being run back with rattle and clatter, while a merry face looks into upon my prostrate form, and exclaims that "It is early! Yes only just six o'clock. And truly it is beautiful weather. The gentleman has no doubt slept well! No? *Oya! oya!* indeed that is extremely sad. How is it? But a cup of tea shall be forthcoming immediately."

SOME METEOROLOGICAL OBSERVATIONS IN JAPAN.

By the Revd. Dr. VEEDER.

Read before the Asiatic Society of Japan, on the 25th of April, 1877.

The importance of Japan as a field for meteorological research can scarcely be over-rated. Consisting of a series of islands surrounded by the waters of the largest ocean on the globe, and possessing no interior regions more than fifty miles from the sea, its climate is essentially an oceanic one. Its oceanic character is, however, greatly modified by the vicinity of the largest continent on the globe, from which it is separated by distances varying from 100 miles —from the island of Kiushiu to the peninsula of Corea— to nearly 500 miles, from the province of Echigo across the Sea of Japan to the coast of Manchuria. The magnitude of these distances makes the insular position of Japan differ sufficiently from that of Great Britain to make a comparison of the effects of the vicinity of the continent upon the meteorological phenomena of these islands to the east of the united continents of Asia and Europe, and of those islands to the west of the same continent, worthy of the most careful study.

Such a comparative study would be made still more instructive by the fact that while the larger part of the surface of the British Isles is comparatively level, the highest peaks scarcely exceeding 4,000 feet in height, and the mountain ranges being of no great extent, Japan is essentially a mountainous country, covered with long ranges of mountains varying in height from 4,000 feet to 7,000 feet, in which isolated peaks and vast masses are found from 10,000 feet to 12,365 feet in altitude. It is well known that elevated mountain ranges exert a great influence upon continental climates, and it is interesting to observe the extent in which even the oceanic climate of Japan is modified by her systems of mountains.

Another important feature of the meteorological position of Japan is her situation in the region of variable winds. These islands extend through 15° of latitude and 14° of longitude in that region, and form a series of land elevations reaching from the average north-eastern limits of the periodical (monsoon) winds, through a distance of 1,300 miles towards the north-east. From time to time the monsoons reach their shores and mountains, and occasionally the dreaded typhoons visit their south-eastern borders, and make their destructive power felt even in the capital. To this influence of the atmospheric currents should be added the exceedingly important influence of the great oceanic currents. The well-known warm Kuro Siwa current flowing parallel to the south-east coasts, and the cold currents coming down from the north into the sea of Japan on the west have much to do with the remarkable differences which are known to exist between the climates of the south-eastern and western coasts of Japan. And, in fine, if we take into account the islands and groups of islands north and south of the Japanese Empire, we have a grand chain of islands extending from the Kuriles near Kamtschatka on the north, through the Loochoos, Formosa and Philippines to the East Indies, so that could the vast belt of islands be dotted over with meteorological stations, connected by submarine telegraphs with each other and with similar stations on the Asiatic continent, knowledge of inestimable value to man, and unattainable elsewhere, could be acquired, shedding clear light on the most difficult and important questions connected with the science of meteorology.

The worth of such a vast system of observations well carried out, have been shown in Great Britain and in the United States. In the latter country, during several years past simultaneous observations taken three times daily at seventy-five different stations, situated at from 50 to 3,000 miles apart, and reported at once by telegraph at Washington, have enabled the central office not only to forecast the weather, but in seventy-six cases out of every hundred, to give warning of impending storms, thus saving thousands of lives and millions of property. Isolated and individual observations have very little value as a means of forecasting weather. They may have, however, a high scientific value in such a country as Japan. And I take great pleasure in referring here to the extremely valuable and accurate series of observations made under the direction of Mr. H. B. Joyner, C.E., F. R. G. S., at the Imperial Meteorological Observatory in Tôkiô. The experience of the director, the skill of his trained observers, and the perfection of the costly instruments employed, are a guarantee that the work is well done, and the result worthy of the deepest study.

I propose to lay before you some of the results of some of my own observations in this field, particularly those results which are represented graphically by the curves of barometric pressure, and of thermometric, psychrometric, and anemometric changes accompanying this paper.

The observations which I wish to discuss by the aid of of these curves cover an interval of 124 days from March 1st, 1876, to July 3rd, 1876.

The instruments used were a standard Negretti and Zambra barometer with a column $\frac{1}{3}$ inch in diameter, a standard wet and dry bulb psychrometer, a Robinson anemometer, a weather vane and a rain guage. The barometer cistern was 21 feet above the level of the sea.

Looking now at the curves themselves, and attending

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

to the description of them given in the margins, it will be perceived that:—

1.—The uppermost continuous curve gives the amount of cloudiness on a scale of from 0 to 10.

2.—The detached heavy vertical lines underneath this curve, with a dotted curve to the left of each, give the amount of rain on a scale of 2 centimeters to one inch of rain, while the dotted lines indicate the time and duration of the rainfall.

3.—The second continuous curve gives the barometric pressure reduced to 32° Far., and on a scale of 20 centimeters to one inch pressure.

4.—The third curve gives the force of aqueous vapour on the same scale as that of the barometric curve.

5.—The fourth curve gives the relative of humidity, or the degree of saturation on a scale of 1 centimeter to five per cent of saturation.

6.—The fifth curve indicates the changes of the thermometer on a scale of 1 centimeter to 5 degrees. The dotted lines indicate the means both of the three daily observations and of the maximum and minimum thermometers.

7.—The lowermost curve gives the daily totals of wind, on a scale 1 centimeter to 50 miles.

8.—Above the lower curve the detached straight lines drawn at different angles to points in the horizontal line show the velocity and direction of the wind at the times of the daily observations.

Noticing first the more obvious peculiarities of these curves, the barometric curve first claims our attention on account of the appearance of a certain regularity in its elevations and depressions, giving the form of mountainous waves with sharp high crests and deep troughs. Examining these with a view of ascertaining whether they indicate anything like a periodicity, or regularity in the oscillations of the barometer, we obtain the following results.

Counting only those elevations and depressions of the barometric column which exceed three-tenths of an inch, we find that during 117 days the following numbers of each occurred at the intervals named.

Elevations indicated by the crests of the curve:—

1	at an interval of	3	days	from the	preceding	one
2	"	"	4	"	"	"	"
3	"	"	5	"	"	"	"
6	"	"	6	"	"	"	"
1	"	"	8	"	"	"	"
2	"	"	9	"	"	"	"
1	"	"	12	"	"	"	"
1	"	"	15	"	"	"	"

Making 17 elevations at average intervals of 6·8 days.

Depressions indicated by the troughs of the curve:—

2	at an interval of	4	days	from the	preceding	depression.
4	"	"	5	"	"	"	"
5	"	"	6	"	"	"	"
2	"	"	8	"	"	"	"
1	"	"	12	"	"	"	"
1	"	"	13	"	"	"	"
1	"	"	14	"	"	"	"

Making 16 depressions at average intervals of 7 days.

While we can discover no exact periodicity in the oscillations here indicated we can clearly see a tendency to an approximate periodicity. The average of all the intervals is 6·9 days, and the separate intervals of 6 days are much the most numerous, while the longer intervals of 12, 13, 14, and 15 days show a tendency to break up into smaller intervals of from 6 to 7 days.

The thermometric curves show in many places remarkable correspondences with the barometric curve, giving in several instances precisely the same intervals between successive crests and troughs. And what is still more noticeable is the fact that the relation is in many cases an inverse one, that is, when the barometric curve rises the thermometric curve falls, the crests of the one corresponding with the troughs of the other. This is especially to be noticed in the curves for the 54 days from March 1st to April 24th. Here we see almost an exact opposition in the chief oscillatory motions during the first 21 days. On the 3rd of March and on the 21st, moderate depressions of the barometer correspond to equally moderate elevations of the thermometer, and on the 15th a great depression of the barometer is seen to be coincident in time with a great rise of the thermometer. Similar coincidences appear elsewhere, but they are not sufficiently numerous to justify the deduction of a general law that when the barometer falls the thermometer rises.

Turning now to the curves of the force of aqueous vapour, which are also approximately* curves of quantities of aqueous vapour, we discover in most parts a remarkable parallelism to the curves of temperature. At a few points however we see that the oscillations are in opposite directions, showing that the quantity of vapour did not invariably increase with the temperature.

A similar parallelism is seen between the curves of relative humidity and of temperature. The means of these curves as indicated by the dotted lines are in most cases nearly parallel.

I may here observe that this parallelism between the curves of temperature and of vapour, and the manner in which they differ from the barometric curve, are in accordance with well known principles of physics and are what we should expect in an oceanic climate. As the temperature of the ocean and the moist land rises in any region, the quantity of vapour drawn forth by the increasing heat also increases. But this vapour is only $\frac{5}{8}$ as heavy as dry air, and as it rises in increasing quantities into the upper strata it unites with the heat of the sun in increasing the volume of the atmosphere and causing an overflow into the surrounding drier and denser strata, and thus diminishes the weight of the atmosphere over the region. The parallelism of the curves of relative humidity and temperature is not a necessary deduction from the results of experimental research in physical laboratories. That is, it does not follow that in the open air an increase of temperature will, as a rule, produce quantities of aqueous vapour, which will increase as rapidly as the capacity of the atmosphere for vapour increases with the increasing heat. In fact their curves show us in a striking manner that, in the warmer part of every day, as at 1½ P.M., the relative humidity falls in a remarkable manner, and at night it rises again, so that the daily oscillations of the curve are opposite to those of the thermometric curve. And yet upon the whole the means of the two curves rise and fall together. And this would appear to be a necessary part of that wise system by which the rain-cloud regions of the atmosphere become gradually filled to repletion with vapour and at length empty their beneficent showers upon the thirsty earth.

We turn now to the winds which may be viewed in many cases as potent secondary causes of the barometric, thermometric and other changes indicated by these curves. Strictly speaking all winds are the effects of differences of atmospheric pressure caused primarily by the sun's heat, yet when vast bodies of the atmosphere have once been set in motion from one part of the earth's surface to another, carrying with them warmth, moisture and diminished density, or the opposite qualities, they necessarily exert a controlling influence over the indications of the barometer, thermometer and psychrometer.

In order to discover the relation between the winds and the curves we are examining, we begin with counting the number and direction of the winds coincident with the chief depressions and elevations of the barometer. We find that there were seven southerly to three northerly winds coincident with low barometers, and seventeen northerly winds to five southerly winds coincident with high barometers. It thus appears that here, as in similar latitudes elsewhere, the barometric column as a general rule rises with north winds and falls with south winds.

It appears to me that the exceptions to this general rule may be due to the fact that the winds in these cases were probably of a local and restricted character. The winds which affect the barometer are not regional winds confined to the lower strata of the atmosphere, but winds that come from great distances and imply motion of nearly the whole mass of the atmosphere. A warm south wind

* The formula expressing the relation between the weight of a given volume of aqueous vapour, and its tension and temperature taken in connection with Glaisher's Factors, shows that for open air temperatures between 32° and 80° with dew point temperatures from 0° to 40° below the open air temperatures, the approximations to strict proportionality between the tensions and the quantities of vapour range from 79 per cent. to 100 per cent. of strict proportionality.

coming from the tropics laden with vapours lighter than dry air diminishes the weight of the atmosphere, and wherever it goes, there the barometric column falls. But a south wind may be merely a local sea breeze springing up at midday in consequence of the land becoming more heated than the adjacent waters. Of this examples occurred on May 3rd, May 26th, June 17th and 18th and other days on which south winds were coincident with high barometric readings. The mornings and evenings of these days were calm, while from 1 p.m. to 3 p.m. a strong south wind blew. And this wind must have been merely a sea breeze, having its starting point not far out at sea, and producing but little effect upon the great mass of the atmosphere. My observations in other parts of Japan afford confirmation of this view. In a journey along the north-west coast in July 1875 in company with one of the Hon. Secretaries of the Asiatic Society, I frequently noticed strong north or north-west afternoon winds, and on my return to Tôkiô I found on examining Mr. Knipping's valuable records of his meteorological observations, that during the same hours on the same days, winds were blowing at Tôkiô in the opposite directions, namely from the south or south-west.

As this is a point of great importance, I will here refer to the remarkable local or regional winds of California, which blow with great regularity from 9 A.M. till 3 P.M. almost every day from April to October. A careful observation of these winds during eleven years, has shown me that while their velocity is considerable and the distance to which they penetrate into the interior is great, their influence is confined to the lower strata of the air, and they affect the barometer very little. Observations on the summit of Mt. Tamalpais near San Francisco, 2,500 feet high, show that these winds do not generally reach that height. As an illustration of their force I may mention that in the valleys north of the bay of San Francisco, trees are all inclined towards the north-east, and in the valleys south of the same bay the trees are inclined towards the the south-east, showing that the winds passing in through the Golden Gate at San Francisco, as though the narrow part of a funnel, and over the lower hills south of the Golden Gate, spread out in both directions north-east and south-east, carrying with them refreshing coolness and welcome moisture far into the interior. And yet these are merely sea breezes, not even ruffling the serenity of the upper air, or diminishing its literal gravity.

In like manner the exceptional occurrence of northerly winds along with barometric depression seems to be due to local causes such as a greater heating of the coast than of the interior in time of an elevated south wind which depresses the barometer, and at the same time permits a low surface current to set in from the north. But in the absence of all observations in the interior at the time of these exceptional north winds, we cannot form any sure judgment as to their origin.

We thus see the great importance of such a number of simultaneous observations at suitable points, as will make known the true character of a given wind, and tell us whether it is a local wind, a land or sea breeze or a movement of the great mass of the air. The barometer may lend its invaluable aid in answering this question. But we must also attentively observe the motions of the upper currents as indicated by the movements of the upper clouds.

Just here Japan becomes an exceedingly interesting field of research. Not only are clouds visible in her skies most of the time, but their differences of form, character and elevation are such as to give the observer almost unequalled facilities for studying the motions of the upper currents of the atmosphere. Such a phenomenon as two winds blowing in nearly opposite directions at once, one in the upper regions of the atmosphere and the other in the lower is very common, and I have observed many instances of different clouds moving at the same time in these different directions of the upper currents. The importance of careful observations at suitable places and at different elevations may be inferred from the fact that the observers connected with the United States signal service are required to note and report by telegraph the direction and velocity of the motion of the upper clouds, these observations being of great use in determining the probable changes of the weather.

The curves of force of aqueous vapour and of relative humidity by which the state of the atmosphere with respect to moisture is indicated, present many points of interest. One of the most interesting of these occurs near the close of April. Here we have from the 21st to the 22nd an increase of temperature and of aqueous vapour together. The quantity of vapour does not, however, increase quite in the same proportion as the temperature ; for we see a depression in one part of the curve of relative humidity, showing that the quantity of vapour did not keep pace with the increase of the capacity of the air for vapour. On the 27th a change occurs ; the thermometric curve is seen to drop rapidly : but we observe that a heavy fall of rain has occurred on the 26th, as if the cup of the clouds had been filled to overflowing, and was now partially emptied. Evidently some cause has lowered the temperature and diminished the capacity of the air for aqueous vapour, thus producing condensation of the vapour and the precipitation of rain. But here we notice that immediately after the rainfall the pressure curve begins to rise rapidly, and at the same time the heat curve continues to drop, and with it both of the vapour curves, and during some days we have low thermometer with high barometer, accompanied by small differences between the maximum and minimum reading of thermometers. If we look for the cause of these phenomena, we may notice that the cold north winds have been at play since the rainfall ceased, producing their appropriate effects on all the curves. If we seek to conjecture what caused the precipitation of rain before the north wind began to blow we may suppose that an upper current of cold north wind began to blow in the upper rain cloud region, condensing the vapour there collected, before the wind was felt below. This surmise finds support in what we observe on the 19th, 20th and 21st of May. Here we finds that after a prolonged and gradual rise in the curve of aqueous vapour, beginning on the 29th of April, a sudden depression occurs connected as before with depressions of the curves of relative humidity and of temperature.

But we see also that a strong north wind began to blow at the beginning of the rain fall. May we not believe this cold wind to be the cause of this precipitation of rain and that it produced this effect by reducing the temperature of the lower rain-cloud region below the temperature of saturation, without at the same time affecting the barometer ; and that the reason why it did not at first effect the barometer was became it was at first a local wind confined to the lower strata of the atmosphere ? We find that after the rain was over the north wind continued to blow, while the barometer rose rapidly. This looks as if the air, being partially dried after the rain and therefore denser than before, was now, like an empty vessel into which water is poured, in a condition to receive accessions to its mass by the movement from above of dry cold air from the north. In this way what was at first a surface wind might have become a movement of the whole mass of the atmosphere. Another noticeable instance, in which a north wind precedes a rainfall at a time of low barometer and is followed by a depression in the curves, is seen on June 20th. It is noteworthy in this case that the rise of the barometer is very gradual after this date instead of being abrupt as in the preceding instances. And this is what we might expect, because we observe that no north winds of any strength blew during more than 10 or 12 days after June 20th. It is, however, by no means a general rule that rainfalls occur only in time of low barometer preceded or followed by north winds.

On the 2nd and 4th of May nearly $2\frac{1}{2}$ inches of rain fell at a time of high barometer. During the rainfall and after it, there was a steady rise of the curves of aqueous vapour and relative humidity, while during only one day was there a slight fall of the thermometer. During the rain a gentle north-east wind was followed by a strong south-east wind. Now it is to be noticed on the curve of aqueous vapour that this rainfall did not rob the lower strata of the atmosphere of their moisture. Is it not fair to conjecture that this rain, falling as it did from higher rain clouds was due to condensation produced by high currents of wind from the north, currents not felt on the surface, and that these currents also caused the barometric

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

column to maintain its height until the rain was nearly over? And when we consider that clouds at different elevations are frequently seen moving in almost opposite directions for hours in succession, we can easily understand how it could happen that a north wind could produce precipitation of higher clouds while a south wind was blowing on the surface below. Had there been an observer on the top of Fujiyama at the date last referred to, there is good reason for thinking that he might have recorded a north wind, while at its base a wind was blowing from the south.

I might extend these illustrations further by discussing the accompanying curves for March and April, 1875. An examination of these would tend to confirm the views already expressed.

In conclusion I only add, that we see even in the light of these few observations by one observer in one locality that such observations have some value in confirming settled meterological principles, and starting questions of great interest, and that therefore efforts should be made to multiply such observations in different parts of the Empire. And every friend of science will earnestly wish that the day may not be far distant when the Governments of Japan and China shall, in the interests of science, commerce and agriculture, establish and put into operation a grand system of simultaneous observations similar to those now in operation in some of the countries of the west.

Correspondence.

THE CURRENCY.

To the Editor of the "Japan Weekly Mail."

Yokohama, 11th May, 1877.

Sir.—"A.Z." overlooks, as it seems to me, a result which must inevitably follow, were the changes he advocates to be confined within the limits he would be content with. If I mistake not, it is one of the fundamental principles of political economy, that with an excess of currency in any country, Exchange will go against that country, and the bullion portion of the currency will be exported to restore the balance. This indeed has been going on for years in Japan already.

From the tenor of "A. Z's." previous communications, I assume that,

1. He recognizes the importance of having in Yokohama a currency which has a fixed value in relation to that of the interior.
2. He considers the *yen* to be, at any rate, suitable for that purpose.—Indeed he reproaches the foreign community for rejecting the *yen*.

Thus far we are agreed. But I protest that it is impossible, that the coin which might be chosen—say the *yen—could* remain in Japan unless also the currency were adjusted. Whether *on the whole* the circulation of Japan is excessive, it is impossible to say, but we know that there is a frequent plethora and congestion, which amounts to the same thing. We had far better keep the Mexican dollar, than adopt the *yen* without a proper regulation of the whole currency.

Equally I would protest against the doctrine that the issues of inconvertible paper, or the general unsatisfactory condition of the currency in the interior, are nothing to foreign trade. I have sought in my previous communications to give prominence to the idea that any reform to be of use must be a general one,—not only for Yokohama, but for all Japan, and paramount importance which I attach to such a comprehensiveness must be my excuse for troubling you again on a subject which I fear may be becoming wearisome.

Yours obediently,

W.

The Berlin correspondent of the *Nord* writes:—The German coast is now bristling with guns and torpedoes from Memel to the Dutch frontier. The iron-clad fleet, specially destined for the protection of the coasts, is composed of five frigates and a corvette, without counting one frigate in course of construction. Naturally, it is French money which has paid for all these works. With such preparations, it appears to me that the Germans could contemplate with a well-grounded tranquility the military reorganization of France, and this so much the more as this reorganization does not affect the navy, of which the efficiency appears at present even more doubtful than in 1870.

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. Wilkinson, Esq., *Acting Law Secretary.*

Tuesday, May 8th, 1877.

Edgar Abbott *v.* John Baikie.

This was a claim of $99, commission on a charter party.

Plaintiff stated:—I am a broker. On the 2nd May, Captain Baikie of the *Ching Too* came to my office in company with Captain Partridge and Captain Sievewright and asked me if I could put his vessel in the way of getting employment. I asked him most carefully if he was consigned to any one else in the place. He said no, his vessel was free. I commenced to make inquiries at once to see what could be done for the ship, when one of my constituents informed me that the vessel had been offered for charter by another firm. Defendant came again on Saturday to my office, and I then accused him of putting his vessel in somebody else's hands. He declared, in presence of two captains, that his vessel was entirely free. On the same afternoon I went out and called on four or five firms and one firm telegraphed to me about chartering. On Saturday I waited for defendant to tell him what I had done. He never appeared, and the first information I received of his charter was through the medium of the press. The vessel was placed entirely in my hands and I consider the captain had no right to go to any one else.

To defendant:—I am perfectly certain that you asked me to do something for your ship.

To the Court:—Defendant did not obtain employment through me. I consider that if a vessel is placed entirely in my hands as a broker the Captain has no right to go to any one else with reference to business. I received no notice from defendant as to what steps he was taking himself. I had offered the ship to several parties. I claim five per cent. commission on obtaining charter. That is the usual commission in this port. I reckoned on the total amount of charter that defendant did obtain. I believe the charter was for $2,500. The five per cent. would come to more, but as Captain Sievewright is leaving for Niigata to-day I was afraid of losing his evidence, and had the case tried summarily on a smaller amount. Several cases similar to this have been tried both here and in Shanghai, and the decisions have been against the captain.

Richard Partridge, sworn:—I am master of the *Wandering Minstrel.* I went to plaintiff's office in company with defendant and another captain on two occasions. Defendant had just arrived, and we introduced him to plaintiff, who was our agent. I do not remember hearing much business talked on the first occasion; on the second I recollect hearing plaintiff remark to defendant that he had placed his vessels in the hands of other people. Defendant replied that it was entirely free and in the hands of himself. I can't remember any thing else.

To plaintiff:—If I put my vessel in your hands I would not think of seeking elsewhere. There was nothing in the conversation to lead me to a supposition either way; I heard no positive statement that the ship was in your hands.

Mr Abbott applied for an adjournment in order to call his other witness, Captain Sievewright.

Adjourned till 2 o'clock.

On the Court sitting again in the afternoon, his Honour said he thought it expedient, as defendant's ship was going to return immediately from Hakodate, to have the case tried by Jury. He had looked over all the cases which could be taken as precedent and considered this course the best. An order was accordingly made "that the case be put down for hearing by Jury on a date to be named on application by either party; that the evidence of Captain Partridge be then read and accepted; and, further, that Captain Sievewright's statement be taken this afternoon on affidavit, and accepted on the day of trial."

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. Wilkinson, Esq., Acting Law Secretary.

and

Messrs. E. F. Kilby, F. D. Walker, C. S. Bland, W. Gordon, and C. H. Dallas, Jurors.

Friday, May 11th, 1877.

W. M. Howles *v.* E. C. Kirby and others.

This was a claim of $15,000 damages for tort and trespass in connection with the administration of the property assigned by plaintiffs to defendants for their benefit and the benefit of plaintiff.

Mr Kirkwood appeared for plaintiff, Mr Dickins for defendants.

Mr Dickins, on his Honour calling for the litigants, answered for three defendants, but on behalf of Mr Plummer he said that as the rules of the Court had not been complied with in the serving the notice upon him, he should move that the case so far as Mr Plummer was concerned should be postponed till the rules had been complied with.

Upon his Honour calling for evidence on this point, Mr Dickins called

A. Plummer, who was sworn and said:—The notice of the Court was only served upon me yesterday morning.

To the Court:—I had no notice of the case before, except in conversation with Mr Talbot, who mentioned incidentally that such a case was coming on. This was a long time ago. Mr Talbot said

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

nothing about a petition on my behalf. I never employed counsel on my behalf through Mr Talbot.

W. H. Talbot, sworn :—I received a summons of petition in this case, one I kept myself and one I gave to Mr Kirby through Mr Dickins. I am not certain that I received more than two petitions. I had some conversation with Mr Plummer in the same day with regard to employing counsel. Mr Plummer said he did not care who was employed for he took no interest in the case. Mr Kirby said he would retain Mr Dickins so I told him also to engage that gentleman on my behalf.

His Honour said he was satisfied that Mr Plummer knew the case was coming on, and if Mr Dickins would show him that the exclusion of Mr Plummer from the case to-day would be necessary, he would make the order.

Mr Dickins replied that the rules of the Court should be complied with. Ten days' notice had not been given. At the present moment his client did not know the particulars of the case. He might have acceded to the wishes of the plaintiff. The case should be postponed, for no harm would accrue thereby.

His Honour expressed his willingness to do this if the Counsel for the other side would agree.

Mr Kirkwood objected to any postponement for it would cause a great deal of trouble, and he would have to request the postponement of the whole case.

Mr Talbot, re-called :—I certainly understood from Mr Plummer that Counsel was to be retained on his behalf, but I cannot say how it is that he did not employ Mr Dickins. Mr Kirby called on me and took the petition from me, saying he would relieve me from all further trouble in the matter.

Mr Dickins stated his inability to conduct the case on behalf of Mr Plummer, for he had had no consultation with that gentleman and did not know what special defence he might have. Mr Mitchell had a special defence as well as a general one. The rules of the Court were imperative and His Honour could not alter them.

Mr Kirkwood said he would accept an adjournment if Mr Plummer would pay the costs.

His Honour said there would be no costs, and after some further discussion over-ruled Mr Dickins' petition, considering Mr Plummer would not be damnified.

Mr Dickins requested His Honour to note his objection.

The Jury were now called and sworn in.

Mr Kirkwood then introduced his case to the Court and Jury.

W. M. Howles, sworn :—I live at 14 Kaigan Dori, native settlement, Yokohama. In June, 1870, I was keeping an engineer's shop at No. 107, Creek. The value of my business then was $14,000 or $15,000. There was a blacksmith's shop, an engineer's shop, one moulding shop, an outside house as office, one banto's house, one watchman's house; also a dwelling house in the centre of the lot. I leased this property from Mr Allmand. The last I heard of the lease was that Mr Talbot was in possession of it. The terms of my lease were five, ten or fifteen years at my option. I erected the premises on No. 107. There was only a dwelling house on it when I leased it. I erected buildings and made alterations and fixtures, in all costing $3,365. No inside fixtures are included in this account. I insured the buildings for $5,000. I except the dwelling house, and stock in trade. My stock in trade was worth about $14,000. My then indebtedness was about $8,300. I was pressed very hard for payment. I was not able to pay then, because my partner's money did not arrive from America as expected. I went to the Consul and told him the circumstances and that the business was worth a great deal, though the money was not handy. He said he would write to Shanghai and receive instructions. I said we did not want to go into bankruptcy for the stock in trade was of great value. In consequence of what the Consul said, a meeting of my creditors was called, to be held at No. 107. It took place there, but I cannot say what occurred. I was outside directing all the parties to come in. After I thought they had all assembled I went into the house and found the meeting over. I called no further meeting, but I saw an advertisement in the papers calling a meeting of the creditors at Carroll & Co.'s, No. 16. (*Japan Herald* of August 1st, 1870, referred to). I went to the first meeting at No. 16, but I did not hear all they said. They talked a lot. They did not ask me to attend. I was not summoned by any one. I think the next advertisement I saw was that the property was going to be sold by auction. It was about two months before the actual sale. I went to Mr Talbot and asked him to request defendants not to sell the place, for there was plenty of money in it. He said he would write to the creditors. I wrote to Mr Talbot to allow me to go along with the business, for it was a paying one. I made an offer to my creditors. Mr Talbot showed me a letter from Mr Kirby. I cannot remember the date.

Mr Kirkwood called for a letter of about August, 1870, in reply to an offer made by plaintiff.

Mr Dickins said defendant had never received such a letter.

Witness continued :—Mr Kirby said he would not give me a clean release unless he could see the amount of the assets. Mr Talbot read that letter to me. I did not take a copy of the letter. It was in answer to a letter of mine to Mr Talbot. I delivered it to him myself. In 1870 I think I only wrote on letter to Mr Talbot in Yokohama and one from Kobe. At the time I wrote the Yokohama one the "For Sale" advertisement was still appearing. On the morning of the sale I went to the Consul. It was on the 16th August. I had lodged an objection to the sale.

Adjourned till 2 o'clock.

The Court sat again in the afternoon.

After some dispute as to its admissibility as evidence, Mr Kirkwood read a letter from Mr Consul Robertson to Mr Talbot in 1870, saying that plaintiff objected to the sale and if it was carried out it would be on Mr Talbot's own responsibility.

Plaintiff continued :—I received no deed of release from my creditors. Mr Hill did my business for me. I had no means to go to law then, and soon after went to Kobe. I received account sales of that sale in 1872. Mr Talbot sent them. (Produced) These are the accounts. I met Mr Talbot and asked him if the creditors would give me a clean release. He said they had no ill-will against me. I said "why then don't they give me a clean release?" I wrote to Mr Talbot then (letter produced). I signed that letter but the rest is not in my hand writing. I returned to Yokohama—I don't remember the exact date. I commenced proceedings in 1876. (Account sales referred to). The value of the buildings mentioned in the first item cost me $3,500. They were my own property. They were sold for $1,700. The drilling machine was worth $35 and was sold for $24. (Witness went through all the items of importance in the account sales and considered the sums actually realised for the goods were far short of the real value, in many cases over 75 per cent being lost.)

The Jury, during the course of this statement, said they thought one or two examples quite sufficient to give them an idea of the difference referred to.

Mr Kirkwood said it was the only way to prove the value of the goods, and the Jury could only in this way arrive at the amount of damages due.

The Jury said that this was only the evidence of plaintiff himself.

Mr Kirkwood promised to bring forward other evidence in support of Mr Howles' statement.

Plaintiff :—I never received any of the proceeds of this sale.

Cross-examined by Mr Dickins :—The buildings were useful for stables, godowns or dweiling houses. They had a second story and were easily convertible into dwelling houses. The petition was read to me. Its statements are all true. When I commenced this business in 1869 don't know how much money I had. My books will tell you. I think I had more than $500. Mr. Black paid $1,400. I put it in the cash box. I did not go to the bank. When I commenced we had over $500 worth of stock. I can't point it out in the books. I am uneducated. I was not at all in debt. I swear that. (Mr Dickins then put into Court the deed of partnership and read the latter part in which it was stated that the debts of Howles amounting to $4,588.10 were to be paid equally by him and his partner). That is the money my partner was to bring in, not my debts. Defendant Talbot has a list of the stock in hand then. He took all the books away. There was very little stock in November 1869. I got a lot of stock from America, and here up till June, 1870. The stock book will show the amount. I gave it to defendant Talbot. There was at least $9,000 or $10,000 worth. I received invoices and bills but I do not have them. Defendant Talbot has; if he has not he ought to. He was appointed to look after this estate. I have no other legal knowledge than that. The creditors did not accept an offer that I should carry on the business and pay the debts out of the profits. J. D. Carroll accepted the proposal but the others would not. From June to August 1870 I was going in the steamer *Shuey Leen* as second engineer. I was frequently in Yokohama. There might have been a summons out against my by Bavier & Co. about June 1870, for $196. My partner might have had something to do with it. (Papers in this suit put in). I know about the suit of David Philipps for $550 in June 1870. (Papers put in). There were several other actions I do not remember about. I saw a lot of advertisements about my property then. I never objected to Mr Talbot being appointed assignee. I recollect one Sutherland being put in possession of No. 107. I objected to Mr Talbot about a week after, in his own office. I objected to the party Mr Talbot appointed to take stock. It was Mr Stevens. He was to arrange the goods in the best way for sale. I objected to him putting them out at all. He knew nothing about the business. I never sent a letter to any of the creditors appointing the sale. I offered to give up the property if they would give me a clear release. My creditors offered a full release if I would answer certain questions as to my estate. This was impossible. Mr Hill was acting for me on the 24th June, 1870. I know one Longfellow. He was my clerk. He did not walk off with a lot of my goods. He took a little. I don't think he did anything wrong in doing so. I think he took $1,400 worth. About $1,200 with came back to the firm. There was nothing else taken away. I don't remember making an affidavit before Mr Lowder, the then Consul. I sent two policemen after Longfellow when he was taking these things away. I cannot remember swearing to an affidavit, though I can tell you the price of the articles read out by Mr Kirkwood. In 1872 I objected to the sale in a letter to Mr Talbot. Since then I have made no objection to any of the items in the account sales. At that time our firm had not money to meet our debts. I don't know the date on which I was ejected from No. 107. I was not ejected by force. I objected to Mr Talbot remaining in possession of No. 107. I received a letter stating that the creditors did not object to me working for my own support and that they would not consider my earnings as assets in the estate. Our firm did no business after June 13th, 1870. I would have been contented had they released me. My objection is not founded on their not giving me a release but to their going to law and spending all the money and paying no one. My counsel agreed to the sale if they would give me a release. The questions they wanted to put to me contained nothing which I could not answer honestly, faithfully, and truthfully. It is hard to satisfy twenty growling men. I did not pay any of them one single cent myself. I don't know where all the money went to. The accounts they sent me were incorrect.

Adjourned till 9 a.m. this morning.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

Saturday, May 12th, 1877.

Mr Dickins resumed his cross-examination of plaintiff, who said:—I have been with the Mitsu Bishi Co. for the past seventeen months. I get about $150 a month. When I entered their service I had no money. In June 1870 I had creditors to the amount of $3,665, but have not a list of them. I had $14,000 worth of stock. The money I bought this with was made in Nagasaki and in a contract here. I cannot exactly say how much I had. I have no proof. The contract was in 1869, between Mr Bovendeer, a gentleman since drowned, and me. I do not have a copy of the contract. I had no books then. I have no receipts for payments made in 1870. That is my letter. I have the other to which it is an answer. (Read by Mr Dickins) About June 1870 something was due for rent. I have no reason to suppose it was less than $400. I received no notice to quit from the landlord. There was not $600 due as wages to the men, nor $312 due to Spiers as salary. In the action in the American Court with Longfellow I was not a witness. I did not promise to appear. The value of the goods he took is in the ledger June 17th, as $1468. Mr Longfellow is not in Yokohama. He left a year or two ago. A bill of sale was not given to him by me. (Copy of document purporting to be bill of sale put in, dated June 18th, 1870). Mr Longfellow took goods away two or three times. I never got any receipt for them. (Receipt, signed by Mr Longfellow, for certain machinery, produced). I have no reason to suppose that I did not owe about $1,100 to creditors before June, 1870. I don't think they were paid through sueing me in the British Court. In February 1870 I owed Mr Blackmeyer $1,700. I owe nothing to my creditors now. They paid themselves. If the proceeds of the stock in trade had not been sufficient to pay them I should decidedly consider myself their debtor. I would only be too happy to pay them, in that case. Mr Black is dead. I received a letter from his sister three months ago. On several occasions before his death he authorised me to prosecute this auction. We carried on no business after June 1870. I worked on my own behalf. I have not the paper of questions Mr Talbot gave me. I saw it in his office. (Letters from Mr Hall, plaintiff's counsel in 1870, to Mr Talbot, produced and read).

Re-examined by Mr Kirkwood:—The last I saw of the stock book was in No. 107. I did not take it away. It was in the safe beside the other books. The bills and invoices were also at No. 107. I did not take them away. When I saw the advertisements in the papers I went to Mr Talbot and told him that it was unfair; the business was paying, and I requested him to tell the creditors so. He said Kirby & Co. objected to me going on until they saw the assets. I never gave my consent to the sale taking place. When I received the accounts I objected by letter. (Read). I never accepted the accounts as correct. I owed Kirby & Co. about $500, not $1,300. I owed Cook $14 to $15. A great part of the goods Longfellow took away belonged to him. In June 1870 I owed $3,500. Mr Talbot said so.

Mr Kirkwood called for the Registrar to prove by the records that Mr Mitchell was a partner in the firm of Curnow & Co. in 1870.

Mr Dickins said the Judge's notes in any case could not be taken as evidence.

His Honour called for evidence upon the point, and both Mr Dickins and Mr Kirkwood cited authorities on both sides of the question Mr Mitchell denied the fact and Mr Dickins was of the opinion that he should be called personally.

A sub pœna was ordered to be served immediately on Mr Mitchell.

George Whitfield, sworn:—I am an engineer, at No. 69, Yokohama. I was in Yokohama in 1870. I recollect Lot 107 and the buildings thereon. There was at first only a little bungalow. There was afterwards a foundry and blacksmiths' shop and iron store. This shed was worth—

Mr Dickins said this mere opinion could not be taken as evidence. A proper survey should have been taken. The witness' credit and experience should be first shown.

His Honour thought the evidence was positive. Witness had seen the buildings and the opinion he formed could be given.

Mr Whitfield said he had gone through the place several times and spoke from memory. He had not examined the house since.

Mr Dickins still objected.

His Honour agreed with Mr Dickins that a skilled witness was not required, and the evidence was admissible. His Honour noted Mr Dickins' objection, however.

Mr. Whitfield continued:—The blacksmith's shop alone would be worth $1,200. I think it was about 80 feet long, tiled on the roof and plastered inside. The engineers' shop I don't remember so well. It was with the foundry. Nor do I recollect the office or the rest of the lot very well. $100 a month is rather a high rent for such a place as that. As to the hand drilling machine, I should say the price would be about $25. I had one, a fellow to it, about the same time. Laid down it would cost $35, at home £3.10. The levelling plate—I have it now myself—was about 15 cwts. As old material it is worth 7 cents per lb. That is about $100. (It was sold for $20.) The seven forges were filled with Japanese bellows, which would cost, put up, $15 each. The whole lot therefore would cost $105. (Sold for $25). The small portable forge was worth $25. (Sold at $2). Anvils cost about $30 each. The usual selling price is 13½ cents per lb. that is $40 (Seven were sold for $108, worth $280). The grindstone was worth at the outside $10. (Sold for $1).

Mr Kirkwood here requested Mr Dickins, who was in a chaffing mood, to cease making witty remarks. Mr Dickins said he was trying to enliven the proceedings.

Witness continued:—The drill-post would cost $20, selling price $30. A Lowmoor plate (sold at $10) was worth about $65, cost price; selling price $80. One hand lathe was worth $150. I have it now in No. 69. (Sold for $50). The screw cutting lathe was not very valuable but it was worth about $250. (Sold for $105) A duplex punch costs at home $75, here $100. (Sold for $10.) I believe the foundation plate was cast at our place. It was about 4 feet square with a large hole in the middle of it, worth about $40.

Cross-examined by Mr Dickins:—I was here in 1870 till 20th December. I don't remember the sale. Machines second-hand are not worth as a rule so much as new. Overtures were made to my firm very likely to buy the whole lot privately. It was not my part of the business. I was not at the sale. I do not remember seeing these particular articles at the time of the sale.

To the Jury:—Sometimes there is a demand for these things sometimes very little. I would not say that there is a steady demand. Selling a machine shop at auction would be at great loss.

Alfred Mitchell, sworn:—I live at No. 83. I have read my answer in this case. My statements therein are correct. I made no payment in 1870 as a partner in the firm of Curnow & Co. I deny having been a creditor of plaintiff in 1870. I had an action brought against me in 1870 by a man called Page. I forget the date. The claim was $1,000. Mr Marks appeared on my behalf. Mr Ross Johnson for Mr Page. I recollect being cross-examined by the latter. I think he did ask me if I was a partner in Curnow & Co.'s, I do not recollect the reply. It would not have been true if I had said I was a partner. People may have understood I was a partner but I received a salary and not a share in the profits till early in 1873. I recollect making a statement to the effect that "I am not, but I was a partner. I left on the 11th July, 1870." Mr Curnow put an advertisement in the paper. I knew he was going to put it in. (Mr Dickins admitted the advertisement in the *Herald* of July, 1870). It was inserted with my consent. I suppose it is correct. People outside thought there was a partnership, and this was to undeceive them.

To Mr Dickins:—Our first partnership was drawn up in 1873. Mr Curnow had been promising for some time. Up till then I received none of the profits. I had acted as a partner in the business though no arrangement was made. When this case came on the advertisement was put in the papers at my own request. The suit against Howles was brought by Mr Curnow personally. I did not eject plaintiff from No. 107.

Re examined by Mr Kirkwood:—Previous to July 1870 I said I acted as a partner.

Mr Dickins said he called no witnesses, but Mr Talbot was requested to answer any questions put by Mr Kirkwood.

Mr Talbot said:—The first meeting of creditors was called at the request of plaintiff. I know what took place. Plaintiff asked Carroll & Co. to assist him in protecting the property. I don't call them assignees, exactly. He did not tell me whether he was present or not at that meeting. I attended the meeting of creditors on the 24th June. I was asked to go by Mr Kirby, verbally. I was per proxy a creditor of Howles, on behalf of a Mr Skinner, I think. I don't know where my proxy is. I only had a memorandum of claim. It was $330 in amount. No debts were proved at this meeting. The door was not opened to any body. Persons who were supposed to be creditors were admitted. I did not call the meeting. I was only asked to attend, to take over the trusteeship of Carroll & Co. Mr Townley and Mr Kirby talked about it. Mr Marks was there for the landlord. I think he was asked to take the chair by persons present. Mr Howles was present in the early part of the proceedings; but was requested to retire. He was not present when the resolution was passed. I don't know that he was asked to sign the resolution. I was thereby requested to call a meeting every ten days. I called one every third or fourth, I think. The minutes of the subsequent meetings are here. The substance of these meetings were told to Mr Howles unless a special order were given to the contrary. I acted entirely under Mr Ross Johnson's advise, and the advice of Consul Robertson. They were determined to take possession of the property. The watchmen were told to keep the doors shut to all third persons. I did not turn Mr Howles out. The advertisement for the sale of his property was put in with his knowledge, at least he never objected to it. He wished that the date of the sale should be put off as far as possible in order that Nagasaki and Shanghai people might have a chance of buying. Howles offered to give us entire possession of his place in return for a clean release. He did so verbally. I may have got an answer to my inquiries of the creditors from Mr Townley for Mr Kirby refusing to accept the offer. For the first 10 days Howles did his best to help us to recover the goods taken from the premises. The creditors authorised me to sell the property. I asked for tenders for the business in all the neighbouring ports, but none were forthcoming.

Adjourned till 1 p.m. on Monday next.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq., Vice-President.

Thursday, May 10th, 1877.

H. AHRENS & Co. *v.* TAKAHASHI CHIKAYOSHI.

Plaintiffs demanded of defendant to take delivery of a quantity of lamp-posts arrived as per contract.

Mr E Schmid appeared for plaintiffs.

Mr Schmid said that in answer to the reply of defendant to the petition he had only to remark that he, defendant, having on several occasions acknowledged his indebtedness, could in no way dispute the claim now.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

His Honour said that defendants chief objection to this claim was that the lamp-posts, when they arrived, cost far more than plaintiff said they would. Defendant requested plaintiffs to keep the bargain money and consider the contract anulled.

Mr Schmid protested against this, for in the letter written by plaintiffs to defendant it was clearly stated that they did not bind themselves to any price, not knowing the freight on this particular merchandise. An estimate only was given of the probable costs, and plaintiffs acknowledged that these exceeded what was anticipated.

Defendant offered to pay any reasonable indemnity besides the bargain money if plaintiffs would accept it.

Mr Schmid said the goods in question were not every day merchandise and would be difficult to sell, so that some time would be required for consideration.

Some further arrangements were made with regard to payment of interest, &c. Mr Schmid said that defendant's chief difficulty was want of funds, and plaintiffs were willing to allow him any reasonable time before settlement.

The Court then adjourned, his Honour saying that if no arrangement was arrived at between the parties, judgment would be given against defendant on the contract.

WALTER BAGEHOT AND THE *ECONOMIST*.

(The Nation.)

In the death of Walter Bagehot, owner and editor of the London *Economist*, financial journalism has lost its acknowledged head, and England one of its best writers on political philosophy and government. The position of the *Economist* among newspapers is exceptional. Although attached to the views of the Liberal party in Great Britain, there is hardly another journal printed in our language which is so judicial in its character, and which has acquired such a hold on public confidence not in England only, but also on the continent of Europe and in the United States. It is not merely a financial paper, though primarily devoted to the interests of commerce, banking, and railways, but equally vindicates its claim to the title of a "political, literary, and general newspaper." No other prominent journal so strictly represents the mind and thought of its editorial head, for the reason, probably, that so large a part of its leading articles have been the work of his own hand; while those who have assisted his labors have learned to think and write like him. It is impossible to predict what the *Economist* will become in other hands than those of Mr. Bagehot, and it is hardly to be hoped that it can continue to enjoy the influence and popularity which he has given to it.

The birth of the *Economist* in 1843 was significant of the revolution which had taken place in English politics. The passage of the Reform Bill closed a chapter in political history; a chapter whose first pages were written by William Pitt, and its closing lines by Macaulay and Lord Brougham. Many years elapsed before the question of the suffrage—of personal participation by the subject in the government of the country—became again prominent. In that interval the ascendancy of material interests in English politics, now the controlling influence in the Government of Great Britain, was definitively established, The *Economist* was the fruit and exponent of the new régime. Singularly enough, its establishment was partly due to the incapacity of the *Examiner* to realize and conform to the new aspect of public questions; or, what is equally probable, to the reluctance of its editor to share the honors of his position with a new and ambitious aspirant. "Sed non omnes omnia possumus." What Albany Fonblanque had so brilliantly accomplished in the field of political reform it remained for another master mind to achieve in the new field of commercial and financial legislation. The prophet of the new dispensation was James Wilson. He proposed to Mr. Fonblanque "to contribute gratuitously to the *Examiner* papers on economical and financial subjects. His offer was refused, and he then established a journal which should be the especial vehicle of his philosophy on these sciences, and which he proposed to sustain mainly by his own exertions." It its early years the *Economist* was almost wholly the work of his own hands. He wrote not only the leaders, but a majority of the lesser articles; and, what is of hardly inferior importance in Journalism, he arranged and classified all its various information in such a manner that readers of every class knew just where to find the matter that concerned them, and were sure to find it.

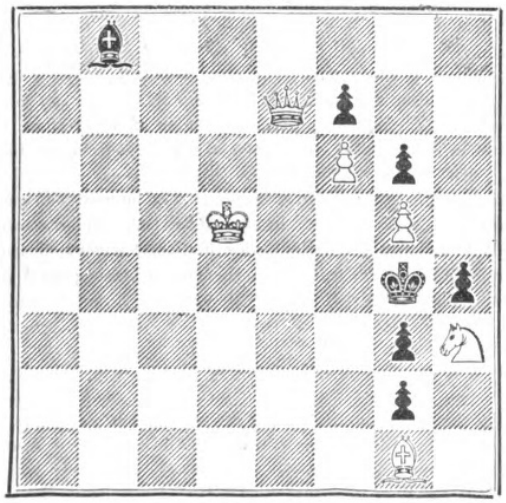
In the seventeen years which intervened between the establishment of the *Economist*, in 1843, and the relinquishment of its control by Mr. Wilson, on going to India as Finance Minister, at the end of 1850, there occurred a series of economical events not less momentous than those political ones which had made the reputation of the *Examiner*. The father of the modern commercial system of England was doubtless Mr. Huskisson. If Canning and Huskisson had not prematurely died, the publice affairs of Great Britain would probably have taken a different turn after 1827. Political and religious reforms might have been postponed, but commercial and financial reforms would certainly have been hastened. Even after Canning's death a good beginning was made by Mr. Huskisson, Sir Henry Parnell, and Mr. Poulett Thompson. The Finance Committee, from which great things were expected, was created in 1828, and in 1830 the question of taxation was discussed by these statesmen with a breadth and liberality hardly surpassed in later times. The measures which were successfully carried by Sir Robert Peel fifteen years afterwards were brought forward by them at this time. They all agreed in recommending large remissions of taxation upon various raw materials of industry and articles of consumption, and they were equally agreed in favoring the imposition of a property or income tax. The further prosecution of these economical objects was, however, arrested by the all-absorbing question of Parliamentary reform, and, after that question has been disposed of, by the emergence of Irish issues, which first divided and ultimately destroyed the Reform Cabinet. The agitation of revenue, and especially the demand for relief from popular burdens, began about 1838, and for twenty years afterwards hardly any other domestic questions were considered than such as related to taxation, commerce, industry, or finance. The income tax was imposed by Sir Robert Peel in 1842 in the face of great opposition from the Whigs, and solely for the purpose of balancing the budget. He had at that time no disposition to reduce duties for the sake of revenue; but a partial readjustment and remission of duties, adopted by him in the interest of protection, produced results so advantageous to the Treasury that the great Tory statesman became an unwilling convert to the doctrine of free-trade. Thus, under Tory auspices, by Huskisson first and by Sir Robert Peel and his political legatee, Mr. Gladstone, afterward, were the great commercial reforms, which have made England the first of producing and trading nations, conceived, promulgated, and carried into operation. The Bank Act of 1844 was also the work of Sir Robert Peel, as had been the act for resuming specie payments in 1819.

Such were the influences under which the *Economist* was established, and such were the questions in the discussion of which its preeminence and influence were attained. Mr. Bagehot suceeded to this great inheritance in 1860, when by the removal of his father-in-law, Mr. Wilson, the control and management of the paper passed into his hands. In the absence of any biographical sketch of him which has as yet reached this country, the facts of his early life are imperfectly known. He was a writer for the *National Review* during the short life of that excellent periodical, and a volume of his collected essays was published soon after 1860. We recall, in particular, one of high merit on Sir Robert Peel. He has never been in public life, though twice a defeated candidate for Parliament—once for Manchester, and, at a later election, for the London University. His talents were not of the popular order, nor had he such persuasive manners or fluency of speech as would be likely to conciliate the difficult constituency of a great manufacturing town. He would doubtless have gained something and given much by occupying a seat in the House of Commons, but his noble career as a journalist would have been endangered by closer political ties. In the *Economist* he occupied a judicial and not a partisan position, and no journalist in England has with equal conscientiousness and impartiality judged the domestic, foreign, and international questions with which English journalism has had to deal. America owes him great respect and gratitude for his honest treatment of her civil war. He began on the Southern side, on the same general grounds which influenced Mr. Gladstone at that period, but his eyes were gradually opened to the true nature of the contest, his sympathies enlisted on the side of right principles, and his calm judgment satisfied not only that the North must certainly prevail in the end, but that it was better for England and for the world that it should prevail. The integrity of this uninfluenced conversion won for Mr. Bagehot the warm friend-ship of many Americans. Since the war the *Economist* has, in America, entirely supplanted the *Times* as the representative of financial opinion in Europe; yet during all those years of heated railway speculation, when a word in its columns would have made the fortune of any enterprise seeking English capital, the integrity of its judgments was never questioned, and it has never even been suspected of improper influences. Nor has its place in American confidence been won by any flattery of our country or its institutions. In all its discussions of our affairs there has been a manifest desire to get at the truth and to speak it fearlessly.

While Mr. Bagehot probably lacked the creative and organizing power which enabled Mr. Wilson to establish the *Economist* and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

place it on so firm a footing, he has nevertheless greatly increased its reputation and authority. In 1843 there was neither precedent nor constituency for such a paper. Its precedent has been numerously followed—*sed longo intervallo*—both on the continent of Europe and in the United States, and it has created a constituency of its own over which Mr. Bagehot has exercised a greater personal influence than was ever acquired by his predecessor. He has been a recognized authority in Europe on financial questions. He was one of the few Englishmen invited to testify before the French Commission on Banking Currency, and Credit in 1865, and he was an important witness before the English Silver Commission of 1876. The circumstance that he was a practical banker has been of great advantage to him as a journalist, as were similar business experiences to his predecessor. It may not be generally known in America that he was one of the proprietors of Stuckey's Bristol and Somersetshire Bank, and that he took an active part in its management, visiting Somersetshire—his native county—every week on this business. The bank is a very old and important institution, having by far the largest note circulation of the English joint-stock banks.



Mr. Bagehot's publications have been numerous, and his pen was never more fully occupied than within the past five years, during which his three most considerable works, 'Lombard Street,' the 'English Constitution,' and 'Physics and Politics,' have been published. He has lately been a frequent contributor to the *Fortnightly Review*. Finance, government, and political philosophy have been his usual topics, and he has discussed them with great acuteness and learning. The contrast drawn by him in his book on the 'English Constitution' between parliamentary and presidential government—the English and the American systems—is the best exposition of these kindred yet differing forms of polity. Many readers were surprised that he should still consider the sentiment of loyalty to the crown as an important bulwark of the English constitution, the popular impression being that loyalty to the Queen and royal family is only a traditional sentiment. Those Americans, however, who happened to be in England in December, 1871, when the Prince of Wales was struck down by a sudden and appalling illness, and who witnessed the out-burst of sincere and *repentant* loyalty which his danger and the rumor of his death called forth, need no better proof of the continued vitality and strength of the sentiment.

Mr. Begehot is the third among the foremost economists of England who have died within a few years, those who preceded him being John Stuart Mill and Professor Cairnes. Each has left a place unfilled, and which it will be difficult to fill.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—There is a dull feeling prevailing in our market and prices follow a downward tendency. In 16/24 and 28/32 *Yarns* some sales are reported at lower rates, but 38/42 continue neglected. For *Shirtings* there is almost no demand, and prices are weaker. *Velvets* are dull; *T. Cloths* are lower, and other articles do not attract attention.

Grey Shirtings:—				
7 lbs.	38½ yds.	39 in.	per pce....	$1.45 to $1.80
8 lbs.	38½ yds.	44 in.	,, ...	1.65 to 2.25
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,, ...	1.62½ to 2.35
9 lbs.	38½ ,,	44 in.	,, ...	2.00 to 2 52½
T. Cloth 7lbs.	24 ,,	32 in.	,, ...	1.45 to 1 65
,, 6lbs.	24 ,,	32 in.	,, ...	1.10 to 1 25

White Shirtings:—				
60 to 64 reed 40 yds	35 in.	per pce. ...	...	2.20 to 2.40
Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. ...		0.67½ to 0 82½
Black Velvets				7.25 to 8.25
English Drills 15 lbs.	40 yds,	30 in.		2.60 to 2.85
Taffachelass	12 yds,	43 in.		1.70 to 2.15

Yarns.—

No. 16 to 24	per picul...	$28 50 to 32.25	
No. 28 to 32	per picul...	$30.50 to 34.25	
No. 38 to 42	per picul...	$34.00 to 38.00	nom.
Reverse Twist 16-24 ...	,, ...		

Woollens.—Our market remained very quiet throughout the past fortnight, with the exception of some demand for printed *Mousselines de Laine*, but at rather unsatisfactory prices. Quotations for all other goods remain nominally the same.

Plain Orleans	40—42 yds.	32 in. ...	5 50 to	7.00
Figured Orleans	29—30 yds.	31 in. ...	4 25 to	5.25
Shimagoro	30 yds.	30 in. ...	4.00 to	5.25
Italian Cloth	—30 yds.	32 in. ...	0 24 to	0.31
Camlet Cords	29—30 yds.	32 in. ...	5.75 to	6.00
Camlets Asstd.	56—58 yds.	31 in. ...	16 50 to	17.50
Lastings, Japan	22—30 yds.	32 in. ...	12.00 to	13.00
Plain Mousselines de Laine	—30 yds.	30 in. ...	0.16½ to	0.18

Figured Mousselines de Laine	...30 yds.	30 in...	0.24 to 0.28
Multicolored ,,	...30 yds.	30 in...	0.28 to 0.36
Cloth, all wool plain or fancy	...48 in. to 52 in...		0.80 to 1.20
Presidents	...54 in. to 56 in...		0.60 to 0.65
Pilots	...54 in. to 56 in...		0.45 to 0.55
Union	...54 in. to 56 in...		0.60 to 0.75
Blankets, scarlet & green	6 to 8 lbs....	per lb ...	0.40 to 0.47

Sugar.—We have no change in our market to note since our last. Stocks consist of 70,000 piculs.

Sugar:—Takao in bag	per picul...		$4.35
,, in basket	,, ...		$4.15
Taiwanfoo in bag...	,, ...		$4 20
do. in basket...	,, ...		$4.05
China No 1 Ping-fah	,, ...		$8.00
,, No. 2 Ching-pak ...	,, ...	$7.30 to	$7.70
,, No. 3 Ke-pak	,, ...	$6.60 to	$6.80

China No. 4 Kook-fah	per picul...	$6.20 to	$6.40
,, No. 5 Kong-fun	,, ...	$5 70 to	$6.10
,, No. 6 E-pak	,, ...	$5.20 to	$5.40
Swatow Brown	,, ...		$3.60
Daitong	,, ...		$3.85
Japan Rice	,, ...	$1.85 to	$2.05
Kerosene Oil	,, ...		$4.15

Kerosene Oil.—The market is rather weaker under the influence of forced sales at $4.15, but native stocks are very small and an improved demand may be looked for shortly.

EXPORTS.

Silk.—Our report per American mail, dated 10th instant, was as follows:—

Since the issue of our last report the utmost dullness has prevailed in our market. A few bales of fair Hanks were bought some few days ago at $500, @ 4/1=20 6, but since then dealers are offering their stocks at very considerable reductions, without being able to dispose of a single bale. Some Oshius have been settled at $500,=18 6, whilst the 50 bales of Filatures which have been delivered were mostly contracted for. We do not give any quotations, as everything is entirely nominal.

Shipments since the 21st ultimo amount to 99 bales. The total export since 1st of July is 20,383 bales, against 12,779 bales last year for the same period. Stocks are 1,400 bales.

Since the above was written deliveries of Filatures are 35 bales and 28 bales of Oshius. Hanks have been bought at $470 to $500, making at 4/1½, 17/8 to 18/8 in London, and at 5.15, frs. 48 to 51 in Lyons.

Tea.—As supplies of the New Leaf are coming in freely prices have declined considerably, and Teas, which at the early part of the week commanded $50 and upwards, are now easily obtainable at a trifle over $40 per picul. Lower class Teas have also followed the *Choice* parcels, and *Fine* Teas may now be bought at $30 to $33. As yet no lower grades have been on offer.

The parcels recently to hand, especially the *Choice* grades, show a decided improvement on last season's crop, being free from open and imperfect leaf and better twisted. It is to be hoped that this marked improvement will continue throughout the season, not only in high grades but also in the lower priced and more useful ones.

Parcels of New Leaf settled to date amount to 2,200 piculs, but stocks are very moderate.

To-day's rates close as under, the market showing a weak tendency.

Fine	$31 @ 33
Finest...	35 @ 38
Choice	39 @ 42

EXCHANGE AND BULLION.

Exchange.—There has been more business doing during the past week, and rates have advanced about 2 per cent., closing firm.

Rates close as follows:—

LEA & PERRINS'

CELEBRATED

WORCESTERSHIRE SAUCE

DECLARED BY CONNOISSEURS

TO BE

THE ONLY GOOD SAUCE

CAUTION AGAINST FRAUD.

The success of this most delicious and unrivalled Condiment having caused certain dealers to apply the name of "Worcestershire Sauce" to their own inferior compounds, the Public is hereby informed that the only way to secure the genuine, is to

ASK FOR LEA AND PERRINS' SAUCE,

and to see that their names are upon the *wrapper, labels, stopper* and *bottle.*

Some of the foreign markets having been supplied with a spurious Worcestershire Sauce, upon the wrapper and labels of which the names of Lea and Perrins have been forged. L. and P. give notice that they have furnished their correspondents with power of attorney to take instant proceedings against *Manufacturers* and *Vendors* of such, or any other imitations by which their right may be infringed,

ASK FOR LEA & PERRINS' SAUCE, AND SEE NAME ON WRAPPER, BOTTLE, AND STOPPER,

Wholesale and for Export by the Proprietors, Worcester: Crosse and Blackwell, London, &c., &c.; and by Grocers and Oilmen universally.

Yokohama, March 7, 1874. 33ins.

ASTHMA AND CHRONIC BRONCHITIS.

EXCHANGE TABLES.

A SUPPLEMENT TO RUTTER'S

From 3/6 to 4/ Sterling

BY

A. MAJOR.

TO BE HAD AT ALL THE STORES.

CAUTION.

BASS & CO.'S ALES.

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

BASS & Co.,
London, and Burton-on-Trent.

REFERRING TO THE ABOVE.

CAMERON & SAUNDERS,

AGENTS TO BASS & CO.,

INTIMATE THAT ALL

Bass's Pale Ale sold by them in bottle has Messrs. Bass's Label, Cameron & Saunders' Green Caution Label and Capsule affixed to each bottle; and that all three bear Messrs. Bass & Co.'s Signature and Trade Mark (a Red Triangle)

AND ALSO THE WORDS.

"Cameron & Saunders, London."

THE GREATEST
WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"
Sold by all Chemists and Medicine Vendors throughout the World

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

SNIDERS Military and Sporting. MARTINI RIFLES.

DOUBLE EXPRESS RIFLES .450, .500, .577 Bore.

SUPERIOR REVOLVERS.

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juice of Messrs BOUDAULT, of Paris, made under the personal supervision of the inventor, were supplemented by the improvements introduced by our own eminent chemists, Messrs MORSON & SON, of Southampton-row, all our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded.* This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

BIRTHS.

On the 15th instant, at No. 157, Bluff, the wife of A. H. C. HASELWOOD, of a son.

On the 19th instant, at the British Legation, Yedo, the wife of AUGUSTUS H. MOUNSEY, Esq., of a daughter.

Notes of the Week.

The news that has arrived from the South during the week is anything but favourable to the prospect of a speedy termination of the war. The insurgents have doubtless received considerable accession to their strength, and if they do not beat them back, have succeeded in holding their antagonists completely at bay. They appear to be ubiquitous, and a strong body has made an unexpected appearance in Bungo, where they successfully attacked the branch of the *Kencho* at Shigeoka, and, entirely defeating the police force at that point, were by last accounts advancing against the head office of the *Kencho* at Funai. At Yashiro in Higo, in all engagements since the 10th instant, the Imperialists have met with nothing but defeat. A large portion of the Satsuma army is in Hiuga, occupying very strong positions. This province is the richest grain country in Kiushiu, and an army can there readily obtain plentiful subsistence. Of the actual whereabouts of Saigo, nothing is definitely known, although it is currently reported that he is in Satsuma. The warlike preparations of Tosa are viewed with the greatest uneasiness by the native press, and unless the demanded concessions are speedily granted, there can be little doubt that the Government must make up its mind to face a new and formidable antagonist. Daily events prove the correctness of our opinion that at no time has the Government been menaced by so many and great dangers as at present. The *Nagoya Maru* sailed yesterday with nineteen hundred policemen, one thousand of whom are destined for Bungo, six hundred for Kumamoto, and three hundred for Kagoshima. It is but a few days since that a number of police were sent back from the seat of war, two facts which it is hard to reconcile. Minister Kido's illness has assumed so grave a form that his condition is regarded as extremely critical, and even should be recover, there is little hope that he will ever again be able to resume his duties.

Although bad weather somewhat interfered with the Racing Association's Meeting and caused a postponement of the third day's sport, no more favourable conditions for racing could have been desired or met with than the first and second days presented. The charming weather brought about a more than ordinarily good attendance of ladies, which ensured an agreeable feature to the proceedings, and made a pleasure of what otherwise would have been a terrible infliction to the sterner sex,—the inexcusable delay which occurred between the various events. That the ladies themselves should have so cheerfully borne the masterly inactivity which distinguished the management of the races speaks volumes for their kindness and endurance. As regards the racing itself the meeting was an unqualified success—though somewhat marred by a disagreeable accident,—as the fields were good, the contests spirited, and the time excellent. Indeed, in several instances, the time made was the best on record in this place. The half-mile was done by *Chief Mongolian* in the Ladies' Purse in 60½ secs., while the best time hitherto was 61 secs. The three quarters of a mile was run in 1 min. 38½ secs. on three occasions, twice by China ponies, *Braemar* and *Lintie*, and once by the Japan pony *Kickapoo*, whereas this distance has never previously been done here under 1 min. 39 secs. The mile was run by *Braemar* when he won the Community Cup in 2 min. 13 secs., and for the Trial Plate *Hoolet* did the same distance in 2 min. 14 secs., which was splendid running, considering the extremely stiff hill the ponies had to ascend. The fastest time ever done here previously was 2 min. 17 secs.

We take the following from the *China Mail.*

"Some of the foreign papers in Yokohama strongly urge the Government even now to arrange a compromise. We fail to see the wisdom of any such proceeding—at least in the way intended by the Yokohama papers. These papers have, with one or two exceptions, exhibited an unaccountably hostile tone to the existing Government; the most has been made of rebel successes and the least of Imperial successes, and while Saigo and his followers have been held up as patriots, and the best friends of the country, the Government has been constantly represented as little better than a nest of adventurers, who recognise the claims neither of patriotism nor justice, and have no regard either for the happiness of the people or the welfare of the country. The compromise which we believe one or two or these papers advocate amounts to nothing more or less than the granting of self-government to Satsuma, with all their old rights and privileges. We have before pointed out that Japan will never be free from disturbance so long as there is divided authority in the empire, and the best thing the Government can do both for its own welfare and that of Satsuma is to take every care at the close of this rebellion that that province is placed on exactly the same footing as all the other provinces composing the empire. To do otherwise would be to take a step backwards instead of forwards in civilisation. The *Tokio Times* has gone into the other extreme, and appears to be a fulsome supporter of the Government. If it were possible for such a state of things to exist, we should be inclined to think that the whole of the foreign papers in Yokohama were the special and paid organs either of the rebels or of the Government."

However correct the judgment of the *China Mail* may be with regard to the position occupied by the journal specially alluded to, it has fallen into error in supposing that the feelings of the foreign press in Yokohama are hostile to the Japanese Government. The *Mail* is judging matters from a distance, and does not appreciate the fact that it is not against the Government or Imperial power that the present war is waged. The Government, thus understood, is unswervingly supported,

Original from UNIVERSITY OF CALIFORNIA

and sympathies have been throughout entirely in favour of law and order. But what has been, and we trust will continue to be protested against, is the presence in the Administration of certain officials who do not scruple to act as the promptings of ambition or jealousy may dictate, regardless of the rights of the nation or of individuals; whose resignation would have saved the country from the countless loss and misery entailed upon it by the present war, and whose retirement or dismissal from office would even now put an end to the murderous strife. We have on several occasions in our columns advocated the advisability of compromise, but it was by no means our intention to uphold so manifestly unjust a proposition as the "granting of self-government to Satsuma with all their old rights and privileges." We can recall no expression that would warrant any such interpretation. Our China contemporary must remember that Saigo expressly stated that his protest was only against the actions of certain members of the Administration, and that on behalf of the country, he desired to represent to the Emperor the necessity of carrying out those solemn pledges made to the Nation, which the presence of these men in the Government prevented from being ratified. It is the justice of these demands alone that we uphold, and our views of a compromise are limited to such concessions.

A paragraph has appeared in a native paper, and been copied into one or two of the foreign journals, to the effect that Mr. Okuma, the Minister of Finance, was about to proceed to Europe to negociate a fresh loan. We have made inquiries into the truth of the statement which we find to be utterly devoid of foundation.

The last English mail brought over, for the use of the Paper-money Department, a further number of machines for the printing of *satsu*, etc. One would have thought that the machinery already possessed by the Department was sufficient for ordinary requirements. Such extraordinary demands have however been made upon it in order to carry on the current expenses of the war and to influence towards the Government the good-will of those whose loyalty was trembling in the balance, that since the breaking out of the present insurrection this Department has been overworked, the machinery having been kept going day and night. There is an old story of a certain man who was taught by the Devil—for a consideration—the way to produce gold from the most unpromising materials. In a short time his coffers were filled and overflowed with boundless wealth, with which he made merry, thinking it would last for ever. But the day of reckoning came, for one day, on entering his treasury, there remained nothing of his imagined riches but a heap of dust and rubbish, while a strong smell of sulphur gave terrible warning that the mortgage was about to be foreclosed. The Japanese Government, able as it has sometimes proved itself, must not imagine that it has discovered the secret of turning rags into gold. Other nations have made the experiment and ignominiously failed.

The *Echo du Japon* of 16th instant contains the following: "The French Mail of this morning took away one of the most honored, most esteemed and most popular of our fellow residents, Mr. E. Piquet, the former silk inspector to the house of Messrs. Walsh, Hall & Co., who returns to Europe after a residence of fifteen years in Japan. The departure of Mr. Piquet leaves a blank in our community which will not readily be filled. The correctness of his judgment and his wide experience constituted him a competent authority on questions of public interest, in which he was always ready to take his part. Whenever it was necessary to find some one who would devote his time and his best energies to such questions, popular choice immediately selected him as the man who would shrink from no task, however, arduous. Mr. Piquet possessed only firm friends in Yokohama, who will feel his loss deeply. The *Japan Mail* found in him, on all that pertains to commercial statistics, more especially with regard to the article of silk, an assiduous and conscientious collaborator whose authority was unquestionable, and that journal will keenly feel his loss, as will the Silk Committee of the Chamber of Commerce. In announcing the regret that we experience at his leaving us we believe that we only express the sentiments of the entire foreign community, for it may be said that there is no one who is not able to bear testimony to his worth, his courtesy, and his ready help. In a community limited as our own the departure of such a man is to some extent a public misfortune."

This is only a just tribute to the gentleman referred to, and we most cordially endorse the expressions of our contemporary. This journal has for many years been indebted to Mr. Piquet for most valuable articles and information on the subject of silk, and the Review of the Japan Silk Trade from 1874 to 1877, which lately occupied our columns, and which was his last contribution, has been generally accepted as the most exhaustive and valuable review that has appeared on the subject. The community can indeed ill afford to lose so able, generous and respected a member.

The last telegrams received from home announce that England has annexed the Transvaal. Without for a moment calling in question the geographical and general knowledge of our readers, we take it for granted that there are some among them who have but a hazy idea of what England has annexed, and her reasons for the annexment. For the benefit of such we venture on a few remarks in explanation of the telegram.

When Great Britain abolished slavery at the Cape Settlements, the Dutch portion of the community, generally known by the name of Boers, refused to hold themselves subject to the law of abolition and persisted in remaining slave holders. The struggle was long and bitter and at one time threatened to become very serious, but it was brought to a peaceable settlement by the Boers seceding from Cape Colony and taking possession of a wide tract of country far removed from British settlements, where they founded a republic called the Transvaal. This was in the year 1848. Its independence was acknowledged in 1852, and in 1858 its constitution was proclaimed, when it had for president the son of the Attorney General at Cape Town. By degrees the British Territory was extended and overlapped the Transvaal enclosing it on two sides, the Kaffir territory lying between it and Delagoa Bay. The extension of British territory was to a great extent due to the recent discovery of the diamond fields which lay partly in unclaimed native districts and partly in the Transvaal. After the diamond discoveries it became necessary for England to annex the territory in order to enforce law and order among the lawless crowds that flocked to the diggings. Finding themselves thus, as it were, hemmed in, the Government of the Republic wished to open a way to the sea and to establish a fort in Kaffir territory which should give them command of a port on Delagoa Bay and the road leading to it. To this the Kaffirs objected and the President of the Transvaal, Mr. Burgers, finding negociations fail, determined to enforce his demands by arms. A very serious war ensued in which some fifty thousand Zulus, under the command of their King, opposed the Boers, and were successful in several engagements. The Boers were entirely outnumbered and there was great anxiety lest the exasperated Zulus, having beaten back their enemies, might threaten and cause serious danger to the other colonists. The troubles had in fact been carried into British territory and fears were openly expressed that the whole of the native races might combine and attack indiscriminately friend and foe. The Boers appealed to the English Government for aid, which it was proposed to afford them if they would recognise English orders and agree to English terms. While some of them wished to retain their independence, there was a large body of the Republicans who recognised the gain that would accrue to them from annexation. We are glad to find, by the telegram, that the latter party have carried the day, and that the serious troubles that were threatened by the ambitious and irritating schemes of an insignificant free state, have been set aside by its quiet absorption into British Territory.

Original from UNIVERSITY OF CALIFORNIA

The effect of the suspension of the police censorship is very apparent in the utterances of the native press. We now learn that Imperialist defeats are possible, the *Hôchi Shimbun* announcing that the Government forces in Higo are being defeated daily and that the rebel force does not seem to have been weakened in the least. Still it is evident that when the truth is to be told it must be done cautiously, the severity of the administration of the press laws seeming in no degree to be relaxed, as we notice among many other convictions, that the Editor of the *Kinji Hioron* has been sentenced to one month's imprisonment for too free expression of opinion.

We publish in our present issue the British Consular Trade Report for Hakodate for last year, to which we can at present only thus briefly call attention.

From the "Japan Mail Daily Advertiser."

Monday, 14th.

The race between the barges of the U. S. S. *Tennessee* and H. B. M. S. *Audacious* resulted in the easiest of victories for the former. The course lay from a stake boat anchored between the two flag-ships, round the Light-ship and back again to the starting point. At 4.53.10 p.m. a start was effected, when the *Tennessee's* boat immediately took a lead, which she not only never lost but seemed to increase as she liked throughout the course. The Lightship was passed as follows:—

Tennessee.....5.10.55 P.M.
Audacious.....5.14.24 ,,

The *Tennessee's* crew were pulling 38 strokes a minute, while their opponents were doing 42. The stake boat was passed as under:—

Tennessee.....5.28.58 P.M.
Audacious.....5,35,14 ,,

the former thus winning by 6 min. 16 secs., and not having been hard pressed had, apparently, plenty more "go" in them. The English boat appeared to make much worse weather of it, and is considerably heavier than the American boat, which seems better adapted for racing. A fresh south-westerly breeze was blowing at the time and there was a nasty and very rough beam sea throughout, so that the rival boats had to contend with every disadvantage.

We would call attention to the fact that it is intended to despatch the *Oceanic* for San Francisco on the 4th June, that being an advance on the usual date of departure.

The O. S. S. Co.'s steamer *Ajax* and the steamer *Candia* both left Singapore for Hongkong on the 2nd, and the *Glenfinlas* on the 4th instant.

The *Flying Spur* reports leaving the Downs on the 12th of December last, meeting with moderate weather down the Channel, and passing the Lizard on the 17th. Heavy westerly and south-westerly gales were experienced up till the 28th December, several chain plates being broken on the 23rd. The truss of the lower fore topsail yard was carried away, and acids stored on deck, having broken loose, were thrown overboard. The *Flying Spur* met with light trade winds after passing Madeira, and called at St. Vincent on the 16th January to refit, sailing again on the 23rd. The Equator was crossed on the 3rd of February, and with light winds to the Cape, passed that point on the 5th March, and afterwards met with the usual westerly winds. Running the Longitude down in 46° S., rounded Tasmania April 2nd, passing New Caledonia on the 13th, and recrossing the Equator on the 24th caught the N. E. trades on the 28th and passed Fatsisio on the 10th instant, taking a pilot on board the next day. Anchored in Yokohama on the evening of the 11th.

From the *Chôya Shimbun.*

A private telegram from Kumamoto states that at 1.15 p.m. on the 12th instant two Imperial men-of-war bombarded Nobeoka, a castle town on the Hiuga coast, and drove out the rebels in disorder. The hospital which the insurgents had established there had to be hastily removed. The Imperial troops have left Yashiro and marched into Hiuga by way of Mamihara.

From the *Chôya Shimbun.*

A telegram from our reporter at Kumamoto, received at 11.15 p.m. on the 11th instant, announces that one division of Imperialists in the province of Higo have advanced toward Hitoyoshi, while another division has advanced to Oguchi. The Imperialists at Kagoshima are thoroughly prepared for the enemy. The insurgents in Satsuma have collected together and several skirmishes have taken place.

On the 12th instant Inspecter Murata, with five sergeants and two hundred policemen, will start in the *Saikio Maru* for Bungo (Owake *ken*).

From the *Hôchi Shimbun.*

Prime Minister Sanjô will leave Kiôto for the capital on the 15th instant.

Mr. Mori Arinori, the Japanese Minister at Peking, will shortly return home.

Mr. Iwamura, the Governor of Kagoshima *ken*, left Nagasaki on the 22nd instant for Kagoshima, but finding that the place was not quiet has again returned to Nagasaki.

From the *Mainichi Shimbun.*

Arisugawa no Miya will shortly proceed from Kumamoto to the province of Hiuga.

Saigo is at present at Gamô in Satsuma.

About fifty *shizoku* of Nagano *ken* banded together towards the end of last month for the purpose of destroying the *Kencho* by fire, but their purpose was discovered and the ringleaders promptly arrested.

Tuesday, 15th.

The Agent of the Great Northern Telegraph Co. informs us that the cable between Shanghai and Amoy is now repaired.

A table of the new postal regulations can be seen at the French Post Office. The Postmaster invites inspection of it, being at the same time prepared to give any explanation of the details which may be required.

We hear that severe fighting was recommenced on the 13th instant, but at what points or with what results we are unable to learn. All private telegrams in cipher are again prohibited, and there is much uneasiness among official circles in the capital. The surprising statement is made that Shimadzu Saburo has left Kagoshima and gone to Gamô. This is the place that is reported to be the headquarters of Saigo and the bulk of his army, and is one of the strongest fortified positions in Kiushiu. Itagaki has been to Kiôto, presented his letter, which is said to partake more of the form of an *ultimatum* than a petition, and has returned to Tosa to await the result. It is doubtless in consequence of the increasing difficulties that are surrounding the Government that the return of the Emperor to Tôkiô, which was announced for the 17th instant, is now indefinitely postponed. We believe that at no time since the commencement of the outbreak have matters been so critical as at present. Minister Kido is, we regret to hear, extremely ill. His condition is said to be dangerous and the attendance of a foreign physician has been requested by telegram. His relatives have also been summoned. The Emperor can at such a moment ill spare the services of one of his most trusted and honoured advisers.

From the *Akébono Shimbun.*

A person who has just returned from Yashiro informs us that it was the habit of Saigo to take a bath every day. When he drank wine, which was seldom, he only partook of a very small quantity at a time. Report says that few people visited him. Saigo seems to fear assassination, as he is constantly surrounded by a body-guard of twenty picked men, and both he and his guards never go to sleep without having their swords within easy reach.

From the *Hôchi Shimbun.*

A telegram which left Kiôto at 4.40 p.m. on the 13th instant announces that His Majesty the Mikado intended to leave that city on the 17th instant, but for the sake of convenience the date of H. M.'s departure has been postponed.

Mr. Mori Arinori, the Japanese Minister at Peking, desired to return to Japan, but has been ordered by a telegram to remain at his post in China.

The policemen of Kumamoto and Fukuoka have been permitted to carry fire arms for their own protection.

Ikebé Kichijuro, one of the leaders of the Kumamoto *samurai* who have been fighting against the Government, has surrendered himself to the Imperialists, owing, it is said, to certain differences of opinion he has had with Saigo.

The rebel leader Katsura Yemon, with five hundred rebel recruits, has left Kagoshima and is on his way to Nobeoka in Hiuga by way of the Takanabe road.

Original from UNIVERSITY OF CALIFORNIA

Wednesday, 16th.

The M. M. steamer *Tibre*, with French mails to the 7th April, left Hongkong on Monday evening, the 14th instant, at 5 o'clock. The *Volga*, which is intended to replace the *Menzaleh* on this line, arrived at Singapore yesterday morning on the outward passage.

We hasten to correct a mis-statement which we made in our issue of yesterday to the effect that the transmission of telegrams in cipher was once more prohibited, the fact being that all native telegrams from Kiushiu are again stopped. It has also been a subject of complaint for the past few days among the native community that the delivery of letters from the South has been extremely irregular and unsatisfactory.

From the *Hôchi Shimbun.*

A telegram which was recieved at 10.25 a.m. on the 12th instant announces that the insurgents attacked Shiiba, near Yashiro, on the 6th and 8th instant, and carried the positions of Shiraishi and Nakamura. The insurgents made another attack upon Kukino on the same day, and also compelled the Imperial police force to retreat from Osekiyama and Kunoki.

On the 9th instant the Imperialists advanced from Sashiki and attacked Ehirase but were unsuccessful. On the 10th instant the Imperialists took possession of the mountain pass Yashiki-goi, but were finally driven away by the insurgents, who were left in possession of the place. But notwithstanding these reverses the Imperialists have generally advanced. At Kagoshima the insurgents invariably make an attack at dawn, but have hitherto been easily repulsed by the Imperial cavalry.

From the *Nichi Nichi Shimbun.*

About three hundred policemen of Tôkiô under Inspector Hagiwara, are to leave in a day or two for Kiushiu.

The three thousand policemen who were lately enlisted by the Bureau of Police are to be drilled and taught camping and field exercises under Colonel Oakasaka at Narashino-hara in Shimôsa.

The actual reason of Kuroda's giving up his post of adviser to the Commander-in-Chief was because he was suffering from rheumatism.

Thursday, 17th.

From the *Hôchi Shimbun.*

A telegram despatched from Yashiro on the 13th instant announces that the police force which retreated as far as Ishizaka was again attacked by the rebels and compelled to retreated as far as Watari. The third division of the Imperial army has advanced from Minamata to Sashiki, and will, together with a force of police, march on to Zenji. At dawn this morning (the 13th) the engagement between the police force and the rebels commenced at a place about sixteen *cho* from Minamata.

A telegram despatched from Owake *ken* (Bungo) at 8 p.m. on the 13th instant says that a message was sent from the branch office of the *Kencho* at Shigeoka to the head *Kencho* that the rebels were about to attack the office, and asking for a police force to be sent immediately. A despatch from a special reporter of the *Hôchi Shimbun* which left Kumamoto at 0.50 p.m. on the 15th instant, says that about one hundred rebels who were hiding at Saiki have made an attack upon Shigeoka. The police were beaten and fled as far as Mihenoichi.

From the *Chôya Shimbun.*

We have received a message from our reporter at Kumamoto, sent at 7.26 p.m. on the 15th instant, announcing that the Imperialists who were advancing on to Ôguchi met the insurgents at Yamanomura, and after a desperate struggle the Imperialists retreated to Kenokoku.

The Satsuma rebels once retreated from Kumamoto, but are now said to be in strong force. Some party at Kagoshima, other than Saigo's party, has it is said, joined them, and this must have been the cause of the postponement of the departure of the Emperor from Kiôto.

From the *Mainichi Shimbun.*

At the Arsenal they are now making twenty thousand small arms for the conscripts who will be called out to recruit the army in June next as usual.

Friday, 18th.

According to the *London and China Express* the *Giaucho* jettisoned part of her rice cargo on her voyage from this port. We believe we are correct in saying that this vessel was compelled by Lloyd's Surveyor to discharge here part of the cargo she had already loaded, before she was permitted to sail.

The *Shalimar* arrived at Marseilles on the 17th March from San Francisco. The captain reports having encountered a gale on the 10th March, and fears that his cargo of corn is damaged.

From the *Osaka Nippô.*

An eye witness of the occurrence has sent us the following :— During the engagement at Futamata in March last, Major Ida, who commanded a regiment there, saw Shinowara directing the advance of the force under him, and taking a rifle from one of his men fired at Shinowara, but missed him. The Major then reloaded and tried again, when he succeeded in killing the rebel leader, but did not survive long to rejoice over his success, as he himself was immediately killed by a rebel soldier by a shot through the forehead.

From the *Mainichi Shimbun.*

All the vessels of the Imperial Navy are now stationed off Kagoshima, Sakurajima and Mukojima, and project an attack on the rebel positions on the coast of Osumi. There are two islands about 16 *cho* from Sakurajima, called Hakamagoshi-shima and Kojima, where a force of about 2,000 rebels are stationed, who sometimes exchange shots from the batteries they have constructed with the Imperialists at Sakurajima, and as these are important posts it is expected that the rebels will send reinforcements there from Kokubu and Kajiki.

The Imperialists in the neighbourhood of Yashiro do not seem to have much work to do at present, for they only fire off about sixty thousand cartridges per day ! !

From the *Hochi Shimbun.*

A telegram despatched from Kumamoto at 8. 40 a. m. on the 15th instant announces that ninety rebels made an attack upon Shigeoka, in the province of Bungo, on the 13th instant, and on the 14th instant advanced as far as Takeda and Saiki. The Owake *ken* (Bungo) authorities have requested the Kumamoto *ken* to send a police force as soon possible as far as Beppu. The Imperialists at Sashiki (in Higo) are being defeated daily. The rebel force does not seem to have been weakened in the least. An engagement took place at Kembu-hara this morning (15th) when twenty-four rebels were killed, and some loss was also incurred upon the Imperialist side.

A telegram which was despatched from Nakatsu, in the province of Buzen, at 11 p.m. on the 15th instant, announces that about one thousand rebels from Hiuga made an attack upon Shigeoka in Bungo on the 12th instant. At noon of the 13th the van of this body of rebels, numbering about fifty men, arrived at Ichiba, which is about fourteen *ri* from the Owake *Kencho*. As there is no military force in Bungo, the province cannot be defended by merely a few *Kencho* officials and policemen. At Nakatsu are stationed 100 policemen, but as this place is also in danger none of this force can be spared.

A telegram which left Kumamoto at 5.25 p.m. on the 6th instant announces that the rebels and the Imperialists had for some time past been inactive at Midzumata and Taketaka, but on the 14th instant the Imperialists under the command of Iguchi attacked their opponents and put them to flight. The Imperialists then took possession of the position formerly held by the rebels, and also captured a standard and a large amount of provisions.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 12th May, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		1,200,000
On hand	885,000	
In circulation	315,000	
	1,200,000	
Reserve Fund		315,000
In Foreign money :—		
In dollars	$218,619	
In Bank notes and cheques	336	
Deposited with Foreign Banks	50,045	
	269,000	
Do in native currency	46,000	
	315,000	

From the *Chôya Shimbun.*

Mr. Nakamura Chutarô, the editor of the *Kinji Hiôron*, has been sentenced to one month's imprisonment for a violation of the Press-laws.

From the *Nichi Nichi Shimbun.*

About one hundred and eighty farmers banded together in order to proceed *en masse* to the *Naimusho* and present a petition embody-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ing their grievances about the land tax, and started for Tôkiô with that intent on the 15th instant. The police, however, interfered and managed to prevail upon the farmers to return quietly to their homes, while five of their ringleaders have been placed under surveillance.

The Imperial troops at Kagoshima number over one thousand.

Saturday, 19th.

A telegram received to-day announces that a rising was projected at Mitsu-no-to in Awomori *ken*. Some *samurai* and *heimin* formed themselves in a body and intended to attack the Imperial troops while on their march from Awomori to Miyagi (Sendai), and to capture their arms so as to make an immediate attack upon the *Kencho*, and then force their way to the assistance of the Satsuma rebels. This conspiracy came to the ears of the police officers, and about fifty of the ring-leaders of the would-be insurgents were arrested before they could put their plans into execution. Arrests continue to be made.

From the *Nichi Nichi Shimbun.*

Yamagata, the adviser to the Commander-in-Chief, with Major Generals Nodzu, Miyoshi, Miura, and Yamada are at Kumamoto. Tani has recovered from his wounds and resumed his duties.

On the 16th instant H.M. the Empress Dowager was detained for the night at Kanaya, on the Tôkaidô, on account of the Oyegawa being flooded.

From the *Chôya Shimbun.*

Two telegrams were despatched by Yamagata on the 16th instant, reporting that as information had reached him that about three hundred rebels were about to enter Takeda, in the province of Bungo, one regiment of troops had been marched into that province. As reinforcements are required in Buzen, two hundred men under the command of Colonel Oku have been sent there, with orders that they should attack the rebels as soon as they could find their whereabouts after reaching Kokura.

From the *Akébono Shimbun.*

A telegram sent from Kagawa, the governor of Owake *ken* (Bungo), to the Minister of Interior on the 16th instant, announced that the rebels who had hitherto been at Takeda had advanced as far as Imaichi, with the intention of attacking the *Kencho*.

From the *Hôchi Shimbun.*

Since the outbreak of the war an extra number of workmen have been employed at the powder manufactory at Koishikawa, Tôkiô. The buildings now standing have been found insufficient for present requirements, so that the authorities have decided to erect other temporary buildings to meet the pressure of business.

From the *Mainichi Shimbun.*

On the 15th instant six men, some of them *samurai* and some of them *heimin*, presented a memorial to both the *Daijôkwan* and the *Genrô-In*, praying for the establishment of a Representative Assembly.

IS IT PEACE?

In October 1875, Itagaki Taisuke, a member of the Council of State, was, at his own request, relieved from office. The reasons that led to his resignation, which took place at the same time as that of Shimadzu Saburo, have never been clearly understood; but it has always been supposed that the opposition displayed by other members of the Administration against the establishment of a Deliberative or Representative Assembly was one of the chief causes of Itagaki's withdrawal. Since that time his name has rarely been mentioned, and he seemed to have retired altogether from public affairs, until the outbreak of Satsuma has again brought him into prominence, and to day he is, with the exception of Saigo, the man whose actions are most anxiously watched and commented upon. What is Itagaki about to do? is the question that is most vexing the Government, and occupying the attention of the native mind. Immediately the uprising in Satsuma was made known, Itagaki, either voluntarily or at the request of the Government left the capital and went to Tosa, ostensibly to restrain the *samurai* of that province, in the event of their showing any disposition to join or assist Saigo. From the first there have been doubts expressed as to the peaceful attitude of Tosa, and from time to time, articles have appeared in the native papers, holding forth in praise of what it was very evident the writers of the articles most doubted, the loyalty of Itagaki to the governing clique. Ominous rumours have, from the commencement of the civil war, reached us of increasing disquietude in the province, and that it has only been by the influence of Itagaki that a large portion of the *samurai* have not openly espoused Saigo's cause.

At last these rumours have taken more definite shape, and if the information which reaches as through the native papers, supplemented by that which comes to us by private sources, is worth anything, there can be little doubt that the danger that threatens the Government from the present attitude of Tosa is scarcely less than that which it has had to combat, and is still grappling with in Kiushiu.

It appears that there exists in Tosa three powerful parties called *Risshisha* (patriotic party) *Seikensha* (quiet party) and *Churitsusha* (neutrals) who were at first much divided in opinion as to what position should be taken with regard to Saigo, a large portion being for assisting him. When Itagaki arrived, however, he succeeded in calming the excitement and apparently brought the different factions to one way of thinking. What means he used to arrive at this end it is not difficult to understand in view of the disclosures made within the past few days. On the retreat of Saigo from before Kumamoto and the presence of the Satsuma Army in the province of Hiuga, it is suddenly announced that Itagaki, acting through the *Risshisha*,—and it is to be presumed with the consent and countenance of the other parties—has determined on enrolling a body or bodies of troops called *Gokio hei* (defenders of the province) urging as an excuse for such action the danger that threatens the people of Tosa in the event of any of the insurgents crossing the narrow channel which separates that country from Kiushiu. Their reasons for taking such action they have obligingly communicated to the *kencho* for the information of the Central Government. The manifesto which sets forth their views is a rare piece of composition, and explains the intentions of the society with charming independence and freedom. It commences by saying that "the Government has at its

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

command a regular naval and military force which is fully able to protect the country, but when sudden emergencies arise, it is the plain duty of a people of a province to enrol troops for their own protection." This was precisely SAIGO's opinion. "The present war that is taking place in the south (of Kiushiu) and in the province of Higo is inflicting great miseries on the people. The Government is using up all its resources in aiding those whom the war has driven from their homes and in extending to them what protection it can. We therefore do not believe in accepting protection from the Government at such a time, and as we feel the actual necessity of taking steps for our defence we have arranged with the men of the province of enrol the *Gokio-hei*. We are told there is no cause for alarm and that the Government troops are everywhere victorious. This news relieves us from much anxiety, but we remember that wars do not progress according to any regular rule. The insurgents are in Hiuga, and we know not what troubles we may become involved in. We therefore propose to form the *Gokio-hei*, and are taking the necessary steps to do so. We herewith report our intentions to the Government and hope our patriotic feelings will not be misunderstood."

Now in the first place it is most unlikely that this design could have been meditated and completed only after Saigo's retreat. The Japanese mind is not prone to act thus promptly. And in the second place there could be no possible excuse for the formation of defensive bodies, unless it were carried out under Government orders by properly authorized officials. ITAGAKI is not a man who has any such authority, and after the bitter fruit that has come of SAIGO'S military schools, the Government is not likely to look with complacency on ITAGAKI'S militia.

But the matter has not ended in the simple enrolment of men for defensive purposes. The Government witnessed with alarm which it has vainly endeavoured to conceal the action of the societies under ITAGAKI, and sent to him to demand the reasons of the formidable preparations. Answer was returned that no danger to the Government was to be apprehended if—and here comes the dictating of terms—the establishment of a Representative Assembly be guaranteed to the nation, but only on such promise being given could the loyalty of Tosa be counted on. The Government then requested ITAGAKI to disband the *Gokio-hei*, and to come to Kiôto. ITAGAKI either could not or would not comply with the first request but proceeded alone to Kiôto and submitted to the Government the request—or demand—of the people of Tosa. He then immediately returned to his own province, where he at present remains.

In the meantime there can be no doubt that the excitement in the province is increasing and affairs are daily assuming a more threatening aspect. In raising the cry of Representative Assembly, ITAGAKI has struck a note that stirs the heart of the nation, and of the power of which SAIGO seems to have been singularly unaware. We scarcely think that ITAGAKI is in actual union with SAIGO, though we have no shadow of doubt that both are actuated by unselfish and patriotic motives. Through how much bloodshed, how much waste and misery, the desired end will be at last attained it is hard to say; but the goal will assuredly be reached, and from out of all the suffering the nation will emerge, weakened it may be, for a time, but purified from many an abuse, and more fitted for accepting the sweeping changes that have been forced upon it by the events of the past few years.

But it would be well if the leaders of reform would bear in mind their native proverb "The combination of mens' minds shall construct a fortress, and metal shall melt before their united breath."

A BAD SPEC.

IT will be remembered that last season the number of *graineurs* who arrived in Japan, from France and Italy, to purchase cards was very limited, and that great was the disappointment and loud were the lamentations of the native holders at the low prices that were offered and the small purchases that were made. It was in vain that those who were perfectly acquainted with the true state of affairs endeavoured to make the Japanese aware of the utter inability of the Continental importers to pay extravagant prices; in vain that they described the bad feeling of the home markets, and the miserable state of poverty to which the unfortunate cultivators had been reduced by a succession of bad seasons. They preached to deaf ears. The native merchant was convinced that all these pleadings of poverty and hard times were merely so many "yarns" to induce him to part with his cards at a figure far below their value. The wily foreigner was at his deeply laid schemes to defraud the innocent native of his righteous profits. The press took up the cry, and many and furious and ridiculous were the articles published in the native papers, calling upon the Japanese merchant to remember how, from the beginning, the red bearded ones had taken advantage of the artlessness and unsuspecting innocence of the trading community of Dai Nipon, and praying him to be on his guard against their selfish and insidious designs. It was always the penury stricken native who suffered, they bitterly proclaimed, while it was well known that after a year or two's trading, the truth-concealing foreigner went home to roll in the wealth that he had accumulated out of the profits of the tea, silk and other produce which he had, by means of his false representations, induced the credulous native dealer to part with for a song. The consequence of all this was that the Japanese refused to sell at any but such prices as the *graineurs* for the most part could not afford to give. Some of the intending buyers returned without having made a single purchase, and the result was an enormous stock of cards left on the hands of the holders.

Whether the idea emanated from themselves, or whether it was put into their heads by foreign speculators who had their own ends to serve, we cannot say, but it was suddenly announced that the Japanese had determined on shipping the cards—we do not know the exact number though it was very large—on their own account, and accordingly native agents with the cards in their charge were despatched to Italy.

The news arrived a few days since of the result of the speculation, in a letter dated from Milan the beginning of April, in which it was announced that while cards in private hands had been selling fairly well, the Japanese had still fully three quarters of their stock unsold, and that there was little chance of their doing much with them. The cards here could have been disposed of to the *graineurs* at certainly one dollar and a half each. The last advices from Milan say that they will be compelled to be sold at from three to four *lire*, (say three francs and a half) and then there will be all the freight and handling charges, storage, expense of agents' journey, etc., to be deducted; in addition to which there are the commissions and charges, which our correspondent candidly admits will not be

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

made considerately small, as it is "as well that the Japanese should receive a timely lesson!"

So much for the "evils that arise from suspicion." But the case has a more important bearing, for the Japanese merchants in Yokohama now assert, on learning the disastrous result of the experiment, that it will, after all, be better for the shippers than if they had sold their cards here, as the Government backed them in their venture, and that all loss will be borne by the same accommodating Government. That is to say, that rather than see any of its subjects make a fair profit with little trouble, it has taken over their produce at a certain price, and accepted what was clearly foreseen and foretold, a heavy loss, for the sake of preventing foreign buyers from reaping a small advantage. It was plain from the first that the Italians would not be forced to pay an exorbitant price for fruit that must drop into their mouths, only give it time. Silkworm's eggs are not goods that can be held over from one year to another. Nature decrees that they shall hatch at a certain time and hatch they will, and if not sold as this unalterable season approaches they may as well be given away or burned. The Italian dealers have long since recognised the working of this natural law and have laid their plans accordingly.

We shall endeavour to learn more of the case here briefly referred to. A few more speculations, with similar results, may teach the Government the undesirability of its turning merchant; an occupation that requires a certain amount of experience in order to pursue it with a fair chance of success. In the present instance it has carried its eggs to a very bad market.

SPIRIT OF THE JAPANESE PRESS.

Above Suspicion.

(From the *Hôchi Shimbun.*)

Suspicion frequently gives rise to evils. For instance should A suspect B of conspiracy against him, he at once takes steps to defend himself against his supposed opponent. B on the other hand, not comprehending A's motives imagines that he is devising some plot for his overthrow and proceeds to act on the defensive. Nor does the evil always end here, for this mutual suspicion and distrust often ends in open warfare, which is only terminated by the loss of many precious lives. He who first harbours suspicion against another should be deemed in the wrong. Suppose that anyone distrusting his fellow, should attack him with a drawn sword. He who is attacked, though it be sorely against his will, is forced to arm and defend himself against his assailant. In this case he who first indulges in suspicious doubts is wrong. The case is the same with persons or governments. Distrust brings misery either to individuals, or evils upon nations.

To prevent the growth of suspicion, a government should be calm in action and liberal in feeling. An administration which makes haste to doubt the loyalty of the people exercises an oppression, which will cause the existence of the evil it suspects. Thus further evils arise and acts are committed which throw the whole nation into distress, and will stain many pages of its history for ever. The Government may perhaps manage to allay the troubles it has caused, but it will in the end only cover itself with contempt.

Many acts take place in a country, the real objects of which differ entirely from their apparent intention, and before suspicion is cast upon them they should be rigorously inquired into, so that no needless evils befall the nation. Although we mention this, we do not believe that our own Government will ever be guilty of such folly.*

On hearing the rumour that agitation prevailed among the *samurai* of Tosa, we proceeded to look into the matter and at first failed in arriving at any satisfactory conclusion. But we have finally been able to obtain reliable information from which it would appear that the Tosa authorities fearing that some of the Satsuma rebels may find their way into Tosa by Hiuga, and excite the people against the Government, have proceeded to enrol bodies of militia. They have done this in no secret manner, but laid their proposal before the Kencho, and made known their intention throughout the *ken*. This has convinced us that Tosa is loyal. They know that the Government is fully occupied with putting down the Satsuma rebellion, and it has long been the opinion of Itagaki Taisuke that it was the duty of the people at such times to take measures for their own protection. In enrolling these militia he is only putting his theory to practical test. His intentions are clear from the fact that when the insurgents were in Higo he remained passive and only took his present action when they entered Hiuga. We can thus see that Itagaki's actions bear out his words. When he left the capital in February last he passed through Osaka, and although at that time there were most disquieting rumours respecting the Satsuma insurgents, he paid no attention to them, but went quietly to his home. Those who are unacquainted with the relations existing between Satsuma and Tosa are continually watching Itagaki with great anxiety, and hearing that a militia force was to be established, at once flew to the conclusion that Tosa was going to break out into rebellion. We earnestly hope however that the Government will not look on Tosa with distrust. We believe it will not, but it is possible that it may do so. In that case we trust the Tosa men will not be in the least alarmed, but quietly prove that their intention is not hostile, for if mutual suspicions arise, they may culminate in such evils as we have drawn attention to.

* Thorough Japanese logic. We wonder how the writer excuses his Government for distrust of Saigo, and its drawing the sword against him.—[Ed. *J.W.M.*]

Reply to the Above.

(*Akébono Shimbun.*)

In an article in the *Hôchi Shimbun* protesting against the Government distrusting the attitude of the men of Tosa without due inquiry, it is stated that in all times suspicion has always given rise to great evils; that, therefore, any distrust that may arise from the enrolment of troops in Tosa, can only result from utter want of knowledge of the existing state of things in that province and may cause much harm. The article was a communicated one, but as the *Hôchi* published it without any remark, we take it for granted that it entirely endorses the opinions expressed.

The *Risshisha* has proposed to enroll bodies of Militia. This is all well and good, but it cannot at present be positively stated that the real object of their enrollment is the same as that which it is given out to be. The *Hôchi* must however be well informed of the real state of feeling in Tosa, as it says that it would be much to be regretted if the Government and the men of that province were to look upon each other with distrust. We cannot agree with this view, and think that it expresses itself rashly on a serious question which engages the attention of the whole nation.

In ancient times, when people were simple and honest, harbouring suspicious doubts of each others' intentions may have been uncalled for, but in dealing with men of the present day it is a very different matter indeed.

When any one collects bodies of troops, without there being apparently any special necessity for their service, and when no fair reason can be given for their formation, it is only natural that suspicions should arise. In the case of the Tosa *samurai* it is all the more natural, as they have always been a source of anxiety (to the Government) and especially at such a time as the present when the country is in a disturbed state. The *Hôchi* says that in enrolling these militia, Tosa is only carrying out its declared policy, and that they, as always, are upholding the Imperial cause; and it arrives at this conclusion from the fact that they have declared that it is the duty of a people to protect its own province, when the Central Government is fully occupied in putting down a rebellion, and cannot readily extend the necessary protection. That Itagaki Taisuke has long held such opinion and that "when the insurgents were in Higo he remained passive and only took his present action when they entered Hiuga."

These are the views of the *Hôchi* and it seems to speak authoritatively, but in spite of these explanations we are altogether in the dark as to the designs of Tosa. If it be now necessary to enrol militia on account of the rebels entering the province of Hiuga, why were they not enrolled with even greater haste, when the insurgents occupied the province of Bungo, which is much nearer Tosa than Hiuga? The *Risshisha* has stated "that they have been freed from anxiety since they heard of the success of the Government forces, but that at the same time victories or reverses in warfare cannot always be foretold." Do they by this intend to convey the idea that when the insurgents were in Bungo, there could be no doubt that the advantage lay

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

with the Imperialists, but that as soon as they entered Hiuga, victory was by no means to be relied upon? Such a statement would be absurd. These are points which we cannot understand, and the *Hochi's* article does not explain them, nor will it convince the nation that Tosa is above suspicion.

Of course we do not maintain that it is desirable that suspicions should exist among intimate relations, but on the other hand we are convinced that great evils may arise through over confidence. Such was the case of Saigo. Whilst he was living in retirement, it was never thought that he would promote the present insurrection. When such trusted men as he turn rebels, how many others are apt to do likewise.

If the designs of the Tosa men should prove other than the *Hôchi* alleges them to be, while the Imperial forces are in Kiushiu, what will be the state of the island of Shikoku? It would certainly be wrong for the Government to wage war against Tosa before there are actual proofs of rebellion, but there can be no harm in being prepared for the worst. What does the *Hôchi Shimbun* think?

THE JAPANESE LAW OF SURETY.

Her Majesty's Minister having, in accordance with instructions from Her Majesty's Government, communicated with His Excellency the Japanese Minister for Foreign Affairs relative to the provisions of the Japanese law in respect to the liability of guarantors to contracts in cases where the principal has disappeared, as announced in the correspondence which was published by the Legation for the information of British subjects on the 15th of September last, and having enquired whether, by Japanese law, a surety may by special contract, waive the immunity accorded to him for three years by the law of his country, and may make a stipulation which will be recognised as binding by the Japanese Courts that he shall become liable on the default of the principal, His Excellency the Japanese Minister for Foreign Affairs has addressed to Her Majesty's Minister the subjoined despatch which is now published for the information of British subjects.

It will be observed from this despatch that, by the insertion in their contracts with Japanese of a special stipulation properly worded, British subjects may avoid the inconvenience which might be entailed by the provisions of the Japanese law first above referred to.

AUGUSTUS H. MOUNSEY.

H. B. M.'s Legation,
Yedo, May 15th, 1877.

[TRANSLATION.]

March 21, 1877.

SIR,—I have the honour to acknowledge the receipt of your despatch dated the 30th of January last, in which you allude to the provisions contained in the Japanese Code in regard to the liability of a surety to a contract in case the principal has absconded, and state that the said provisions are not satisfactory, and you also make enquiry as to the revision of the said law, and ask whether, until such revision take place the Japanese Courts will recognise as binding any clause creating a special contract by the guarantor.

In reply I beg to state to you that the revision of the above law has not yet been fully arranged. I have however been informed by the proper Authorities that in the case of there being inserted in contracts between foreigners and Japanese a special agreement which contains a distinct provision that should the principal abscond the contract liability shall at once devolve upon the surety, then even before the expiration of a period of three years, judgment is to be given in our Courts in accordance with the terms of the contract.

I have, &c.

(Signed) TERASHIMA MUNENORI,
Minister for Foreign Affairs.

SIR HARRY S. PARKES, K.C.B.,
&c., &c., &c.,

A return presented to Parliament by the Registrar-General states that the total number of births in England and Wales in the year 1876 was 887,161, and the total number of deaths 510,308. The number of marriages was 201,835. The estimated population to the middle of 1876 was 24,244,010.—*Pall Mall Gazette.*

BRITISH CONSULAR TRADE REPORT FOR HAKODATE FOR 1876.

BRITISH CONSULATE,
Hakodate, 20th April, 1877.

SIR,—I have to express my regret at being so late in transmitting the Trade Returns of Hakodate for the past year, which is attributable to the Custom House not having been allowed to give up the returns of the last half-year until they had been approved of by the Treasury, consequently they only reached me the beginning of this month.

The Shipping and Trade Returns, in duplicate, comprise as in former years:

1.—Imports from England and other countries.
Imports from open ports in Japan.
2.—Exports to England and other countries.
Exports to open ports in Japan.
3.—Return of Treasure Imported and Exported.
4.—Return of Foreign Shipping.
5.—Return of duties collected on Imports and Exports, together with a return of entrance and clearance fees.
6.—Return of British and Foreign Residents and Firms.

SHIPPING.

	Entered.		Cleared.	
	Ships.	*Tonnage.*	*Ships.*	*Tonnage.*
1875.....	36	11,785	39	12,394
1876.....	32	10,513	32	10,513
Decrease....	4	1,272	7	1,881

Foreign shipping is annually decreasing owing to the number of Japanese merchant steamers plying between Yokohama and Hakodate, no less than 104 steamers, under the Japanese flag, of 92,513 tons having visited this port during last year. Formerly all exports for China were shipped direct by sailing vessels, but now the greater part goes to Yokohama by Japanese steamer and is thence trans-shipped to Shanghai.

IMPORTS.

	From other Countries.	*From Open Ports.*
1875,.....	$27,641	$39,484
1876,.....	$27,380	$16,540
Decrease.....	$ 261	$22,944

The great decrease in Imports from open ports is owing, as I have remarked in former Reports, to the native merchants and shop keepers buying very nearly all the foreign goods they require at the auctions in Yokohama and Tôkiô much cheaper than what they would have to pay if they got them out direct from Europe.

Not a steamer arrives but large quantities of foreign goods are brought up, such as clothing, provisions of every imaginable description, hardware, crockery and glass ware, fancy goods,—in fact there is not a thing one could wish for but it is to be had at the Japanese shops. One has to beware, however, of Wines, Spirits and Beer.

Much of the imports are bought up again by the native merchants coming from the northern provinces of the Main Island, the Awamori steamers constantly bringing over crowds of them.

EXPORTS.

	To other Countries.	*To open Ports.*
1876.....	$776,962	$ 6,544
1875.....	$350,734	$45,168
Increase.....	$426,228	Decrease...$38,624

As will be seen, the exports to other countries, that is China, have more than doubled as compared with those of 1875, whilst those to open Ports in Japan have considerably fallen off; the natives now exporting a large quantity of dried fish to the southern ports, the impetus having been given by the foreigners. Notwithstanding this the total exports are $387,604 in excess of those of the previous year.

GENERAL REMARKS.

The great event of the year 1876 was the visit of the Mikado to this Island, the first time any Sovereign of Japan has ever come so far north.

After inspecting the Government offices, His Majesty

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

paid a visit to the Government School, where he stopped a considerable time questioning the pupils, and in which he appears to have taken a great interest, for he afterwards expressed great satisfaction with his visit and the readiness with which they replied to any questions put to them.

From 80 to 100 Ainos with their wives came to do homage to their Sovereign. They appeared to belong to a better class, it may be they were chiefs of different tribes, for to all outward appearance they looked more respectable and were better dressed than the deputations one generally meets in town in spring. During the procession in town they always managed, I have been told, to be in a conspicuous spot by taking a short cut whenever the Imperial carriage had passed them. This must have been arranged for them by some official, as they could not have known which route the procession would have taken.

Twice they had the honor of going through one of their national dances before his Majesty. This dance of theirs is what is termed the crane dance, the singing, if such it may be called, being an imitation of the noise caused by the chain passing over the pulley, and the motion with their feet being that of a person employed in turning the wheel of a crane. Their motions are very regular, and they keep very good time by clapping their hands. They were very much pleased with the gracious manner His Majesty thanked them for their performance, and more gratified still, I feel convinced, with the thousand *yen*, which he ordered to be distributed among them.

His Majesty's stay among us was but short, not extending over two days, during which time he made an excursion to the model farm at Nanai.

A few weeks later on the Mikado's Cabinet Ministers likewise came to Hakodate. After having visited the schools and spending considerable time there, they extended their tour of inspection to Sapporo, going to Otarunai by steamer, and keeping on to the main road, returned to Hakodate.

Telegraph.—As I remarked in my Report for 1875, the double telegraph cable between Awomori and this Island was snapped some time early in 1876. An unsuccessful attempt was made last summer to pick up the cables and splice them. It was then found necessary to send home to Europe for fresh cables, so that we are still dependent on the Awomori steamer for telegrams.

Post Office.—The native Post Office here was remodelled on the foreign system in 1874, and began to take charge of foreign mails the year following when the P. M. S. ships ceased to visit this port.

There are no foreigners connected with the Post Office and no distinction is made between native and foreign mails, both being made up in, and distributed from, the same department.

One hour after the arrival of any mail steamer, all mail matter is ready for delivery, and if not called for, is taken to the different houses within the next hour.

Notice is invariably given eight or ten hours previous to the departure of a mail, and sometimes a longer notice if it is known when the steamer will sail.

The mails from Yokohama have come up to Hakodate within the twelve months most regularly in eight days, a steamer bringing over the mails from Awomori every other day.

Custom House.—The Custom House has undergone a thorough change during the past year, and is now conducted on the same principle as at the other ports, that is to say, more in conformity with the usages of foreign countries. The Custom House officers are very strict, at times too punctilious, and consequently dilatory; but I have no doubt, that in course of time they will learn to get through their business more rapidly.

Judicial Department.—The Judicial Department gives but little satisfaction. Cases are allowed to drag on indefinitely, so that in claims against natives the latter have every opportunity of getting rid of whatever they possess, and when they are declared bankrupts, which is invariably the upshot of every claim, they are worth nothing.

In police cases we have nothing to complain of, however; no thief or criminal can escape the vigilance of the authorities, and it is wonderful how they manage to ferret out anything, if they set their mind on it.

Education.—The boys' and girls' school at Sapporo that I made mention of in my last report, has collapsed owing to the misconduct of the Native Director. The pupils have been sent home to their parents. An agricultural college has been established there, superintended by four foreigners. At present there are not more than fifteen pupils.

At Hakodate the Kaitakushi has five Government schools with 525 pupils, of whom 446 are boys, the remainder girls. Twenty native teachers have charge of the schools. The children are taught reading and writing, geography of the world, universal history and arithmetic up to fractions. The school hours in summer are from 7 to 1 and in winter from 9 to 3, one hour being allowed for the midday meal. Besides, every hour the children are let loose for ten minutes to run about and amuse themselves as they please. Admission to those schools is obtained by application in writing to the officers of the Town Hall. Only children of the latter class are admitted. For each child there is a sum of 12½ cents per month to be paid, and where there are more than three from one family, there is no charge from the third child.

Similar schools have been erected in all the principal towns, but no returns have been received.

Besides the above there are numbers of private schools, where writing and reading only are taught. The number of pupils attending these schools, as far as I have been able to ascertain, average about fifteen hundred (1,500) daily. The charge is from 5 to 10 cents per month.

Three of the shopkeepers have combined to erect an evening school for apprentices and others who are engaged during the day. The hours will be from 6 to 10. Admission is obtained on production of good testimonials.

Age from 12 to 18. A monthly payment of 10 cents has to be made, books being found. The same branches of learning as at the above mentioned Government schools.

Lighthouse at Siriya Saki.—This Lighthouse was completed some time last autumn and lit up in October. Siriya Saki is situated at the N. E. point of the main Island of Japan in the Tsugaru Straits. The light is elevated 150 feet above the level of the sea and should be visible in clear weather at a distance of 18 miles.

The tower, 94 feet high, is circular, constructed of brick and painted white.

Position Lat. 41° 26′ 10″ N.
„ Long. 114° 29′ 25″ E.

This light will be of great benefit to navigation, for it was much needed. There is some talk now of a light being erected on Hakodate head.

Ship Building.—Some two years ago an English shipwright built two schooners of a little less than 100 tons each after the foreign model. The native carpenters, whom he employed, were not slow in learning all they could of this foreign style of ship building, and last year they launched among themselves no less than eight schooners averaging from 20 to 80 and 100 tons, although much inferior in every respect to the models they had copied from. There are now several more such schooners on the stocks, and the English shipwright, Mr. Thompson, has repeated offers to build schooners for the Japanese, but too frequently the funds are wanting.

At one time the Kaitakushi intended starting a shipyard at this port, but they have changed their minds and have commenced one at Moruran on Volcano Bay. I am sorry to say, however, that at the latter place there are more officials than workmen or men fit to superintend a work of this description, so that I fear after much money has been expended this new undertaking will prove a failure. One practical man, who understands the business, would do more good than all those drones with their pens, paper and ink.

Farm at Nanai.—The farm at Nanai, which at first was expected to be of such great benefit to this Island, is still carried on at an immense expense, no attempt being made to make the farm pay for this great outlay. This is much to be deplored, as there is no doubt that much beneficial improvement might be derived from the extension of agriculture in this Island, for one cannot but regret, as one travels over this part of Japan, that so much valuable land is allowed to lie waste, which might with proper management be turned to profitable account. It is true, the climate so far north is ill adapt-

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ed for growing rice, which is the staple food of the people, but as they are becoming more accustomed to the foreign way of living, I feel convinced there is much to be done on this Island in the raising of cattle, cereals, vegetables and fruit, for the climate so closely resembles that of England, and the soil is so rich and fertile, that with very little trouble almost anything will grow here.

At the present time the few bullocks that are required for the consumption of foreigners, the natives and the shipping, are brought from Nambu and are but sorry animals at the best, but I feel convinced, that if the Japanese were to take this matter in hand, and devote a small part of this rich pasture land to the raising of cattle, not only an immense profit might be derived but beef equal to the Kobe beef might be sold at the same price for the poor substitute we now get, and since the Japanese have of late taken so much to beef diet, to them it would be an immense advantage.

And now last but not least the *Fisheries*. The immense wealth to be derived from the fisheries of the Island of Yesso has so often been dwelt upon that I need scarcely repeat, that if so many obstacles were not put in the way by the officials, they would long ere this have been fully developed. Fish, salted and dried, have for many years found a ready market, both in China and Japan, as the annual Trade Returns show.

Last year an attempt was made to turn the oyster beds, extending over miles near Akish, into a profitable speculation. A native of this Island engaged three Chinamen to dry oysters in Chinese fashion for the China market; but no sooner was it discovered that this might be a profitable undertaking than some flaw was found to exist in the lease he had obtained, and thus a stop was put to what might in all probability have been a very lucrative business. I now hear some officials are supposed to be desirous of carrying on the work commenced.

Last autumn another way of preserving salmon for exportation by Japanese was brought to my notice. A native residing at Nemero sent a smoked salmon and fresh salmon preserved in tin requesting me to give him my opinion on the same, and whether I thought they would be saleable articles in the market. After giving them a fair trial, I came to the conclusion that the smoked fish was better than any I had tasted in Japan, as the salmon at Nemero is much finer and richer in flavor than any caught more to the southward, and as to the fresh salmon in tin it was excellent and quite equal to, if not better than that sent out to the East from Europe or America. I was told samples had been sent to Tôkiô, and I feel convinced, that if they persevere and continue with it, this branch alone will be in itself a most lucrative business besides being an immense benefit to the shipping. Should this be carried on, the preserving in tin might be extended to the oyster beds, so that I am of opinion, that if the speculator can command sufficient capital with the requisite perseverance, this will turn out a grand success, as there is little chance of any foreigner having anything to do with it unless he advances the funds, and that would not be advisable with the sad experience foreign merchants have had in doing so for other produce of this Island.

I have the honor to be,
Sir,
Your most obedient humble servant,
(Signed) R. EUSDEN.

Sir HARRY S. PARKES, K.C.B.,
Her Majesty's Envoy Extraordinary,
&c., &c., &c.

I.—RETURN OF THE IMPORT TRADE OF HAKODATE FOR THE YEAR ENDING 31ST DECEMBER, 1876.

From England and other Countries.

Kerosine Oil	$18,473
Raw Cotton	8,785

The German Emperor has written a letter to Prince Bismarck, which was published in the *Official Gazette* of the 26th inst. The Emperor thus refers to the recent celebration of his birthday:—"The day on which I completed the eightieth year of my life awoke in the German people a sympathy which touched me profoundly. This excessive plenitude of kind wishes has rendered that day a peculiarly sacred one to me. Surrounded by a powerful circle of allied princes, I felt with satisfaction the value of being regarded as the centre of the national sentiment, and from that consciousness I derive new strength to devote myself to care for the well-being of the fatherland. In this sense I desire to express my thanks to all that sent me their congratulations."—*Pall Mall Gazette.*

A HISTORICAL AND DESCRIPTIVE SKETCH OF MANILA, THE CAPITAL OF THE PHILIPPINES.

South and East from Hongkong, distant somewhat more than six hundred miles, lies the city of Manila, the capital of Luzon and of the Philippine Islands. The great army of travellers, whose ambition it is in these days of rapid transit to traverse the wide wide world in a few brief months of scramble, does not include Manila in the circle it traces for itself on the map; and thus it is, "la perla del oceano," and the "always faithful city of Legaspi," are scarcely known to the general reader, although discovered and colonized more than three centuries ago.

Within fifty years a large and important commerce has been developed between Europe and America and the Philippines, and to this intercourse Manila, in recent times, chiefly owes its celebrity. And yet, in history, Manila figured for centuries as the bone of contention between Spain, Portugal and the Netherlands; while England an hundred years since conquered the city and released it for a ransom—a bond not yet discharged by the Spanish crown. No less an adventurer than the famous Magellan reached these shores during his quest for the fabulous Spice Island, and Spain subsequent to their discovery devoted many lives and much treasure in accomplishing the addition of the islands to her already vast foreign possessions.

Early in the sixteenth century the Portuguese navigator Hernando de Magallanes conceived the magnificent idea that it was possible to pass round the southern extremity of the American Continent, and by this new route reach the much coveted Spice Islands. He revealed this vast and daring project to the King of Portugal, without meeting any encouragement from his sovereign; and possessing no means of his own, and being unsuccessful in his efforts to secure the aid of others, Magellan retired from Lisbon and passed over into Spain. Accompanied by the cosmographer Ruiz de Talero, he presented himself at the court of Carlos I, who willingly listened to the brilliant schemes of conquest unfolded by the enthusiastic navigator. Don Carlos unhesitatingly accepted the propositions of Magellan, and gave instructions for the immediate outfit of an expedition to be placed at his command. The king invested him with the military order of Santiago; named him governor of all the new lands he should discover; and agreed to accord to him a portion of the profits which might result from the treasure and spices Magellan so confidently expected to secure. Six small vessels, manned by 230 men, sailed from Sanlucar de Barremeda on the 10th of August, 1519 on this grand voyage of discovery. On the 27th of November of the following year, after having overcome extraordinary obstacles, the fleet emerged into the Pacific Ocean through the straits which have immortalized the name of their discoverer. Although the small fleet under Magellan's command had by this time been reduced to three vessels, their crews decimated by suffering and disease, he still ploughed onward through the unknown waste of waters with the chivalrous courage characteristic of the navigators of that century. On the 16th of March 1521 he discovered the Marianas, or Ladrone Islands, and a few days later sighted Cape San Augustin on the southern coast of Mindano. Coasting along this island, he effected a landing with his men and took possession of the new lands in the name of the King of Spain. From thence he passed to the island of Cebu, the Rajah of which yielded ready allegiance to the Spaniards, and Magellan, in compliance with his solicitations and in reward for this hospitable treatment, consented to aid him in a raid upon the people of the neighbouring island of Mactan. In this attack, Magellan lost his life on the 26th April 1521. Under Juan Carballo the little fleet continued its course towards Borneo, and at length made harbour in Tidore, one of the Marianas. Preparations were here made to put the fleet into a sea-worthy condition for return to Spain; but only one of the six vessels was found sufficiently serviceable to undertake the voyage. Loading her with sandalwood, ginger, cinnamon, and gold—as much as they could with safety carry over and above the provisions for the voyage—the few survivors set out early in 1522 to regain their native land. Juan Sebastian Elcano was in command. On the 7th of September of 1522, three years after their departure, there landed at Sanlucar de Barremeda only eighteen men of the two hundred and thirty-four who had sailed under Magellan. Elcano was the first to accomplish the circumnavigation of the world; and in honourable recognition of his services, the king granted him the armorial bearings of a globe with the motto "hic primus circumdedit me."

A second expedition was despatched from Coruña in 1524 under the leadership of Don Juan José Garcia, who succeeded in reaching the shores of Mindanao and from thence passed on to Gilolo, where in harassing conflicts with the Portuguese, who were in occupation of the adjacent islands, the whole expedition miserably perished, with exception of a handful of men, who, after innumerable hardships, were successful in making their way to New Spain. But the enthusiasm of the Spanish monarch was now thoroughly aroused, and at his instance Hernande Cortez, the then illustrious governor of New Spain, was directed to make yet another attempt to colonize the islands discovered by Magellan. This effort, however, as well as a fourth one, proved fruitless; and it was not until 1564, that in response to the importunities of the San Augustin friars, Philip II was induced to organize a fifth expedition. To Don Miguel Lopez de Legaspi—a man of great experience, of generous and disinterested character, and full of zeal for his King—was entrusted the conquest, colonization, and pacification of the Philippines. He sailed from Mexico on the 24th of November 1564 in command of a fleet of five ships, their companies numbering some 400 souls. On the 22nd of January of the following year, the Marianas were formally annexed to the crown. Leaving these islands, Legaspi next touched at Leyte, one of the Philippines, from whence a surveying party was despatched in search of a more commodious harbour, and on the 27th of April, 1565, he brought his whole fleet to anchor in the port of Celu. From this point he continued his explorations and in 1570 effected a landing, not without some opposition on the part of the natives, upon the island of Luzon. The port of Manila was visited for the first time, and so favourably impressed was Legaspi with the natural advantages of its situation that he here resolved to found his capital.

The city of Manila was founded by Legaspi in 1571, and in 1590 a substantial wall was built about it for the protection of its inhabitants from the depredations of the natives and the incursions of foreign foes. The entrance to the bay of the same name is divided into two passages by the small island of Corregidor upon which a lighthouse is maintained. The southern channel, or "boca chica," is the narrower of the two, but either passage is of sufficient depth to admit the largest ships. Approaching from the eastward the lofty peak of Mariveles forms a conspicuous object, and when well within the bay the volcano Majayjay and Mount Aryat are descried further inland. The anchorage is distant from the low shores some three miles and from Corregidor about two and twenty. The city is built upon the banks of the river Pasig and immediately at its mouth. Viewed from the bay a very inadequate idea can be formed of the extent of Manila. Its site is but slightly elevated above the sea level, and the side fronting the sea is enclosed by a high wall, the base of which is only separated from the bay by a narrow strip of land. A few edifices tower above the general level of roofs; but the dome of the Cathedral, the square spire of the church of San Augustin, with here and there the broad walls of a convent, afford unmistakeable evidence of spacious surroundings. A few trees peering above the fortifications relieve the monotony of the brown walls and the dull red of the tiled roofs, yet it must be confessed that the general aspect of the city is not prepossessing. Stretching into the bay are two low moles, which protect the mouth of the river from accumulations of silt, and within them an anchorage is secured for vessels and steamers of light draft. Ascending the river, an impression is for the first time obtained of the bustle and importance of the port. Along either bank is moored a miscellaneous fleet of native craft, interspersed with vessels of foreign build; and further up, small paddle-wheel steamers and large seagoing propellers indicate indubitably that commerce has extended its civilizing influences even to this remote portion

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

of the globe. The landing is effected in front of the Harbor Master's office, where a comodious flight of stone steps has been constructed for the accomodation of the public. Before landing, passengers are obliged to pull alongside a Custom House guard-boat stationed near at hand to prevent smuggling. In the plaza adjoining the Harbor Master's office a crowd of vehicles awaits hire, and the traveller may take his choice of the two-wheeled and one-horsed "calesa," at two "reales" the hour, or the more luxurious barouche drawn by a pair of ponies, for which he must pay one dollar. The hotels are uncomfortable and badly kept; but a person well introduced is tendered the hospitality of the private house of the foreign merchant to whom he comes commended.

A hasty glance while diving through the principal throughfares discloses the vast area of the city. The streets are narrow, but of ample width to admit of the easy passage of carriages. A broad avenue or "calzada" shaded by rows of Almond trees, extends along the moat outside the walls, reaching as far as the "playa" or beach in front of the city. This avenue forms the fashionable drive of the "Manileses," and at eventide a large concourse of carriages assembles upon the beach. At the sound of the vesper-bells, all carriages halt and their inmates uncover their heads: a brief orison is said, and with the last stroke of the bells all are in motion again. With the failing light the assemblage of vehicles disperses. Twilight in these latitudes is of but brief duration. The gorgeous colours assumed by the heavens at sunset rapidly fade after the sun has disappeared below the horizon. Night quickly spreads her pall over the face of nature, and the stars shine forth with a brilliancy only to be witnessed within the tropics.

The city and suburbs of Manila contain a population of nearly three hundred thousand souls, including natives, Chinese, Spaniards, and foreigners of all nationalities. The walls enclosing it constitute a fortification of some strength, although they would afford scant resistance to the terribly destructive power of modern artillery.

The greater part of the dwelling houses are capacious, and constructed with especial reference to the depredations of earthquakes to which the islands are subject. Although imposing in appearance, on account of their ample dimensions, the buildings are devoid of architectural merit. A frame of hard wood rests upon a basement, or ground story, of stone, with the roof sloping to the four sides of the building and covered with red tiles. The upper, or main story, projects beyond the basement walls and is closed in on all sides by sliding shutters which thus form a corridor or close balcony around the house, protecting it alike from the heat of the sun and the inclemency of the weather. Light is admitted through many small panes of oyster shell, a material admirably adapted to the purpose, as it is translucent and sufficiently non-conductive to divest the sun's rays of a large portion of their heat. The living rooms are usually upon the principal floor, and consist of a "sala" or drawing-room, a "caida" or hall, and two or more sleeping apartments. The kitchen and servants' offices are generally situated in outbuildings or in smaller structures attached to the main edifice. The "caida" serves also as a dining room and communicates with the basement by means of a stairway. In many houses there are both sleeping and living rooms in the basements, but such apartments are deemed damp and unwholesome and are mostly unoccupied. The basement is entered from the street by a door-way sufficiently wide to admit the entrance of a carriage, and when not in use the basement serves as a coach house, the stables being either situated within the inner courtyard or in the "patio" at the rear of the dwelling. Without the city walls, the houses are chiefly detached; but within the fortifications, or inside the city proper, they are built in blocks abutting immediately upon narrow "trottoirs" which are paved with bricks or flag-stones. The street are unpaved and consequently fall into bad repair during the rainy season. No complete system of drainage exists, and the immunity from epedemics or malaria enjoyed by the city is doubtless owing to the great heat of the tropical sun which in summer keeps the ground baked and dry, while the enormous rainfall during the wet months effectually cleanses the surface and drains.

The government offices are located within the walls, together with the principal churches, educational and other public institutions. The cathedral was founded originally in 1578, but has been many times destroyed and rebuilt. Since the great earthquake of 1863 it has been lying in ruins, but the work of reconstruction is now in progress and the edifice promises to be once more an ornament to the city. The churches of San Augustin and San Francisco, within the walls, and of Binondo, San Sebastian, and Santa Cruz without the city limits, are the most notable for their size and antiquity.

The few "plazas" or public squares, are destitute, with unimportant exceptions, of trees or statuary, and of the latter adornments the column of Magellan and the monument recently erected to the memory of Don Simon de Anda are chiefly conspicuous for their ugliness.

A Botanical Garden is situated in close proximity to the "calzada." A few indigenous shrubs and plants are enclosed by a rough bamboo fence. Two Chinese griffins guard the gate-way, through which may be descried the staring white labels descriptive of the plants, the general effect being more that of a cemetery than of a garden. It is worthy of remark that, in a climate where every growing thing could with small care be made to blossom like the rose and where a measureless abundance of tropical foliage exists, no persistent efforts have been made to beautify either the public squares or promenades. It is true the "paseo de Magallanes" is lined with a few common shrubs, such as may be seen everywhere in the country hedges: yet there is a total absence of any such attempts at ornamental gardening as are to be seen in Java, Saigon, or Singapore.

Within a radius defined by municipal regulations the erection of none other than substantial structures of stone and wood is permitted: but without these limits, bungalows of lighter materials and native huts of bamboo thatched with the leaves of the Nipa palm are thickly congregated. The suburbs are intersected by wide avenues, and as the native houses are surrounded by groves of plantains, palms and canes, interspersed with hedges of bright flowering plants, the general appearance of this portion of the city is attractive and picturesque. The "barrios" of San Miguel and Santa Ana are the favorite abodes of the English and American residents of Manila. These districts border upon the river Pasig and afford charming views of the distant hills of Mariquina and Majayjay.

The River is the great highway communicating with the lake of "Bay," and drains by means of its innumerable branches the broad alluvial plains lying between the foot-hills and the bay of Manila. The lake is distant nearly eight miles from Manila in a direct line, but following the tortuous course of the Pasig the distance is quite double. It is a fine sheet of water covering an area sixty miles long by twenty wide and is enclosed on all sides by hills of considerable height. It is navigable only for "cascos" or the native cargo-boats and "proas," although small steamers of light draft now ascend the rivers and enter the lake.

The native population of the country surrounding Manila is to a great extent employed in the cultivation of rice and sugar-cane, to the growth of which the soil is well adapted. But one crop of rice is raised each year. The farmers await the approach of the rainy season before preparing the ground. The parched fields which have lain fallow from December to July are hard and unyeilding to the plough, until well saturated by the earliest showers. They are then broken up by rude ploughs drawn by water buffaloes, and afterwards reduced to a consistency of stiff mud by harrowing. This operation completed, the fields are ready to receive the tender shoots of rice which have meanwhile been sprouted in a corner of the fields especially prepared and irrigated for the purpose. The task of transplanting is rapidly performed; and nourished by frequent showers—the rainy season having now fairly set in—the crops are thriving in a surprisingly short time. At this time of the year the landscape assumes its most pleasing aspect; the whole face of nature appears covered as with a carpet of verdure; the trees, many of which have shed their leaves during the dry season, now don a brighter costume; while the country round seems refreshed and revivified. The rains cease in December, when the work of harvesting is commenced. The paddy is stacked upon the fields and the grain lei-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

surely thrashed from it, either by hand against an uninclined sieve of cane, or trodden out by the feet of buffaloes within a circular space of ground smoothed off for that purpose. Sugar cane is principally planted for consumption and not for the sugar mill. The natives are immoderately fond of the sweet and succulent cane, and consume enormous quantities of it.

A short distance above the city, the river presents a scene of ceaseless activity. Innumerable "bancas" are constantly ascending and descending—those bound down the swift stream keeping well within the influence of the strong current, while these upward bound skirt closely along the shallower banks where the work of paddling, or poling is accomplished with the least labour. The native boats are of various dimensions, from the large square-bowed "cascos," capable of loading from fifty to two hundred piculs weight, to the light grass "banca" which with its load of bright green "sacate" appears to skim over the surface of the water. The "banca" is a dug-out constructed from a single trunk of a tree, and has the form of a canoe. The large ones, or passenger boats, are covered in by a mat of split bamboo to protect their inmates from the hot sun or pelting rains. The "banquero" sits in the stern of the boat and propels it with a broad paddle; or where the water is sufficiently shallow, he assumes an erect position and pushes the boat along with a pole placed against the river bottom.

Thousands of "cigarreras" (cigar girls) from the villages above come down to the city early to the Cigar factories, and return again at night to their rural homes. At the evening hour the river appears fairly alive with boats. The commodious passenger "bancas" are then laden to the water's edge with a living freight: the slightest movement would seemingly cause them to capsize, but the lithe banqueros with a graceful swing of the body pole them steadily upward against the stream. Multitudes of grass bancas are bound city-ward, with supplies of food to the equine inhabitants of the metropolis; while others homeward bound have exchanged their contents for a load of lively "cigarreras." Groups of three or four of these boats contest with each other the passage of some sharp bend round which the river is rushing like water through a sluice; or crossing to the opposite shore, it becomes an exciting race among the banqueros to first reach shallow and slack water. An uneasy swaying of the narrow craft elicits lond screams from the noisy girls; or it may be a few break into a plaintive song as they glide along.

The long and slim fish bancas, propelled by three or four stalwart fish-wives, and heaped up with baskets of fish—still alive and but an hour since swimming joyously in the lake—outstrip all others in their swift course towards the evening market. The reflected rays of the setting sun turn the turbid waters into a flood of molten gold. The brilliant green of the bamboos and plantains bordering the river banks is imperceptibly transformed into a roseate hue: and as the brief twilight is rapidly followed by the grayer hues of night, a still interminable throng of boats come and go, discovering their tracks by long lines of ruddy light on the surface of the deep blue waters. Darkness comes on apace, and the stars shine forth. But the gentle plash of paddles is yet heard, and laughing voices, or the soft notes of the guitar, still come through the obscurity.

(To be continued.)

A telegraphic summary is published of the news by the Cape mail to the 6th of March. Intelligence had been received at Cape Town from the Transvaal Republic that scenes of confusion had occurred in the Volksraad upon the refusal of that assembly to consider President Burgers' programme of reforms:—"The House insisted upon the maintenance of the freedom of the Republic." This seems to mean that the President's proposal of union with the British Colonies was rejected. The telegram adds:—"Rumours have been current that Sir Theophilus Shepstone's life has been threatened by the members of the extreme party."—*Pall Mall Gazette.*

We hear that the loan of five million taels for Tso Tsungt'ang is not yet a *fait accompli*; but what the cause of delay is, we do not know. We expect that the foreign lenders in London will be excessively cautious, having had so many sharp lessons during the last two or three years. We hear however that the Imperial guaranty is really to be given to Tso's loan, so that the delays are the more mysterious. We have already pointed out the vast differences between an Imperial and a provincial loan; the latter would be in fact a personal loan without provincial or state security.—*Shanghai Courier.*

YOKOHAMA RACING ASSOCIATION.

SPRING MEETING.

The Racing Association were fortunate in having such fine weather for the opening day of their meeting as Wednesday afforded. Notwithstanding the rain which fell on the previous day the course was in excellent condition, so that good time was made, as a rule, in the races run. A large number of ladies were present in the Grand Stand, but there was a falling off in the general attendance, and but very few natives indeed turned out to see the sport. The delay between the various events was worse than usual, so that despite the good music which the *Tennessee's* band performed, many of the spectators—especially the ladies—found it more than ordinarily tedious.

FIRST DAY.

Wednesday, 16th May, 1877.

1.—THE TRIAL PLATE.—For China Ponies that have never won a flat race here. Weight for inches. Entrance $5. One mile.

Mr. Fiddle-de-dee's *Hoolet* (late *Hooze*), 10st. 8lbs. 1
,, Robertson's *Chance*, 10st. 2lbs... ... 2
,, Riyoshi's *The Boojum*, 10st. 2lbs..... 3
,, Earnest's *Raethia* (late *Ta Phairson*), 10st. 5lbs. 0
,, Sinbad's *Davenport*, 10st. 11lbs..... 0

Much delay was caused by the fractiousness of *Mongolian Lamb* who twice threw his rider, severely hurting him on the second occasion. This pony was consequently withdrawn, leaving a field of five to go the post. *Chance* got away with a decided advantage, but was picked up by *Hoolet* at the top of the hill, from which point it became a race between these two, the result being in doubt until after entering the straight, when *Hoolet* came away and won with ease by a couple of lengths. Mr. Marlborough rode the winner. Time 2 mins. 14 secs.

2.—THE GRIFFINS' PLATE.—A sweepstakes of $10 each (with $50 added) for Japan Ponies being *bond fide* Griffins. Weight for inches. Five furlongs.

Mr. Douglas' *The Crescent*, 10st. 2lbs..... 1
,, Robertson's *Rebel*, 10st. 6lbs..... ... 2
Dr. Buckle's *Spendthrift*, 10st. 8lbs..... ... 3
Mr. R. Jaffray's *Professional*, 10st. 4lbs..... .. 0
,, do. *Exile*, 10st. 4lbs..... 0
,, W. Fairplay's *Shizoku*, 9st. 12lbs..... 0
Major Arda's *Monarque*, 10st. 6lbs..... 0
Mr. Fiddle-de-dee's *Dumfounder*, 10st. 6lbs..... ... 0

The eight got away to a very bad start after much delay, *Monarque* making the running, being closely followed by *Spendthrift*. At the turn *Monarque* ran wide, and *Rebel* coming up challenged *Spendthrift* and succeeded in taking the lead, but just at the post *The Crescent* came up with a rush and secured the Judge's decision, although the general impression seemed to be that *Rebel* had won, thus giving another winning mount to Mr. Marlborough. Time 1 min. 20½ secs.

3.—THE LUSITANIAN CUP.—For all Ponies. Weight as per scale. Entrance $5. Three quarters of a mile.

Mr. Fiddle-de-dee's *Braemar*, 10st. 8lbs. 1
,, W. Fairplay's *Chief Mongolian*, 10st. 11lbs..... 2
,, Riyoshi's *The Snark*, 10st. 8lbs..... 3
,, Earnest's *Title Deed*, 10st. 5lbs 0
,, Sinbad's *The Judge*, 10st. 8lbs..... 0
,, do. *The Minister*, 10st. 5lbs..... 0
,, Ola's *Mohstotz*, 10st. 6lbs..... 0
,, Robertson's *Mandarin*, (late *Cocheco*), 10st. 5lbs 0
,, Rebertson's *Dibs*, 10st. 8lbs..... 0

An unusual number of crack ponies met at the post, which gave additional interest to this race. There was again a difficulty about starting them, several false starts occurred, and for a weary time were the ponies kicking their heels about at the post, "mocking the air with colours idly spread." When they got away *Braemar* took a lead which he kept to the three furlong post, where *Chief Mongolian*, making a desperate effort, succeeded in passing *Braemar*, but was only able to retain this advantage for a very brief time, as the Tartan again went to the front, and when at the distance *Braemar's* rider, Mr. Marlbrough, called upon him, the pony responded at once with scarcely an effort, and won by several lengths, *Chief Mongolian* being second and *The Snark* a good third. Time 1 min. 38½ sec.

4.—THE PROFESSIONAL CUP.—Presented, value $—. For Japan Ponies. Winners of any open race excluded. Weight for inches. Entrance $5. Half a mile.

Mr. D. de Ding Dong's *Jim Hills*, 10st. 4lbs..... 1
Dr. Buckle's *Spendthrift*, 10st. 8lbs..... 2
Mr. Fiddle-de-dee's *Distemper*, 10st. 6lbs..... 3
,, Ola's *Moscou*, 10st. 4lbs..... 0
,, R. Jaffray's *Exile*, 10st. 4lbs..... 0
,, Robertson's *Nick*, 10st, 0lbs..... 0
,, do. *Doctor*, 10st, 6lbs..... 0
,, W. Fairplay's *Heimin* (late *Stalemate*), 10st, 8lbs..... 0

This afforded the novel sight of all the ponies entered appearing at the post. A good start was effected, *Spendthrift* jumping off with the lead, being closely followed by *Jim Hills* and *Moscou*. At the turn *Moscou* ran wide and lost his chance, and *Distemper*

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

came up and raced with *Spendthrift* down the straight, the race apparently lying between these two, but *Jim Hills*, who had been running third, made a rush on nearing the post, and by excellent riding secured the race by a length, Mr. Marlborough being again the lucky jockey. *Spendthrift* beat *Distemper* for second place by a head. Time 63½ secs.

5.—The Association Cup.—Presented, value $100. For China Ponies. Weight for inches. Entrance one mile and a half. To be won by a Pony the *bonâ fide* property of a member of the Association at the date of presentation.

Mr. Robertson's *Dibs* 10st. 8lb..... 1
,, Sinbad's *The Raven*, 10st. 8lb..... 2
,, Earnest's *Trustee*, 10st. 5lbs..... 3
,, W. Fairplay's *Mongolian Owl*, 10st 5lb..... 0
,, W. Fairplay's *South Mongolian*, 9st. 13lbs..... 0

South Mongolian was left at the post on starting and so spoiled his chance. The other *Mongolian* made the running, being followed by *Trustee* and *The Raven*, and after passing the stand the latter took the lead. *Dibs* had been running fourth and was only set going at the top of the hill, when he easily passed his opponents in succession and took the lead at the trees, from which point he ran in an easy victor. *The Raven* making a desperate but futile attempt to catch him. Mr. Williams rode the winner. *Trustee* was a good third. Time 3 min. 32½ secs.

6.—The Akindo Cup.—Presented, value $—. For Japan Ponies. Weight for inches. Entrance $5. Three quarters of a mile.

Don Carlos' *Kickapoo*, 10st. 8lbs..... 1
Mr. D. de Ding Dong's *Typhoon*, 10st. 2lbs..... 2
,, Robertson's *Oyama*, 10st. 2lbs..... 3

If the old favourite *Typhoon* did not carry off this race it was looked upon as a certainty for *Oyama*, but the result was a great surprise. *Typhoon* took the lead on starting as usual, but all three ponies were well together, so much so that on entering the straight it was impossible to say who had the advantage, and the finish became most exciting, *Kickapoo*, well ridden by Mr. Urquhart, just managing to beat *Typhoon* by a head, while the latter only took second place from *Oyama* by half a length. Time 1 min. 38½ secs.

7.—The Hachi-ban Cup.—First Prize, Presented, value $100. For China Ponies. Winners of three races in Japan, in 1876, to carry 12 stone 10 lbs. Winners at this meeting 12 stone; other Ponies weight for inches. Entrance $5. One mile and a quarter.

Mr. Douglas' *Crusader*, 10st. 5lbs..... 1
,, W. Fairplay's *Mongolian Chief*, 10st. 8lbs..... 2
,, Robertson's *Favori*, 10st. 5lbs..... 3
,, Earnest's *Raethia* (late *Ta Phairson*), 10st 5lbs. 0
,, Sinbad's *Antidote*, 10st. 8lbs..... 0
,, do. *The Dwarf*, 9st. 13lb 0
,, R. Jaffray's *Satisfaction*, 10st. 5lbs..... 0
,, Riyoshi's *Sovereign*,, 10st. 11lbs..... 0
,, Robertson's *Gladiateur*, 10st. 11lbs..... 0

More delay took place at the post. When the ponies got away *Raethia*, *Antidote* and *Mongolian Chief* were to the front, *Favori* and *Dibs* lying behind. On topping the hill *Crusader* and *Favori* were let out, and the race evidently lay between these two, but *Crusader* was too good for the other, and when coming down the straight so easily increased his lead that he won in a canter by several lengths, under the able guidance of Mr. Marlborough. Time 2 min. 54 secs.

8.—The Club Germania Cup.—First Prize, Presented, value $—. For Japan Ponies. Winners of two races at any previous meeting, 12 lbs. extra; other winners, 8 lbs. extra. Weight for inches. Entrance $5. Five furlongs.

Mr. D. de Ding Dong's *Jim Hills*, (12lbs ex.) 11st. 2lbs..... 1
,, Robertson's *Moor*, 10st. 2lbs..... 2
Dr. Buckle's *Sandboy*, (8lbs. ex.) 10st. 12lbs..... 0
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Mr. Ola's *Mohstotz*, (12lbs. ex.) 11st. 4lbs..... 0
,, Robertson's *Rebel*, 10st. 6lbs..... 0

Daimio was placed at a disadvantage at the start. *Mohstotz* and *Rebel* led off, and at the quarter mile were joined by *Jim Hills*. At the turn the latter ran wide and apparently put himself out of the race, which looked as if it lay between *Mohstotz*, *Rebel* and *Sandboy* who were racing neck and neck down the straight, but *Jim Hills'* jockey, Mr. Marlborough, brought his pony cleverly along the outside rail, and won a very exciting race by a neck.

"How use doth breed a habit in a man."

Even the extra weight was of no avail. *Sandboy* was for some time shut out by the leading ponies, but secured third place, *The Moor*, who came up with a great rush, taking second place. Time 1 min. 21½ secs.

9.—The Celestial Cup.—Presented, value $ —. For China Ponies, being *bonâ fide* Griffins at date of meeting; winners at this meeting excluded. Weight for inches. Entrance $5. Half a mile.

Mr. Peter's *Skeddaddle*, 10st. 2lbs..... 1
,, W. Fairplay's *Mongolian Wolf*, 10st. 2lbs..... 2
,, Earnest's *Bebé*, 10st. 2lbs..... 0
,, Sinbad's *The Sheik*, 10st. 2lbs..... 0
,, do. *The Consul*, 10st. 2lbs..... 0
,, Ola's *Maccaroni*, 10st. 8lbs..... 0
,, R. Jaffray's *Dusty Miller*, 10st. 10lbs..... 0
,, Riyoshi's *The Snark*, 10st. 8lbs..... 0
,, do. *The Boojum*, 10st. 2lbs..... 0
,, Robertson's *Tennessee*, 10st. 2lbs..... 0
,, do. *Bravo*, 10st. 5lbs..... 0
,, do. *Chance*, 10st. 2lbs..... 0
Don Carlos' *Telegram*, 9st. 13lbs..... 0

A capital field of thirteen started for the last event and as a matter of course there was a difficulty in getting them away. *Dusty Miller* jumped off with the lead being followed by *Skeddaddle*, who wrested the lead from the former at the trees. *Mongolian Wolf* here came up and challenged the leader, and a capital race ensued down the straight, but *Skeddaddle*, who was ridden by a Japanese, could not be headed, and greatly to the surprise of the knowing ones won by a length. The winner must be a good pony, as his success was scarcely due to the riding of his jock. Time 62½ secs.

Second Day.

Thursday, 17th May, 1877.

Charming weather again favoured the Association for their second day and there was a marked improvement in the attendance of the fair sex and public generally. But there was no improvement at all in the method of starting the races and much valuable time was wasted early in the afternoon, with the result that it was after 7 o'clock when the last race of the day was run. Such unpunctuality made the publication of the intended time for starting a farce. The band of the *Tennessee* was again in attendance, and played through an excellent programme.

1.—The Community Cup.—Presented, value $150. For all Ponies. Weight as per scale. Entrance $5. One mile.

Mr. Fiddle-de-dee's *Braemar*, 10st. 8lbs..... 1
,, Robertson's *Dibs*, 10st. 8lbs..... 2
,, Fiddle-de-dee's *Lintie*, 10st. 2lbs..... 3
,, do. *Tallapoosa*, 10st. 8lbs.. 0

Mongolian Lamb again displayed anything but the pastoral quietness which his name would denote, but proved, rather, that he was "a beast, that wants discourse of reason," and his jockey having been thrown and kicked in the face, the pony was scratched for this and all other races for which he had been entered at this meeting. Four ponies appeared at the post, three of them in the Tartan colours as opposed to the crack from the Blue and White stable, Mr. Fiddle-de-dee having declared to win with *Braemar*, with Mr. Marlborough up. At the start the latter rushed off with the lead, followed by *Lintie*, *Dibs* and *Tallapoosa* lying behind, which order they kept until the half mile post when the two last named caught *Lintie*, *Braemar* still leading. At the trees *Dibs* closed up to the leader and on entering the straight made a gallant but unsuccessful attempt to pass him. Down the straight both ponies were ridden out, but the Tartan was not to be beaten, and won a capital race by a length and a half in the excellent time of 2 min. 13 secs.

2.—The Silk Cup.—Presented, value $. For Japan Ponies that have never won a race. Weight for inches. Entrance $5. Half a mile.

Major Arda's *Monarque*, 10st. 6lbs..... 1
Mr. Robertson's *Moor*, 10st. 2lbs..... 2
,, do. *Rebel*, 10st. 6lbs..... 3
Dr. Buckle's *Sorcerer* (late *Moh-ichido*), 10st. 8lbs. 0
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Mr. R. Jaffray's *Exile*, 10st 4lbs..... 0
,, do. *Professional*, 10st. 4lbs..... 0
,, W. Fairplay's *Shizoku*, 9st. 12lbs..... 0
,, Alexander's *Griffin*, 10st 0
,, D. de Ding Dong's *Young Rapid*, 10st..... 0

There was one false start when *Shizoku* ran into the rails and got rid of his rider, while neither *Moor* nor *Sorcerer* could be stopped until the former had reached the straight and the latter had passed the Stand. When the ponies at length got away *Exile* took the lead, but bolted badly at the quarter and destroyed his chance, leaving the race to *Monarque*, *Moor* and *Rebel*. The success of the winner was certain after he passed the Blue and White ponies on entering the straight. *Monarque* was ridden by his owner. Time, 62 secs.

3.—The Mitsu Bishi Challenge Cup.—Presented, value $100. To be won at two consecutive meetings by a Pony or Ponies, the *bonâ fide* property of the same owner or owners; to be held by the last winner at each meeting until finally won. For China Ponies. Weight for inches. Entrance $5. One mile and three quarters.

Mr. W. Fairplay's *Mongolian Chief*, 10st. 8lbs... 1
,, Robertson's *Dibs*, 10st. 8lbs..... 2
,, Fiddle-de-dee's *Braemar*, 10st. 8lbs..... 3
,, Sinbad's *The Dwarf*, 9st. 13lbs..... 0
,, Earnest's *Trustee*, 10st. 5lbs..... 0

This race was looked upon as a match for *Dibs* and *Braemar*, so that the result was a great surprise. At the start *The Dwarf* took the lead, but yielded it to *Mongolian Chief* on passing the Stand, being closely followed by *Braemar* and *Dibs*, *Trustee* lagging far behind. *The Dwarf* began to fall off ascending the hill, while *Braemar* and *Dibs* closed up. At the trees it was difficult to say who had the advantage, and a most exciting struggle ensued down the straight. The *Chief* gradually went ahead, and though *Dibs* made a splendid effort he only succeeded in taking second place from *Braemar*, but failed to reach the *Chief*, who, ridden by Mr. Herhausen, won by a length in the capital time of 4 mins., 10 secs.

Original from UNIVERSITY OF CALIFORNIA

4.—THE LADIES' PURSE.—Presented by the Ladies of Yokohama and Tôkiô, value $—. For all Ponies. Weight as per scale. Entrance $5. Half a mile.

Mr. W. Fairplay's *Chief Mongolian*, 10st. 11lbs... 1
,, Riyoshi's *The Snark*, 10st. 8lbs..... 2
,, R. Jaffray's *Dusty Miller*, 10st. 5lbs..... 3
,, Earnest's *Title Deed*, 10st. 5lbs..... 0
,, Sinbad's *Davenport*, 10st. 11lbs..... 0
,, do. *Antidote*, 10st. 8lbs..... 0
,, Riyoshi's *The Boojum*, 10st. 2lbs..... 0
,, Robertson's *Mandarin*, 10st. 5lbs..... 0
,, do. *Tennessee*, 10st. 2lbs..... 0

The fractiousness of the nine ponies at the post gave the starter lots of trouble, and it was only after considerable delay that a start was effected at all, and that by no means a good one. *Dusty Miller* showed to the front at once but did not long retain his advantage. He was first passed by *Antidote* who ran wide, however, at the turn and put himself out of the race, and then by *The Snark* and *Chief Mongolian*. The latter responded well to the call his rider made upon him, and won easily. Time 60½ secs.

At the conclusion of the race, Mr Herhausen, the winning jockey, was led up to Mrs. Center on the Grand Stand, for the purpose of receiving the purse from her, when she addressed him as follows:—"I have the honour of presenting you, on behalf of the charming ladies of Tôkiô and Yokohama, their very sincere and hearty congratulations, together with this little purse, filled with golden souvenirs contributed by their fair hands in appreciation of your success to-day. Please accept with it, also, their best wishes for future victories." The honoured recipient of the extremely pretty purse which Mrs. Center presented to him replied in so low a tone that his remarks were inaudible, but judging from his pleased but bashful expression, there was no doubt that he was endeavouring to convey his hearty thanks for the honour conferred upon him and his appreciation of Mrs. Center's kindness in presenting the purse, but just after riding a hard race it does not seem to be conducive to eloquence or clearness of expression for the winning jockey to be forcibly conducted to the Grand Stand and suddenly confronted with grace and beauty. At the conclusion of his remarks Mr. Herhausen, on behalf of the riders at this meeting, presented the fair donor of the purse with a bouquet.

5.—THE NAVAL CUP.—Presented, value $—. For all Ponies, being *bonâ fide* Hacks and that have never won a flat or a hack race. Ponies entered are disqualified from entering for any other race at the meeting except for Nos. 1 and 6 on the third day. Weight as per scale. Entrance $5. Three quarters of a mile.

Mr. Alexandre's *Luck's All* 10st. 2lbs..... 1
,, do. *Petitpas*, 10st 5lbs..... 2
,, Riyoshi's *Doncaster*, 10st. 5lbs..... 3

Doncaster was considered the favourite for this but disappointed expectations, for though he jumped off with the lead he could not last beyond the quarter mile, and had to give way to his opponents, who from that point had it all their own way. Time 1 min., 41½ secs.

6.—THE HACHI-BAN CUP.—Second Prize. Presented, value $100. For China Ponies. Winners of three flat races in Japan, 12 stone 7 lbs.; No. 1 this day, and of two races at this meeting, 11 stone 7 lbs.; and of one race and non-competitors at this meeting 7 lbs. extra. Weight for inches. Entrance $5. One mile and a quarter.

Mr. Fiddle-de-dee's *Hoolet*, 11st. 1lb. (7lbs ex.)..... 1
,, W. Fairplay's *Mongolian Wolf*, 10st. 2lbs.. ... 2
,, Sinbad's *The Raven*, 10st. 8lbs..... 3
,, Robertson's *Favori*, 10st 5lbs..... 0

This was rightly enough looked upon as *Hoolet's* race. All four, after starting well, kept together until the Stand was passed and the hill gained, the "Tartan" being a little to the fore, with *Favori* second, the *Wolf* third and *The Raven* last. Soon after passing the half mile the *Wolf* drew ahead and challenged the leader, but was never able to deprive *Hoolet* of the lead, and he ran in an easy victor in 2 min. 53½ secs., being ridden by Mr. Marlborough. *Favori* was pulled up, which allowed *The Raven* to take third place.

7.—THE LEDGER CUP.—Presented, value $—. For Japan Ponies. Winner of any open race 12 lbs. extra: other winners 7 lbs. extra. Weight for inches. Entrance $5. Three quarters of a mile.

Mr. D. de Ding Dong's *Jim Hills*, 11st. 2lbs. (12lbs. ex.)..... 1
,, Robertson's *Moor*, 10st. 2lbs... ... 2
Don Carlos' *Kickapoo*, 11st. 6lbs. (12lbs. ex.)... 3
Dr. Buckle's *Sorcerer*, (late *Moh-ichido*) 10st. 8lbs... 0
,, do. *Spendthrift*, 10st. 8lbs..... 0
Mr. W. Fairplay's *Shizoka*, 9st. 12lbs..... 0

One false start happened when *Shizoka* could not be stopped until he had reached the Stand, and much delay occurred before he faced the starter again. On getting away *Sorcerer* took the lead, but had to succumb before he had gone far. The *Moor* showed first in the straight with *Jim Hills* and *Spendthrift* well up, but the latter gave way to the other two, who had a very close and hard race in, *Jim Hills* just securing the advantage by a head, thus scoring another win for his rider Mr. Marlborough. Time, 1 min. 38¾ secs.

8.—THE TOKIO CUP.—Presented, value $—. For China Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entrance $5. Three quarters of a mile.

Mr. Fiddle-de-dee's *Lintie*, 10st 2lbs..... 1
,, Robertson's *Favori*, 10st. 5lbs..... 2
,, W. Fairplay's *South Mongolian*, 9st. 13lbs.. 3
,, Earnest's *Raethia* 10st. 5lbs..... 0
,, Sinbad's *The Judge*, 10st. 8lbs..... 0
,, Ola's *Maccaroni*, 10st. 8lbs.. 0
,, Riyoshi's *The Snark*, 10st. 8lbs..... 0
,, Robertson's *Mandarin*, 10st. 5lbs..... 0

Owing to exclusions and other causes only eight ponies appeared at the post out of thirty entries. These eight gave trouble enough to the starter by their obstinacy, and when they eventually got away to an indifferent start *Maccaroni* was left at the post. *The Judge* led, but all the others soon closed up and kept well together to the trees, where *Lintie* forged ahead, being followed by *Favori*. From this point the race lay between these two, but despite energetic efforts on the part of *Favori* he could not collar *Lintie*, who won by a length and a half, being ridden by Mr. Marlborough. Time 1 min. 38½ secs.

9.—THE CLUB CUP.—Presented, value $—. For Japan Ponies. Non-competitors and winners at this meeting excluded. Weight for inches. Entance $5. Five furlongs.

Mr. Robertson's *Oyama*, 10st. 2lbs..... 1
,, R. Jaffray's *Professional*, 10st. 4lbs..... 2
,, Robertson's *Doctor*, 10st. 6lbs..... 3
,, do. *Nick*, 10st..... 0
,, R. Jaffray's *Exile*, 10st. 4lbs..... 0
,, Ola's *Moh-stotz*, 10st. 6lbs..... 0
Count Tristan's *Daimio*, 10st. 6lbs..... 0
Dr. Buckle's *Sandboy*, 10st. 4lbs..... 0

Several false starts took place. When they at length got away *Sandboy* rushed off with the lead, followed by *Professional*, who jammed the leader too close to the rails so that he fell. *Nick*, ridden by Mr. Herhausen, was close at his heels at the time and could not get out of the way of the fallen horse, so also came to grief. The *Doctor* coming next cleared the prostrate ponies by a jump, but unfortunately in doing so kicked Dr. Buckle, the rider of *Sandboy*, thereby fracturing his collar bone, Mr. Herhausen luckily escaping without injury. This accident gave *Professional* the lead, *Oyama* and the *Doctor* being well up, and the three raced hard down the straight together, *Oyama*, ridden by Mr. Marrables, eventually winning by a couple of lengths. *Exile* bolted at the turn and lost all chance in consequence. Time 1 min. 20 secs.

10.—THE CLUB GERMANIA CUP.—Second Prize, Presented, value $.—For China Griffins at date of meeting. Winners excluded. Weight for inches. Entrance $5. One mile.

Mr. Sinbad's *The Sheik*, 10st. 2lbs..... 1
" Riyoshi's *The Boojum*, 10st. 2lbs..... 2
" Robertson's *Chance*, 10tt 2lbs..... 3
" do. *Bravo*, 10st. 5lbs..... 0
" do. *Sport*, 10st. 5lbs..... 0
,, R. Jaffray's *Satisfaction*, 10st. 5lbs..... 0
,, Sinbad's *The Consul*, 10st. 2lbs..... 0
Don Carlos' *Telegram*, 9st. 13lbs..... 0
Mr. Earnest's *Bebé*, 10st. 2lbs..... 0

This race was run in the gloaming, nine ponies facing the starter, who got them well away together with the exception of *Telegram*, who objected to join the others. *The Consul* made the pace very hot and led to the five furlongs, where, his tactics having served his stable companion, he fell back, and *The Sheik* went ahead and took a lead which he never resigned, winning a capital race, with his owner riding him, in 2 mins. 18 secs. The first win of the Maroon and Pink at this meeting was received with hearty cheers.

THIRD DAY.

Saturday, 19th May, 1877.

Heavy rain caused a postponement of the third day's racing until to-day, and although the sky was overcast and threatening in the morning it cleared up beautifully by noon, at which time the first race was announced to start. There was a great falling off in the attendance, and the course was so heavy that no particularly fast time was made, and mud was flying about pretty freely. More punctuality was observed in the starting, which made to-day's events less wearisome than on previous occasions. The band of the *Tennessee* again enlivened the proceeding by some excellent music.

1.—THE HURDLE RACE.—Value $75. For all Ponies. Over six (6) hurdles. Weight as per scale. Entrance $5. Once round and a distance.

Mr. Robertson's *Doctor*, 10st. 6lbs. 1
,, R. Jaffray's *Satisfaction*, 10st. 5lbs..... 2
,, Riyoshi's *Doncaster*, 10st. 5lbs..... 3
,, Sinbad's *Antidote*, 10st. 8lbs... 0
,, Robertson's *Tim Whiffler*, 10st. 12lbs..... 0
,, W. Fairplay's *Mongolian Owl*, 10st. 5lbs. 0
Don Carlos' *Kickapoo (late Kangaroo)* 10st. 8lbs. 0

Doncaster was first over the hurdle opposite the Stand, closely followed by all but *Antidote*, who would not start. *Tim Whiffler* cut out the running, but nearly got rid of his rider at the second hurdle. At the trees *Doncaster*, *Kickapoo* and *Doctor* were well together with *Tim Whiffler* not far off, but a wide gap separating him from the others, and as *Tim* ran wide at the turn he spoiled his chance. On entering the straight *Satisfaction* came up and joined the leaders and all four were in a bunch at the last hurdle. Here *Kickapoo*,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

who was leading, swerved, and was consequently out of it. *Doncaster*, *Doctor* and *Satisfaction* took the last hurdle almost together, but in the run in *Doncaster* had to give way to the others, and *Doctor*, ridden by Mr. Williams, won by a length from *Satisfaction*.

2.—THE CONSULAR CUP.— Presented, value $—. For all Ponies. Weight as per scale. Entrance $5. Three furlongs.

Mr. W. Fairplay's *Chief Mongolian*, 10st. 11lbs..... 1
,, Fiddle-de-dee's *Maris*, 10st. 8lbs 2
,, R. Jaffray's *Professional*, 10st. 4lbs..... 3
,, Earnest's *Raethia (late Ta Phairson)*, 10st 5lbs. 0
,, Sinbad's *Antidote*, 10st. 8lbs. 0
,, R. Jaffray's *Exile*, 10st. 4lbs..... 0
,, Robertson's *Mandarin*, 10st. 5lbs..... 0
,, do. *Tennessee*, 10st. 2lbs..... 0

Eight ponies appeared at the post out of twenty-one entries, and of course gave plenty of trouble. Before they got away finally several false starts occurred, in one of which *Tennessee* and *Exile* went some distance before they could be stopped. When the flag at last went down *Raethia* was left behind, while *Maris* and *Satisfaction* got away with most advantage. *Maris* led to the turn, where *Satisfaction* took a brief lead, *Chief Mongolian* soon passing both of them, and making the lead a most decided one, winning by a length, Mr. Herhausen riding him. Time 47 secs.

3.—THE OWNERS' CUP.—Presented, value $—. For all China Griffins beaten at the meeting. Weight for inches, Entrance $5. Three quarters of a mile.

Mr. Robertson's *Chance*, 10st. 2lbs..... 1
,, ,, *Bravo*, 10st. 5llbs..... 2
Don Carlos' *Telegram*, 9st. 13lbs..... 3
Mr. Robertson's *Tennessee*, 10st. 2lbs..... 0
,, Sinbad's *The Consul*, 10st. 2lbs..... 0
,, Ola's *Maccaroni*, 10st. 8lb..... 0
,, R. Jaffray's *Dusty Miller*, 10st. 5llbs..... 0
,, Riyoshi's *The Snark*, 10st. 8lbs..... 0
,, Robertson's *Sport*, 10st. 5lbs..... 0

Nine ponies at the post again gave trouble. At the start *Sport* was left behind, and *The Consul* did not get away well. *Dusty Miller* jumped off with the lead which he kept to the three furlongs when *Telegram* picked him up, followed by *Tennessee*, but here *Bravo* ran through his horses with *Chance* waiting on him. *Telegram* next took the lead, and on entering the straight ran level with *Bravo*. Here *Maccaroni* was coming to the front when he slipped and could not recover. A most exciting race ensued down the straight, the result being quite doubtful; but at the distance *Chance* came ahead, followed by *Bravo*, and as Mr. Robertson had declared to win with the latter, *Chance* tried to favour his stable companion, but *Telegram* was too dangerous, or *Bravo* could not make sure of the lead, for *Chance* secured the win by a neck, the same distance separating *Bravo* from *Telegram*. Mr. Williams rode the winner. Time, 1 min. 44 secs.

4.—THE SPRING STAKES.—For China Ponies. Compulsory on winners on first and second days at this meeting. A sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5 to go to the fund. Entries to be made on the course at the close of the second day's racing. 1st Pony to receive 75 per cent; 2nd Pony to receive 25 per cent. Weight for inches. One mile and a quarter.

Mr. Fiddle-de-dee's *Braemar*, 10st. 8lbs..... 1
,, ,, *Hoolet*, 10st. 8llbs..... 2
,, Robertson's *Dibs*, 10st. 8lbs..... 3
,, Douglas' *Crusader*, 10st. 5lbs..... 0
,, Peter's *Skedaddle*, 10st. 2lbs..... 0
,, W. Fairplay's *Mongolian Chief*, 10st. 11lbs... 0

The ponies were despatched at once to a good start. *Crusader* passed the Stand first with *Braemar* second, and *Dibs*, *Hoolet* and *Mongolian Chief* well up, *Skedaddle* lying far behind. This order was kept up the hill, after passing which *Dibs* and *Hoolet* closed up, and shortly afterwards, the pace being too hot, *Braemar* wisely dropped astern. On entering the straight *Crusader* was done and was passed by *Hoolet* and *Dibs*, and it seemed as if the race lay between these two, though the Tartan stable had declared to win with *Braemar*. At the distance, however, Mr. Marlborough, who was riding *Braemar*, showed the soundness of his judgment in managing his pony, as he brought him ahead, and just succeeded in securing the Judge's decision, his stable companion *Hoolet* beating *Dibs* for second place by half a length. *Skedaddle*, who certainly added brilliancy to the scene by his strange contradictory colours if he did nothing else, must be a good pony, for he came well up at the finish although during the race he had stayed too far behind. Time, 2 min. 55 secs.

5.—THE NIPHON STAKES.—For Japan Ponies. Compulsory on winners on first and second days at this meeting. A sweepstakes of $10 with $5 extra for every race won at this meeting. Open also to Ponies placed second, at an entrance fee of $5 to go to the fund. Entries to be made on the course at the close of the second day's racing. 1st Pony to receive 75 per cent; 2nd Pony to receive 25 per cent. Weight for inches. Entrace $—. One mile.

Mr. D. de Ding Dong's *Typhoon*, 10st. 2lbs..... 1
Don Carlos' *Kickapoo*, 10st. 8lbs..... 2
Mr. Robertson's *Oyama*, 10st. 2lbs..... 3
,, Douglas' *The Crescent*, 10st. 2lbs..... 0
,, Robertson's *Nick*, 10st. 2lbs..... 0
,, W. Fairplay's *Shizoka*, 9st. 12lbs..... 0

Typhoon, as usual, took the lead at starting and past the Stand, but at the bottom of the hill nearly all the ponies ran wide, allowing *Kickapoo* to take the lead followed by the Blue and White. *Typhoon* after topping the hill went ahead once more but again fell back, only to recover at the trees, from which point he was never headed, and urged on by his rider, Mr. Marlborough, in order perhaps to show what the "little man" could do, won by several lengths. Time, 2 min. 20 secs.

6.—THE TITLE DEED PLATE.—With $50 added. A Handicap for China Griffins having run at this meeting, to be handicapped by the Stewards at the close of the second day's racing. Winners of any race after the publication of the handicap 3 lbs. extra. Entrance $10. One mile.

Mr. Robertson's *Chance*, 10st. 10lbs..... 1
,, Sinbad's *Sheik*, 11st. 2lbs..... 2
,, Sinbad's *The Dwarf*, 9st. 10lbs..... 3
,, Fairplay's *Mongolian Wolf*, 10st. 10lbs..... 0
,, Robertson's *Sport*, 10st. 5lbs..... 0
,, Riyoshi's *The Boojum*, 10st. 8lbs..... 0
,, Sinbad's *The Consul*, 10st. 8lbs..... 0
,, R. Jaffray's *Satisfaction*, 10st. 5lbs 0

All but one of those entered went for this and got off to a capital start. *The Consul* and *Satisfaction* led off, but all the ponies kept well together. At the trees *The Consul* was done and fell astern, while *The Sheik* and *Chance* came to the front, and from the entrance to the straight the race lay between them, although *The Dwarf* was dangerously near. *Chance*, ridden by Mr. Williams, was too good for the Arabian, and won by three-quarters of a length, the time being worse than that of the previous race, viz., 2 min., 21 secs.

7.—THE TOKIO AND YOKOHAMA BANKERS' CUP.—Presented, value $—. For all beaten China Ponies at this meeting. Weight for inches. Entrance $5. Once round and a distance.

Mr. Fiddle-de-dee's *Tallapoosa*, 10st. 8lbs..... 1
,, Robertson's *Favori*, 10st. 5lbs..... 2
,, ,, *Bravo*, 10st. 5lbs..... 3
,, ,, *Gladiateur*, 13st. 11lbs..... 0
,, ,, *Mandarin*, 10st. 5lbs..... 0
,, ,, *South Mongolian*, 9st. 13lbs..... 0
,, Earnest's *Bébé*, 10st. 2lbs..... 0
,, Sinbad's *The Raven*, 10st. 8lbs..... 0
,, ,, *The Minister*, 10st. 5lbs..... 0

Only eight appeared out of thirty-six entries. Just before he came up to the post *Mandarin* was allowed by his rider to bolt and go completely round the course, mostly with a slack rein, and was only stopped by a betto at the gate. After the exhibition his rider made on this and two former occasions to-day, he ought never to cross a pony again. At the start *Bébé* led followed by *Tallapoosa*, but going up the hill *The Raven* went ahead and led, the pace then being rather hot. At the five furlongs *The Raven* led, but *Favori* came up to him at the half mile and they raced together to the trees, when *The Raven* fell back, letting *Favori* go ahead. At the quarter *Tallapoosa* and *Bravo* came up and challenged *Favori* on entering the straight, and at the distance *Tallapoosa* was let out, and won a good race by a couple of lengths in 2 min. 37 secs., having been judiciously ridden by Mr. Marlborough.

8.—THE VISITORS' CUP.—Value $—. For all beaten Japan Ponies at this meeting. Weight for inches. Entrance $5. Five furlongs.

Mr. Robertson's *Moor*, 10st. 2lbs..... 1
Dr. Buckle's *Sandboy*, 10st. 4lbs..... 2
Mr. Fiddle-de-dee's *Distemper*, 10st. 6lbs..... ... 3
,, R. Jaffray's *Exile*, 10st. 4lbs..... 0
,, ,, *Professional*, 10st. 4lbs..... 0
,, Robertson's *Nick*, 10st. 0lbs..... 0
,, ,, *Rebel*, 10st. 6lbs..... 0
Count Tristan's *Daimio*, 10st. 6lbs..... 0

Eight ponies again appeared at the post, and after one false start got off well together. *Moor* took a lead which he never lost, no matter what efforts his opponents made. At the quarter mile all the ponies, with the exception of *Daimio* who was far in the rear, were together in a cluster, some lengths behind the eager *Moor*, and on entering the straight *Distemper* and *Professonal* were dangerous, but *Moor* could not be collared, and even though *Sandboy*, coming through his ponies, pressed him hard, he had the race entirely secure, and left

"No hinge nor loop
To hang a doubt upon,"

as he won by several lengths, being ridden by Mr. Marrables. Time 1 min. 21½ secs.

9.—THE ORIENTAL CUP.—Value $100. A Handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winners of Nos. 4 and 5 of this day excluded, and winners of any other race after the publication of the handicap 3 lbs. extra. Entrance $10. Second Pony to save entrance fee. One mile.

Mr. Fairplay's *Chief Mongolian*, 11st. 12lbs..... 1
,, Robertson's *Oyama*, 10st. 12lbs..... 2
,, ,, *Favori*, 11st. 10lbs..... 3
,, ,, *Dibs*, 12st. 5lbs..... 0
,, Sinbad's *The Raven*, 11st. 6lbs..... 0
,, ,, *The Judge*, 11st. 4lbs..... 0
,, Earnest's *Trustee*, 11st. 0lb..... 0
,, R. Jaffray's *Satisfaction*, 10st. 6lbs..... 0
,, Sinbad's *Davenport*, 10st. 6lbs..... 0

Chief Mongolian took the lead at starting closely followed by *Satisfaction*, who, ridden by the same jockey, tried boring the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

leader to the rails in the same manner as led to the deplorable accident of yesterday. Up the hill *Satisfaction* pressed the leader hard as did also *The Raven*, but the *Chief* was not to be beaten. At the half mile *Ogama* tried his best, and *Favori* came up at the three furlongs, but still the *Chief*, ably ridden by Mr. Herhausen, kept to the front. Down the straight the race lay between the *Chief*, *Ogama* and *Favori*, *The Raven* coming up for a good fourth, but the *Chief* was game, and won an excellent race by a length. Time, 2 mins. 19 secs.

So closed the Spring Meeting of the Association, after being productive of more good racing than we have seen here for a long time. Senor Don M. Alvarez acted as Judge, and Dr. Wheeler as Time-keeper; and Mr. Bayne as Starter effectually discharged a most troublesome duty. This meeting was also remarkable for the great success of Mr. Marlborough as a jockey, being most nearly approached in this respect by Mr. Herhausen.

Law Reports.

IN H. B. M.'s COURT AT KANAGAWA.

Before H. S. WILKINSON, Esq., Acting Law Secretary.

and

Messrs. E. F. KILBY, F. D. WALKER, C. S. BLAND, W. GORDON, and C. H. DALLAS, Jurors.

Monday, May 14th, 1877.

W. M. HOWLES v. E. C. KIRBY and others.

This was a claim of $15,000 damages for tort and trespass in connection with the administration of the property assigned by plaintiff to defendants for their benefit and the benefit of plaintiff.

Mr Kirkwood appeared for plaintiff, Mr Dickins for defendants.

(Continued from Saturday, 12th instant).

Mr Kirkwood, as counsel for the defence, continued his examination of Mr Talbot, who said:—I think at the meeting which I attended, Mr Skinner was also there, so I had not to sign the minutes per proxy. If he had not been there I should have signed my name. I suppose Mr Marks, when he signed his name alone, was acting for Mr Allmand. The resolutions were put to the vote and agreed upon, all present signing them. The list of creditors I sent to plaintiff I believe to be correct. There are twenty-two. Dr Sidall never attended the meetings. Messrs Lucy & Co. never appointed me as their agents. Messrs Carst & Co. sent in their claims to me. The Manager of the Yokohama Dispensary never attended the meetings. Mr Bridgens never appointed me as his agents. Neither the *Japan Mail* nor Mrs Green appointed me to act for them. Messrs J. J. Gray appointed me to act for them. Out of twenty-three creditors only eight appointed me to act as their agent. These creditors authorised me to call in Mr Ross Johnson. It was left to my discretion whom to appoint. I was sometimes forced to call a meeting within ten hours. In the exact sense of the word none of the creditors did prove their debts. They signed no affidavits. The sale took place in the 15th and 16th August. It occupied two days. I do not know that the date was changed till the 16th. I saw the *Herald* every day then, and from the 30th July to the 16th August, the sale was advertised to take place on the 16th. If it had been put in as the 15th, I should have corrected it. The advertisement appeared through my orders given to the auctioneer. The answers to the interrogatories are facts which came under my personal knowledge. Plaintiff himself told me that he called in Carroll & Co. to protect the property. I am responsible for all these answers. I never met Mr Mitchell in this matter, and he was not a partner in Curnow & Co's.

Mr Kirkwood send it was a most improper way to answer interrogatories.

Witness:—I answered to the best of my belief. I was asked "was he a partner?" I said "no." I was assured by Mitchell that he was not a partner. The chances are that I must have seen the advertisement in the paper. If my attention had been called to it I should have modified my answer. I think Curnow attended the meeting in person on the 24th June. Plaintiff was indebted to him for some small amount. As to the letters that passed between me and Mr Hill, that of the 19th August referred to a declaration of bankruptcy on the part of Howles & Black. Perhaps he looked on what we had done as wrong. I don't consider a letter like that Mr Robertson sent me a consent to the sale. I was guided in all these actions by Mr Johnson. I remember presenting a report to the creditors, and recollect Phillips going over the premises with me. I think he said the buildings were worth $4,500.

To Mr Dickins. None of the creditors who were not present at the meetings ever objected to any of my acts. The letter from Mr Robertson may have been delayed in reaching me. I did not know of its existence for some time after. I went to Mr Hill's office to ascertain whether plaintiff was willing to act straight-forwardly and assist the creditors in recovering the property which had been taken. I told the creditors that a lot of proprety had been taken by Black or his agents, and plaintiffs were requested to answer some questions before they received a release. Neither Howles or Hill ever specified the underhand proceedings at which they hinted. I told Howles in Kobe that he could have every information be required.

Lengthy arguments were now entered upon by the learned counsels and the bench about the interrogatories, and Mr Dickins was at last forced to repeat them.

Witness:—I found a man named Sutherland in possession of the property after I was appointed assignee. I called upon the Consul and asked if he would allow a constable to take charge. He said if I would give Sutherland a written order to keep the premises he would sign and seal it. I went to see the premises with plaintiff and found that a large portion of the best of the machinery had been taken away. A man named Longfellow took it. I derived my information from Howles, who made an affidavit to that effect. He said Longfellow had ruined him. Plaintiff made the affidavit in this Consulate. The original was handed to the American Consul. I believe it had to be sent to the American Minister through Sir Harry Parkes. I made application for this document through Mr. Johnson but it was not returned to me. I went to the American Consul, and when Mr Howles was present, he said, "If you can prove that the property has been taken away I will have it in store to-morrow." Mr Howles made up an affidavit, which was considered sufficient. Upon the presentation of the affidavit to the Consul Messrs. Kirby and Carroll made a bond. Mr Johnson said that no further steps were necessary. An action was commenced at this time against Longfellow and at the end I said that having recovered the property I had no further application to make. About the 4th July I was informed that the American marshal had broken in and I went down and found a quantity of machinery and boiler tubes being removed. Some correspondence then took place, and eventually the property was returned a second time, but considerably damaged and covered with rust. Action was then taken on the bond and the creditors returned $78 to Longfellow. That sum was taken out of the proceds of the sale. The boiler tubes taken away by the marshal were delivered up to Walsh, Hall & Co. the owners. From these proceedings sprung four actions. During all this time the workmen's wages had not been paid, and expenses were going on and there was no possibility of raising the funds to meet outstanding debts. The creditors believing in Mr Howles' honesty and industry, were anxious to do the best they could for him, and I endeavoured to persuade Whitfield and Dowson to take over some of the machinery and employ him as boiler-maker. They were unable to do so.

I had given a promissory note to Mr Allmand for his demand for rent. The wages due amounted to $600 or $700. There were other small expenses incurred, about $1,600 or $1,700, before the sale was resolved upon. I think the business was advertised for sale by private contract on the 15th July. No tenders were forthcoming, and I thought it better to sell by auction. The date was fixed for the 15th August in anticipation of orders from Nagasaki or Shanghai for some large machinery. I saw Mr Howles very often, Mr Black occasionally. Nearly all the meetings of creditors were advertised. Neither of the partners objected to what was done. Mr Hill never objected to the proceedings. I knew that the Bankruptcy Act of 1869 had been passed but had not come in force. I endeavoured to get a copy. Mr Howles seemed desirous of avoiding bankruptcy till September, when he asked me to file the petition. Between the 1st and 15th August no objection was made to the sale. I have no recollection of receiving Mr Robertson's letter previous to, or during the sale. The appearance of the goods was very bad though we had tried to clean them. There was rather a large attendance. The buildings on the lot we tried to let as godowns. Every one refused to have them. The doors had no proper fastenings and there was hardly anything in order. I never gave orders to eject Howles or Black. I never prevented them entering the premises. The gross amount of the proceeds of the sale was $3,490. These proceeds were applied to the expenses as per my account. I sent the list of claims to Mr Howles in 1872. These accounts and lists of creditor were never rejected. I herd nothing more about them. I could never have told plaintiff the claims amounted to $3,500 only. At the first meeting of creditors it was found they far exceeded this. (Witness here gave a list of these) No dividend has been paid to the creditors of plaintiff. The proceeds of the sale fell short by about $950. Plaintiff, as far as I can remember, made a proposal about keeping on the business. It must have been shortly before the seizure by the American Consul. The items of legal expenses in the accounts were expended in protecting the property. I was myself voted about $380 for my labours. I was engaged every day for three months. No objections were made by plaintiff to Mr Sutherland. Mr Howles made some statement in his letters that underhand work had been carried on. It was utterly untrue.

Russell Robertson, sworn, stated:—I was Vice-Consul in Yokohama in 1870, from July. (Letter produced). That is in my handwriting. It is my practice to write the draft of a letter, send it to the other office to be copied, compare the copy with the draft, sign the former and despatch it. I invariably send letters out by chit-book. I usually look to see if the letter has been received, and to institute inquiries if anything is out of order. I do not recollect making any inquiries about this letter. I am afraid that chit book has been destroyed. Letters like this are not frequently delayed in transmission.

To Mr Dickins:—I really have no special recollection of this case. My recollection has been furbished up by referrence to the papers. When the petition was made up it was addressed to me.

To the Court:—I have no recollection of Mr Talbot making an application to me with reference to the Bankruptcy Act. I do not remember, though it may be he did apply. I ought to have been in a position to give information about the Bankruptcy Act in July 1870. A letter dated Shanghai, July 6th, contains a reference to this Act. There is evidence also from the correspondence of that period that the Consulate was then able to give information. The application was made by Howles and Black.

Mr Talbot, recalled, to Mr Kirkwood:—At the meeting of 25th July, there were only six creditors present. Their authority was sufficient for all. I think ten days' notice was given of this meeting. Receipt of the accounts was never acknowledged that I know of. (Letter read)

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

That does acknowledge receipt of the accounts. I had forgotten about it.

To the Jury:—The questions which plaintiff refused to answer were in reference to certain plant and stock which were believed to have been taken away by Black. I have a draft of these which I took down at Mr Kirby's dictation.

All evidence being concluded,

Mr Kirkwood then addressed His Honour and the gentlemen of the Jury. He told the Jury that they would have to consider whether the creditors of Howles and Black held the property legally and with the sanction of Howles. The defence set up by the opposite side was that Howles was cognisant of and approved all the actions of the defendants in regard to the sale of the property. The learned gentleman contended that so far from Howles approving of the sale, the letter sent by H. B. M.'s Consul the day before, requesting Mr Talbot to stop the sale, or if he proceeded he would do so at his own risk, was proof that Howles did not concur in it. The plaintiff had been a long time in the witness box and his story seemed simple and true. When he found that he was unable to meet his liabilities he immediately went to his Consul and explained his position to him. He was advised by the Consul to call a meeting of creditors and appoint one to look after the property, which advice the plaintiff had acted upon. The meetings of the creditors which did take place from time to time were entirely informal, as they were held without the sanction of the plaintiff. And, according to the evidence of Mr Talbot, what transpired at those meetings was only made known when it suited the purposes of the few creditors who had met together. Acting under a resolution passed at one of those informal meetings, Mr Talbot took steps for the sale of the property, merely on the authorization of six creditors, and which he did at his own risk. Mr. Kirkwood argued that in the face of the objections and the fact that Talbot acted only on the authorization of six creditors, it was impossible for the Jury to a find a verdict for the defendants. He scouted the argument of his learned friend, that no action had been taken by the plaintiff until the last twelve months, as ridiculous. Going back to the subject of the letter sent by H. B. M.'s Consul to Mr Talbot, Mr Kirkwood maintained that it was evident the letter had been received before the sale, as it was very improbable that such an important document should have been delayed in the delivery under the methodical arrangements for the transmission of documents in force at the Consulate. Far fewer letters were apt to miscarry by the practice of sending them with chit books, than through the post office; and had the letter been lost it would have a different thing. He said that the time of the Court had been taken up considerably with the question of damages. And he thought that His Honour would instruct the Jury that, if they found a verdict in favour of the plaintiff, they would have to assess the damages of the goods at the time of their conversion, that was to say, their value to the plaintiff at that time. The learned gentleman then quoted several cases in support of his contention, after which he remarked that he did not know what the defence actually was; but if it was contended that the defendant Talbot had acted in the capacity of a bailee, and the Jury should look upon him in that light, he could only be considered as acting in trust until steps were taken in Bankruptcy for the liquidation of the estate. And if he had received the goods in trust, then he had rendered himself liable for damages in having disposed of them. It was needless for him to point out that the whole of the proceedings in regard to the disposal of the goods were illegal under the Bankruptcy Act; and if Howles did assign the goods to a few of the creditors, his act was invalid. If the Jury should find that he did assign his goods to a few of the creditors, then the question arose could he take advantage of his own wrong act? He, the learned gentleman, contended that he could do so, even though it was a fraudulent act. It must also be remember that the defendants must have been aware of it at the time as well as the plaintiff.

Mr Dickins objected to the expression "fraud."

His Honour remarked that if Mr Dickins had not got the option of replying, it might be worth while to go into the question as to whether Mr Kirkwood was entitled to use the objectionable term, but as it was it was scarcely worth while.

Mr Kirkwood then continued his address, concluding by requesting the Jury to give a verdict in favour of the plaintiff.

Mr Dickins then rose and addressed the Court, remarking that he appeared for the defendant Mitchell specially, Talbot and Kirby jointly, but that he did not appear for Mr Plummer.

His Honour interrupted the learned gentleman, and informed him that it was now too late to say that he did not appear on behalf of defendant Plummer, as he, His Honour, had stated at the commencement of the case that he could not take any appearance unless it was a general appearance. Mr Plummer had been included in the case, and His Honour had understood Mr Dickins to say that he would appear for him; and as a point of law he must rule that he did do so.

In reply Mr Dickins said:—I shall first take the case of Mitchell. Even if Mitchell was a partner of Curnow in 1870, it was clear from evidence produced by the other side, by Mitchell's statements, and by advertisements of the middle of July 1870, that Mitchell was not a partner when the act complained of in the petition was committed That act is laid in the 6th, 7th and 8th paragraphs of petition as done after the 4th August, and it is clear that it was done, if at all, after the 4th August. But Mitchell was not a partner with Curnow—he had not a verbal or written agreement of partnership and was paid by a salary, having no interest either in the profits or losses of Curnow's business. When Curnow sued the plaintiff for some $70, he sued in his own personal name, not as Curnow & Co. even, and plaintiff never objected to this. True, Mitchell in some degree held himself out as partner, and this might be pleaded against him by any one who had been deceived by such holding out into acting as if Mitchell had been partner. But plaintiff is clearly not in this position. Besides, even if Mitchell were a partner he is not responsible for tortious acts of co-partner unless these were done in ordinary course of partnership business. And the acts now complained of were evidently not acts in the ordinary course of the business of a store-keeper such as Curnow was. Lastly it is proved that Mitchell had nothing to do with these proceedings—the plaintiff in his evidence does not even allege it. Hence I conclude whatever might be the position of the other defendants, for Mitchell a verdict of not guilty must be returned.

With regard to the case against the defendants. The plaintiff is an honest, industrious, but obstinate man. He has persuaded himself he has been wronged and is determined to fight the question, although nearly 7 years have elapsed since the acts complained of were committed. His demands are preposterous and absurd, without a shadow of foundation in justice, law, equity or common sense. Another 6 weeks and he would have been bound by the statute of limitations. Either of his own motion or by the advice of some cunning lawyer he has just managed to hit the moment in which, while time nearly but not quite bars his claim, it quite bars our claim against him. This laches on his part, in view of the difficulties which it has imposed upon us in the matter of evidence, deprives the plaintiff of all title to consideration. Before going into the case a word is necessary as to the petition—which is self contradictory. It states that plaintiff was willing to assign his property for his debts if released from these and afterwards complains of the property being taken have him. It is evident that all he has to complain of, if anything, is that a release was not given him. So it states the property to have been properly taken possession of in June 1870 and then in August to have been illegally seized. The fact is if any trespass was committed, this could not be in August, because the property had been in possession of Talbot since June. How can Talbot be guilty of illegally seizing in August property already legally, and with consent of all interested including plaintiff, in his possession in June? Next what damages does the petition really claim? Not the value of the goods sold, but simply damages done to plaintiff in his 'trade and credit.' Where was his trade in August 1870? It had been stopped for two months. Where was his credit at same time? He had none,—less than none—he was over head and ears in debt, claims of rent, back wages, judgment and half a doz n pending actions. The position I take up with respect to the sale is that the plaintiff consented to it positively, and if not positively by a acquiescence in it before and after it had taken place. In June 1870 he finds himself in difficulties, calls his creditors and assigns his property. The proceedings were not in Bankruptcy but by private liquidation. The advantages of this plan were obvious to all, and plaintiff was, as his evidence and correspondence shows, especially desirous of not being made bankrupt. The arrangement is complete in equity if not at law, and in consideration for it the creditors agree to release him from his debts. The letter of 14th July is in fact a written release though not in technical form. It says distinctly that the plaintiff's after earnings are safe from attacks of creditors. Hence the property was out and out the property of creditors before sale took place and they had full right to do what they liked with it—sell it or eat it with or without permission of plaintiff. They had bought it, with their debts. But afterwards when formal release was wanted they had reason to suppose that plaintiff had not carried out his bargain. He was to give all his property up, creditors were to give all their debts up. The creditors had done their part and were willing to do it over again, but they had reason to suppose that plaintiff was keeping back some of his property and hence required him to answer certain questions relative to his property which he acknowledges he could have answered, but which for some unexplained cause he did not answer. Then the creditors naturally and properly refused to do anything more. Hence plaintiff can neither complain of sale nor complain of no formal release being given him—a release indeed which was superfluous as he was already fully released. It must be remembered too, that a good deal of money had been spent in defending the estate, especially with regard to the property taken away by Longfellow and afterwards recovered ($1,200, odd) on the faith of the assignment.

Next, even if Talbot had no power to sell, the plaintiff acquiesced in the sale before and after it was made. There is no question that he acquiesced up to 15th August. Then we have the Consul's letter of that date, the only piece of evidence in the whole case in the slightest degree giving it any foundation. This letter is not from plaintiff or his Consul but a mere piece of advice from the Consul, having no legal force whatever and of no more account in law than a similar letter from any one else. Nor is there any proof—no allegation even—of its having been delivered to Talbot, or if delivered, delivered before or during sale. About it Talbot has no recollection and as a fact it first turned up some few weeks ago among some old papers of Mr Johnson. If it was really intended to stop the sale why did not Mr Hill, who was a lawyer, take the proper legal steps to obtain an injunction. He knew all about the sale weeks before and was in no way taken by surprise. Again what says the letter? After asserting that to carry on the sale would work most serious injury, it curiously enough assents to the sale if a release be given. The letter then was not to stop the sale but to force a formal release being given, and brings us to the argument already made use if, that of the plaintiff has anything to complain of it is that he had no formal release given him—that and nothing else. Counsel in the course of this part of the argument with reference to the point of acquiescence refered to the Cases of Dann v. Spiner by Vesey, Catching v. Bassett, 32 Beavan Barkast v. Tennart L.

Q. 10 Equity (a case into which Consul had been formally connected) and Cook and Corporation of Leaford Low. 6 Ch. Appeals. As to the correspondence after the sale between Hill and Talbot and between plaintiff and Talbot in 1872, the letter of 15th August and the sale were never refered to in it, and no objection was made to the sale or to any of accounts or any objection whatever, other than vague insinuations and unspecified assertions of under-handedness. The correspondence confirms amply what has already been said that the sale was never objected to, only the withholding of a formal release and it had already been sufficiently shown that the formal release was properly withheld until certain questions (which Howles admitted at this trial he could answer) were replied to—questions having reference merely to the plaintiff's property—to that which he was bound to hand over to his creditors The very last phrase of the correspondence at the end of Mr Hill's last letter (September 6th 1870) is "Messrs. H. & B (H. is plaintiff) here made no request for an unconditional discharge *and do not decline* to answer the questions . . . . . to secure a discharge *as proposed by you* (Talbot) *herstofore*." How in the face of all this the present action could be brought passes understanding. Taking, however, the view of the case most against the defendants, what damage can Howles complain of? If what was done had not been done what would have been the result? The landlord could have seized and sold for rent, the judgment creditor could have done so, the plaintiffs in the pending actions could have put themselves in a position to do so likewise, or the creditors could have put Howles into Bankruptcy. That they did not do so was purely out of consideration for him. Had they done so the property would have been sold at a still greater sacrifice in all probability and the debtor would not have been free for three years. The sale was an absolute necessity as already clearly shown from the evidence. That a great sacrifice was made is undoubted; such a sacrifice is inevitable in such a sale. But how could it be avoided. I have already shown that his trade and credit could not suffer by the sale because he had then neither trade nor credit – not credit enough to pay his rent or even Curnow's small claim of $70. And I have shown too that the absence of a Consular release was no injury to him. He had the release of the 14th July, all the release implied in the actions of the creditor and when he commenced the action he had the best release—release by effluxion of time. In the interval he had been left entirely alone and kept to himself every jot of his earnings. No doubt if the proceedings had been in Bankruptcy they were irregular, but they were not in Bankruptcy, which all parties desired to avoid. If Howles had any cause of complaint he could at any moment for a few dollars have righted himself by filing his own declaration in Bankruptcy. So too though all the creditors did not attend the meeting, four-fifths in value did, and the rest acknowledged the proceeding by presenting their claims, none of which, nor the accounts were ever disputed by plaintiff and his attorney otherwise than in the vague manner already referred to. Such acquiescience is equivalent to an acceptance of such accounts and claims. Finally the case is a most curious one. The plaintiff owed some $7,000, did not pay a cent, made his creditors lose a further sum of some $900 on protecting his property after transfer to them and now, after seven years, asks you to give him $15,000, without producing a shred of evidence that he has in 'trade or credit' or otherwise lost a single cent by the action of his unlucky creditors. The learned counsel then shortly recipatulated the principal points and left the case to the jury.

Without retiring, the Jury returned a verdict for the defendants, costs to be borne by plaintiff.

Thursday, May 17th, 1877.

KATO HEGORO *v.* W. CURTIS.

Claim for $88.44, for poultry supplied.

Kato Hegoro, cautioned, stated:—I live at Motomachi, Yokohama. I am a poulterer. Having known defendant for a long time, I supplied him with fowls from November 6th last year at his request. I allowed him to get them a long time without payment. I received *yen* 100 in the spring, in payment of the greater part of last year's bill. I further supplied him after this payment till February 2nd. There was still a considerable balance unpaid.

Defendant said that to shorten the case he admitted the claim. Dull business only kept him from paying. He only wanted time, and would pay by installments within a month.

Ordered to pay $44.44 on June 1st, and $40 on July 1st.

Friday, May 18th, 1877.

MIURA DANYEMON *vs.* WM. CURTIS.

This was a claim for $16.50, for two tons of coal sold and delivered.

The defendant did not appear, and plaintiff having proved his claim,

His Honour ordered that the amount of $16.50 be paid within ten days.

AWOHI YOSHIRO *v.* WM. CURTIS.

In this instance the plaintiff sought to recover the sum of $55.50, balance of account for goods sold and delivered; and produced an I. O. U. for $50, which he alleged had been given him.

There being no appearance for the defence, judgment was given for the amount claimed, to be paid within ten days.

ARAI TOSUKE *v.* WM. CURTS.

This was a similar case to those preceding it, being for $85 for goods sold and delivered.

In the evidence adduced it was shown that the defendant had given the plaintiff an I. O. U. for $85, but had paid $10 off that amount.

The Court made an order for $75 to be paid within ten days.

KANI SHINKICHI *v.* WM. CURTIS.

Claim: $32.50, balance of an account for work done.

Judgment for the amount claimed, to be paid within ten days.

IN H. I. R. M.'s CONSULAR COURT.

Before A. PELIKAN, Esq, *Vice-Consul.*

Messrs. VAN OORDT and BOGONOLOFF, *Assessors.*

Friday, May 18th, 1877.

A. DUNCAN *v.* N. NORDENSTEDT.

The plaintiff is a lawyer residing in Kobe, and brought a claim for $466 for fees, and $150 interest. It appears that in October last year there was a dispute between the present defendant and Mr Strome, which was settled by arbitration. In that case the plaintiff represented the defendant, and now sought to recover his fees for the same.

The plaintiff attended personally, but defendant did not appear.

Mr R. Bishop, Registrar of H. B. M.'s Court, was examined by the plaintiff as to the practice observed in regard to the charges of solicitors; after which the bill of charges was placed in the witness' hand and he was asked to give opinion relati ve to the items. The witness replied that in the first place he must say that it was got up in a slovenly manner; no retainer's fee had been inserted and neither was there any scale of charges, consequently if the action through which the present case originated had been for $10,000 or $15.000, a charge of $1,000 might have been made. Some of the charges mentioned in the bill, the witness considered as charges that could not be allowed; while other items were below the usual practice. The last item of $350, after having heard the explanation of the plaintiff, there being no rebutting testimony, was a fair one.

The plaintiff then read and handed into Court some correspondence relative to the case.

The judgment of the Court was, that the items charged in the account were not excessive according to British law, and that the defendant pay the amount claimed, less the interest, and costs of Court.

The plaintiff said that as Mr Strome had a sum of money belonging to the defendant, he would apply for an order from the Court for him to pay the amount.

His Honour replied that, as the defendant had the right of appeal, he could not make such an order at present.

HOUSEHOLD REGENERATION.

(Saturday Review.)

If there is wisdom in the multitude of counsellors, young mistresses of households are likely to become peculiarly sagacious. Almost every week sees published a little book full of good advice to the timid and inexperienced matron, and of instruction as to door-mats, domestics, decoration, and kindred topics. If any bride insists on hiring a lady-help as cook, and an ebullient ex-ballet girl as housemaid, it is not for want of warning; and no lady has now a right to say that she is ignorant of the virtues of gas-stoves. As tract succeeds tract, each more well-meaning than its predecessor, one begins to feel how deep is the abyss of contemporary helplessness. Have brides no mothers, or has life changed so much that the experience of wise and aged women has ceased to be of any avail? Is the gulf between the customs of this and of the last generation so wide that oral traditions of housekeeping are no longer of any value? From a small work called *Household Organization*, by Mrs. Caddy (Chapman and Hall), we gather that the author is of this opinion. These are hard times, as Mrs. Caddy observes. After seven years of unbroken national prosperity in England, and of untrammelled money-lending to all and sundry, the Turk has surprised us with a more than Oriental skill in the science of repudiation. His friends, when told that he has not improved, and can not improve, may point proudly to his advanced ideas of finance, ideas akin to those of the enlightened Pennsylvanians. But the holder of Turkish bonds is not consoled by reflecting that the truth of the great doctrine of human progress is defended against the sneers of the cyncial by the financial policy of the Ottoman. On the contrary, he remembers, with Mrs. Caddy, that "many could not, last autumn, afford to buy the breath of sea or mountain air which would have strengthened them for the burden of the new year." The burden is peculiarly heavy, moreover because "we may be going to pass through seven years of dearth." We must brace ourselves to bear adversity. "Tattersall, who generally has a hundred and fifty applications for coachmen on his books, has now a hundred and fifty coachmen applying to him for situations." This is terrible, but "we have in the case of France an example of how a great nation can rise renewed in strength out of over-

whelming troubles, and our trial is less than that of France." Certainly, the trials of France cannot be expressed in terms of coachmen. Her need is greater than ours; but a little moral regeneration can do us too no harm, and many a family many come to bless the unconscious Turk who has provided England with a salutary current of the cold air of adversity. Meantime it is fair to say that, though the author of *Household Organization* may raise a smile now and then by her somewhat stilted style, still her practical hints and moral and economical advice are very far from being contemptible.

Servants, their extravagance, insolence, carelessness, and the rest, furnish Mrs. Caddy with much matter for moralizing. During the seven fat years we have multiplied our wants, and become more indolent, while the class from which servants come has done much the same thing. M. Taine has remarked that, "from England to France, and from France to Italy, wants and preparations go on diminishing." This is true, and when we go further and reach Brazil, we find man content with a simple gourd. He scoops out the inside, eats it, puts half the shell on his head, and there he is. But it is clear that unless we are to go all lengths with Rousseau, we cannot reduce our wants and preparations to the heathy simplicity of Brazil. Mrs. Caddy, in a fine passage, calls on the "women of England to encourage and support the men in an endeavour to return to simplicity of life, to a more manly condition; call it Spartan, Roman, Republican, what you will," but of course she would not call it Brazilian. Nay, even Italian abstinence from luxury comes perilously near that of Congo in some important respects, as Colonel Lane Fox reminds us in a learned work. We may restrict our wants, but only within rather narrow limits; and the men of England must encourage and support the women in efforts which we shall not call Spartan, for Spartan ladies, as Aristotle ungallantly declares, were the ruin of the State. It is not absolutely necessary that English ladies should strive to reach the straightforwardness which Mrs. Caddy admires in the lovely and accomplished daughters of our colonists. "You hear them talk quite freely of how Colonel So-and-So called in the morning while they were 'stuffing the veal' to ask for the two first dances at the ball at Government House in the evening." It may be well that ladies should stuff veal, though, in the absence of evidence, we withhold our opinion; but the gallant and ardent Colonel should have kept his request for a more convenient season. It is also often needful to do things which it is not so needful to talk freely about, and "stuffing veal" is a theme which does not require to be discussed in general society. Mr. Matthew Arnold in a recent article speaks of "the steady and respectable life of the middle class which makes one shiver: its hideousness, its immense ennui." Would Mr. Arnold shiver less, would the ennui be lightened, and a tender grace be cast over the hideous, if young women spoke freely of how the captain paid a visit just as they were plucking the fowls for dinner, or were peeling the potatoes? No; enthusiasm may carry one too far; and the author of *Household Organization*, when she comes to details, does not advise maidens and matrons to receive their friends in the kitchen. "Order, comfort, and loveliness" are not to be secured in that too colonial fashion.

Before the women of England can rise to the moral heights to which they are afterwards to drag up the men—like the pretty girl on the sea-washed rock in a popular engraving—they must reform their bad habits. Late hours, for example, will never do in the moral regeneration. The Prince Consort, our author says, felt painfully the difference between England and Germany in respect of late hours. Indeed the Royal family are made to furnish the middle classes with most admirable examples of conduct. "The favourite story of the Queen always putting away her own bonnet, and folding up the strings, helped much in sweeping away fanciful gentility." We acquit this guide and philosopher of the family of the charge of sympathizing with persons who revel in this "favourite story." After imitating the early hours of the Germans, women are advised to copy the cheerfulness, frugality and keen, clear-headed habits of business of the French. From the Spaniards they are to learn "what it is to sink into the scorn of other nations through smoking and debt." The Dutch are to teach cleanliness, the Swiss simplicity, the Italians patriotism. From the Americans, ladies are to learn something, though what the exact lesson may be is not very clear. Thus regenerated woman is to be simple, clean, bright, patriotic, early rising, no smoker, not inclined to run into debt.

These are general precepts which it is easy to learn; but practice is more difficult. How is money to be saved? how is display to be avoided? how are servants to be managed or dispensed with? Our counsellor has a great many practical hints to give as to the economy of labour. In a house where there are grown-up daughters, servants are scarcely necessary. A "lady help" or an occasional charwoman may be useful; but the girls of the family can make the beds, dust the furniture, and even cook the dinner. A kitchen ought not to be on the casement, but on a level with the dining-room, and may be fitted up in a decorative way, or in the Swiss style. The cook, too, may attire herself in a Helvetian costume; and mottoes in Old English character, "which is similar to the German Gothic type used in Switzerland, form an appropriate decoration to the cornices of the room." Everything, in short, may be Swiss, except, let us hope, the meat and the cooking. A mere man, in training for the Spartan, Republican, or Roman form of life, is sure to rebel against veal-cutlets, tough chicken, and eternal lettuces. "Cuckoo clocks and a few hooks of chamois horn carry out the effect," we willingly allow, and "a Swiss costume will add a great charm and liveliness to the scene." But the poor bread-winner must be spared his only tie to life, and not be put off with the strange food of the Alpine *cuisine*. It is still true of the father and husband, as many ladies have found out since the days of Molière's Cathos and Magdelon, that he has "la forme enfoncée dans la matiere." The mountain gloom and the mountain glory are all very well at Zermatt; but the Swiss cutlet is a large element in the mountain gloom which we are glad to leave behind us at Basel.

In all reforms the little attractive details of costume and uniform help to make people overlook the difficulties of a new task. Mrs. Caddy is quite right to lay stress on the prettinesses of her new fashion of domestic life. It is perfectly true that girls might do a good deal of household work, in place of lounging, pouting, writing letters, making anti-macassars, and reading novels. They would be more contented if their mornings were occupied with distinctly serviceable work. A few simple arrangements, like those suggested in this little manual, would facilitate this change in habits, and this adoption of new duties. We need not, however, go so far as to encourage girls to tint the ceilings in distemper. The Renaissance is not yet so powerful that, as our monitor thinks it well to advise, every family need "possess such a collection of beautiful objects for daily use as should for ever prevent our sighing after the palmy days of Greek art." If once we are going to feel a passionate regret for Greek art, even "the beauty and comparative cheapness of our Worcester and other pottery" will not, alas! console us.

> Some harping of the God of golden head,
> By Delian waters waiting to be dead,

will still reach, still sadden us with an ineffable desire, even though our daughters "paint the ground on which the plaster design is embossed" on our cornices, and thereby "give a cameo effect which is elegant." "The necessary materials are a pennyworth of whitening, a pennyworth of size, and of the required tints a pennyworth. This quantity of material is sufficient to tint every cornice in the house." It seems cheap at threepence, and the operation, though "messy," is no doubt amusing; but there will always be spirits which these things cannot console for the art of Greece. There is really more of the Greek spirit in Mrs. Caddy's advice to mothers to "cultivate musical young men." Socrates, too, cultivated musical young men.

Perhaps it is natural that writers who really have to deal with changed conditions of society, with luxurious and half-educated tastes, with a demand for leisure and beauty arising in natures which can neither understand beauty nor worthily employ leisure—perhaps it is natural that they should find themselves overburdened by their subject. They may begin with the intention of giving a few practical hints, and suddenly find themselves lost in a current of general ideas. Or they may begin with general ideas, and make a rapid descent to practical details. In either case there will be matter to smile at, with no ill-natured amusement. But the fact remains that people are beginning seriously to ask themselves what state domestic life has come to, and how to improve it, how to give it order and meaning. The little manual before us shows much intelligence, and hits on the right answer to the problem. Thought must be expended on household management, and personal care and industry must not be spared. People must make up their minds to accept a difference in their mode of life, and must accept the fact that they are poor, and cannot afford to imitate the rich. For cultivated people whose friends are wealthy this change can never be easy, as indeed it is never easy to prefer reality to appearance. The danger of falling into a German mode of life, in which the women of the family are sometimes little better than servants, and have few ideas beyond household management, is one which the advocates of retrenchment rather overlook. Every one has not the strength to lead two lives, and

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

be at once a cook and an educated lady. Still, even if little beauty is brought into the life of the middle classes by moral regeneration in the shape of economy, at least the burden of the "immense ennui" will be lightened by moderate household work.

MISSIONARIES AND ELEPHANTS.

(The Weekly Scotsman.)

A number of Baptist ministers of New York are just now seated in conclave, discussing ways and means of providing a missionary somewhere in Hindostan with an elephant. The reverend brother *in partibus* has discovered that the possession of one of those powerful and sagacious brutes would lighten very greatly the labour of his charge, and he has his eye on an animal which would exactly suit him. It is safe, steady-going, and affords that easy seat which is so grateful to the cloth; and it is to be had for an old song. We cannot doubt that when a plan has been properly matured by the New York committee, the ladies of the denomination will throw themselves into the work with the ardour that they never fail to display when missionary interests are at stake, and that by means of a bazaar, or some other familiar device for charming money into ecclesiastical coffers, the petitioner will soon be master not only of an elephant, but of a mahout to attend to its wants, and a paddock for it to stretch its legs in. The incident is perhaps worth a little attention, as illustrating the comforts that are now within the reach of those who have a cure of souls among the heathen. A missionary of the old-fashioned type would as soon have thought of asking for a kraken as an elephant, and in old-fashioned times he would have had as much chance of getting the one as the other. Now, with a Committee and Mrs. Jellyby to look after his wants at home, he knows that he has only to call out loud enough to have every vacuum in his larder, his wardrobe, or his stall instantly filled; and it is not unnatural that, with the consciousness of this, his heart should be lifted up, so that he should desire to ride on elephant-back, and from that elevation look down on the dusty and dangerous ways along which his flock are plodding. It is not, of course, suggested that any of the good things of this life are too good for him. There are people who grumble at the millions that are annually sent out of the country for the support of foreign missions, and the comparatively small amount of benefit that seems to come of them. The cash, they say, might be much more advantageously and economically spent in bringing up the children of Bill Sikes in an honest way of life, than in supplying the youth of Borrioboola Gha with unlimited tracts and flannel jackets. The people who argue in this manner, besides forgetting how much less interesting and attractive an urchin is whose face will rub white with soap and water than one whose colour is "fast," cannot have perused, in a spirit of faith, the missionary records and reports. If they had, they would have found that, although the blackfaced flocks that have been gathered together are small, counting by the number of heads, the quality is eminently good; while the shepherds are, to a man, hardly less than angelic in wisdom and grace. Indeed, their goodness reflected from these reports, is such as to inspire incredulity, like the preternaturally sagacious look of a famous Lord Chancellor of England. They look wiser and better than it is possible for any class of men to be.

When we turn to other sources of information, the impression receives some confirmation. You do not have to look far for the missionary in exploring the secular walks of life abroad. He has rather indeed a knack of getting into peoples' way. You cannot wade many pages into a Colonial blue-book without breaking your shins against him, generally in an obstructive attitude, and he is constantly making his appearance in books of travel, and not always in so dignified or poetic a light as could be wished. Take, for example, the Tonga Islands, which are a veritable South Sea paradise for the missionary. There he has a free field and everything in his favour. King George of Tonga is himself an enthusiastic missionary of the Wesleyan persuasion; and assists with regal authority the collection of the sustentation fund. There is nothing to fear from the friendly Friendly Islanders, who are the mildest of mortals, and the most revered national hero is the captain of an English man-of-war, who, with a curious perception of his duty, died with a cutlass in one hand and a Bible in the other, in an attempt to force the latter down the throat of the natives at the point of the former, or, as the little Tongans are taught in their spelling-books, "in promoting Christianity by means of the sword." Even in Tongatabu, according to a charming writer who has just visited it, and who is inclined to do full justice to missionary merits, life stops one or two stages short of ideal perfection. He admits, for instance, that it "tells against the statistics" to find the natives crowding about you begging for small change in return for their silver dollars, on the ground that they must pay something for a *maki-maki*—a grand religious palaver that was going on—and that if their spiritual guide got his fingers on the coin there was no hope of any portion of it finding its way back to their pockets; or to see, as he did at one island, "a native teacher whip the villagers into a little chapel hut, where accordingly they went, sat down, and sang hymns very prettily, much to our edification." The Roman Catholic missionaries are believed to have special talents for the work of converting the heathen, and China is spoken of as a portion of the "field" in which they have laboured most successfully. The Abbé Armand David, an energetic missionary and naturalist, who has been travelling to and fro and walking up and down in that country, refreshing the vineyard, with a geologist's hammer in his hand and a botanical case at his back, has just published an account of his journeys, and it is plain the good father is hardly satisfied with what he saw. "The deplorable divergence in the teaching and practice of Christianity," he says, "is for Chinese a *seminarium* of indifference," and in his opinion, the "general conversion of this people if it ever takes place, can only be looked forward to in a future still very distant." Especially offensive did he find the "Mandarin manners" of the native priests; and the "excessive obsequiousness" of their flocks to the spiritual teachers of their own inferior race filled his soul with wrath and grief. A meeting with one of these priests was an ordeal trying to his patience as a Caucasian and a Frenchman. "Seated in a chair, borne by four Christians clothed in red, and preceded and followed by a numerous *cortege*, his approach heralded by the discharge of firecrackers and petards, Père Chang advanced up the slope of the hill, so impressed with his own worth, or so unconscious of his surroundings, as never to think of dismounting and walking when the road became steep and difficult." Elephants are not to be had easily in China, and perhaps four fellow-Christians are the best substitute that can be procured; but in the circumstances there is some excuse for the Abbé's growl that "by the side of a Chinese who does not even take the trouble to fill his own pipe for himself, it is but a sad figure that is cut by a foreigner, who wearies himself out every day, wearing no clothes but the commonest, and performing, without cessation, work of the meanest character." It will be admitted that not a few of the ordinary weaknesses of human nature peep out in the airs of this "Mandarin priest," and the bitter grumblings of the Abbé, but we shall look in vain for any trace of either in the next issue of the "Annals of the Faith." In spite of this and similar authorities, therefore, there is reason to think that the missionary is not so far raised above the infirmities of humanity as to be incapable of being spoiled by coddling, or profiting by a little good advice, honestly offered.

It might be found, on inquiry into missionary failures, that the cause has as often been wrong impressions of the nature of the work, and a wrong choice of men and means of carrying it out, as the difficulties inseparable from the work itself. The true missionary—there have been and doubtless are some noble specimens—should be a sort of moral backwoodsman, a pioneer who, by the force of his influence and example, clears the ground for the slow growth of civilised ideas. The missionary of actual life, on the other hand, is frequently a feeble evangelist whom the Church finds not suitable for home consumption, but who may go down very well with blacks; or he is a mild enthusiast who fancies he has a "mission" for the regeneration of mankind, and as he plainly sees that it does not lie among the rough, coarse argumentative heathen at home, is convinced that it must be with those poor dear savages abroad. The popular imagination clothes him in habiliments of spotless black, with a turned-down collar, and pictures him with a hectic flush in his pale cheek, and most weak hams. The true ideal of a missionary is one with the nerve of a lion tamer, a Bow Street officer's experience and address in dealing with human "cussedness," and the patient endurance of a Job, with as much enthusiasm and tenderness as you like thrown in. He does not wander about paving the low latitudes with good intentions, but settles down to what he knows to be an exceedingly hard, rough, and disagreeable work, and is not troubled with visions of elephants. He knows that he will have to meddle with moral filth unspeakable; and that the native, of whatever colour, viewed closely and stripped of his romance, is a remarkably ugly customer—that he is a child in intellect, with full-grown passions and ineradicably bad habits, and that he differs from the home rough mainly in being more stupid, more inaccessible to arguments and influences that are likely to

Digitized by Google

have a good effect, and in being evil from necessity rather than choice. This is the soil which with a light top-dressing of the Confession of Faith, the Thirty-Nine Articles, or the Creed of Pius V., is expected to yield a rich crop of the Christian graces and virtues in the course of a season, though a hundred hands have been busy planting their contrary vices. It is not to be wondered at that the returns are disappointing, that the missionary field is often waste and weedy, and that some strange new weeds, much as hypocrisy and the like, are forced into growth, which the many-troubled missionary is fain to bind up with his meagre sheaves. The regeneration of the savage is a slower and more laborious process than many think; and it should take a full generation at least to teach him the very first lesson, which must be taught by example as well as precept—the nobleness, the imperative necessity of honest toil. It is satisfactory to notice that in the latest missionary enterprise of the Scotch Presbyterian Churches—the Lake Nyassa mission—the industrial part of the work is to have a prominent place; and it is sincerely to be hoped, for the sake of missionaries and missioned alike, that the spade, the primer, and the Catechism will be taught in their natural and not in their ordinary sequence.

REUTERS' TELEGRAMS.

The War.

London, 4th May, 1877.

The Russian are gradually advancing on Armenia and have occupied Bayazid.

In the House of Commons in reply to a question, the Chancellor of the Exchequer said that England was not prepared to consent to the exclusion of war vessels from the Suez Canal, but would however take steps to protect the Canal.

London, May 7, 1877.

The Russians have made two separate attacks on Kars, and been repulsed with heavy loss and compelled to fall back.

The British Ironclad Squadron, now at Corfu, has been ordered to rendezvous at Crete.

Austria observes neutrality, while reserving liberty to protect her interests.

England has annexed the Transvaal.

London, 6th May, 1877.

The China Loan is now officially quoted in London.

ARRIVAL OF THE ENGLISH MAIL.

TELEGRAMS.

London, 23rd April, 1877.—Roumania is concentrating troops at Kalafat. There are conflicting accounts. Detatchments of Russian Troops have arrived at Bucharest this morning.

England has informed Turkey that her support is impossible.

A declaration of war is expected on Tuesday.

The Russian Chargé d'Affaires has broken off diplomatic relations with the Porte.

The Sultan will command the Turkish Army.

The Porte has requested Prince Charles of Roumania to act with Abdul Kerim Pasha.

London, 24th April.—No Russian circular despatch justifying the proclamation of war has yet been delivered to the Powers.

London, evening 26th April, 1877.—The Russians are advancing rapidly. They have crossed the frontier at Alexandropol. The main Russian Army is moving towards Dobrudscha, and it is considered doubtful whether the Turks will arrive in time to prevent the passage of the Danube.

London, 27th April.—The Russians commenced hostilities at Ardahars and were routed near Batoum with a loss of 800 men.

Bombay, 10th April.—The new Cabul Envoy is reported to have arrived at Jelallabad *en route* to Peshawur. It is expected that the Conference will be resumed. Fresh outrages have occurred on the Frontier. A native Inspector of Police has been killed by the hill men and the European Assistant Commissioner escaped with difficulty. The Viceroy arrived at Nynee Tal on the 7th.

Bombay, 10th April.—The increase of labourers on Famine Relief Works in this presidency was 17,232 last week, bringing the total to 253,270. The deaths from cholera at Dharwar were 420.

Allahabad, 11th April.—A rupture of the Government of India with Cabul is believed to have taken place. It is attributed to the discovery of the Ameer's attempts to excite a religious war in Kandahar.

A projected murderous attack on Dr. Rowe, the Superintendent of the District Jail at Allahabad, was discovered yesterday by information given by an old servant and confirmed by an ex-prisoner.

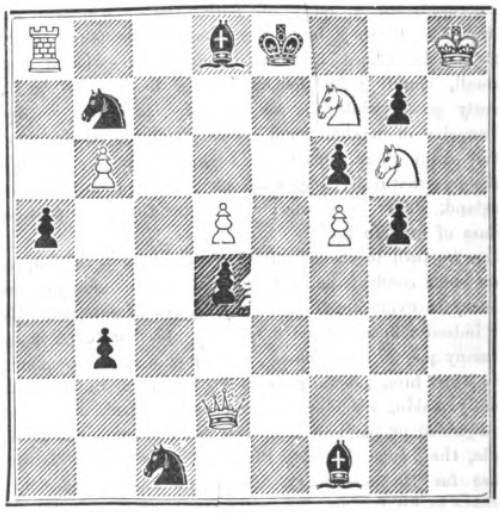
Galle, 16th April.—Early this morning a steamer, supposed to be the Scotland, was seen making straight for the Whale rock, and the well known signal "Hold off, you are running into danger" was hoisted at the flagstaff. The steamer at once went off at right angles, and acknowledged the signal. Orders have at last been received in Galle to buoy off the "Whale" and "Gindurah" reefs.

Teheran, April 17.—The Persian camp at Kermansha has been raised and the troops sent to the interior.

Simla, April 18.—Since the death of the Cabul Envoy and the Conference at Peshawur was closed, no definite change of relations between India and Cabul has taken place. For some time past fanatical feelings have been stirred up in Cabul arising probably from European events; otherwise there is no groundwork for disquieting rumours spread by irresponsible people. The Frontier is quiet, and events beyond it are unlikely to disturb peace and security.

Galle, 18th April.—The French Transport *Sarthe*, to Saigon, has struck on the Gindurah Reef. The damage done is unknown. She has her flag half mast high, and has fired two or three guns. A Messageries steamer is ordered to proceed to her assistance. The Transport ran on the rock about one o'clock.

Berlin, 18th April.—*Semi-official Correspondenz* of Berlin says that since no hope is entertained of averting war the Great Powers will endeavour to localise it.



Vienna, 19th April.—The Roumanian army is being mobilized. It is stated that Austria will occupy Bosnia and Herzegovina when the Russians cross the Danube.

London, April 20.—After a closely contested election the Conservative candidate has been elected for Salford.

PROBLEM.

By W. B. Mason, Tôkiô.

BLACK.

WHITE.

White to play and mate in 3 moves.

Solution of S. E. Farbier's problem of last week.

White.	Black.
1.—Q. to K.'s 4th, ch.	1.—B. to K. B.'s 5th.
2.—Q. to Q. R.'s 4th.	2.—Anything.
3.—Q. mates.	

Correct answers received from W.B.M., and W.H.S., Tôkiô. F. S. is wrong in his first move.

COMMERCIAL INTELLIGENCE.

Cotton Fabrics & Yarns.—The market has been quiet throughout the week. Business has been on a very limited scale and prices show little or no fluctuation. No. 16/24 *Yarns* are more readily saleable at somewhat better prices for cheap qualities. Transactions in No. 28/32 have been unimportant. No. 38/42 have met with rather more enquiry, and a few sales at low prices are reported. *Grey Shirtings* have undergone no improvement; the subjoined quotations are therefore almost purely nominal. *Black Velvets* are attracting a little more attention, but other articles remain dull and unchanged.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.45 to $1.80	60 to 64 reed 40 yds.	35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.65 to 2.25	Turkey Reds 24 yds.	30 in.	2—3 lb. per lb. 0.67½ to 0.82½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.62½ to 2 35	Black Velvets		7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2 52½	English Drills 15 lbs.	40 yds,	30 in. 2.60 to 2.85
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.45 to 1 65	Taffachelass	12 yds,	48 in. 1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No. 16 to 24	per picul...	$28 50 to 32.25	No. 38 to 42 ...per picul... $34.00 to 38.00
No. 28 to 32	per picul...	$30.50 to 34.50	Reverse Twist 16-24 ,, ... $33.75 to 34.00

Woollens.—The same quietness still prevails in our market and prices are as unsatisfactory as before. Some demand for plain *Mousselines de Laine* has sprung up but has been chiefly confined to some special colours. *Blankets* have found buyers for the Government.

Plain Orleans	40—42 yds.	32 in.	5 50 to 7.00	Figured Mousselines de Laine ...30 yds. 30 in... 0.24 to 0.28
Figured Orleans	29—30 yds.	31 in.	4.25 to 5.25	Multicolored ,, ...30 yds. 30 in... 0.28 to 0.36
Shimagoro	30 yds.	30 in.	4.00 to 5.25	Cloth, all wool plain or fancy ...48 in. to 52 in... 0.80 to 1.20
Italian Cloth	—30 yds.	32 in.	0.24 to 0.31	Presidents ...54 in. to 56 in... 0.60 to 0.65
Camlet Cords	29—30 yds.	32 in.	5.75 to 6.00	Pilots ...54 in. to 56 in... 0.45 to 0.55
Camlets Asstd.	56—58 yds.	31 in.	16 50 to 17.50	Union ...54 in. to 56 in... 0.60 to 0.75
Lastings, Japan	22—30 yds.	32 in.	12.00 to 13.00	Blankets, scarlet & green 6 to 8 lbs....per lb ... 0.40 to 0.47
Plain Mousselines de Laine	—30 yds.	30 in.	0.16¼ to 0.10	

Sugar.—There is some improvement to note in our market, which shows an upward tendency. Stocks are estimated at 40,000 piculs.

Sugar:—Takao in bag	per picul...	$4.65	China No. 4 Kook-fah	per picul...	$6.20 to $6.40
,, in basket	,,	$4.50	,, No. 5 Kong-fun	,,	$5.70 to $6.10
Taiwanfoo in bag	,,	$4.40	,, No. 6 E-pak	,,	$5.20 to $5.40
do. in basket	,,	$4.25	Swatow Brown	,,	$3.90
China No. 1 Ping-fah	,,	$8.00	Daitong	,,	$4.20
,, No. 2 Ching-pak	,,	$7.30 to $7.70	Japan Rice	,,	$1.90 to $2.05
,, No. 3 Ke-pak	,,	$6.60 to $6.80	Kerosene Oil	,,	$4.00 to $4.10

Kerosene Oil.—The market as declined to $4.00 to $4.10, and the demand is only from hand to mouth.

Silk.—The dulness reported in our last issue has suddenly subsided. Telegrams advising an improvement in the European markets in consequence of unfavourable weather, and doubts concerning the result of the continental crop, have caused a few buyers to operate on a rather considerable scale; pretensions of holders have, however, in several instances prevented business, as they are now asking a rather stiff advance on last week's prices. Rejections of Hanks have been especially large.

Shipments amount to:

Hanks	38 bales
Oshius	120 ,,
Filatures	32 ,,
	190 bales

We quote:

		In London at 4s. 2d.	*In Lyons at 5.20.*
Fair medium, *Hanks*	$540 to $560	20/3 to 20/11	frs. 55.50 to 57.50
Medium to common, *Hanks*	$500 to $530	18/10 to 19/11	frs. 51.50 to 54.50
Fair *Oshius*	$530 to $550	19/11 to 20/7	frs. 54.50 to 56.50
Medium *Hamatski*	$430 to $450	16/5 to 17/2	frs. 45 00 to 47.00

There are reports of slight frosts in the Oshiu and Shinshiu districts, but on the whole natives expect a fairly good crop; it is, however, too early yet to form a reliable estimate of the yield.

Tea.—A brisk business has been done during the closing week, New Crop Teas coming in pretty freely and finding purchasers on arrival.

During the early part of the week natives were rather anxious sellers, being evidently in want of funds, but this pressure seems in a measure relieved and they are now rather firmer in their demands, prices showing an advance of $1.50 to $2.00. Settlements for the week amount to 4,400 piculs, which nearly accounts for total arrivals to date, so that stocks are merely nominal.

The quality of the New Leaf shows great superiority in comparison with first arrivals for the past two or three seasons. The leaf has not only been more carefully prepared but the weather has been very favourable to its proper development. With fine weather ample supplies are expected during the course of next week.

Prices for grades so far to hand close as under:—

Fine	$29 @ $31
Fine fine	$32 @ $34
Finest	$35 @ $37
Choice	$38 @ $43

Exchange.—The holidays during the past week have somewhat interfered with business, and rates close slightly easier.

Rates close as follows:—

Sterling	Bank 6 months' sight	4s. 1½d.	
,,	Bank Bills on demand	4s. 0½d.	
,,	Private 6 months' sight	4s. 2d. to [illegible]

PROCLAMATION OF THE JAPANESE GOVERNMENT.

TRANSLATION.

"The British Authorities have complained that certain parties in this Country have been imitating the Trade Mark of Messrs. Bass & Co., a firm of Brewers in the English capital and selling Beer so labelled. The manufacture of Beer is not prohibited in this country, but it is wrong, according to Commercial law, to imitate Trade Marks.

"Henceforward, therefore, persons whose business is Brewing Beer must apply for LICENSES, and send in a specimen of Trade Mark not likely to be confused with others.

"The above to be universally notified.

"9th Month, 1871. (Signed)

"TOKEI FU."

In consequence of extensive forgeries of our Labels and Trade Mark having come to our knowledge, the attention of the public is called to the above PROCLAMATION.

We, therefore, CAUTION all persons against either selling or purchasing, as our manufacture, beer, whether in bottle or in cask, bearing such forged and fraudulent Labels, Capsules or Trade Mark.

THE GREATEST

WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,

in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,

in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a "fowl and any quantity of peas, and the demand became so great "that I was obliged to lock up the small remaining stock"

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial. "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

OPINIONS OF THE PRESS ON

MORSONS' PEPSINE PREPARATIONS.

PEPSINE.—Among the results of the application of science to the practice of medicine, none appear to promise more important results than Pepsine, the digestive principle of the gastric juice, which in a purified state, and mixed with some inert vegetable powder, or dissolved in wine, or made into a lozenge forms a valuable medicine. It appears that the use of this important agent is greatly increasing as the knowledge of its effects becomes more widely diffused. A few grains put into a wine-glass with some water forms at once an artificial stomach in which food may be digested, in this way the relative values of different samples of Pepsine may be determined. At a lecture that was delivered a short time ago at the Society of Arts, by Dr. LETHEBY, an experiment of this sort was made, in which large quantities of animal fibrine were digested in bottles, during the lecture, with MORSON'S Pepsine.—Extract from the *Morning Herald* and *Standard* Newspapers.

The rapid popularity Pepsine has acquired among the most eminent members of the medical profession throughout the civilised world, as almost a specific for chronic dyspepsia, is due to the fact that it is the nearest possible production of the active principle of the gastric juice of the stomach. Unfortunately, like all other inventions of a like nature, Pepsine has been not slightly discredited by the spurious manufactures that have been issued from time to time, but when it was know to be the product of of such eminent chemists as MORSONS', of Southampton-row the concurrent testimony of almost every physician in France and England declared it to be the grandest and most perfect cure ever introduced for all diseases of the digestive organs.—*Church Herald.*

It is not too much to say that the introduction of Pepsine into the list of modern therapeutic agents by Dr. CORVISART created a very veritable revolution in the pathology of dyspepsia, and diseases of the digestive organs. Whereas no complaint was so common as chronic indigestion, perhaps the most painful martyrdom to which any one can be subjected, this should now be positively unknown, for as the disease is due to a lack of gastric juice, a dose of Pepsine, which contains the active digestive principle of the digesting juice of the stomach, restores the equilibrium, and effects a cure. Fortunately, too, for its popularity, the preparations of Pepsine, for which we have to thank Messrs. MORSON & SON, are of the most elegant character, enabling it to be administered with the most extreme accuracy, and also in very palatable forms.—*Freeman's.*

One is apt to look with so much suspicion on all proprietary medicines the secret ingredients of which are carefully concealed from the world that it was a relief to find there was no secret about Pepsine. This comparably new and valuable agent is simply the active principle of the gastric juice of the stomach, and as nature is above art or science it is hardly to be wondered at that it has effected the most wonderful cures of what were heretofore supposed to be chronic dyspepsia. The principle underlying the administration of Pepsine, is just this. "Where the stomatch is not strong enough, strengthen it." It is, however, of the last necessity to see that it is properly made, the best guarantee for which is to be found in the presence of the labels issued by Messrs MORSON & SON, of Southampton-Row, these eminent chemists having achieved a deserved reputation for the manufacture of Pepsine, which has completely overshadowed even the original French makers.—*Weekly Register.*

When CORVISART first announced his invention of Pepsine not a few of the faculty were inclined to denounce it as one more added to the already long list of empirical remedies. But by degrees it made its way, and when the preparations of this active principle of the gastric juce of Messrs BOUDAULT, of Paris, made under the personal supervision o' the inventor, were supplemented by the improvements introduced by ourown eminent chemists, Messrs MORSON & SON, of Southampton-row, al our leading physicians, one after the other, gave in their adhesion to this purely and thoroughly scientific remedy, which seems to have proved a complete specific for the most wearing and trying of "the ills that flesh is heir to"—chronic dyspepsia. Indeed, without arrogating to ourselves any very special medical knowledge, we are able to understand why this grand therapeutic remedy, which contains the active principle of the gastric juice, should prove a perfect remedy for all diseases of the digestive organs which arise from a failure of the gastric juice.—*Court Circular.*

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

Suddenly at 1.30 p.m. on the 20th instant, at No. 234, Bluff, EDWARD S. D. ROTHMUND, aged 39 years.

On the 20th instant, at 7.30 P. M., at the "Eureka Hotel" No. 128, Capt. C. SCHMIDT, late Commander of the Imperial Japanese Steamer *Gembu-maru (Kuroda)*, age 34 years, a native of Kiel, Holstein, Germany.

Notes of the Week.

The news from the South during the past week shows little change in the position of the contending parties. Reports of engagements magnified by the native papers into battles, but which are evidently nothing but utterly insignificant skirmishes, are the principal items. But there are one or two statements which show clearly that so far from being crushed, the strength of the insurgents is increasing, at least numerically, in an astonishing manner. It was but a week or two since that Saigo's forces were said to number but ten thousand men. The *Hôchi Shimbun* now states that they are divided into three armies. Under Murata Shimpachi there is a body of eight thousand; Kirino Toshiaki is at the head of a like number, while Saigo has with him over ten thousand troops. Taking into account the scattered forces under other commanders, there is no doubt, and indeed it is openly admitted by officials at Tôkiô, that the Imperial troops in Kiushiu are altogether outnumbered. At no time has the Satsuma army been so well provided with arms, the Imperialists having unwittingly furnished them with an immense number at the Government's expense. It is true that in command of resources the Government has a great advantage over their antagonists, but the latter possess compensating advantages in the way of discipline, generalship, spirit, and we may now say numbers. Under such circumstances it is useless to look for speedy peace. At the present rate the war may go on for years. Of what is transpiring in Tosa, nothing further is known but it is certain that the Government has cause for the gravest apprehensions. Tosa has the power to enforce peace. It remains to be seen if she has the united will to exercise it.

On Monday last we witnessed the successful ascent of a balloon at the grounds of the Naval College, Tôkiô. This is the balloon to which we referred some time since as being in process of manufacture. It has been made entirely by Japanese, and considering that it is the first attempt of the kind, is in every respect most creditable. We were informed by a Japanese gentleman that the material of which it is composed is *shiroi chirimen*, or thick white silk crape. The shape was irregular and defective, but this may, probably, to a great extent, have proceeded from imperfect inflation. The elevation attained was only a few hundred feet, the trial ascents being made with the balloon in a "captive" condition. It is stated that it is intended for the purpose of making military surveys in the South, but we should imagine that it will be somewhat difficult to procure the means of inflation in those portions of the country in which a balloon survey is likely to prove of any value.

There can be no doubt that races are demoralizing. We are not going to enter into a discussion as to the effect they have on the minds of those who find their pleasure therein. There is a wide spread idea that the atmosphere of stables is apt to bring about a very relaxed condition of the moral fibre, and that there is a singular characteristic in the horse which renders association with him, for any other than hack purposes, likely to be productive of disastrous ruin. We are not going to hold forth on these views. We are not afflicted with hippophobia and our opinion of racing for racing's sake is, that it is not more objectionable than any other harmless amusement. But for all that, in common with most of our fellow labourers we have found the late races singularly 'demoralizing' to work of any kind, and it is as well, perhaps, that the irresistable temptation to 'go out and play,' in such glorious weather, should cease with the end of the Spring Meetings. He would certainly be a man of more than common fortitude who could shut himself up in his office in such weather as we have enjoyed for the past few days, when he had every reasonable excuse for walking out of it and locking the door, afforded by the Queen's Birthday, the Races, the Flower show, and their accompanying attractions, neither small nor few. We lay claim to no such strength of mind. We confess to having enjoyed the pleasant hours, happily forgetful, for the time, of wars and rumours of wars, irritating and irritated correspondents, and the thousand and one woes of our weekly life. The "green trees whispered low and mild," and to their callings and beckonings we yielded an unresisting consent. It was evident that nearly everyone had done likewise; that silk merchants had been kept anxiously awaiting the return of the inspector, who came not; that tea-men had left their fragrant samples undrawn, or cooling untasted in the neglected cups. We found that all the world was playing holiday, and not to be singular, we, with our attendant imps, have played with the rest. Our readers will appreciate the reasons for this confession, but we throw ourselves on their mercy. The break in the routine of daily office life has been a most agreeable one and non-racing members of the community owe their best thanks to those whose love of sport and excellent management have afforded to all enjoyable relaxation.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

However much we may all deplore the division in the racing community which again led to there being two meetings this spring, we can at least congrutulate ourselves on having seen more than ordinary good racing. It cannot be denied that the Race Club laboured under some considerable disadvantage in having their meeting but a few days after that of the Association, as more than three days racing within so short a period will satiate even an enthusiast. The Club could not send out the large fields which was the distinguishing feature at the meeting last week, but certainly to the Club must be awarded the laurel for well sustained and spirited contests, clever finishes and splendid time made. Good as the latter was in many instances at the Association meeting, it was even excelled at the one just concluded. Though the former have still the honour of having done the half mile in the best time, 60½ secs., with a crack China pony, they were nearly approached by the Club, when *Liddesdale*, a China subscription griffin, ran that distance in 61½ seconds. Another subscription griffin, *Talisman*, in winning the Silk Cup yesterday ran the five furlongs in 1 min. 19 secs., being the best time ever made on this course, and but for a check he received coming down the straight would have made even better time. This same distance was also done today by the Japan pony *Distemper*, when he won the Solace Cup in 1 min. 19½ secs. Previous to last week 1 min. 39 secs. was the best time in which the three quarters of a mile had been done here, which the Association beat by running the distance on three occasions in 1 min. 38½. On Thursday the first China subscription griffins' race was won by *Vandal* in 1 min. 38¼ secs. Yesterday *Lintie* won the Celestial Cup in the capital time of 1 min. 36 secs; *Kittiwake*, a China subscription griffin, won the Owners' Cup in 1 min. 37½, secs. and the Japan pony *Kickapoo* beat his Association time, winning the Ito Cup in 1 min. 38 secs. *Hoolet* repeated his performance of doing the mile in 2 min. 13 secs., when he won the Tea Cup. The Mitsu Bishi Challenge Cup, a mile and a distance, was won by the Japan pony *Kickapoo* in the extraordinary time of 2 min. 40 secs., old *Typboon* being then beaten by a neck only, while *Hoolet* again distinguished himself by carrying off the Merchants Cup, one mile and a quarter, in 2 min. 49 secs. Of course the handicapping was grumbled at. Indeed, as a rule, it may be safely said that no handicap ever gives entire satisfaction, and certainly the Club handicap formed no exception to this rule. But the result proved the cavillers to be utterly wrong and that the handicappers had shown sound judgment in their estimate of each pony's merits, for a prettier race that the Sayonara Stakes, with which the meeting closed, has seldom been seen. Old *Crusader*, the winner, must be an extraordinarily good pony. He was not a griffin when he came to Japan, and yet his racing career in this country, which, apparently, is far from finished yet, has now lasted for five years, during which time he has run fifty-one races, more than half of which he has won.

In congratulating the Club on the success which attended the meeting just concluded, let us hope that similar success will attend the proposal for amalgamation with the Association which will be brought before the Club members early next month. If this be happily attained, the result of the united racing forces in the Autumn may be even more satisfactory than that of the two Spring Meetings which it has been our pleasant duty to chronicle.

The case of Beato *v.* The P. & O. S. N. Co., which was decided in H. B. M.'s Court here in November last, will still be in the recollection of our readers. Mr. Beato sued the Company for damage to goods shipped on board the defendant's steamers in London and delivered here. The jury found that the damage was caused while the goods were in defendants' possession, and that it was occasioned by the negligence of the defendants' servants. But the Acting Law Secretary decided that the defendants were exempted from the consequences of such negligence by a clause in the Bill of Lading. At the time we expressed a hope that the case would be appealed so that a question of such importance should be definitely and clearly settled. We were, therefore, glad to see that leave to appeal was given by the Acting Judge of H. M.'s Supreme Court. We now hear, however, that the appeal has been abandoned, and merchants are therefore placed in the unsatisfactory position, that by a clause in the Bill of Lading which has been adopted by all the Steam-ship Companies trading to the East, the shipowner is absolved from all loss caused by the negligence of his servants.

We take the following paragraph from the *Japan Gazette*:—

"A Sendo in the employ of Messrs. J. D. Carroll & Co. was caught this morning in the act of stealing brass screws. He had contrived to secrete on his person ten gross of screws when detected. No police being in the vicinity at the time, it was resolved to make an example of the thief in a rather unusual way. A board was obtained on which was written, in English, Japanese and Chinese, "This is a thief." It was fastened to the back of the offender who was then tied to a post outside the premises, where he was kept for a considerable time. Such an unusual sight drew together an immense crowd of people. Ultimately he was taken from his conspicuous position and handed over to the tender mercy of an officer of the law."

This mode of procedure is certainly "unusual," and we trust that, as it is the first example of the kind, it will also be the last. We can only speak of it as being extremely unjust and reprehensible. We foreigners pride ourselves on our love of fair play even in cases of extreme provocation, and are constantly asserting the superiority of ourselves over the Japanese in holding the scales of justice even. Such an action on the part of a foreign firm or any of its employés cannot but be viewed by the Japanese with feelings of anger and contempt; and justly so, for it is an assumed power to administer punishment to the subject of a Government which is permitted the exercise of no authority over those who inflict it. It is contrary to the first principles of justice. What would be said if one of the Japanese shopkeepers, who are so often the victims of robberies by sailors or loafers, were to have recourse to similar procedure? If it be allowed that Messrs. Carroll & Co. were justified in acting as they did, there can be no doubt that a native may with equal justice take the law into his own hands and deal with a foreign delinquent as shall seem right in his eyes. It is not hard to imagine the outcry that would immediately be raised; the indignant protests of the foreign community; the appeals to Consuls and Ministers; and all the rest of the hubbub and fire-eating that such a case would assuredly call forth. And yet one action is as defensible as the other. It is a poor excuse to say that no policeman was at hand. But a few minutes would have been required to find an officer to whose charge the offender might have been committed; and there is certainly no reason to suppose that a fitting punishment for the theft would not be adjudged by the *Saibansho* Authorities. We regard the proceeding as entirely unwarrantable, and neither becoming nor dignified.

The Very Rev. Dean Butcher will preach at the morning service in Christ Church to-morrow, and there will be an offertory to defray the expenses of the new Church furniture and decorations which have just arrived from England.

From the "Japan Mail Daily Advertiser."

Monday, 21st.

From the *Chôya Shimbun.*

On the 18th instant a special meeting of the *Genro-In* was held and some important discussion is said to have taken place.

About one hundred and forty new police men are to be enlisted by the Bureau of Police from the North-Eastern provinces, to be used for the protection of the capital.

By order of the Government the Engineers and Artillery are to be augmented by ten thousand recruits.

Saigo is at Hitoyoshi, and Kirino and Murata have gone to Kagoshima.

Her Majesty the Empress Dowager is expected to arrive in Tokiô on the 22nd instant.

The number of officers and constables despatched by the Bureau of Police to the 18th instant amounts to 8,369, leaving a force of 6,000 men in the capital.

A telegram despatched from Kiôto at 2 p.m. on the 18th instant announces that as on the 16th an attack from the rebels was expected full preparation to receive it was made by the *Kencho* officials of Owake *ken*, but the rebels changed their plans and advanced towards Tsurusaki. Here they encountered a force of policemen who had landed at Saganoseki and were marching to the aid of the *Kencho*. The rebels attacked the police at 2 p.m.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

but after a short engagement were forced to retreat to Inugai, leaving the police to make their way to the *Kencho* without further interruption.

From the *Hôchi Shimbun*.

A telegram from Owake *ken* at 0.45 p.m. on the 17th instant says that the rebels are gradually making their way into Bungo. The few policmen there have been armed, and some sailors have been landed from the *Asama Kan* and *Môshun Kan*. With these forces combined the *ken* is to be defended against the rebels.

The Kôchi *Kencho* has replied to the *Risshisha* that it could neither approve or reject the proposal that had been made about the enrolment of a militia force until it had received orders from the Government Department which deals with such questions. The *Risshisha* then presented another letter to the *Kencho*, as follows :—

"To our proposal of the 26th of last month you answer that it will be difficult to grant our request, but we think this answer on your part arises from the fact of your not comprehending our real ntentions. We are well aware that no military force can be collected together without special permission from the Government. Our intention was merely to consult with the people of the province as to the advisability of enrolling militia for protection of the province during the present unsettled state of the country, and fearing that false rumours might reach you regarding our proceedings, we wrote to you in order that you might be fully aware of our intentions.

(Signed) IKEDA OSUKE,
IWASAKI NAGA-AKIRA,
YAMADA HEIZAIMON,
SHIMAJI MASANORI."

8th May, 1877.

Tuesday, 22nd.

The Empress Dowager is expected to arrive at Kanagawa at noon to-day, in which case Her Majesty will proceed to Tôkiô by the train at 1.35 p.m.

From the *Akébono Shimbun*.

A telegram sent from Kiôto at 8.05 a.m. on the 20th instant announces that a despatch received from Major-General Miyoshi states that he had attacked and succeeded in dispersing the rebels who were stationed in a strong position on Kunimiyama. On the 18th Miyoshi advanced as far as Hirase, but the rugged and hilly nature of the country prevented him moving his troops except with great difficulty, and his progress was consequently slow.

A report has also been received from Major-General Miura that the rebels made an attack upon the Imperialists at Kamikoba during the forenoon of the 18th instant, but being taken in flank by another body of Imperialists who hastened up to render assistance from Osekiyama the rebels retreated towards their fortified positions, the Imperialists following them up. Just at this time another body of the Imperialists under the command of Major-General Kawaji advanced from Nagao-yama to the rear of the rebels, so that they were entirely hemmed in, and after a desperate struggle fled, leaving their dead and wounded behind them. Several of the rebel officers were killed.

The Imperialists then advanced upon Ono, on the highway leading to Oguchi, and there captured two of the rebel fortifications.

Another telegram from Major-General Kawaji has been received giving the same account of the above engagements, and he adds that twenty rebels were killed and one captured, together with thirty rifles and much ammunition. The Imperialists' loss was only three men killed and ten wounded. Since the 10th instant incessant attacks were made by the rebels by night and by day, but on account of the result of tho above engagements Midzumata is no longer in danger and the ardour of the Imperialists has been greatly increased.

From the *Chôya Shimbun*.

His Majesty the Emperor visited H. E. Kido on the 19th inst., to enquire about the state of his health.

Wednesday, 23rd.

From the *Akébono Shimbun*.

A telegram despatched from Kiôto at 6.15 a.m. on the 21st instant announces that a large number of rebels made an attack upon Uwakoba, a place occupied by Major-General Miura and his troops, on the 18th instant. A desperate struggle took place for a time, but the rebels were finally repulsed.

Major-General Miura made an attack upon the insurgents in their mountain fastnesses at Fukumatsu-tôge and Kamon-goi at 3.15 a.m. on the 20th instant, and succeeded in driving the rebels from their positions and in taking a large number of prisoners and ammunition.

His Majesty the Mikado has sent Higashi Kuze, one of his attendants, as a special messenger to the Commander-in-Chief, his adviser and other leading officers of the Imperial army, to convey His Majesty's thanks for the service they are now rendering.

The following is a copy of the letter conveyed by Higashi Kuze to H.I.H. Arisugawa-no-Miya :—

"You have performed your office of Chief Commander of Our forces with much ability, and through good management Our troops not long ago reached Kumamoto and routed the rebels. We are greatly pleased with the zeal with which you have performed your duties, and for this reason send Higashi Kuze with *sake* and *sakana*, in hopes that it may afford you some pleasurable reward. Continue therefore zealous."

Letters to the same effect were sent to Yamagata and Kawamura, with the addition that His Majesty states his desire that his consideration for the labours of all the Imperial troops and the police should be made known to them.

From the *Nichi Nichi Shimbun*.

A person going from Uwajima, in the province of Awa, into Kôchi in Tosa, was stopped at the frontier of the latter province by a police force guarding the place, and told that no strangers were permitted to enter the province without a passport from the *Kencho*. Such a document the traveller could not produce, and though he explained his business very minutely, he was informed that the permission of the *Kencho* must first he obtained before he could be allowed to pass into the province, and that to get this would take about four days, so that the unfortunate man had to return home without accomplishing the object of his journey. It is therefore expected that some agitation prevails in Tosa.

From the *Mainichi Shimbun*.

There are about 7,800 fire arms in Tosa, being the property of the former *Daimio*.

There is now a force of ten thousand men in Tôkiô, who have been newly enlisted into the regular army by conscription in the various *Fu* and *Ken*.

Friday, 25th.

Yesterday being the Queen's birthday, the usual salutes were fired at noon by the men-of-war in port.

From the *Hôchi Shimbun*.

There is now a large force of the Imperialists occupying Kagoshima ; batteries have been erected at all places of importance, and pickets are placed at various points to guard against unexpected attacks from the rebels. On the whole the Imperialists, at first sight, appear as though they were beseiged in the town.

Major General Miyoshi on the 15th instant commenced to march from Higo at the head of the division of the Imperial army under his command, for Satsuma, so we may now expect that all the forces will gradually be in motion towards the rebel positions on the borders.

The troops under the command of Major General Kawaji, having been victorious in several previous engagements, made a reckless attack on the 13th instant, but were not so successful as they expected.

A telegram which left Kiôto at 9.05 p.m. on the 21st instant announces that the Imperialists at Mitsumata have taken possession of a range of mountains called Kentaka, and advanced as far as Takumidôshi, which is but fifteen or sixteen *chô* from the Satsuma boundary. They now intend to advance into Ôguchi.

A telegram despatched from Kiôto at 9.45 a.m. on the 23rd instant, says that on the night of the 20th instant an attack was made by the rebels on a fortification of the Imperialists' situated at Takumidôri, about three *ri* from Midzumata and fourteen *chô* from the Satsuma border. The rebels endeavoured to carry this fort by the sword, but were repulsed by a volley from the Imperialists.

From the *Chôya Shimbun*.

The following has been addressed to the Satsuma insurgents :—

NOTIFICATION.

On examining the rebel captives, it has been found that many of them followed Saigo, the leader of the rebellion, thinking that they were forwarding the interests of their country, and not knowing that they had turned traitors by opposing the Imperial authority. And again it has been discovered that many of them think that they would not be forgiven even though they should surrender themselves to the Imperial army, and for this reason have resolved to oppose us to the death. But such a supposition

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is entirely false. Were any among them to repent their opposition to the Imperial authority and submit themselves to the same, they would be pardoned. So all such had better surrender themselves without losing a moment, and free themselves from the odium of rebellion.

The above is made known.

By Order,
Head Quarters of the Van
of the Imperial Army.

May, 1877.

A telegram despatched by Major-General Miura on the 22nd instant announced that, on the same day as the despatch was sent, an attack was made by the Imperialists on Sashiki, and from that place to Imaizaki, a distance of about 3 *ri*, several hundred stockades were captured from the rebels, who were defeated and fled, leaving their arms, dead and wounded behind them. The headquarters of this division of the rebels were situated at Ono, which place was also captured, together with large quantities of arms and ammunition. The Imperialists then advanced to Kagami-yama. The reflection of fire was observed in the direction of Sashiki, and it is therefore supposed that the rebels set fire to their own camp.

A telegram despatched from Osaka at 5.10 p.m. on the 21st instant says that Kunimiyama was taken from the rebels on the 17th instant. On the 18th instant the rebel fortifications of Takano-su and Tsubaki-yama were also captured, and then the Imperialists advanced into Hirase and Okudate. On the 19th instant they marched against and took Okôchi and Midzunashi, and they have blockaded the Terukaku road.

From the *Akébono Shimbun.*

As the suppression of the Satsuma rebels has been so prolonged, a report has been received from Osaka to the effect that His Majesty the Mikado will proceed as far as Shimonoseki, so as to personally direct the movement of his troops from that place.

A telegram despached from Kiôto at 9 a.m. on the 22nd instant announces that in the engagements at Sashiki, near Yashiro in Higo, on the 20th instant, four officers of the rebel army surrendered themselves to the Imperialists.

One battalion of Engineers now at Tôkiô will shortly start for the South.

From the *Nichi Nichi Shimbun.*

Major Murata (the notorious rifle shot) was wounded in the abdomen at the engagement of Takenomiya on the 20th of April last, and is now in the hospital.

Mori Arinori, the Japanese Minister at Peking, will start from China on the 23rd instant, and return to Japan to enquire about the health of His Majesty the Mikado.

A telegram despatched from Kiôto at 10.15 a.m. on the 23rd instant announces that some spies sent by Kawaji to Demidzu have returned, and report that the rebels have constructed batteries in many places between the mountain passes of Yahatsu and Yonedzu. The rebels are exciting the *samurai* of Demidzu, Akune, Noda, Takano and Nakajima to join them.

Saturday, 26th.

From the *Osaka Nippô.*

Mr. Yamao, the Vice-Minister of Public Works, has reached Kiôto. He is supposed to have gone there to have an interview with the Minister of Public Works and consult about erecting fortifications at the seat of war.

From the *Nichi Nichi Shimbun.*

A telegram from Kiôto despatched at 10.25 a.m. on the 24th instant announces that the following information had just been received from Kokura in Buzen :—The Imperial forces coming from the province of Higo advanced on the 23rd instant as far as Tamarai and there had an engagement with the rebels. A body of men under Hagiwara have been sent to Imaichi in order to attack the rebels as soon as an opportunity offers. Two companies of Imperial troops have arrived at Kokura.

From the *Chôya Shimbun.*

Saigo has none but his special guard of eight hundred picked men near him. As his other troops do not know much of his whereabouts, it is not strange that the Imperialists should be altogether in the dark as to his movements.

A telegram despatched at 1.35 a.m. on the 23rd instant from Nagasaki announces that a force of Imperialists reached Saganoseki on the 21st instant, none of the *samurai* of Bungo excepting those of Oka have joined the rebels. The insurgents in this district have made Oka their headquarters, and on the 20th instant encountered the Imperialists at Irakao, about 2 *ri* from Oka.

JUSTICE IN YOKOHAMA.

THAT a startling opposition may exist between the principles of common sense and those that govern the decisions of some of our local tribunals has rarely been more clearly shown than in two recent cases, the events of which suggest some odd reflections to a non-legal intellect, and remind us of the imperfections of the exterritorial jurisdiction we think ourselves so fortunate in living under. Of the cases we have in mind one is that of Beato *v.* P. & O. Company, the appeal in which having been withdrawn we feel ourselves at liberty to discuss, not so much with a view of criticising it in detail as with the purpose of showing the nature and consequences of the principle established, so far at least as Yokohama is concerned, by its result. Stated shortly, that principle is that shipowners may by a proviso in a Bill of Lading relieve themselves of all obligation to take the slightest care of the goods entrusted to them, and in virtue of it are freed from all responsibility with regard to damage if—mark well the 'if'—caused by their negligence or default. In other words if the damage should be due to their own carelessness or wilful default they are not answerable ; if due to some other cause they may be answerable. This is very much as if one were to threaten a person with punishment for the faults of others, or for accidents altogether out of his control, and afford him impunity for the results of his own wrongful acts. The ship-owners, or some of them, will perhaps urge that in fact all damage to cargo (not being what is known as marine damage) must be due to their, or their servant's, negligence or default. If this be so the Bill of Lading frees them from all responsibility whatever, and is a mere unmeaning document beginning with a promise in consideration of the freight paid to deliver certain goods at a certain port in good order, and ending with a declaration that of they don't use the proper means, namely, due care and diligence, by which alone their promise can be carried out, they are not responsible. Under these circumstances it is difficult to see what the shipper gets in return for his freight beyond the *chance* that the goods will be properly stowed, carried, and delivered,—surely an altogether and insufficient return for his money. To this the shipowners may answer :—You may insure with us or elsewhere against our negligence or default. But as a matter of fact no such insurance is possible unless with the shipowners themselves (as to some extent is done when goods are shipped by the P. & O. under their Red Bills of Lading) and the proposition of the carriers amounts in effect to this—a sufficiently cool one—pay us first for the chance of our taking *any* proper measures to execute our contract, and then pay us a second time for the assurance that we will take *some* proper measures to fulfil our promise. In other words, it amounts to a demand for a high rate of freight sought to be enforced by a kind of threat that if not paid, the shipper will have no redress if his goods are carelessly stowed, carried, or delivered.

Such is the logical meaning of the decision we are reviewing. If it is in accordance with English law, the sooner English law is amended in that respect the better. It is certainly not in accordance with common sense or with the general understanding of merchants. Commercial law we have always supposed to be founded on the rules of ordinary reason, and intended to facilitate and assure the operations of commerce, differing in both these respects from much of the law of persons and property which is more or less the outcome of history, and has commonly in view rather the maintenance of a particular social or political system, than a logical satisfaction of the real wants of society.

Original from UNIVERSITY OF CALIFORNIA

By carriers alone, if by any parties to a mercantile transaction as far as our experience teaches us, has a defence founded on their own negligence ever been allowed to be put forward; and even in the case of carriers such a defence would be at once rejected by the courts of every European country, except, possibly, by those of England. To our mind it appears a wholly incontrovertible position that the acceptance of freight involves some positive duty on the part of the shipowner, and no words written or spoken can do away with the effect of such an acceptance. Why carriers should enjoy the privilege of contracting themselves out of their own contract is far from apparent. A principle of law, illogical and unreasonable in itself, may occasionally be justifiable by some political, social, or commercial exigency. But what commercial or other exigency justifies the claim of the shipowner? The exigency, if any, is plainly the other way; the freighter much more than the shipowner stands in need of protection. In every shipping case the odds are, from the difficulty the merchant commonly has in procuring evidence and from other obvious causes, very greatly in favour of the shipowner. The policy of trade, too, requires that the banker and merchant should be able to protect themselves perfectly under the Bill of Lading and the Policy of Insurance, and should be wholly unrestrained in their choice of carrier and insurer. We have already shown that the neglect or default of a particular shipowner can only be insured against with the shipowner himself, and this too in an imperfect manner and not by any means universally. We need not again dilate upon the absurdity of a contractor demanding a fee to ensure his making some attempt to carry out his contract.

The practical result of the case BEATO *versus* P. & O. COMPANY is, that shippers under such a Bill of Lading as that in which the defence was founded must insure against the carrier's negligence, either with the carriers themselves, or elsewhere, if they wish for any real protection against damage. In other words, they must pay a higher freight than they have been accustomed to pay (for insurance otherwise than with the shipowner is impossible) and it is a question for them to decide whether or not they can with prudence concede a higher rate. What merchants must do for their security bankers must insist upon being done for theirs, and either shipowners must continue to enjoy an immunity as unreasonable as impolitic, or the community must, if disinclined to concede the higher rate of freight, combine so as to bring the law of Yokohama into conformity with that of England, or effect a change in the law of England itself such as was effected some years ago with respect to Railway companies. Such a change in English law, if the state of the law be such that it is really necessary, would be simply a return to the principles of reason and convenience which are supposed to govern and shape our commercial code.

We now pass on to the second of the two cases we mentioned at the outset—that of WATSON *v.* WALSH HALL & Co. lately decided in the American Consulate General. The Consul General lays it down impliedly, it is true, rather than in terms, but still distinctly, that a party to a contract has no remedy for its breach against the other party if the latter is an agent, even though the names of the principals remain undisclosed and they are resident ten thousand miles away from the jurisdiction, and informs the plaintiff that he must look for relief to parties altogether out of his reach and whose very existence was unknown to him when he entered into the contract. So monstrous a proposition we cannot believe to be in accordance with either American or English law; or indeed with the law of any country. The defendants were the only persons whom the plaintiff knew in the transaction and to them, and them alone, could he, by any process of law or logic that we are acquainted with, be supposed to look for a fulfilment of the contract, and the defendants accordingly ought to have been treated precisely as if they were principals. If the defendants stated clearly they were agents (which however they do not appear to have done) and did not state for whom they were agents, this to our mind is equivalent to a declaration by them that they took upon themselves the responsibilites of principals, a declaration the stronger in that, while they stated their agency, they did not disclose the names of their principals. It is a manifest injustice to the plaintiff to treat him as having contracted with persons totally unknown to him, persons with whom, had their names been disclosed, be assuredly would not have contracted at all. That we have not mis-stated the effect of the Consul General's decision is clear from the judgment itself, which says "the shippers...are responsible... for this gross wrong"—alone responsible, and to the plaintiff, we suppose is meant—and there can be no ground for assigning them as the sole parties responsible other than the mere declaration or insinuation of unspecified agency by the defendants. It is odd, we may here remark parenthetically, that the judgment after admitting that a 'gross wrong' had been committed, finds that the defendants, even if owners of the goods, would have been in no way responsible. Nor are we able to see in the evidence any proof of neglect on the part of the plaintiff. Some of the same lot of bags had been previously sold to Mr. WILKIN, and these were all new and perfect. The defendants, who had had the bags in their possession for a long time, and themselves selected the samples, supposed them to be new and perfect, the prices first demanded and even those ultimately paid were prices of new bags, and there was nothing in any of the documents to lead to any suspicion that the bags were other than new and perfect,—indeed the express mention of some few of the bags as second hand would be an indication that the rest were new. Under these circumstances mercantile custom did not call for any particular examination of the bulk, and the samples were evidently intended by both parties to represent merely the size and character of the bags forming the different lots, by which it might be judged whether they were of proper strength, capacity, and make. This indeed is clear from the defendants' answer which denies expressly that the goods were sold on sample, and thus impliedly admits they were sold on the representation that they were new and perfect. Anything like a sufficient examination of some 800 bales (necessary only, if at all, in the case of a sale by sample) was quite impracticable, more especially when payment had to be made at once and in great part by drafts to be immediately remitted. Nor, as pointed out in a letter which we publish to-day, does the evidence warrant the assertion that the bags complained of were up to sample, or that some of the samples were of very inferior quality and unfit for the plaintiff's purposes. Of the samples produced one was patched or faulty in manufacture; one had a stain not much bigger than a crown piece near its mouth; and one was dust-discoloured externally. None were bone-impregnated and none were unfit for rice packing,—indeed the evidence shows that had the bulk been equal to the sample they would have been accepted, though with reluctance, by the plaintiff, who had a legal right to demand new bags. As to the samples not produced the defendants never alleged them to be patched or stained, admitted indeed that they supposed them to be new and perfect, and the plaintiff and Mr.

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

WILKIN distinctly stated that they were neither patched, stained, nor bone-impregnated. We have searched the evidence with some care but have been unable to light upon a single fact justifying the assertion that some of the samples was 'very inferior' and 'unfit for the plaintiff's purpose.' No doubt there was no pretence that the defendant had practised any improper concealment, and a verdict against them would have entailed upon them a serious hardship. The case was such that one of two innocent parties must suffer, and in such cases justice seems to require that the sufferer should be he who might most easily have avoided loss. The defendants were manifestly in that position, they had but to state distinctly they were agents and name their principals and thus escape all responsibility. They had a perfect right to withhold those names, but they undoubtedly did so at their own risk. Had they disclosed those principals the contract could not have been entered into by the plaintiff, they had thus a certain benefit by not disclosing their principals and ought not to have escaped the burden attaching to such non-disclosure. And the judgment shows clearly that they would have had a perfect remedy against their consignors, unless indeed their own statement that the bulk of the bags were quite fit for rice packing precluded them from seeking it. On the whole, although there were some circumstances in the case not adverted to in the judgment which might have put a less confiding person than the plaintiff upon some enquiry, we cannot but sympathise with him in his defeat, and we feel that we should not be doing our duty if we did not express our opinion that he has been somewhat hardly treated in the matter. Such appears to us to be a common-sense view of the whole proceeding—if it is not in accordance with the laws, we are sorry for the law.

SPIRIT OF THE JAPANESE PRESS.

THE WAR.

(From the "Kinji Hôron" 23rd May.)

Gentoku, who became Emperor of China, used to say "The fortune of war is ever varying, and opportunities of success are ever recurring, so that though one chance be lost, it is important to look out for the next."

As war is thus a game of chance, plans of Commanders do not always succeed, and although one opportunity may have been missed, there is no reason for giving way to despair. An inch may be lost by to-day's failure, and, taking warning by this, a yard may be gained by to-morrow's success. When it became known that the relief of the garrison at Kumamoto had been accomplished, and that the rebels had been forced to retreat, the mind of the Nation was much relieved, and the feeling of depression that had been universal for some months was replaced by a general feeling of joy. The Army Department celebrated this happy event by giving *saké* and fish to all the officials and underlings. In Kumamoto Camp the rejoicings were necessarily greater. For a few days it seemed as though the war which had been the sole topic of discussion had ceased to be spoken about. We thought of writing an article in honour of the event, but we decided that it would be better not to do so, as we forsaw that the responsibilities of the Commander-in-Chief of the Imperial forces would increase from day to day, in spite of the relief of the garrison. Firstly, because the rebels, although forced to retreat, had not been destroyed, and were therefore not an enemy to be despised. Secondly, observing that there were nine Lieutenant Generals and three Major Generals assembled together in one place, that there was therefore likely to be much division of opinion. Thirdly, as Kagoshima *ken* appeared to be entirely with the rebels, much ill will would be caused in that *ken* towards the Government in the sufferings it would necessarily inflict upon the people in suppressing the rebellion.

To some our speaking in such away may seem out of place, but being desirous of seeing the insurrection entirely crushed we write thus.

On the 14th April, the Imperialists opened communication with Kumamoto, and then pursued the retreating rebels to Mifume, Koyama and Yabo, where several engagements took place: but when we look at the magnitude of the rebellion such skirmishes are of small account.

We therefore regard the 14th April as the end of the first period of the present war; the departure of Vice Admiral Kawamura with Generals Oyama and Takashima at the head of six battalions for Kagoshima, to destroy the nest of the rebels, as the comencement of the second period. From the end of the first period to the commencement of the second ten days elapsed. Many people were, during that interval, in a great state of anxiety, thinking that an opportunity had been lost, and that while the Government leaders were forming their plans, time was being afforded to the insurgents to recruit their strength, so that they would not speedily be suppressed. It cannot be said that such complaints were altogether unreasonable. But it must be remembered that the Imperialists had been fighting for several months, and that they also required a few days rest; not for the sake of pleasure, but in order to recover from their fatigues. We do not hold with the opinion that any opportunity was lost. It cannot be positively said that even if the Imperialists had followed up the rebels in their retreat from Kumamoto they would have succeeded in crushing them. By their state to-day we perceive how strong they still are. One division at Hitoyoshi, another division surrounding Vice Admiral Kawamura at Kagoshima, while a third body is preparing to attack Owake *ken*. It will thus be seen that no advantage would have been gained by following them up from Kumamoto.

The Government has to sieze many other favourable opportunities before it can obtain any actual victory, and therefore one success or one defeat should cause neither rejoicing nor regret.

Opportunities are frequent. We will not refer to the past, but entreat the leaders of the expedition to let slip none that may arise in the future.

THE SAMURAI.

(From the "Chôya Shimbun.")

In a certain place, all the people both old and young were crying and lamenting, saying in their despair that the Japanese nation was going to be eaten up by the *samurai*. Up came a policeman, who, on learning the cause of their grief, spoke thus "The *samurai* are not devils; neither have they the jaws of crocodiles, and the teeth of lions and wolves. What makes you suppose then that they will devour you?"

The police have tried to reassure us in like manner, but we cannot free our minds of anxiety. We will not refer to the dark days of uncivilization which preceded the Restoration. The Restoration itself was said to be for the benefit of the Emperor, and the well-being of the nation, but although it may indeed be so, we must confess that we were made the sufferers by it. Our houses were burned, our money taken from us by force, and our labours hindered for no one knows how long. How many thousands were reduced to like condition with ourselves we cannot say. But at length peace was restored, and we hoped that we should long be permitted to enjoy its blessings under the new Government. But our hopes have in no way been fulfilled. There have been the Saga, Kumamoto and Yamaguchi insurrections, all caused by discontented *samurai*, and now we have this reckless outburst in Satsuma which has been going on for the last hundred days, adding to our anxieties. The reason of their rising we do not know, but they spill much blood, cause terrible hardships to the people who are in the vicinity of the conflict, and diffuse the evil effects of war throughout the nation. Moreover we do not want to see the farce of "People's Rights" played by actors who do nothing but glorify their own strength.

We wish the *shizoku* would pay a little more attention to their acts. First they overthrew the Tokugawa power, by the cry of duty towards the Emperor. Then came the demand for the Corean and Formosan Expeditions. This was followed by the cry of "Expulsion of foreign barbarians unless they pay due respect to our Gods," and they insist on the Government now, finally, declaring its intentions with regard to "Peoples' Rights." The alleged reasons for revolution are constantly changed, but in all cases the result is the same. The *samurai* fight against each other, apparently caring nothing for the misery caused to the people, or the weakening of the power of the country. As long as they can carry out their own views, they care not a jot for what may befall the Nation at large, but only think of bringing out large and small fire arms, swords and spears, and using them to their heart's content.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

But we cannot understand what all this means. It is true that the side which is victorious gives some compensation to the people, in the shape of small amounts of money or food; but as the side which is beaten takes whatever it wants in the most unceremonious manner, they will be a long time regaining their former fortunes. It is no trifling matter that the whole people of Japan should thus have to suffer for the actions of the *samurai*, and if some check is not put to them, and the whole of the *samurai* swept away, an end will surely be made of the people. The people are weak and the *samurai* are powerful, and the weaker animals always become the prey of the stronger. Thus we believe the upshot of the affair will be that the people will be devoured by the *samurai*. They may not have jaws like the crocodiles or teeth like wolves, but when it comes to being devoured the effect is the same.

In such case we cannot refrain from crying out our fears in a voice that may be heard throughout the neighbourhood.

BRITISH CONSULAR TRADE REPORT FOR NAGASAKI, FOR 1876.

BRITISH CONSULATE,
Nagasaki, April 30, 1877.

SIR,—I have the honour to furnish you with a report on the trade and shipping of this port for the year 1876, accompanied with the following returns.

1.—Return of the Imports from England and other countries and from the open ports of Japan.

2.—Return of the Exports to England and other countries and to the open ports of Japan.

3.—Return of the Amount of Treasure Imported and Exported.

4.—Return of Foreign Shipping.

5.—Return of duties collected on Imports, Exports and Shipping.

6.—Return showing the number of British Residents and Firms, together with the Residents and Firms of each Foreign nationality.

It will be observed that the total trade of the port shows a decrease of $661,521 on comparing it with the previous year, viz :—

	1875.	1876.
Imports	$ 1,525,090	$ 1,063,199
Exports	$ 2,159,303	$ 1,959,673
Total	$ 3,684,393	$ 3,022,872

I have endeavoured, in the following remarks, to state the cause of the decline.

Imports.—During the past year it will be observed that the Import Trade of the Port, in comparing it with the previous year, again shows a falling off. It is difficult to account for this decline, but, as I understand other Ports in Japan have suffered from a similar decrease in trade I imagine that it is not entirely of a purely local nature.

The total value of Imports, including those from the coast ports, amount to $1,063,199 against $1,525,090 for 1875, or a balance of $461,891 in favour of 1875. The chief falling off is noticeable in textile fabrics, the value of which reached $440,282 in 1875, while for the year just closed they amount to only $169,489. But the Import of piece goods in 1875 fell considerably short of those of the proceeding year, so that, if these figures may be taken as a guide, it would not only appear that foreign articles of this description are less required than formerly, but that they are comparatively going out of use in this part of Japan.

In one or two of the preceding years I have been inclined to believe that part of the heavy stocks, which had been imported, and, in many cases, sold to the Japanese merchants, much in excess of the nominal consumptive demand, were still existing, untouched, in the interior districts, and gradually supplying a portion of the present demand; but whether this opinion were correct or not at the time, these surpluses can scarcely exist at present.

For some time after the opening of the port of Hiôgo-Osaka, merchants here commonly attributed the falling off in their trade to the transference of a portion of it to that port. They did so with justice no doubt, and had trade at Hiôgo continued to flourish and develop itself the fact might still be adduced to account for one continued retrogression. The dullness and depression of trade at Hiôgo, however, afford no explanation from that direction.

No manufactures that would compete, to any serious extent, with foreign piece goods, have been produced in the country, except such as were produced formerly. Neither has the population suffered from bad crops, or other natural impoverishing causes which would diminish the ability of the lower classes to supply themselves, as freely as before, with articles of dress. The heavy land tax imposed upon the population is, however, much felt, and more so, doubtless, since its collection in money instead of in kind as formerly. I am inclined to think that to this cause, chiefly, and to the otherwise severe pressure of taxation, must be attributed the large diminution of trade which I have to record.

The decrease shows itself most strikingly in plain cotton goods, but largely also in mixed fabrics and in such articles as velvets, lawns &c. &c. which are not so much used by the lower classes as by the grades above them. The country people in this portion of Japan, though pretty well off, so far as actual necessaries are concerned, are not rich, having little profitable outlet for the surplus productions; their available funds, therefore, are soon absorbed.

Some accumulation of wealth, among the people, is necessary for their advancement, but this does not seem to take place under the present system, but rather the reverse. The trading classes, and those who receive direct benefit from their intercourse with foreigners, are but few, compared with the population of the interior, who receive little compensating advantages for the more expensive system of Government they now live under, for only a very small proportion of the revenue collected in the island is expended here, and thus returned indirectly to the pockets of the people.

In thus associating the decline of trade here with the present system of centralization pursued by the Government I might be supposed to overlook the fact that ports nearer the centre of Government are in the same languishing condition. But, in my opinion, this circumstance only suggests the consideration that in the district represented by these ports taxation also absorbs too much of the surplus earnings of the country, and that a fair share of the revenue is not devoted to the carrying out of useful practical improvements, likely to increase the national wealth and productiveness.

Exports.—The figures here do not denote so large a falling off as in the Imports, although the tendency is still towards a decline.

For the three past years the total amounts of Exports to all countries, including re-Exports to other open ports, are as follows :—

1874.....$2,692,875
1875.....$2,159,303
1876.....$1,959,673

Last year thus shows a reduction on the preceding one of $199,630, which that was less than 1874 by $533,572, or a falling off of $733,202, more that one-third of the present export in two years.

Tea.—This article shows an increase in quantity of about 1,300 piculs of all kinds, but a falling off in value of $138,116 which is to be accounted for by the serious decline in value tea has everywhere experienced.

I believe that the production of tea in the districts near here, has increased to a somewhat large extent than is shown above. A considerable portion of the Kiushiu growth finds its way direct to Hiôgo and Yokohama, where it frequently commands higher rates than in Nagasaki, owing to its suitability for mixing purposes. The very low prices which have been current during the past year seem likely, however, to check any further development of this industry for the present.

I understand that scarcely any of the tea sold here this season, except the very common kind of leaf, has realized profits to the grower and native dealers, most of it showing considerable losses.

Tobacco.—The tables show a large falling off under this heading, the quantity exported during 1875 having been 13,242 piculs against 3,450 piculs for the year just closed. The low price which exporters were able to give for the leaf in 1875 has, no doubt, stopped production to some extent,

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

but I understand there were between five and six thousand piculs awaiting shipments in foreign godowns at the end of 1876, which will account for a great portion of the deficiency. This crop exhausts the soil more quickly perhaps than almost any other, so that, unless the area of cultivation were increased, the production would be likely to diminish. Tobacco cannot be grown upon the same soil, even in alternate years, for a long period together.

Shortness of supply seems to have had a beneficial effect on the London market and it is probable, therefore, that some improvement will be the result here during the next season.

Vegetable Wax.—The quantity of this production exported in 1875 was 9,411 piculs while for 1876 it only amounts 4,583 piculs or rather less than one half. The falling off here is again to be accounted for by the great depression in value in the home markets, the price ruling in London, during the past year, having been about half what the same article was worth two or three years ago. It is evident that the price now obtainable by the natives for wax in the market scarcely pays for the cost of its manufacture, for in this neighbourhood the berries are often left to decay upon this trees.

Camphor.—Is one of the few articles that show any improvement in the quantity exported. The figures here are 2,906 piculs for 1875 and 4,203 piculs for 1876, or an increase of 1,297 piculs. The fluctuations noticeable in the value of this drug are dependent mainly upon the Formosan supply, and are, therefore, difficult to account for without a knowledge of that market. The chief portion of the Camphor exported from here finds its way to China, where it is more esteemed, and commands a better price than that from Formosa, some of this, however, is probably afterwards re-exported to Europe. It is difficult to send this article to Europe from this port direct as it injures many others kinds of produce by its strong smell, and requires to be shipped only with such as are not damaged by it.

Rice.—Shows an increase of 22,706 piculs, the export of last year being 28,403 piculs against 5,697 piculs for 1875. I understand the whole of this rice has gone forward on account of the Japanese Government.

Dried Fish.—Has always been an article of large export from this Port, and the tables will show that it still maintains its position. This trade is, however, entirely in Chinese hands and I have difficulty, therefore, in obtaining many particulars about it.

Coal.—150,841 tons were exported last year against 164,140 tons in 1875 showing a decrease of 13,299 tons. This decrease is attributable to the output of the Takashima mine having diminished through the mine igniting as explained under the following head.

TAKASHIMA COAL MINE.

	Tons.
Output of Coal from January 1st to June 30th....	79,414
„ „ July 1st to December 31st....	22,462
Total Output.....Tons	101,876

During the month of June alone the output averaged about 650 tons per working day. Towards the end of July a fire, attributed to spontaneous combustion broke out in some of the disused workings. All endeavours to to extinguish it were unavailing, and on the 11th of August coal working was entirely stopped. The mine was subsequently flooded about three-fourths full. Additional pumping machinery ordered from England arrived in December. The water is now being pumped out, and it is anticipated the yield will gradually increase until the month of May or June, when full work will be again resumed.

An independent seam of about nine feet of coal formerly worked in Japan fashion, but abandoned for want of adequate appliances for removing the water, has recently been opened out, and an additional supply of about 200 tons per day is expected therefrom in a few months.

The Takashima screened coal continued to be used by vessels of war of the French, United States, Russian and German Navies. It is used by some of the fast steamers on their voyages from China to London with the first teas of the season which speaks for its qualities as a steam coal. Shipments and sales of Takashima coal during 1876 were as follows:—

	Tons.
To Shanghai	16,848
„ Hongkong	19,517
„ Yokohama	2,672
„ Tientsin	4,740
„ Manila	825
„ Foochow	800
Sales in Nagasaki	46,647
Total .....Tons	92,049

Hashima Coal Mine.—During the past year the coal mine at Hashima have been opened out on a more extended scale than formerly, and the output from this island reached over 2000 tons for the month of March this year. The Japanese proprietor of the mine has engaged the services of a European engineer and miner, who anticipate a considerably increased production of coal during the current year. This coal mine is the second private one in Japan worked by Foreign Machinery.

The island of Hashima is situated about three miles to the S.W. of Takashima and forms one of the group of four islands, the strata of which all dip to the N. W. at an angle of 28 to 35 degrees. These islands seem to have been thrown up at the same time as the peninsula of Nomo, the latter forcing itself through the sedimentary rock, whilst the islands were merely sufficiently upheaved to bring the underlying coal seams to the sea level. In the peninsula of Nomo no coal has been discovered.

In Takashima, the largest of the four islands here referred to, the outcrop of several coal seams is visible, the highest of which is known as the eight foot seam. This seam was the original one worked at Takashima and is the one which first made a name for the Takashima coal. This same seam of coal shows itself in Hashima, but at the sea level, and it is the one now being worked at that island.

The probabilities are that one vast coal field exists under the sea, running from the penisula of Nomo towards Matsushima and Hirado, and when this field is entered by safe means, though the overlying islands, an enormous extent of coal will be available. Such an entry has already been made at Takashima. From the experience of work already done at Takashima, it has been found, that the coal field, that I have referred to, runs practically level when once the boundaries of the islands have been passed, and if this level is reached at a safe depth from the sea, the working of it will prove both easy and economical.

I may add that the sale of Hashima coal has been placed under the agency of one of our English firms.

Miike Coal Mine.—Among other coal area in the Nagasaki district is the Miike Coal field, situated in the South East corner of the Province of Chikugo on the East of the Shimabara Gulf. This coal field forms a strip of about four miles wide from East to West, and runs a few miles from North to South. It outcrops on the East against some granite hills, on the West it dips gently under the sea of the Shimabara Gulf, it also outcrops to the North against some hills of clay slates. There are two seams of excellent bituminous coal, the upper one exceeding six feet in thickness, and separated from the lower seam which average five feet by a parting of stone six feet thick thus upper seam six to eleven feet thick, clear coal with no "batt."

Parting of stone six feet, lower coal of five feet with an irregular seam of "batt." The inclination of the seams is very gentle to the S. W.

These mines have been most extensively worked for a great number of years probably more than 200 by following the seam from its outcrop down its inclination by natural ventilation, and carrying the coal out of the mine in baskets by coolies. The workings have now reached a distance of over half a mile from the outcrop of the seam where the entrances to the mine are, and this great distance has rendered European methods of working necessary for raising the water and coal and ventilating the mines. Being now in the hands of the Imperial Government they have decided to improve the system of working by introducing modern European methods, and they have secured the services of Mr. Potter, an English Mining Engineer, for the purpose. The output from these mines last year averaged about 200 tons per day, which

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

is about the present output, of most excellent bituminous coal.

The introduction of modern European methods of mining will enable this district to yield coal, for many years to come, economically, which could not have been done under the native method. Lately a great portion of this coal has been brought to this port for market.

Shipping.—No material change has taken place in the Foreign Shipping and calls for but few comments. 277 vessels entered of 180,243 tons, being a decrease of 19 in the number of vessels and of 96,172 tons of the total tonnage as compared with the previous year which is partly accounted for by one of the mail steamers under the American flag having been transferred to Mitsubishi Company.

The aggregate tonnage of British ships entered and cleared shows an increase of 12 vessels and 12,452 tons, being 132 vessels of 80,243 tons against 120 of 67,791 tons of the previous year.

The British ships of 2,644 tons sailed for England direct, and 2 vessels of 1,182 tons arrived direct from that part, with cargoes.

American ships, entered and cleared, (not including mails steamers) likewise show an increase, as compared with the previous year, being 64 vessels of 29,004 tons against 43 vessels of 22,627 tons.

Eight French ships of 2,448 tons entered and cleared —being an excess of 3 vessels and 974 tons over the previous year.

The German shipping shows a decrease of 2 vessels and 514 tons, being 17 ships of 5,150 tons in 1875 against 15 ships of 4,636 tons in 1876.

Twenty Russian steamers entered and cleared, being an increase of eleven steamers and 4,266 tons in favour of 1876.

Exchange.—Has fluctuated during the year between 3/10 and 4/6¼ for six months sight Bills on London. These fluctuations are governed by so many and often such remote contingencies that it can serve little purpose to speculate upon them, more expecially as the money market at Nagasaki is so small. It is entirely controlled by that of Shanghai.

General.—The foregoing report will necessarily strike you, in many respects, as a very unsatisfactory one. It cannot be expected, however, that the commerce of Nagasaki will do more than languish, as it has been doing for the past few years so long as the Government continues to draw away the sinews of the country, at least of this part of it, without giving the people a *quid pro quo* in the shape of public improvements and healthy, inexpensive, but progressive legislation. A country so little advanced as this is, cannot, without injury to its progress, bear the pressure of an expensive form of Government.

I have so often expressed my opinion with regard to roads, as being the great requirement here before we can expect this port to make any great step in advance, that I have little left to say upon this subject.

The short one to Tokitsu, referred to in my last report, is progressing, and will, when it is finished, be a stride in the right direction. It will, I hope, be found beneficial to the town by connecting it with the traffic of Omura Bay, but nothing have been done towards connecting the place with the mainland by a road over Aba Hill, which, as I have frequently pointed out, is the only outlet of importance.

The want of roads, however, although it might account for a slow development, or even for a stationary condition of trade, can scarcely be accepted as a reason for the continual and lamentable falling off which have been shown of late years. This decline, as I have previously pointed out, can only be attributed to the impoverishment caused by too severe a drain of funds towards the Central Government.

Dry Dock.—In my report for the year 1874 I referred to the construction of a dry dock by the Japanese Government of the following dimensions. Length 460 feet, Breadth 89 feet, Depth of Water 28 feet. These works have been actively carried on during the preceding year, and it is expected if the caisson which has been ordered in England arrives in time, that they will be completed towards the end of 1877.

Corea.—Shortly after the conclusion of the Treaty between Japan and Corea a monthly service began from Nagasaki to Fusankai calling at Tsushima on the way. The time occupied by a round voyage was about 12 days and the steamer had only made three trips when she had to be withdrawn in consequence of the present disturbances in Satsuma.

The general account brought back was that the country looked uninviting and that the inhabitants were starving. On the occasion of the last outward voyage of the steamer she was laden entirely with rice which was the commodity the Coreans would take in barter.

The prospect of a trade springing up between the two countries excited some little interest amongst the native merchants of Nagasaki before the withdrawal of the steamer. It is, however, not anticipated that the trade will assume large proportions.

The articles imported from Corea were irico, seaweed, peony bark, goose quills, sharks fins, sanshin, dried awabi, hides and bones.

The exports consisted of rice, saffron, shirtings and dyes.

I have the honour to be
Sir,
Your most obedient
humble servant,
(Signed) MARCUS FLOWERS,
H. M.'s Consul.

Sir HARRY S. PARKES, K.C.B.,
&c., &c., &c.

AN HISTORICAL AND DESCRIPTIVE SKETCH OF MANILA, THE CAPITAL OF THE PHILIPPINES.

(Concluded.)

The little village of Antipolo perched among the hills behind Marquina and in plain view of Manila, is famous for its church wherein is deposited a highly revered image of the Holy Virgin. For more than an hundred years an annual festival has been observed, when pilgrims from far and near visit the church to offer prayers at the Virgin's shrine. The "fiesta" occurs in the month of May and has become of almost national importance. The greater portion of the distance between Antipolo and Manila is traversed by the river Pasig. From the first to the last day of the feast thousands upon thousands of bancas are engaged in the conveyance of pilgrims. Arrayed in holiday attire—their boats decked with garlands of flowers and flags and streamers—the light hearted natives take full advantage of the occasion, which with them assumes the character of a grand picnic. Food and bedding are provided, and those who come long distances are furnished with all the essentials to house-keeping. Nor is music forgotten. Nearly every party is accompanied by a band of "musicos," who, *en route*, fill the air with lively melody and serve at their destination for dancing. It is computed that thirty to forty thousand persons annually visit Antipolo.

The river and lake abound with excellent fish. Lucrative employment is thus provided for a large class of the population, who keep the market supplied with this description of food. The fish are caught with weirs, or with nets and drags. In the bay large seines are employed; but the natives are not bold fishermen, and prefer to confine themselves to the less tedious and dangerous methods of fresh water fishing. Markets are held at morning and night. The fish are frequently still living when offered for sale; but the ingenious modes practised by the Chinese for preserving the fish alive are not in use among the natives, and, indeed, fish are so abundant and cheap as to render such treatment quite unnecessary.

The population of Manila is of a very mixed character, and comprises, besides the native or predominating element, a large number of Chinese and mestizos. According to the Census of 1873 there were residing in Manila some 250 foreigners of European origin; 4,189 European Spaniards; 15,157 Chinese; 46,066 Chinese mestizos; 3,849 Spanish mestizos; 160,896 Tagalogs, or Indians. Of the total population of 230,000 souls, only 10,620 resided within the city walls. The population of the Philippines was by the same census computed at upwards of 5,000,000.

Spaniards of European birth fill nearly all positions of public trust under the Government, and but few of this class follow mercantile pursuits. Foreigners of other nationalities are almost exclusively engaged in commerce. The Chinese are shopkeepers, merchants, artisans, and common labourers; and form a highly important item of the population. From the earliest Colonial days, and even prior to the advent of the Spaniards, China was in commercial communication with Manila. Large numbers of Chinese have at various times formed settlements at, and contiguous to, the capital; and the old chronicles of the Spanish padres record sanguinary conflicts between the natives and these alien colonists. The Chinese have, however, with a persistence natural to their character, maintained their relations with the islands, notwithstanding the jealousy and dislike with which they have ever been regarded by the natives. It was early recognized by the governors of the colony that, unless an effective check should be placed upon the immigration of the Chinese, their numbers would increase to such an extent as to threaten the extermination of the Indians. As measures of prevention, heavy taxes were imposed upon the Chinese and laws enacted by which they were permitted to engage in agricultural pursuits only. In spite of these preventions, however, the superiority of the Chinese race has asserted itself, and in place of remaining mere tillers of the soil as the Spaniards wished to make them, they have become dominant in all sorts of handicrafts; have to a great extent monopolized the trade in imported goods of European manufacture; and insidiously established themselves in every part of the archipelago. The Chinese have also made a strong and permanent physical impression upon the native races, to which large class of mixed blood, called "mestizos sangleys," has come into existence testifies: but unfortunately these half castes are no improvement on either parent race, for although they have to a great degree cast off the indolence of the Tagalogs, they have on the other hand retained the worst characteristics of the Mongols, and lost the vigour of both ancestors. The "mestizos" of Spanish and Indian origin represent a type superior to the native race, and naturally assume the higher place in the social scale to which their improved intellectual traits entitle them.

The Tagalogs, or Indians as they are called, the most important and numerous of the many races inhabiting the islands at the time of the Spanish occupation, are of undoubted Malayan origin. The principal features of the latter type are strongly developed in the Tagalogs, who are, however, somewhat more robust than their protoypes. The colour of their skin varies from a light brown to a "café au lait" tinge. Their hair is coarse, black, and abundant. The women carefully cultivate its length, but the males wear it short. The facial contour of the Indian is oval, with heavy and projecting cheek-bones; the lower jaw is narrow, the nose broad and flat at the base with the nostrils exposed; the eyes are black, and slightly deflected at the interior angle. In character, the Indian is indolent and improvident, deceitful and ungrateful, cowardly and treacherous, and possesses none of those nobler traits which distinguish the higher orders of humanity. His indolence rendered him docile, while his lack of courage enables his conquerors to retain him in easy subjection. The history of the Spanish occupation, with few exceptions, is devoid of accounts of the bloody wars and incessant revolts which characterized the subjugation of South America.

From the commencement of Spanish control the natives embraced Christianity, and the Roman Catholic faith is universally professed by the natives, with the exception of some few of the still uncivilized tribes inhabiting the inaccessible mountain districts. It may be doubted, however, whether the native mind has attained to more than outward observances of Christianity; for still possessed of the superstition and incredulity ineradicable in the race and filled with the traditions and legends of their barbarian ancestors, their practice of religion can scarcely be deemed more then an improved sort of idolatry. It must be confessed, that to the untiring zeal of the priests is wholly due the advanced condition of the race; and whatever of civilization has been accomplished is solely attributable to the labours of the Roman Catholic missionaries.

The native dress is peculiar, but not unpicturesque. White or coloured shirts, worn outside the pantaloons like blouses, with trowsers of variously coloured cotton stuffs, form the costume of the men. The women wear a short chemise, unconfined at the waist, high in the neck, and with wide sleeves: a cotton gown or petticoat extends to the feet, over which is tightly folded a broad scarf of dark blue colour, more than half covering the gown; about the neck is folded a handkerchief, the points of which are disposed across the bosom; the feet are protected by thin sandals. The women seldom wear any head covering, but when attending mass a scarf resembling the Spanish mantilla is thrown loosely over the head. The men wear hats of straw or other material and leathern sandals or shoes. Bright colours delight the native eye and the womens' dresses are strikingly gay and gaudy. The men affect a more modest attire, but on gala days the brilliance of their costumes vies with that of the other sex.

The natives are excessively fond of music and possess an extraordinary talent for melody. The military and village bands are composed exclusively of native musicians who have attained to a high degree of proficiency upon all kinds of wind instruments. Nearly every household numbers in its midst a musician. With the men wind instruments are the favourites, but there is no lack of skilful performers upon the violin. The women confine their talent to the harp. The music itself is nearly universally of European origin, and it is a singular circumstance that while the native ear is quick, retentive, and sympathetic, it entirely lacks invention or originality. But few native melodies are known, and they are of a plaintive character.

The love of music naturally engenders a liking for dancing. The latter accomplishment is common among all classes of the natives, and at their festivals music and dancing are the invariable amusements; and as the Roman Catholic calendar abounds in holy-days, the natives may be said to live a joyous life.

Each "barrio" or district is under the spiritual protection of some, one of the Saints. The annual recurrence of the saint's day is made the occasion of religious and social festivities. A procession of images followed by the populace bearing lighted candles parades the streets at the vesper hour, and at night the churches and houses are brilliantly illuminated with countless lamps and lanterns. Arches of flowers and evergreens are thrown across the principal thoroughfares; tapestries and streamers adorn the house-fronts; bands of music enliven the air; and the whole village is in gay commotion. In every house is spread a collation of which the neighbours or friends from adjoining parishes are pressed to partake. Dancing is not neglected, and the bright-eyed maidens are easily persuaded by their gallants "to trip the light fantastic toe."

The social intercourse between the English portion of the community and the Spaniards is limited to visits of ceremony. The utmost cordiality exists between them, however. A Jockey Club was formed by the English residents some years since. It is now liberally supported by all members of the community, and the annual race meeting has become an event looked forward to with much interest. The meeting takes place in the spring, and during the afternoons of the three race days the attendance is not only numerous, but comprises the élite of the officials and civil classes. The native horses, or ponies, are well proportioned animals, and more shapely than the ponies of China, Java, or Japan. They are hardy and fleet, and run in excellent form.

Theatres and operas exist, but the drama does not flourish in this distant land. On the other hand the whole population is so extravagantly find of music that really good opera companies are induced to visit Manila, and during the season Lucrezia Borgia or Il Trovatore may be heard very creditably performed. The orchestras are made up of native musicians who prove fairly equal to the scores of the most difficult masters.

The Philippines are held by military occupation. Manila, being the capital of the Archipelago, is the seat of the Central Government. The Crown is represented by the Governor-General, who is an officer of high rank chosen either from the army or navy. The existing system of civil Government is defective to a high degree. Each province is presided over by an alcalde who is at once the judge and administrator of the law. Trial by jury is unknown. Appeal can be made from the judgment of the alcalde to the Supreme Court or "audencia" which resides in Manila. The Governor-General preserves but little state. His present residence is situated in the outskirts of the city, the palace proper having lain in ruins since the earthquake of 1863. The Governor drives out in a barouche drawn by four horses and on official occasions is escorted by a mounted guard.

The army comprises from eight to ten thousand men, of which about fifteen hundred are European Spaniards, the balance being natives drafted from all parts of the islands and officered by Spaniards. The garrison of Manila consists of the European and several native regiments. An arsenal is maintained at the neighbouring port of Cavite which is the rendezvous of the men-of-war on the station.

The police of the city is under military discipline, and considering they are chosen from the native classes, they execute their duties with praiseworthy fidelity. A very low average of crime exists. The natives are not addicted to drunkenness and to that fact is to be attributed in a great measure the absence of violent crimes. Their chief vice is gambling, an offence punishable by law. The lighter crimes are expiated upon the public roads, but criminals under sentence for long terms or for life are deported to the convict stations at Balabac or the Marianas.

The passport system obtains in the Philippines, and no one can enter or leave the islands without previously obtaining a pass. The same system applies equally to intercourse between the different provinces and islands of the archipelago.

The unmistakeable evidencies of the ravages committed by earthquakes are everywhere visible. Many of the churches are still in ruins, and large numbers of private dwellings yet remain a heap of stones as they fell. From the date of its foundation, Manila has been the victim of of these terrible visitations, and its inhabitants live in constant fear of their recurrence. The most memorable and destructive earthquake occurred in 1645 on the day of San Andres. At about eight o'clock of the evening of that day, the sky being clear, the sea calm, and the whole community in repose, the city was suddenly precipitated into ruins. Without warning and in an instant the sea rose with a broad swell which lashed itself against the very walls of the city. Frightful noises fell upon the appalled ear. The earth trembled, and seemed shaken to its centre. The dumb animals cowered to the ground in their terror. All nature appeared to be in travail. Again and again were the mighty throes repeated until nothing could longer withstand the irresistible shocks. The walls of the dwellings cracked and strained under the unseen power which swayed them. Overcome with fear, the inhabitants sought refuge under the arches and doorways of their houses, but roofs and timbers fell crashing about them, and those who had not escaped to the streets and plazas were instantaneously immured in a common grave. The confusion increased and the dust which arose in thick clouds from the ruins added to the obscurity of the night. The cries of the wounded and dying mingled with the deafening crash ef crumbling edifices. Mothers sought for their lost children in vain. Husbands and wives called helplessly to each other in the agony of their separation. In less time than has been consumed in the narration of the catastrophe the des-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

truction of the city was complete. At daybreak the sun shone upon the ruins of the once proud capital, not one stone of which remained upon another. Recovering from the stupor induced by the horrors of the preceding night, the inhabitants commenced a forlorn search for those who might still be succoured from a living sepulchre. More than six hundred bodies were disinterred, and hundreds of maimed, though still living victims, were exhumed from the rubbish. The actual loss of life was never ascertained, but computed at three hundred. Manila had previously contained many substantial buildings of some architectural pretensions. Her dwellings were lofty and extensive, with galleries, balconies, and cupolas, and all the adjuncts of tropical comfort. The city was shortly rebuilt, but upon a more moderate scale and in a style better calculated to resist the almost invincible phenomana of earthquakes. In 1863 Manila was again almost destroyed, but owing to the improved methods of construction which had been gradually adopted, the loss of life was less terrible. The Cathedral and other large buildings were ruined, together with more than one thousand private residences.

The principal articles of export from Manila are hemp, sugar, tobacco, cigars, coffee, and indigo. Among the imports are comprised all descriptions of cotton manufactures, silks, iron, steel, ship chandlery, and articles of luxury. The commerce of Manila has assumed of late years very important dimensions and gives employment to many foreign vessels.

Tobacco is extensively cultivated in the provinces of Cagayan and Ysabela of the island Luzon. The trade in the article is controlled by the Government. Agents are located throughout the producing districts who receive the tobacco from the cultivators, paying them for it at prices fixed by the hacienda in scrip redeemble at the pleasure of the colonial treasurer, who is usually heavily in debt to the planters. This mode of settlement promotes great discontent among the natives and is productive of great suffering among them, compelled as they often are to part with their scrip at heavy discounts to unscrupulous speculators, who are not infrequently officials occupying high positions in the service of the Government. The leaf is collected into the public warehouses at Manila. A portion of each crop is remitted to Spain for colonial account; a part is supplied to the government cigar manufactories at Manila; and the residue is offered for sale in public auction to exporters. The government controls also the manufacture of cigars. Five large factories give employment to twenty-five to thirty thousand natives, the greater part of the workers being females. For local consumption, cigars can be purchased at the government "estancos," but for export all purchases must be made at the periodical public sales held for that purpose.

In the vicinity of Manila the monsoons of the China Sea do not blow with the regularity peculiar to higher latitudes. The intervals of varying winds are more prolonged at the changes, when gales and hurricanes and all the phenomena attending such atmospherical revolutions are experienced with unequalled intensity. Storms of thunder and lightning burst with terrific force upon the land, levelling trees and unroofing the frail huts of the natives; while along the coast hundreds of small craft, unable to escape from the fury of the tempest, are strewn upon the beach. The hot season begins in March and lasts until the latter part of July, when the rains commence. The maximum of the thermometer is about 92,° and there is a range of ten degrees during the twenty-four hours. At night-fall the sea-breezes set in, reducing the almost intolerable heat of the day to an agreeable and endurable temperature for sleeping. During the rainy season the earth becomes inundated, the roads impassible, and the fields converted into vast lakes whose limits can sometimes scarcely be defined by the eye. The rains cease in December. The abundant vegetation, washed and bright, appears to have assumed its holiday attire, and this in a land ever verdant implies an additional charm to an already delicious landscape. The air has become more transparent. The distant hills seem to approach the enchanted spectator, to whose expanding nostrils are wafted flower scented breezes from adown their sides. The aspect of the landscape changes with each hour of the day. From the rise of the sun, when first he announces his presence by the violet and purple tints along the horizon and bursts in golden glory above the hill tops, until he again retires trailing his gorgeous mantle behind him adown the western slopes, new phases of colour are constantly developed. The greys of morn deepen into intenser hues at mid-day: and as the light travels from mountain top to distant volcano, tree and forest assume garbs of russet, yellow, and emerald green in interminable variety. As the sun wanes, the shadows lengthen, and the sky is slowly and imperceptibly lit up with a surprising splendour of gold and crimson. His slanting rays again illuminate the landscape for a brief moment, when night suddenly draws her pall over the face of nature and all is darkness. The stars shine forth with magic brilliancy. The Great Bear discovers his full height close to the northern horizon; the Southern Cross leans against the opposite sky; and in the zenith, Orion assumes command of all the constellations.

ASIATIC SOCIETY OF JAPAN.

An ordinary meeting was held in the Society's Library, Tokio Dai Gakko, on the 23rd instant, Dr. Syle, Vice-President, in the chair.

The minutes of last meeting were read and approved. The Council acknowledged a contribution from Professor Perry "On Steam," and the Library Committee reported receipt of the Proceedings of several learned Societies.

Professor Perry then read a paper "On a neglected principle that may be employed in Earthquake Measurements."

The Chairman invited discussion on the paper. Mr. Poate suggested that Peruvian Balsam, whose viscosity could be regulated, would be such a liquid as Messrs. Ayrton and Perry required. A mixture of tar and pitch, which Mr. Perry thought of, Professor Smith pointed out was very unsuitable on account of the effects of heat on these substances.

Prof. Smith further said that in the experimental study of earthquakes he thought that exact time observations taken at a large number of stations scattered over the affected district were of much greater importance than very complete and accurate observations taken at any one place. The dynamics of weather meteorology had only been successfully studied since the establishment of a wide-spread system of observation stations, whose records could be studied in connection with each other and as a whole, and a similar system had to be adopted in tracing the origin and progress of disturbances in the earth's crust. As a wind register may be made to record with tolerable accuracy the direction and velocity of the wind from instant to instant at the particular place in which the instrument is placed, so might a seismograph be made which would indicate the nature of the disturbance of that particular point of the earth's surface on which it rested, with an exactness proportionate to the mechanical science and still brought to bear upon its design. But the motion of our particular part of the surface was by no means a time approximation to the average motion over a large area, nor could there be deduced from a knowledge of it a knowledge of the progress with regard to direction and velocity of the general wave, any more than the general direction and velocity of a wave crossing an expanse of the sea could be discovered by watching the part of it that runs round a rock or up a creek. In the earth's surface lie scattered everywhere resistent obstacles which deflect the earthquake-wave irregularly to one side or the other from its general course. The only way of arriving at a time knowledge of the value of the wave as a whole was to note accurately the exact dates of its arrival at a great many scattered stations. Professor Smith then pointed out that Professor Perry's equations did not take account of the fact that as the earth's surface tilted over the seismograph-case along with it, the line of action of the vertical suspending springs altered its inclination to the line of action of the weight of the ball, and expressed his belief that the modification necessary on account of this was very considerable. Professor Smith did not agree with the writers of the paper in thinking that the natural period of vibration of the ball suspended by the springs should be made short compared with the expected

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

period of the earthquake, because, although Professor Perry had mathematically proved that if it was so, the motion of the ball relatively to the box would be approximately the same as the motion of the box itself, only reduced in scale, still it was only an approximation, and the long curve representing the earthquake would be difficult to deduce from the actually registered rippled curve unless the amplitude of the short ripples representing the "instrumental" vibration was small compared with the amplitude of the long earthquake curve upon which the ripples were superimposed. Now, although from a mathematical point of view there was no impossibility in arranging the various dimensions of the instrument so that the above relation between the amplitudes would hold, still Professor Smith was of opinion that Professors Ayrton and Perry would, when they came to design their instrument, find considerable practical difficulty in fulfilling simultaneously the two conditions that the one vibration should have both its amplitude and its period very much longer than those of the other. If, on the other hand, the natural period of vibration of the instrument were made considerably longer that of the earthquake, the reduction of the registered curve to the true earthquake curve would be somewhat more complicated. The accuracy of the result was worth the extra trouble in the case of an expensive instrument such as was under discussion.

The Chairman now observed that the usual time for closing the meeting had arrived and put to the meeting whether or not the discussion should be continued some other day. It was agreed that the discussion be continued next Wednesday, when also the other paper advertised for the meeting would be read.

YOKOHAMA RACE CLUB.

SPRING MEETING.

Beautiful weather favoured the Race Club for their first day's racing, and after the late rains the course was in excellent condition. The attendance of ladies in the Grand Stand was not so good as it will no doubt be to-day as the weather is again favourable, but the general attendance was up to the mark, though there was but a scanty show of natives. The appearance of the Grand Stand and enclosure was a great improvement on anything hitherto attempted in the decorative line, and reflected very great credit on the good taste and management of the Committee. The Grand Stand itself was simply but effectively festooned with evergreens, while on the lawn in front were arranged flower beds containing spendid roses of

> "Beauty truly blent, whose red and white
> Nature's own sweet and cunning hand laid on,"

and other gorgeous flowers, rivalling by their brilliancy and variety of colours the toilets of the ladies who graced the scene by their presence. There were also several stands devoted to plants for sale, each one ticketed at about three times the price at which it could be obtained at the nursery gardens. Altogether, owing to high prices and the fact that few people attending a race meeting will ever think it desirable to finish the day's proceedings by a purchase of plants which they would have to take away there and then, we fear that the native custodian will not look upon the flower show as a financial success. The band of the *Tennessee* was in attendance, and served to pleasantly while away the unavoidable intervals between the races.

FIRST DAY.

Thursday, 24th May, 1877.

1.—THE GINKO CUP.—For China Ponies, subscription Griffins only; weight as per scale. Entrance, $5. Three-quarters of a mile.

Mr. Peter's *Vandal*, 10st. 5lbs 1
,, Savile Stuart's *Talisman*, 10st. 5lbs..... 2
,, Fiddle-de-dee's *Kittiwake*, 10st. 2lbs..... 3
,, ,, *Wilhelm Tell*, 10st. 5lbs..... 0
,, John Peel's *Liddesdale*, 10st. 11lbs..... 0
,, Walter's *Jack O'Lantern*, 10st. 8lbs..... 0
,, Pringle's *Pegasus*, 10st. 5lbs..... 0
Dr. Buckle's *Sequel*, 10st. 2lbs..... 0

This, the first race, opened with a chapter of accidents, as *Sequel* bucked his rider off as he left paddock, and *Talisman* twice parted with his jockey before the race was run, besides once more at the conclusion of it. Added to this the determined obstinacy of *Liddesdale* delayed the start for an unconscionable long time. When the flag at last went down *Jack O'Lantern* made a series of bucks and got rid of his rider, while *Liddesdale* took a most decided lead, being followed by *Talisman* and *Kittywake*, *Sequel* having by far the worst of the start. At the half mile *Talisman* overtook the leader and headed him at the trees, keeping this advantage to the turn, but here *Kittiwake* and *Vandal* came up and the race lay with these four, the rest being nowhere. Down the straight they came together, but at the distance Mr. Herhausen, who was riding *Vandal*, brought him well to the front, and eventually landed him a winner by half a length, in the splendid time of 1 min. 38¼ secs.

2.—THE GRIFFINS' PLATE.—For Japan Ponies, *bonâ fide* Griffins; weight for inches. Entrance, $5. Five furlongs.

Mr. John Peel's *Sakigake*, 10st. 4lbs..... 1
,, Fiddle-de-dee's *Dazzle*, 9st. 12lbs..... 2
Dr. Buckle's *Snake*, 10st. 6lbs..... 3
Mr. E. Mason's *Silverspring*, 10st. 8lbs..... 0

Only four ponies faced the starter, and when the word was given *Sakigake* was left at the post, and only succeeded in getting away a score of lengths behind the others. *Snake* jumped off with the lead, but was soon picked up and passed by *Dazzle*, who, leading by several lengths, seemed to have the race all his own way, but *Sakigake*, despite the disadvantage he had at the start, overhauled his ponies one after the other and challenged the leader at the quarter mile. *Dazzle* led into the straight, but at the distance *Sakigake*, ridden by Mr. Osborn, ran level and a most exciting finish ensued, resulting in the latter's favour by half a length, thus scoring a well deserved and popular win for Mr. John Peel. *Silverspring* never had a show in this race, as he bolted at the trees so soon as his rider commenced to flog. Time 1 min. 26 secs.

3.—THE TRIAL PLATE.—Value $—. For China Ponies that have never won a flat race here up to date of entry; weight for inches. Entrance, $5. Once round.

Mr. Fiddle-de-dee's *Hoolet*, 10st. 8lbs . ..... †
,, John Peel's *Bonny Doon* (late *Skylark*), 10st. 8lbs. †

This resulted in a match between *Bonny Doon* and *Hoolet*. The former was allowed to go away with the lead at a comparatively leisurely pace, and to keep it to the three quarters post, from which point to the half mile the ponies ran level, where *Hoolet* again dropped astern. Mr. Marlborough, who was riding *Hoolet*, evidently relied on deciding the race down the straight, but every effort on his part met with a corresponding one from Mr. Osborn on *Bonny Doon*, and amidst the intense excitement of the spectators the finish was a dead heat. The owners subsequently agreed to divide the stakes. Time 2 min. 25 secs.

4.—THE SPRING STAKES.—Value $—. For Japan Ponies. Winners of one race in 1876, and the winner of No. 2, 5lbs. extra; winners of two or more races in 1876, 10lbs. extra; weight for inches. Entrance, $5. Half a mile.

Mr. D. de Ding Dong's *Jim Hills*, 11st. (10lbs. extra.) 1
Dr. Buckle's *Spendthrift*, 11st. (10lbs. extra.)..... 2
,, ,, *Sandboy*, 11st. (10lbs. extra.)..... 3
,, ,, *Sorcerer* (late *Mohichilo*), 10st. 8lbs... 0
Mr. Savile's *Drift*, 10st. 7lbs. (5lbs. extra.)..... 0

Five ponies appeared at the post, and though at the start *Sandboy* got off first the others were close up in a ruck, and so raced to the trees, where *Drift* ran up to the leader, *Jim Hills* being third. In this order they entered the straight, but at the distance Mr. Marlborough called on *Jim Hills*, and by hard riding passed his opponents and won by a length. Time 63¾ secs.

5.—THE CHALLENGE CUP.—Value $150. For China Ponies; weight for inches. Entrance $5. One mile and a half.

Mr. John Peel's *Bonny Doon*, 10st. 8lbs..... 1
,, Fiddle-de-dee's *Lintie*, 10st. 2lbs..... 2
,, Savile's *Crusader*, 10st. 5lbs..... 3

On the flag being lowered *Lintie* started off followed by *Bonny Doon* and *Crusader*, and kept this order past the Stand and up the hill. At the three-quarters *Crusader* took second place, and shortly after *Lintie* dropped behind, all, however being well together. *Bonny Doon* and *Crusader* ran neck and neck at the trees, but at the turn *Lintie* was let out, went by *Crusader* and up to *Bonny Doon*, who then had the lead. Down the straight the result was doubtful until the distance was reached, when Mr. Osborn brought *Bonny Doon* cleverly ahead and won by a length and a half, this further success of Mr. John Peel's being received with hearty cheers. Time 3 min. 28¼ secs.

6.—THE AKINDO CUP.—Value $110. For Japan Ponies; winner of No. 4 excluded; winner of No. 2, or of any race previous to this meeting, 10lbs. extra; weight for inches. Entrance, $5. Three-quarters of a mile.

Mr. D. de Ding Dongs, *Typhoon*, 10st. 12lbs..... 1
Dr. Buckle's *Sandboy*, 11st..... 2
Mr. Pringle's *Planet* (late *Sirius*), 11st. 2lbs..... 3
Dr. Buckle's *Spendthrift*, 10st. 8lbs..... 0

There was much trouble at the post and two false starts. When the flag fell *Spendthrift* jumped away with the lead, which he increased to the half mile, with *Planet*, *Sandboy* and *Typhoon* following at intervals. At the trees *Typhoon* and *Sandboy* began to close up, and on entering the straight all four were in a ruck together, and the race might have been anyone's. At the distance Mr. Malborough called on *Typhoon*, when the old favourite shot ahead at once in a marvellous manner, winning by a couple of lengths. *Sandboy* and *Planet* nearly ran a dead heat for second place, while *Spendthrift* was close up at the finish. Time 1 min., 39¼ secs.

7.—THE NANKING CUP.—Value $—. For China Ponies; subscription Griffins only; winner of No. 1 excluded. Entrance, $5. Half a mile.

Original from UNIVERSITY OF CALIFORNIA

Mr. John Peel's, *Liddesdale*, 10st. 11lbs.. 1
,, Savile Stuart's, *Talisman*, 10st 5lbs..... 2
Dr. Buckle's, *Sugarplum*, 10st. 5lbs..... 3
Mr. Fiddle-de-dee's, *Corbie*, 10st. 8lbs..... 0
,, Fritz's, *Faust*, 10st 5lbs..... 0
,, Pringle's, *Premier*, 10st 8lbs..... 0

Sugarplum led, followed by *Liddesdale* and *Talisman*, with *Corbie* well up only to drop hopelessly astern almost immediately. *Liddesdale* ran level with *Sugarplum* at the trees, and shortly afterwards took the lead from him, while *Talisman* came on fast and seemed dangerous, but lost somewhat by running wide at the turn. Down the straight the latter, running on the outside rail, made a gallant but unsuccessful attempt to collar *Liddesdale*, who, ridden by M. Osborn, won a capital race by a head only. Time 61½ secs.

8.—The Mitsu Bishi Challenge Cup.—Value $200. Presented by the Mitsu Bishi Company. For Japan Ponies. To be won at two consecutive meetings by the same stable. To be held in the meantime by the last owner. Entrance, $5. Once round and a distance.

Don Carlos', *Kickapoo*, 10st. 8lbs..... 1
Mr. D. de Ding Dong's, *Typhoon*, 10st. 2lbs..... ... 2
,, Pringle's, *Planet*, 10st. 6lbs..... 3

Planet led off with *Kickapoo* second and *Typhoon* last, and so ran past the Stand and up the hill, where all closed up more, but without altering their order. At the half mile *Typhoon* fell back, while the other two raced neck and neck, until *Typhoon* was let out at the turn and drew up to them. They came down the straight locked together, but *Planet* had a slight advantage at the distance. The finish was an excellent one; *Kickapoo* was ridden by Mr. Herhausen with great judgment, and despite the vigorous rush which *Typhoon* made on nearing the post, secured the prize by a neck. Time 2 minutes 40½ seconds.

9.—The Lusitano Cup.—Presented. Value $100. For China Ponies; winners at this meeting excluded. Weight for inches. Entrance $5. Once round.

Mr. Savile's *Crusader*, 10st. 5lbs..... 1
,, Savile Stuart's *Not Proven*, 10st. 8lbs..... 2
,, Spooner's *Dick Swiveller*, 10st. 5lbs..... 3

Only three ponies appeared at the post. This race was rightly enough looked upon as a moral certainty for *Crusader*, who, ridden by Mr. Marlborough, waited on the other two as long as it suited his jockey's purpose, and then went ahead and won in the commonest canter. A very hollow affair, and a race which unfortunately led to some disputes and disappointments. Time 2 min. 22 secs.

At the conclusion of the race the successful Jockey was led up to the Stand to receive the Cup from Miss Machado, and this very young lady when presenting it, made a speech in a singularly clear and unembarrassed manner as follows:—"It has been allotted to me the pleasant task of presenting the "Lusitano Cup." I have therefore the honour of presenting it to you on behalf of the Portuguese Community, with their very sincere and hearty congratulations on the occasion of your success. Please accept with it, also, their best wishes for future victories."—Mr. Marlborough briefly replied, expressing his thanks for the gift, and the indebtedness of all the members to Miss Machado for her kindness in presenting it.

Second Day.

The lovely weather yesterday drew a large concourse of spectators to the second day's racing of the Club. Everything went off well. The Committee exerted themselves energetically to prevent unnecessary delay between the several events and so made up for time lost before the first race. The contests in all cases were spirited—notably so in some—and in several races unprecedented time was made.

Friday, 25th May, 1877.

1.—The Celestial Cup.—Presented. Value, $160. For all Ponies; weight as per scale. Entrance, $5. Three quarters of a mile.

Mr. Fiddle-de-dee's *Lintie*, 10st. 2lbs..... 1
,, John Peel's *Bonny Doon*, 10st. 8lbs..... 2
,, Peter's *Vandal*, 10st. 5lbs..... 3
,, Savile Stuart's *Not Proven*, 10st. 8lbs..... 0

Lintie made the running at a hot pace with *Not Proven* close up, but the latter soon dropped astern, and *Bonny Doon* lay on the leader's quarter, *Vandal* being a good third. In this order they entered the straight, and each pony being ridden out to the utmost, strenuously contested every yard, making a splendid finish, when *Lintie*, ridden by Mr. Marlborough, won by half a length, *Bonny Doon* beating *Vandal* for second place by the same distance. The time was the best ever made on this course, 1 min. 36 secs.

2.—The Maiden Stakes.—For Japan Ponies that have never won a race; weight for inches. Entrance $5. Half a mile.

Mr. D. de Ding Dong's *Young Rapid*, 10st. 0lbs. 1
,, John Peel's *Annandale*, 10st. 6lbs 2
Dr. Buckle's *Snake*, 10st. 6lbs 3
,, Buckle's *Sorcerer*, 10st. 8lbs..... 0
Mr. Mason's *Silverspring*, 10st. 8lbs..... 0

All got off to a capital start, *Sorcerer* having the lead which he speedily resigned to *Young Rapid*, who was joined at the quarter mile by *Annandale*, and from this point the struggle lay between these two, the result of a capital race being decided only just on the post by a neck, Mr. Marlborough again having the winning mount. Time 63 secs.

3.—The Cathay Cup.—Value, $—. For China Ponies, *bona fide* Griffins at date of meeting, winners excluded; weight as per scale. Entrance $5. Once round.

Mr. Walter's *Jack O'Lantern*, 10st. 8lbs..... 1
Dr. Buckle's *Sequel*, 10st. 2lbs..... 2
Mr. Savile Stuart's *Kismet*, 10st. 2lbs..... 3
,, Fritz's *Wilhelm Tell*, 10st. 5lbs..... 0
Don Carlos' *Telephone*, 10st. 2lbs..... 0
Mr. Pringle's *Pegasus*, 10st. 5lbs..... 0

The flag went down to a good start, but *Telephone* put himself out of the race, as he would only buck and not gallop until it was too late. *Sequel*, *Wilhelm Tell* and *Jack O'Lantern* were soon far in advance of the others, and kept so to the quarter mile, where *Kismet* came up and *Wilhelm Tell* dropped behind. The two leaders ran wide at the turn and raced down the straight on the outside rail, *Jack O'Lantern* just securing by a neck the maiden win for his rider, Mr. Pugh, and the first on this course for his owner, which seemed to give much satisfaction to the lookers on. Time 2 mins. 19½ secs.

4.—The Ladies' Purse.—Presented by the Ladies of Yokohama and Yedo. For all Ponies. Winners of any race under a mile at this meeting 7 lbs. extra; winners of more than two races at this meeting excluded; weight as per scale. Entrance $5. Half a mile.

Mr. Fiddle-de-dee's *Mavis*, 10st. 8lbs..... 1
,, John Peel's *Liddesdale*, 11st. 4lbs. (7lbs ex.)... 2
,, Savile's *Crusader*, 10st. 5lbs..... 3
,, Osborn's *Grey Friar*, 10st. 5lbs..... 0
Dr. Buckle's *Spendthrift*, 10st 8lbs..... 0
Mr. Spooner's *Dick Swiveller*, 10st. 5lbs..... 0

On arriving at the post *Grey Friar* bolted, forced his way underneath the rails and scoured away across country, his rider fortunately succeeding in getting clear of him with only some slight injury. Much delay occurred in starting the five ponies left at the post, and two false starts were made, *Spendthrift*, in both cases running past the trees before he could be stopped, so that he was virtually out of the race. When at last they got away *Mavis* and *Liddesdale* singled themselves out from the rest and ran neck and neck to the straight, where the extra weight and long fretting at the post told on *Liddesdale* and he succumbed to the "Tartan," *Mavis* running in an easy winner by several lengths. Time, 61½ secs.

The successful jockey, Mr. Abbott, was led to the Grand Stand to receive the Purse from Miss Center, who addressed him as follows:—,'Please accept, Mr. Abbott, the congratulations of the ladies of Tōkiō and Yokohama upon your success in having won this well-contested race. In their name, I take pleasure in presenting to you this purse, with the wish that in all things you may succeed as well as you have done to-day, in so gallantly winning the 'Ladies' Purse'." Mr. Abbott made a suitable reply, and wound up his grateful acknowledgements by expressing his conviction that the fair donor would always continue to be the "centre" of attraction, and on behalf of the jockeys presented her with a bouquet.

5.—The Ito Cup.—Presented. Value, $120. For Japan Ponies; winner of No. 4 (first day), 14 lbs. extra; other winners at this meeting, 10 lbs. extra; weight as per scale. Entrance $5. Three-quarters of a mile.

Don Carlos' *Kickapoo*, 11st. 4lbs. (10lbs. ex.)..... 1
Mr. D. de Ding Dong's *Jim Hills*, 11st. 4lbs. (14lbs. ex.) 2
,, Fiddle-de-dee's *Distemper*, 10st. 6lbs..... 3
Col. Forrester's *Grayling*, 10st. 4lbs..... 0
Mr. Pringle's *Planet*, 10st. 6lbs..... 0

This was undoubtedly the best race of the day. *Planet* led off, followed by *Kickapoo*, *Jim Hills* and *Distemper*, the two first soon placing a considerable gap between themselves and the rest. At the trees *Jim Hills* and *Distemper* closed up, and all four ponies entered the straight in a cluster. Each jockey then set to work, and made a splendid race of it down the straight, and it was only just on the post that *Kickapoo*, ridden by Mr. Herhausen, contrived to forge slightly ahead, and carry off this stoutly contested prize by a head, a similar distance separating the second and third. The time was capital, viz, 1 min. 38 secs.

6.—The Tea Cup.—Presented. Value, $150. For China Ponies; winner of the Challenge Cup, and winners of two races at this meeting excluded; winner of one race 7 lbs. extra; weight as per scale. Entrance $5. One mile.

Mr. Fiddle-de-dee's *Hoolet*, 11st. 1lbs. (7ll. ex.)... 1
,, Osborn's *Grey Friar*, 10st. 5lbs..... 2
Don Carlos' *Telegram*, 9st. 13lbs..... 3
Mr. Savile Stuart's *Saracen*, 10st..... 0

Grey Friar bolted and was only stopped when he had nearly completed the circuit of the course, but yet, when the flag went down, jumped off with the lead which he kept some lengths in advance of the rest, until *Hoolet* ran up to him at the half mile. Still *Grey Friar* kept the lead, but *Hoolet* had plenty of running in him, whereas *Grey Friar's* performance on his own account before the race had taken too much out of him, so *Hoolet* came away when his jockey, Mr. Marlborough, thought fit, and won in a canter by several lengths in the capital time of 2 minutes 13 seconds.

7.—The Owners' Cup.—Presented. Value, $—. For China Ponies, subscription Griffins only; winners excluded; weight as per scale. Entrance $5. Three-quarters of a mile.

UNIVERSITY OF CALIFORNIA

Mr. Fiddle-de-dee's *Kittiwake*, 10st. 2lbs..... 1
Dr. Buckle's *Sugarplum*, 10st. 5lbs..... 2
Mr. Pringle's *Premier*, 10st. 8lbs..... 3
,, Savile Stuart's *Kismet*, 10st. 2lbs..... 0
,, Fritz's *Faust*, 10st. 5lbs..... 0
,, ,, *Don Carlos*, 10st. 5lbs..... 0
,, ,, *Wilhelm Tell*, 10st. 5lbs..... 0

After some little trouble at the post all got away to an excellent start, when *Kittiwake* at once took a lead which he kept throughout. The rest of the ponies, with the exception of *Faust* and *Don Carlos* who were left far behind, followed in a ruck, headed by *Sugarplum*. At the half mile *Sugarplum* caught the leader and the two raced into the straight together, but *Kittiwake* was far too good for his sweet companion, and though never pushed hard won easily by a couple of lengths. This was another winning mount for Mr. Marlborough. Time, 1 min. 37½ secs.

8.—The Silk Cup:—Presented. Value, $100. For all Ponies *bonâ fide* griffins at date of meeting, and already entered at this meeting. Japan Ponies 10st.; China Ponies, 11st. Winners at the meeting 7lbs extra. Entrance, $5. Five Furlongs.

,, John Peel's *Liddesdale*, 11st. 7lbs. (7lbs extra). 2
Dr. Buckle's *Sugarplum*, 11st..... 3
Mr. Spooner's *Dick Swiveller*, 11st..... 0

There was again a capital start, when *Talisman* was the first to show in front with *Liddesdale* waiting on him. *Sugarplum* came near *Liddesdale* at the trees, but his running in the previous race had been too much for him, and it became evident that the struggle lay between *Talisman* and *Liddesdale*. On entering the straight the former proved how good a pony he is by running clean away from his opponent, and though he stopped short after passing the distance, frightened by the awful appearance of a Japanese policeman on duty, his rider, Mr. Marlborough, recovered him at once, and brought him in a winner by a length in the crack time of 1 min. 19 secs.

9.—The Criterion Stakes.—For China Ponies. A forced entry for all Ponies that have run at this meeting. Winners of one race 10 lbs., of two races 14 lbs. extra. Ponies that have run twice and have not been placed allowed 7 lbs.; weight for inches. Entrance $5. One mile and a quarter.

Mr. Fiddle-de-dee's *Lintie*, 10st. 12lbs. (10lbs. ex.) 1
,, John Peel's *Bonny Doon*, 11st. 8lbs. (14lbs. ex.) 2

,, Fritz's *Don Carlos*, 10st. 5lbs..... 0
Dr. Buckle's *Sequel*, 10st. 2lbs..... 0
Mr. Pringle's *Pegasus*, (7lbs. allowed) 9st 12lbs..... 0
,, Savile Stuart's *Not Proven*. 10st. 8lbs..... 0

Sequel made the running, passing the Stand first closely followed by *Lintie*, *Bonny Doon* and *Not Proven*. At the top of the hill *Lintie* took the lead and was shortly afterwards joined by *Bonny Doon*, *Sequel* having fallen back. At the quarter mile *Bonny Doon* ran level with the leader, and each jockey had his work cut out. Down the straight they came hard at work, and it seemed as if, after passing the distance, the victory lay with *Bonny Doon*, ridden by Mr. Osborn, but Mr. Marlborough brought in the grey in fine style, and at the post won a remarkably good race by half a length, the extra weight his rival carried no doubt helping him to reverse the result of the Challenge Cup on the previous day. *Vandal*, one of the subscription Griffins, came up with a rush for a good third. The time was again excellent, 2 min. 52½ secs.

The weather was, if possible, still more lovely to-day than on the two preceding ones, and the course in very fine condition. There was rather a falling off in the attendance within the enclosure, but the Japanese assembled in larger numbers than usual. The very fine band of the *Audacious* played through a long and varied programme excellently well, and added in no slight degree to the attractions of the day.

Third Day.

Saturday, 26th May, 1877.

1.—The Hurdle Race.—Value, $75. For all Ponies; over six hurdles; China Ponies, 10st. 7lbs.; Japan Ponies, 10st. Entrance $5. Once round and a distance.

Don Carlos' *Kickapoo*, 10st. 8lbs..... 1
Mr. John Peel's *Annandale*, 10st. 6lbs..... 2
,, Pringle's *Pegasus*, 10st. 5lbs..... 3

Pegasus would not take the first hurdle until after so much delay that he was pulled up without having passed the gate. The race therefore became a match between *Annandale* and *Kickapoo*, who went round together, taking all the hurdles in a clean and business-like style, *Annandale* having a slight advantage at each one, but after the last hurdle was cleared *Kickapoo's* superior turn of speed told, and he beat his opponent easily in the run in.

2.—The Merchants' Cup.—Value $150. Presented. A handicap for all China Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance, $5. Compulsory. Open also to beaten Ponies at the meeting. One mile and a quarter.

Mr. Fiddle-de-dee's *Hoolet*, 11st. 7lbs..... 1
,, John Peel's *Bonny Doon*, 11st. 7lbs..... 2
,, Savile's *Crusader*, 10st. 12lbs..... 3
,, Peter's *Vandal*, 10st. 10lbs..... 0

Bonny Doon led past the Stand, with *Crusader* and *Hoolet* well up, but *Vandal* lying far behind. Going up the hill *Crusader* took the lead, which he resigned to *Hoolet* at the top, and allowed *Bonny Doon* to take second place. The two leaders kept on even terms to the trees where *Hoolet* drew ahead, and was never afterwards headed, winning by a length and a half, ridden by Mr. Marlborough. The same distance separated the second from the third. The time was particularly good, 2 min. 49 secs.

3.—The Nippon Handicap.—A handicap for all Japan Pony winners at the meeting. To be handicapped by the Stewards at the close of the second day's racing. Entrance $5. Compulsory. Open also to beaten Ponies at the meeting. Once round.

Mr. Pringle's *Planet*, 10st..... 1

,, John Peel's *Sakigake*, 10st. 2lbs..... 0
Dr. Buckle's *Sorcerer*, 9st. 7lbs..... 0

A new jockey went out on *Sorcerer* to "witch the world with noble horsemanship," but at a false start which unfortunately occurred did not succeed in stopping his pony until he had gone half way up the hill. When the flag fell *Planet* started off with the lead, followed by *Kickapoo* and *Jim Hills*. The latter took second place up the hill, ran up to *Planet* at the five furlongs, and raced with him but without succeeding in taking the lead from him. *Kickapoo* had been lying far behind, but came up rapidly on entering the straight, though he had too much to pick up to be dangerous, especially as *Planet*, ridden by Mr. Osborn, came away when called upon and won by several lengths, *Kickapoo* just taking second place from *Jim Hills*. Time 2 min. 16 secs.

4.—Subscription China Griffins' Handicap.—A handicap for all subscription China Ponies only. To be handicapped by the stewards at the close of the second day's racing. Entrance, $5; compulsory. Once round.

,, John Peel's *Liddesdale*, 10st. 8lbs..... 0
,, Fritz's *Don Carlos*, 9st. 7lbs..... 0
,, Savile Stuart's *Talisman*, 10st. 6lbs..... 0
,, do. *Kismet*, 9st. 10lbs..... 0
Dr. Buckle's *Sequel*, 9st. 10lbs..... 0

All got off to a capital start, *Sequel*, ridden by a young naval officer, jumping off with the lead, which he kept up the hill, *Liddesdale* and *Premier* being close on him. These three raced together to the half mile, where *Sequel* tired, the ruck, headed by *Kittiwake*, being some lengths astern. After passing the trees *Kittiwake* overhauled *Premier* and *Liddesdale* and led into the straight, being pressed hard by *Premier*, and only secured the win, after a splended run in, by half a length, both ponies having been well punished. Mr. Marlborough was again the lucky jockey. Time, 2 min. 15¾ secs.

5.—The Scurry Stakes.—Value, $—. For all Ponies; weigh as per scale. Entrance, $5. Three furlongs.

Mr. Fiddle-de-dee's *Maris*, 10st. 8lbs... 1
,, Spooner's *Dick Swiveller*, 10st. 5lbs..... 2
,, Savile's *Drift*, 10st. 2lbs..... 3

This was a very uninteresting race, as only three ponies went to the post out of twelve entries. On the flag falling *Dick Swiveller* would not start, leaving *Drift* alone to contend hopelessly against *Maris*, who took the lead at once and won as he liked in a canter, being ridden by Mr. Marlborough. At the post *Dick Swiveller* came up and defeated *Drift* for second place. Time 45 secs.

6.—The Solace Cup.—Value, $—. For all beaten Japan Ponies at the meeting; weight for inches. Entrance, $5. Five furlongs.

Dr. Buckle's *Sandboy*, 10st 4lbs..... 2
Mr. John Peel's *Annandale*, 10st. 6lbs..... 3
,, Fiddle-de-dee's *Dazzle*, 9st. 12lbs..... 0
Dr. Buckle's *Spendthrift*, 10st. 8lbs..... 0
Mr. E. Mason's *Silverspring*, 10st. 8lbs..... 0
Col. Forrester's *Grayling*, 10st. 4lbs.. 0

There was an unwarrantable delay at the post before the ponies were started. When the flag fell *Silverspring* was left at the post, and *Grayling* immediately tailed off. *Spendthrift* led at a rattling pace followed by *Distemper*, and kept this advantage to the trees, where the "Tartan" pony wrested it from him. *Sandboy* and *Annandale* came up at the turn, and down the straight all the riders were working hard, but *Distemper* was not to be beaten, and eventually Mr. Marlborough landed him an easy winner in the spendid time of 1 min. 19½ secs.

7.—The China Consolation Plate.—Value $—. For all beatan China Ponies at the meeting; weight for inches. Entrance, $5. Once round and a distance.

Mr. Savile Stuart's *Not Proven*. 10st. 8lbs..... 1
,, Osborn's *Grey Friar*, 10st. 5lbs..... 2
,, Pringle's *Premier*, 10st. 8lbs..... 3
,, Fritz's *Don Carlos*, 10st. 5lbs..... 0
,, ,, *Wilhelm Tell*, 10st. 5lbs..... 0
Dr. Buckle's *Sequel*, 10st. 2lbs..... 0
,, ,, *Sugarplum*, 10st. 5lbs..... 0
Don Carlos' *Telephone*, 10st. 2lbs..... 9
Mr. Spooner's *Dick Swiveller*, 10st. 5lbs..... 0
,, Savile Stuart's *Saracen*, 10st. 5lbs..... 0

Grey Friar led past the Stand followed by *Dick Swiveller* and *Premier*, the former racing up the hill some lengths in advance of

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

the others. *Not Proven* ran through his ponies at the three quarter mile, and put himself on even terms with *Grey Friar* at the five furlongs. Thence they raced on together to the trees where *Not Proven* took the lead, *Premier* being third. In this order they entered the straight, and though *Grey Friar* made a desperate effort to recover his lost ground it was of no avail, and *Not Proven* won a good race by a length, ridden by Mr. Marlborough. Time 2 min. 36½ secs. *Saracen* was pulled up lame immediately after the start.

8.—THE SAYONARA STAKES.—A handicap for all Ponies. To be handicapped by the Stewards at the close of the second day's racing, when entries will be received. Winner of No. 2 (third day) excluded. Winner of the Nippon Handicap, and the Subscription China Ponies' Handicap, 7lbs. extra. Winners of any other race after publication of the handicap, 3lbs. extra Entrance, $10. Once round.

Mr. Savile's *Crusader*, 11st..... 1
,, D. de Ding Dong's *Typhoon*, 10st..... 2
,, Peter's *Vandal*, 11st..... 3
,, Savile Stuart's *Talisman*, 10st. 7lbs..... 0
,, Fiddle-de-dee's *Lintie*, 11st. 4lbs..... 0

This was a capital race. All got away to a good start, *Lintie* leading up the hill followed by *Typhoon* and *Crusader*, a wide gap separating them from *Talisman* and *Vandal*. This order was kept to the half mile where the two last closed up with a terrific rush, and all the ponies raced hard together to the trees. Here *Typhoon* took a slight lead, but soon lost it, and on entering the straight swerved on account of being whipped and carried *Crusader* with him across the course. The splendid finish which now took place down the straight was a fitting conclusion to a very successful meeting, as the race was entirely doubtful, each jockey straining every nerve. *Typhoon* and *Crusader* finally got the better of the rest, running close on the outside rail all the way, and just as the post was reached Mr. Williams cleverly lifted his pony in, and secured the race by a head. Time 2 min. 17¾ secs.

BETTOS' RACE FOR CHINA PONIES.—ONCE ROUND.

Kittiwake..... 1
Kismet..... 2
Jack O'Lantern..... 3

Dr. Wheeler's well know and diminutive betto won this race easily, leading the others all round by several lengths, but did not fail to punish his pony as if it required very effort to win, and tossed his whip with a knowing air on passing the post.

BETTOS' RACE FOR JAPAN PONIES.—ONCE ROUND.

Distemper..... 1
Annandale..... 2
Planet..... 3

Dr. Buckle's betto won this race, but had a little more difficulty in doing so than his brother professional in the previous race.

A half mile race with owners up, at catch weights, concluded the proceedings, in which four ponies ran with the following result:—

Mr. Savile Stuart's *Not Proven*..... 1
,, John Peel's *Liddesdale*..... 2
,, Fritz's *Wilhelm Tell*..... 3
,, Walter's *Jack O'Lantern*..... 0

Correspondence.

WATSON *V.* WALSH, HALL & CO.

TO THE EDITOR OF THE "JAPAN WEEKLY MAIL."

Yokohama, 26th May, 1877.

SIR,—In the decision in the case of Watson *v.* Walsh, Hall & Co. it is stated that the samples were never compared with the bulk and that some of the samples produced in Court were of 'very inferior' quality and 'unfit' for the plaintiff's purposes. As a matter of fact, amply proved by the evidence, the original samples were sent to Kobe and there compared with the bulk, as it was broken, and complaint was made as soon as the bags began to show an inconsistency. None of the original samples produced in court were of inferior quality or unfit for rice packing. I cannot but think that the learned Consul General has mixed up in his mind the samples upon which the contract was made and those sent from Kobe to represent the bad bags; the latter samples were of 'very inferior' quality, etc. Of the original second part, sample one showed a yellowish, round stain, somewhat larger than a crown piece and situate close to the mouth of the bag. This stain was evidently due to mere accident, probably caused by nitric acid; at any rate there was neither proof nor probability that it was a water stain. Another bag presented what might have been a patch or a default in manufacture. A third was dirt or dust-stained externally. All were perfectly sound and strong, and, except as to the marks upon them inside, perfectly fit for packing rice, and none were bone-impregnated. Had the bulk been equal to these samples, though we should not have been contented, we should certainly have brought no action. As to the missing second-hand sample there is not the slightest proof that they were stained, &c. On the contrary both parties express their belief to have been that they were new and perfect.

I take the liberty of inserting this correction in your columns, because, were the statement I have referred to founded on fact, the action, though not an improper one, would have been a highly unwise proceeding, which I am not anxious to be supposed to have recommended my client to adopt.

I am,

Yours faithfully,

COUNSEL FOR PLAINTIFF.

Law Reports.

IN THE U. S. CONSULAR GENERAL COURT.

Before General T. B. VAN BUREN, Consul General.

Wednesday, May 23rd, 1877.

E. B. WATSON *v.* WALSH HALL & Co.

In this case plaintiff sued defendants for $16,365, for having delivered a quantity of bags inferior to the quality represented. It was heard during March and the beginning of April, Mr Dickins appearing as counsel for the plaintiff, and Mr Ness for the defendants. The following was delivered this morning.

JUDGMENT.

This is an action to recover the sum of $16,365.00, the alleged value of 100 000 gunny bags, interest, expenses &c., which plaintiff purchased of defendants, but which it is claimed are "old, damaged not equal to sample, and unfit for packing rice" for which use they were bought and are "therefore of no value to plaintiff." The answer sets up that the defendants in making sale of the property in dispute were acting as agents of other parties and not for themselves. That the bags were sold by sample and were not warranted to be of any special quality or in any particular condition; that the money received for them was transmitted to the owners before the commencement of this action; and that the plaintiff has suffered no damage in the premises.

The evidence establishes the following facts. That in February, 1876, the plaintiff purchased of the defendants 350,000 gunny bags,—a few of which were delivered in Yokohama, but the great bulk to the plaintiff's agents in Kobe; that samples of the bags were drawn in the usual manner from the different bales, and placed in the possession of the plaintiff; that with the exception of a few loose bags rejected as being torn, stained and otherwise unfit for use, all the bags being in bales, securely bound, were accepted by the plaintiff and paid for; that thereafter upon opening the bales a large proportion were found unfit for the uses for which they were intended. Whereupon the defendants were notified and a survey was held in November, 1876, at Kobe, which established the fact that a large number of the bags were second-hand, stained or impregnated with bone dust.

I find also that with regard to all the bags complained of the defendants were, in fact, simply acting as agents of the owners, which fact was sufficiently communicated to the plaintiff and that the proceeds thereof were duly transmitted by defendants to their principals with the knowledge of plaintiff before the examination by him of the bulk of the bags. This clearly appears from the fact that a portion of the bags sold were specially declared to be the property of the defendants, and the plaintiff, agreed to pay for these particular bags a higher price than for the others, and also that in the memorandum given plaintiff, the bags now complained of are designated as sold on account of parties represented by their initials, and from the further fact that the last payment was made by the plaintiff, according to his own testimony, before the 28th of March, and the complaint of their turning out bad was not made until the 30th of July following.

This perhaps might be considered sufficient to dispose of this proceeding but it seems to me proper to examine into the merit of the cause itself: to ascertain if the plaintiff has in law or equity any just claim on account of the injuries complained of. That the plaintiff has been greatly deceived and injured through his contract appears to me clear, but that this deception and injury has been caused by the defendants I cannot gather from the evidence. The shippers or packers of the goods, it seems to me, are alone responsible for this gross wrong.

So much of the evidence as connects itself with the samples

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

ceived by the plaintiff goes to show that they were never themselves carefully examined by him, and were never compared with the bulk which they were supposed to represent. His reason for this neglect is, that, feeling grateful to the defendants for certain kindnesses theretofore received, and having the utmost faith in their commercial integrity he thought he was dealing in entire safety. It will be found, however, that the counsel for the plaintiffs in his remarks expressly repudiates the idea that the defendants knew anything about the condition or quality of the bags confined in bales, or in any manner knowingly or wilfully injured the plaintiff by selling him bags unfit for use, and the evidence shows clearly that they had no knowledge whatever as to the bags, and sold them as described in the invoices, which descriptions were given to the plaintiff in writing together with the samples Upon this state of the facts, I am very clear that plaintiff could have no legal claim upon the defendants, were the latter the owners of the goods in question. The samples do not vary the written description; the plaintiff was not bound to pay for the goods until examined and found to correspond with the samples, which is the warranty implied in the sale; although it may be true as stated by him that such examination would have lessened their merchantable value. He chose to receive and pay for the goods without such examination, and thereby deprived himself of the benefit of that right unless exercised within a reasonable time after such payment; which was not done in this case. In fact it is nowhere satisfactorily shown that the bulk of the goods differed in quality from the sample. Some of the latter when examined in in Court proved to be of a very inferior quality and in some cases unfit for the purposes required by the plaintiff, and others were not produced, being represented as lost.

The maxim *caveat emptor*, it appears to me, must apply in this case. The plaintiff received the samples and without examination or requiring any other warranty from the defendants, accepted the goods and paid for them. "The rule to be derived "from all the cases is, that where, upon the sale of goods, "the purchaser is satisfied without requiring a warranty he "cannot recover upon a mere representation of the quality by the "seller, unless he can show that such representation was bottomed "in fraud." (See Chitty on Contracts, 10 Am. Edition, page 447, and cases there cited.)

In this case, as I have shown, there is no pretence of fraud on the part of the defendants and as the plaintiff neglected to avail himself of his right to examine the goods before payment or to exact any warranty as to their quality except that they should agree with the samples, in the language of the decisions he "cannot recover." The complaint is therefore dismissed with costs of Court. No other costs to be allowed.

THOS. B. VAN BUREN,
U. S. Consul General.

May 23rd, 1877.

POPULAR ART.—I. DECORATIVE.

(The Spectator.)

During the last few years, there have come into common usage many phrases unfamiliar to our fathers, and even in some cases doubtfully comprehended by the mass of those who use them so glibly, and we hear the most frivolous school-girl discussing psychic force and the most practical business men dilating upon Decorative Art. The absurdity is patent enough, when once fairly examined, but it does not lie in the fact of either person caring to know anything about such subjects, but because with the majority it is sufficient to use the phrase, without seeking to understand its meaning. A rage for nomenclature is one of the most notable characteristics of the present day, and the man who can invent a good high-sounding Greek name for his hair-wash or his oil-cloth may consider his fortune made. Not long since, strolling down Piccadilly, I saw in a chemist's window that his "Egyptian Looffas were indispensable for a gentleman's bath-room;" and on the other side of the street, I was invited to take my chop off "the patent, hydraulic silver grill." It is quite needless to multiply the examples,—a glance at the first sheet of the *Times* will produce a dozen such. The step from employing words that are not understood to applying phrases that are not understood is a very easy one, and it is of one such application that I am desirous to speak. One of the most common phrases continually repeated is that of "Decorative Art," and perhaps it is the one which is the least understood of all. We have occasionally asked for a definition of its meaning, but have never received a satisfactory answer. The subject seems to fall naturally into three divisions, first, what Decorative Art has always been hitherto; second, what is the meant by the words now; and third, what should be meant by them, were they rightly used.

First, then, without lingering long over the historical part of the question, there is no doubt that, in the first instance, all art was decorative. The art of the savage, the only outcome of which was in painting his face and his tomahawk, was pure decorative art, and for many centuries art remained dedicated to similar purposes, even though making in the meantime enormous strides in skill and beauty. The Egyptian carvings on rock-hewn temples, or gigantic statues, are as pure decorative art as that of the North-American Indians; there is in them no sign of beauty being sought for its own sake, but only as a supplement to architecture and religion. A temple wall was bare,—they covered it with the deeds of the god to whom the place was dedicated; a statue of the deity was required, and it was carved and erected there,—and so on throughout the various departments. How long this lasted it is difficult to say; there seems to be considerable doubt whether the whole art of Greece was not originally intended only for decorative purposes. That its noblest works were is undoubtedly the case. From the days of the greatest supremacy of Rome downwards art gradually lost more and more of its decorative character, and gained a vantage-ground of its own. No longer subsidiary to the service of architecture or religion, it grew day by day of more importance, till we find it culminating in the days of Venetian glory in Titian and Tintoret. But as Art advanced thus from infancy to manhood, a change took place in it similar to that which takes place in a human being, and it became gradually self-conscious, and with this self-consciousness came its fall. Gradually painters and architects and workers in metals began to lose confidence in their individual efforts, and found it easier to imitate the perfection of those who had preceded them. We have dwelt thus long on this branch of our subject to try and show our readers, what is indeed the case, that there is no authority for the term "decorative art" in olden days, as then all art was decorative. For instance, the most magnificent picture that Tintoret ever painted was to measure, to fill the end of the great council-chamber in the Doge's Palace at Venice, and the picture is of an awkwardly irregular shape, to allow space for the two doorways at the end of the hall. So also you have Veronese painting the ceilings of the Pitti Palace, and Michael Angelo's "Last Judgment" and Raphael's "Madonna," both painted for the Sistine Chapel at Rome, the first remaining there to this day. And this is "decorative art," as it used to be. What does "decorative art" mean now?

Well, it is difficult to say exactly what it does mean, but we can imagine one of its ordinary practitioners, if compelled to give a perfectly truthful, straightforward answer, would say something like this:—"Really good art is much too great a thing to be wasted in ornamenting a sideboard or a carpet; for such art you must pay a great price, say, two or three thousand guineas, and then you must put it in a large, elaborate, gilt frame, and hang it up opposite the looking-glass. Besides, good art needs time and labour, and perhaps even more than these to produce it, and we can't give you that, it would not pay; but we will sell you another sort of art,—a good thing, of its kind, better fitted for every-day use, and this is what we will call 'decorative art.'" And if the persevering inquirer were to ask, further, what was the special *differentia* of this decorative art, he would probably be told "that it was founded upon a notion that man could improve nature very much, and that proceeding upon this plan, he took, say, some reeds and a bird and a red sun, and he arranged them in the following manner:—First, he put the reeds side by side, vertically upright, and left some space between each; balanced upon the extreme point of the centre reed he placed a red sun, half the size of his picture, and in the exact middle of this, with wings extended horizontally, he placed his bird. But it may be said, all decorative art is not like this, and does not delight in perverting the natural shapes and appearances of objects. Well, it is true that there are some exceptions, but by far the larger part of what is called "decorative art" at the present day does rely for its attractiveness on this perversion of nature.

Take a walk down either Oxford Street or Bond Street, and you will see in the window of almost every shop devoted to furniture, panels depicting something like the above design, generally on a gold ground. The cause of it was very simple,—a few years ago, a man of genuine artistic taste, much cultivated by study, set up a house in Bloomsbury, and inaugurated, in company with some others, this style of decoration. It has been taken by thousands of others without his taste or his knowledge, and the results are, as a matter of course, horrible. When the ordinary furnishing upholsterer worked only in plain wood, or at all events, plain wood and a little gilding, there was some limit to his error, but now that he employs workmen to

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

paint artistic designs on gilt panels, imagining that he can order good art as he can good polish, he has a gigantic scope for ugliness and folly. In the same way that this "decorative art" attacked furniture, it attacked dress, but the results it produced there, were less violently manifested. Mr. Morris having set the example of painting walls and backgrounds generally of neutral greens and browns, soon the more artistic of the women began to follow in the same track. The amount of sickly-green and dirty-red dresses that Mr. Morris is indirectly responsible for is an awful thing to contemplate, but it is more the folly of his followers that is to blame than his teaching. The only reason for which he recommended these neutral shades of colour was that they were to serve as a background. One of his favourite sayings, if we mistake not, is "that you don't want to make a picture of your walls, but a background for pictures;" and as a natural effect, when a beautiful woman put on a trailing gown of a neutral-green hue, she looked all the better for her background, but as the majority of women are not beautiful but require some little attractiveness of colour to set them off, as a rule the dresses were not becoming.

Then from painting and dress the mania attacked needlework. We must have decorative needlework, "conventional needlework," as its admirers called it, with a delightful sense of mystery. We had it, we have it, it is going on still; probably most of our readers can look up from their *Spectator* and see it opposite them, on chair or fire-screen. This conventional needlework is a fearful thing. Formerly, if the designs were not beautiful, they were at least fairly like the flowers that they were intended to represent, and done from patterns designed by competent persons. At the very least they were bright and pleasant in colour. But now every one invents her own patterns, and twists the most beautiful flowers in the world into fantastic combinations of spike and ball.

People without the slightest acquaintance with the most elementary forms of design sit down calmly to *conventionalise* nature, "at their own wild will," and the results are awful. This is decorative art, as at present understood and practised; the catchword that is in every one's mouth means practically that any art is good enough, if it is not required for gilt-framing and Academy exhibition. How long will this fallacy last? When will people discover and take to heart the first truth about art,—that *any* art is *no* art, that you cannot have an art which shall be good for one thing and not good for another? For instance, because you do not want a bird as *elaborately* painted on the panel of a ward robe as in a picture, that it is not necessary it should be *rightly* painted, as far as it goes. The truth is, that all art is decorative art, the difference being only in the degree. For instance, the art that is required to cover a water-bottle or a wardrobe should have for its chief character simplicity of form and colour; and so, in infinite gradation, real decoration progresses till it culminates in the grand fresco at the end of a Venetian palace or a Roman chapel, and you have Tintoret or Michel Angelo for your furnishing upholsterer. When will people learn that they can no more design without an apprenticeship to it than they could practise any other difficult profession without learning?

The present state of Art, in our nation, is alike pitiable and ludicrous. Every one talks of it, and no one seems to know, or care to know, the first elements of its life. To conclude, then, with a few words upon what decorative art should be. We have seen that in former times all art was decorative, we have seen partially that at the present time a division has been made between decorative and pictorial art, and that in consequence decorative art has become hardly worth calling art at all; that it is mainly practised by workmen and amateurs, and that, as a rule, the educated artist passes it by with grave contempt. So long as this state of things continues, there is no hope for it. The essence of good decoration is that it must spring from thorough artistic feeling and perception, and be grounded upon true knowledge of natural form. And the second indispensable mark of decorative art is that it should be true, as far as it goes, no matter how short a way that may be. The greatest test of all good decorative work is that it should be easy, springing with but little effort from a mind fully stored and a hand accustomed to severer labour. For instance, if in designing a flower we choose to omit all accident of light and shade and local colour, we may do it, and it may still be a good design, but we have no right to alter the proportions of its leaves or the number of its petals. Any art which stops deliberately short of nature, but yet does not falsify it, is thus decorative in the right meaning of the term; but art is not decorative because it is painted on gilt wood, or because it suggests nothing in the world save the ignorance of its creator.

REUTER'S TELEGRAMS.

London, May 11, 1877.

Information has been received from Turkish sources that the Russians attempted to cross the Danube at Reni, but were defeated with great loss in killed, wounded and prisoners.

LATE TELEGRAMS.

(Straits Times' Extra.)

Bombay, April 12.—The Bank of Bombay has raised its discount rates one per cent.

Bombay, April 13.—Captain Henry. Fund amounts to R. 9,000. It has been resolved that a bust shall be put in the Town Hall, and that the balance shall be applied for the benefit of the Sailors' Home. The Great Eastern Spinning and Weaving Company has declared a dividend of sixteen per cent. per annum for the second time.

Bombay, April 17.—The weekly returns of the famine show an increase in relief labourers of 13,411, or a total of 253,270. General Kennedy says the time of greatest pressure has arrived. An Tanna, four prisoners have been sentenced to death, and six to transportation for life for dacoity, which is terribly prevalent.

Bombay, April 18.—A Jeddah letter says that large sums have been raised in the district to aid the Turks, that people are preparing for a Jehad, and that all available males are being trained to arms.

London, April 21.—Consols 95¼, 4 per cent 84. 4½ per cent 84½. 5½ per cent 88½. Bar Silver not quotable. Exchange on India 1/8 15/16. Oriental Bank Shares £44 10/. Mercantile Bank Shares £27 10/.

London, April 22.—Mr. Layard has arrived at Constantinople.

Obituary.—General Wylde, Lieutenant-General Burke, Mr. Cuppage.

Washington, April 22.—President Hayes has withdrawn the troops from New Orleans.

Paris, April 22.—An agitation among the Ultramontane party is seriously occupying the attention of the French Ministry.

Constantinople, April 22.—The accounts respecting the course Roumania intends pursuing are most conflicting. The Grand Vizier has sent a despatch to Prince Charles relative to his concentrating his troops at Kalafat, and requesting him to act with the Porte. Mr. Layard has had an interview with the Grand Vizier, and informed him that the rejection of the Russian protocol by the Porte has rendered support from England impossible.

London, April 23.—In the House of Commons this evening the Hon'ble R. Bourke, in reply to a question, said that the Russian Chargé d'Affaires at Constantinople had broken off diplomatic relations with the Porte, and leaves the Turkish capital this evening.

Constantinople, April 23.—The Porte has requested Prince Charles to act with the Forces under Abdul Kerim Pasha, and prevent the passage of the Russian army across the Danube. The Sultan will command the Turkish army in person against the Russians. A detachment of Russian troops arrived at Bucharest this morning.

Washington, April 23.—The conflict among political parties in Louisiana has been settled, the Republicans having joined the Democrats.

Calcutta, April 23.—A large public meeting, chiefly attended by natives, was held in the Town Hall on Saturday, the Sheriff presiding, for the purpose of protesting against the Presidency Towns Magistrates Act. Resolutions were carried deprecating the extension of the Magistrates' powers, and against the injury caused by the Act to the system of trial by jury. It was also resolved to memorialize the Secretary of State to veto the Act. A Committee was appointed to prepare a memorial.

London, April 23.—Consols 95⅛. Bar Silver 54⅛.

St. Petersburg, April 24.—The Czar reviewed the Russian army at Kischeneff yesterday, when he addressed the troops, urging them to deeds of bravery, and hoping for a speedy and glorious return to their native country. A circular despatch from the Russian Government justifying a proclamation of war, was delivered to the Powers yesterday.

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

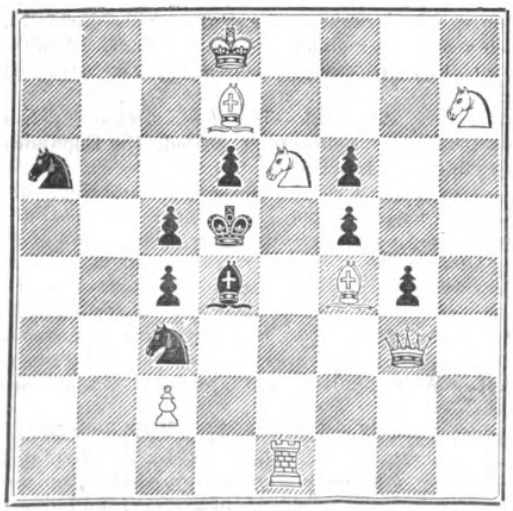
Constantinople April 22.—The Russian Chargé d'Affaires has left.

St. Petersburg, April 24.—The Czar has issued an Imperial manifesto, in which he recalls the interest he has always taken in the destinies of the oppressed Christians in Bosnia, Bulgaria, and Herzegovina, and his desire to ameliorate their condition by endeavouring to obtain guarantees for their better Government. His Majesty states his entire reign has testified to his earnest solicitude for peace, but that two years of negotiations with the Great Powers have failed before the stubborn refusal of Turkey to execute reforms. Every refusal of every effectual guarantee, the refusal to accept the Protocol expressing the unanimous views of Europe, and all pacific efforts being exhausted, the proud obstinacy of the Porte obliges a recourse to arms. Being profoundly convinced of the justice of his cause, and confiding in God, His Majesty states that the moment, as foreseen in his Moscow speech, has come for the independent action of Russia, and that, invoking the blessing of God, he will order his troops to cross the Turkish frontier. Prince Gortschakoff, in a circular despatch justifying the proclamation of war, states that in seeking to obtain forcibly what Europe has vainly tried to secure peaceably, Russia thereby furthers the interests of Europe.

Constantinople, April 23.—The Porte has despatched an Envoy to Cabul.

London, April 25.—In the House of Lords last night Earl Derby stated that 17,000 Russian troops had already crossed the Roumanian frontier. With regard to the Grand Vizier having called upon Prince Charles to cooperate with the Turkish forces, he said that the order would be referred by the Roumanian Government to the Roumanian Chamber of Deputies on the 26th instant. In the meantime, the Roumanian troops are falling back.

Berlin, April 25.—At yesterday's sitting of the German Parliament there was a debate on the Army Estimates. Count Moltke said that Germany could not hope for a long period of peace, and alluded to the readiness of France for war, and the unusually large masses of troops between Paris and the German frontier.



Simla, April 25.—The amalgamation of Oudh with the North-Western Province has been cordially approved by Her Majesty's Home Government.

London, April 25.—The National Bank of India pays 3 per cent for the half year. Withdrawals from Bank—For Germany $125,000. Consols 94½. Silver 51⅛. Manchester market dull. 7lbs. shirtings ordinary quality 6s. 4½d. 8¼ lbs. 7s. 4½d.

PRIZE PROBLEM.

By J. G. Campbell.

BLACK.

WHITE.

White to play and mate in 3 moves.

We reserve our solution of Mr. Mason's problem of last week, as we think a pawn has been omitted from the position.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—With the exception of a few articles only a limited business can be reported; prices in many instances are weaker and nominal. *Yarns*: There is a fair demand for 16/24 and 28/32 mockwater at firm rates; 28/32 water twist attract more attention, but offers are still proportionately low, while 38/42 are neglected. In *Shirtings* there has been only a small business at declining prices. Of *Velvets* some sales are reported, whereas for other articles no interest is shown.

Grey Shirtings:—					White Shirtings:—		
7 lbs.	38½ yds.	39 in.	per pce.	$1.45 to $1.80	60 to 64 reed	40 yds.	35 in. per pce. ... ... 2.20 to 2.40

,, No. 3 Ke-pak	,,	... $7.90 to $8.30	Kerosene Oil	,, ...	$4.50

Kerosene Oil has advanced to $4.50, with a firmer market, stocks having been much reduced during the month.

EXPORTS.

Silk.—Our report per American mail, on the 24th instant, was as follows:—

Only very small transactions have took place immediately after the departure of the last American mail, and prices have had a very downward tendency. On the 15th and 16th instant telegrams were, however, received here, reporting an improvement in the European markets in consequence of unfavourable weather and doubts concerning the result of the Continental crop, and a sudden enquiry sprang up, resulting in comparatively large settlements. Dealers raised their demands immediately by about $60 per picul, while many parcels of good quality were withdrawn from the market altogether.

Business has in consequence fallen off lately; rejections, especially of Hanks, have been very large, and at the close a decided weaker feeling is apparent. Arrivals are very small. Settlements amount to 100 bales of Hanks, 200 bales of Oshius, and 50 bales of Filatures.

Quotations are as under:—

		In London at 4s. 2d.	*In Lyons at 5.25.*
Hanks, Best No. 1 & 2	$640 to 660	23/9 to 24/5	66 to 67
,, Good No. 2	$610 to 630	22/8 to 23/5	63 to 65
,, Good all round No. 2½	$580 to 600	21/8 to 22/4	60 to 62
,, Medium No 3	$540 to 570	20/3 to 21/4	56 to 59
,, Common to Inferior No 4 & 5	$500 to 530	18/10 to 19/11	52 to 55
Oshiu, Good to Medium	$500 to 550	18/10 to 20/7	52 to 57
Hamatski, Medium to Common	$430 to 460	16/5 to 17/6	45 to 48
Kakeda, Good	$580 to 620	21/8 to 23/	60 to 64
,, Medium to Common	$530 to 560	19/11 to 20/11	55 to 58
Filature Silks	$650 to 750	24/1 to 27/7	67 to 76

The total export since 1st of July is 20,452 Bales, against 12,934 Bales for a corresponding period last year. Stocks consist of 1,100 Bales.

Tea.—A large business at declining rates was done during the course of the past week, settlements amounting to 3,000 piculs and arrivals to about 5,000 piculs.

Some parcels of *Good Medium* grades were settled from $24 to $26, but of lower Teas no musters have appeared so far.

To-day's prices close as under, the market being weak.

Good Medium	$24.00 to $26.00	Finest	$31.00 to $35.00
Fine	$27.00 to $30.00	Choice	$36.00 to $40.00

EXCHANGE AND BULLION.

Exchange.—Rates have remained steady throughout the past week with a fair business doing in Private Paper, but with little demand for Bank Bills.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 1½d.	ON SHANGHAI—Bank sight	75
,, Bank Bills on demand	4s. 0½d.	,, Private 10 days sight	75½
,, Private 6 months' sight	4s. 1⅞d. to 2d.	ON NEW YORK—Bank Bills on demand	97½
ON PARIS—Bank Sight	5.08	,, 30 days sight Private	99½
Bank 6 months' sight	5.15	ON SAN FRANCISCO—Bank Bills on demand	98
,, Private 6 ms. sight	5.25	,, 30 days sight Private	100
ON HONGKONG—Bank sight	1¼ % dis.	Kinsatz	403½
,, Private 10 days' sight	3/8 ,,	Gold Yen	403

THE GREATEST
WONDER OF MODERN TIMES!
HOLLOWAY'S PILLS.

PERSONS suffering from weak or debilitated constitutions will discover that by the use of this wonderful medicine there is "Health for all." The blood is the fountain of life, and its purity can be maintained by the use of these Pills.

SIR SAMUEL BAKER,
in his work entitled "The Nile Tributaries in Abyssinia," says, "I "ordered the dragoman Mahomet to inform the Fakey that I was a "Doctor, and that I had the best medicines at the service of the "sick, with advice gratis. In a short time I had many applicants, "to whom I served out a quantity of Holloway's Pills. These are "most useful to an explorer, as possessing unmistakable purgative "properties they create an undeniable effect upon the patient, which "satisfies him of their value."

SIMPLE, SAFE AND CERTAIN!
HOLLOWAY'S OINTMENT

Is a certain remedy for bad legs, bad breasts, and ulcerations of al kinds. It acts miraculously in healing ulcerations, curing skin diseases, and in arresting and subduing all inflammations.

MR. J. T. COOPER,
in his account of his extraordinary travels in China, published in 1871, says—"I had with me a quantity of Holloway's Ointment. I "gave some to the people, and nothing could exceed their gratitude; "and, in consequence, milk, fowls, butter, and horse-feed poured "in upon us, until at last a tea-spoonful of Ointment was worth a 'fowl and any quantity of peas, and the demand became so great 'that I was obliged to lock up the small remaining stock"

W. & C. SCOTT & SON.

FIRST PRIZE MEDAL and DIPLOMA OF HONOUR awarded, CENTENNIAL EXHIBITION, Philadelphia, 1876. For excellence of Materials and Workmanship in their PREMIER QUALITY and medium grades. Their New PATENT TRIPLEX action and COMPENSATING LUMP.

The attention of Sportsmen is requested to the above new system of action. Its superior strength and solidity imparts greatly improved shooting powers. Hard hitting being the desideratum required is obtained by this powerful Gun.

Prices of the TRIPLEX: £22.10.0, £30.0.0, and £37.10.0. This latter is our highest quality and is marked "THE PREMIER QUALITY."

Excellent DOUBLE-GRIP BREECH-LOADERS at £8.10.0, £12.0.0, £16.0.0 and £20.0.0. Shooting guaranteed.

OUR PATENT TOP LEVER with PURDEY solid double bolt. Shooting guaranted. Sound plain finish £15/0/0. Well finished, good materials £21.0.0. Cases and implements £4, £6 and £8 extra.

In the New York International Gun Trial competition, 1873, the Committee awarded our guns the Diploma, being declared first for points of merit of action, materials, proportion and shooting qualities.

Extract from Forest and Stream, New York, December 26th, 1876. Contributed by one of the judges of awards of guns at the Centennial "The crowning glory of the display was the case of W. & C. Scott & Son. This firm has sent more good guns to this country during the past few years than any other, and they especially commend themselves to American sportsmen from the fact that they furnish good guns, honestly made, and of high shooting powers at very moderate prices. Their TRIPLEX ACTION combines, in the highest degree, strength with simplicity, and it must rapidly secure the favor of all who test its merits."

OUR PATENT COMPENSATING LUMP strongly recommended; should be ordered on every gun (cost, 30 shillings extra). For the Sportsman abroad, this invention is invaluable, being secured against the joint becoming loose after several years wear.

CHOKE BORED GUNS.—Slight, Medium or Full.

BREECH LOADERS in all systems from lowest qualities.

SINGLE and DOUBLE MUZZLE LOADERS.

Makers of the NEW SWINBURN-HENRY Sporting Express and SWINBURN-HENRY RIFLES and Carbines taking Government Ammunition. This Rifle is a great improvement on the Martini.

BUGS, FLEAS, MOTHS, BEETLES,

and all other insects are destroyed by

KEATING'S INSECT DESTROYING POWDER

which is quite harmless to Domestic Animals.

Sold in tins 1s. and 2s. 6d. each, by THOMAS KEATING, St. Paul's Churchyard, London, and all Chemists. The 1s. tins are so made that the Powder is easily distributed from them, and will be found a great improvement on the old paper packets. In exterminating Beetles the success of this powder is extraordinary, and no one need be troubled by those pests. It is perfectly clean in application.

SOLD IN TINS AND BOTTLES, BY ALL DRUGGISTS.

KEATING'S BON BONS OR WORM TABLETS

A PURELY VEGETABLE SWEETMEAT both in appearance and taste, furnishing a most agreeable method of administering the only certain remedy for INTESTINAL or THREAD WORMS. It is a perfectly safe and mild preparation, and is especially adapted for Children.

TESTIMONIAL.

Mr. KEATING. Medical Hall, Gildersome, Nov. 28th, 1876.

Dear Sir,—I think it nothing but my duty to inform you of the immense sale I have for your Worm Tablets, which I may justly say is enormous, and in every case gives the greatest satisfaction. I have now in stock two bottles containing the Round Worms brought me during the last few days by customers, one Worm 40 yards long. I dare not be without the remedy.

Yours respectfully,
M. E. WALKER.

SOLD IN BOTTLES, BY ALL CHEMISTS AND DRUGGISTS.

Proprietor—THOMAS KEATING, London.

REWARD AND CAUTION.—Whereas I am informed fraudulent imitations of this unsurpassed remedy have been sold, I hereby request anyone knowing of the vendor of the same to communicate with me, and on conviction of the offender a liberal Reward will be paid.

TO SUBSCRIBERS.

SUBSCRIBERS at a distance whose period of subscription may have elapsed, are informed that their papers will be addressed and charged to them *until countermanded*. This rule has been found necessary in order to avoid the inconvenience of an abrupt stoppage of the paper which might result from an omisson to renew.

It is requested that notice of the intention to discontinue a subscription be so given as to reach Yokohama *before* the date of its effluxion.

NOTICE.

ON and after the 1st of July, Notices of Births, Marriages and Deaths will be charged $1 each insertion.

Such Notices cannot be inserted in this journal unless endorsed with the name and address of the person by whom they are sent.

Yokohama, 25th June, 1874.

DIED.

On the 28th May, at 11 a.m. at No. 17, Tsukiji, Tôkiô, Miss CATHRINE ALLMAND, aged 18 years.

Notes of the Week.

The accounts of the progress of events in Kiushiu are not such as to encourage the belief that any advantage is being gained by the Imperial troops over their antagonists. The position of the Government is as perilous as ever. The insurgents increase in numbers, while their attacks become more daring and formidable, and their defence more obstinate and prolonged. It would appear that they are keeping open lines of communication from the south-west to the north-east of the island, but whether with the intention of closing down on the Imperialists, or with a view of forcing a junction with Tosa it is difficult to judge. The Government have evidently great fears on the subject of the latter province. A strict watch is kept between Cape Jizo in Bungo and at Misaki in Sikoku, the narrowest channel of communication between the islands, the distance to be traversed being only six *ri*. It is difficult, however, to imagine how even so short a passage could be successfully effected. As far as we know, no vessel of war or transport is in possession of the insurgents, and one man-of-war could certainly prevent any communication being made by junks. In the meanwhile all private junk traffic is prohibited between Tosa and Bungo. There are certain reports to the effect that several suspicious vessels have mysteriously appeared at various points and then as mysteriously vanished, and it is by no means impossible that the insurgents may be able to command naval aid of which we know nothing. The Satsuma forces at Takeda have apparently been utterly routed and compelled to abandon their position, while at Kagoshima, and at Oka in Owake *ken* they have driven back the Government troops with terrible slaughter. The *Mainichi Shimbun* reports that great excitement has been caused by a small body of insurgents making their appearance at Amagasaki in the neighbourhood of Osaka. A police force was immediately despatched against them but failed to discover their whereabouts. It is supposed that they have made their way into the province of Tamba. The rumour is also current in Tôkiô of great disquietude in Yamaguchi *ken* (Chôshiu). The *Akébono Shimbun* of this morning publishes a report of the disturbance, which it states was caused by about one hundred and fifty of the *samurai*, but thinks there is no cause for uneasiness. It appears to have been now decided that the ex-Governor of Kagoshima, Oyama Tsunayoshi, is to be sent to Nagasaki, where some tribunal is to be got together for his trial. The treatment of this official has been throughout most unseemly and unjustifiable. There is no clause in the whole penal code of Japan under which he can be tried, and no judge in Tôkiô has been found who would undertake a trial that could with no shadow of justice be prosecuted.

There can be no doubt that telegrams, worded so as to convey an entirely false impression of the state of affairs in Kiushiu, have been forwarded to the various Japanese Legations abroad, and by them circulated in the respective countries in which they reside. It is but natural that the Government which so successfully conceals from the masses of its subjects any news which is unfavourable to itself, should spare no pains to deceive the world. But daily events are utterly contradictory of the statements of successes so boldly announced. It would be far more dignified, and in every way better for itself if it would not attempt to win the temporary confidence of Western nations by having recourse to announcements whose truth is utterly disproved by results. Some of our contemporaries have suggested that the intention of the Government to ask for another foreign loan may have been the object of the transmission of these falsehoods. This we do not believe, as there is an intensely strong feeling in the Administration against any such course. It is, moreover, far easier to get an unsecured loan of fifteen millions from the confiding *kwazoku*, than to obtain it from the oft-beguiled and naturally suspicious foreign capitalist. Besides, where is the security?

The Commander-in-Chief of the Imperial Army in the South, H. I. H. Arisugawa-no-Miya, has issued an address to the troops under his command, reminding them of the successes attending their arms which led to the relief of Kumamoto, and pointing out that as the insurgents are now hard pressed, they are driven to desperation, so that additional watchfulness and valour are called for in order that the soldiers of the Imperial Army may not be taken unawares and defeated. The Commander-in-Chief also points out that the honour of the Army is concerned in carefully guarding against any negligence that may give the enemy an undue advantage.

There is a singular circumstance connected with the bestowal of rank of *Shô-ni-i* on the great man just deceased, Kido Takatada, inasmuch as it does not appear to have been conferred until the day after his decease. The *Nichi Nichi Shimbun* states that on the morning of the 27th, an Envoy of the Emperor went to Kido's residence and made the announcement to his family of the honour His Majesty had been pleased to confer on his

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

faithful adviser, presenting them at the same time with the sum of five thousand *yen*. The Empress and Empress Dowager also gave one thousand *yen* each. The funeral took place on the morning of the 30th, the chief priest, Otani Koson, assisted by fifty others conducting the ceremonial. Kagawa, a *Daijô* of the *Kunaisho*, and one of the princes of the Imperial family, acting as representative of the Mikado, attended the interment; Sanjô, Okubo, Ito, and all the higher officials at present in the Southern capital being likewise present. The procession left the residence of the deceased statesman at one o'clock in the afternoon, one company of cavalry escorting the body to its final resting place at Riosan, in Higashi-yama, Kiôto.

From the *Chôya Shimbun* we learn that His Majesty the Mikado has acknowledged his late Secretary's services in the following terms:

"The Mikado, who is, by the will of the Gods the representative of a dynasty that has been uninterrupted from time immemorial, presents to the *Naikakukomon* (private adviser), Kido Takatada, the decoration of the first class of the *Rising Sun*, together with all the rights and dignities appertaining to the order."

Dated, 24th of May, 2537.

From the palace at Kiôto, signed and sealed by H. M. the Mikado.

Signed also by

Shoshii Ito Hirobumi,
Sangi, Minister of Public Works and Director of the *Hôsei-kioku* and *Kunsho-kioku*.

Joshi-i Ogio Tsune,
Member of the *Genro-In*, and Vice Director of the *Kunshô-kioku*.

On the 28th an Imperial officer, named Nabeshima, was sent to the residence of the deceased nobleman, with the following message to his relatives:—

"Kido Takatada has been a true and loyal subject, who devoted the powers of his mind to the Imperial cause, and rendered the greatest services to the nation in bringing about the Restoration, raising the Empire from a state of decadence to one of progress. He has ever proved himself faithful, and has been a pillar of strength to his country, and a right arm to Ourselves. We are overwhelmed with sorrow at his death, and have promoted him to the rank of *Sho-ni-i*, bestowing also a sum of money on his relatives."

This tribute to the worth of his deservedly trusted friend and adviser is as graceful as deserved, and shows that the Emperor appreciates the almost irreparable loss he has sustained by the death of Kido Takatada.

Now that a war has broken out between Russia and Turkey which may, for ought we know, involve the whole of Europe in conflict, it is desirable that we should be in possession of the very latest telegraphic news. For this reason Reuter's Agent has determined to make another effort to obtain from the residents of this settlement and of Tôkiô sufficient monthly subscriptions to cover the cost of extending to us here a privilege which Hongkong and Shanghai already enjoy. If deserved support is given to the proposed scheme,—as we have good reason to believe it will be—arrangements will at once be made for having the latest war news forwarded here at once, and distributed amongst the subscribers without delay.

The latest advices from Milan only confirm what we stated a week or two since with reference to the shipments thither on native account of a very large number of silk-worms' eggs. The Japanese in charge of the cards are offering them at from three to three and a half francs per *carton*, and Italian buyers are not showing the least desire to become their possessors at even such a low figure. The native agents express great fears that they will be able to realise nothing for the larger portion of them, and as the real owners are guaranteed against all loss by the official ring which advised the transaction, we do not feel called upon to express any sympathy with the losers. The unanimous verdict is "serve them right."

When a Government can show that its estimated revenue exceeds its anticipated expenditure by the enormous sum of one thousand seven hundred and sixty nine *yen*, there can of course be no reason why any, or all, of its departments should not indulge in any playful experiment that may appear desirable, regardless of the cost or utility. Having established a model farm at Shimosa which, though it have no other advantage, affords rich grazing ground to the favoured children of fortune who have been established thereon; where "eating the lotos day by day" they can "live and lie reclined on the hills like Gods together, careless of mankind;" and where, in the dim future, fleecy flocks may adorn the grassy slopes, it follows in natural sequence that there should arise a yearning desire for means to turn the prospective fleeces to some account. With this laudable view a woollen mill of seventy-five horse capacity has been ordered and has arrived. As yet a fitting spot has not been chosen for its erection, but there is no doubt that so important a point will be decided before the Shimosa sheep are prepared to supply sufficient raw material to keep the mill in constant work. It is true that at present the flocks are limited to a few pet lambs, but it is thought that the use of pens with blue glass lights will cause a rapid increase in their numbers. Should this method fail to achieve the desired result, sheep of the most improved breed can be imported from California or "the blue grass region of Kentucky," certain philippic gentlemen being willing to submit to the toils and dangers of the voyage, for the purpose of benefitting the Government by acting as purchasing agents. In the mean time it is proposed to import wool from Australia, and there is no doubt that when the mill is in full running order, the present foreign trade will receive a terrible blow, and that Japan will be able to flood Western markets with stocks of tweeds and broadcloths.

Speaking of the "blue grass region of Kentucky" whither, it was stated a few weeks ago in the native journals, Mr. Ap Jones and the Japanese gentlemen accompanying him had gone, for the purpose of placing the Government under increased obligations to them by further purchases of blooded stock, we quote with much pleasure the following chastely written account of their visit, which is taken from the *Chicago Times* of April 22nd.

"NO SLOUCH."

The Kentucky Blue Grass Region, Its Products, and What Has Recently Happened There.

[*Special Correspondence.*]

Louisville, Ky., April 19.—Kentucky is, after all NO SLOUCH OF A STATE

She may not be so tall as she thinks herself, but she is a real likely nubbin. She can beat the world on lottery schemes and murders. She can also raise an article of grass that goes a little ahead of anything of the kind in this country. It is called

BLUE GRASS.

Blue grass is much more aristocratic than green grass. Lexington is the centre of the blue-grass plat, and in fact has long ago gone to grass. Down about Lexington they have healthy mint beds; the mint is mixed with ice and Bourbon and presented to all strangers. I have heard it called a great improvement on the amber-hued river water we drink in Louisville. It has also a peculiarity of making guests see everything in a new light.

Japan is now fooling around Woodford country. She is buying

HORSES.

The Japanese speculators thought they had purchased horses in California, but they never saw horses until they saw them in Kentucky. Their almond eyes were stretched to the proportions of walnuts while they were watching the blooded stock of Walnut hills. Waverly, Gilroy, Alarm, and Strachino, pranced over the lawn for their amusement and a young colt which is in training for the English Derby of 1878 created great enthusiasm among the Japs.

At Stockwood, the home of Mr. Swigart, they were further astonished by Baden-Baden, Lisbon, Cairo, Flying Locust, and Ceylon.

Ceylon was immediately purchased by one impulsive youth, who resides in Jeddo.

Gen. Buford welcomed the distinguished foreigners—I don't know why distinguished, except that all foreigners are distinguished,—to his fine stock farm of Bosque Bonita.

After a lunch, designed to make men reckless, Inquirer, McHenry, Lizzie Whipps, and Yandell, were waltzed around the yard and shown off by the grinning little darkies.

The $25,000

COWS

at Woodburn struck their withered beaves with awe, but when they reached old John Harper's, and beheld Nicy Hale, Longfellow, and the Champion Cen-Breeck, the words rattled from their tongues like dimes in a contribution box; they jumped up and down with delight and excitement, and remarked as the old queen of Sheba did on a certain occasion, that "the half had not been told them." The tender blue-blooded

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

vegetation clothed all the swelling lawns, the forest trees were tasseled in gold and rose, the magnolia scented the evening air, and under the scant foliage little jockies showed a combination of quaint ebony and ivory, as they led the glossy

PROUD-STEPPING STALLIONS

in review before the strange group of small men who have come from the far Occident to see for themselves the horses of Kentucky.

If there is any one thing which Kentucky can raise better than grass and horses, it is

WOMEN.

Most everybody has heard of the beautiful women of Kentucky, if they never heard of them anywhere else. It has really become tiresome and monotonous by repetition, especially to women of other states. But truth being bound eventually to be the upper dog in the fight, I will side with the winning canine, and say that Kentucky can raise more female loveliness to the square inch than all other countries combined, and that the blue-grass region can double discount all the rest of the state in this particular line.

And of all the beautiful girls of the blue-grass section, Miss Bettie, daughter of Senator James B. Beck of Kentucky, is

MOST BEAUTIFUL.

She is of the brilliant brunette type, with carmine cheeks, and eyelashes like the curled tips of ostrich plumes, sweeping her cheeks with lines of darkness, or, upraised, casting shadows by their length over her rounded cheeks. Her figure is tall and slight, her hands very beautiful.

How they must have regretted that they had spent so large a portion of their pocket money in California in the purchase of the eight colossal steeds that recently arrived! How they must have burned to possess the young colt in training for the English Derby! We shall not be surprised to hear of the acquisition of several $25,000 cows, unless there are more expensive animals for sale. With regard to the last paragraph, it is singular that a correspondent of such evident refinement and delicacy, should have been guilty of such an error in taste as to write of woman in as large print, and in similar terms, as full blooded cows and horses.

We would wish to make it clear to our readers that the appeal in the case "Beato *v.* The P. & O. Company" has only been abandoned because, as the law of England at present stands as regards shippers and carriers,—to the detriment, unfortunately of the former—only unnecessary expense would be incurred in taking it before a higher tribunal. Cannot our Chamber of Commerce move in this matter, and utilize some of that "time elaborately thrown away" which has hitherto distinguished it? There is no doubt that the law at present in force is not only an absurdity, but entails the greatest injustice on shippers, and if our Chamber would only make proper representation of the practical effect of this statute, as evidenced in the case under notice, to the Chamber of Commerce of London, Liverpool or Manchester, we might reasonably hope that the attention of Parliament would soon be called to the anomalous condition of the existing law, so that there might be some chance of it being made more in accordance with common sense and commercial usage.

We do not wish to intrude our private affairs upon our readers, but we cannot refrain from remarking on the undue proportions that our druggist's bill has lately assumed. The principal items in the account appear to be essence of ginger, peppermint, and various other simples, the use of which has been forced upon us by alarmingly frequent attacks of what old ladies call "spazzums" in our domestic circle—or rather we should say, circle of domestics. Scarcely a day has passed, but one of our trusty serving men has presented himself, his pallid face, and doubled up form,—to say nothing of the wasp-like shape to which a tightly tied girdle has reduced him—betokening his sufferings, while in a faint and broken voice he has begged that a little more of the medicine which had such marvellous effect on the last occasion may again be administered. If he has required nothing for himself, he has petitioned on behalf of some afflicted friend. We were fairly puzzled as to the cause of these attacks. We prohibited the use of cucumbers on pain of dismissal. *Daikon* became the forbidden fruit. We know from long experience that all the members of our household are of sterling honour, and that every strawberry we possess is sacred. It could not be the super-acidulous product of our gooseberry bushes, for we had witnessed the frightful effects on the native countenance produced by tasting this fruit at our special invitation. But by diligent search and prolonged inquiry, we at length succeeded in learning that a liberal hearted friend in Tôkiô, who is a merchant of foreign goods, and dealer in curious wines, had sent to the cook a present of sundry rare compounds. At our request we were shown these delightful preparations, "warranted genuine imported liquors." The first bottle we took up contained, according to the label, "Sugar of Lemons." It looked like that delectable preparation. It tasted like a mixture of oxalic acid and soapsuds. Adorning the neck of the bottle was another label on which was written "hot Cold Sure" which we could only suppose to mean that if partaken of when hot (or at any other time) the unhappy imbiber would feel the chills of death certainly stealing over him. Its entire power to act as thus warranted, the effects we had witnessed left us little room to doubt. The next bottle had an inscription that might have misled a near-sighted toper to his ruin. It looked very much like "Red Heart Rum." But close inspection showed it to be a mysterious and weird like compound called "Red Herb Wine." It had the colour and general appearance of Godfrey's cordial, and tasted like cold elderberry wine. Mixed with water, and plenty of ice, we have no doubt it made a cooling drink, but its after effects were singularly demoralizing, especially where, as in one instance, a daring experimenter had followed up a dose of the Lemon mixture by a deep, deep draught of the Red Herb Wine. This case alone caused the addition of several items to our druggist's bill. The third and last bottle that we took up bore a label with this strange device, "Genuine Rikicoshiy Liqueurs." The man who invented that label is a genius. It is eminently original, and in a certain way seems to give a foretaste of the compound. We did not taste this. We are willing to brave much in the interest of our readers, but there is a point that we cannot pass. If any of them are, however, sufficiently curious to examine for themselves, we will with pleasure inform them where these unpronounceable liqueurs can be purchased.

While on this subject of poisonous frauds we cannot refrain from expressing our earnest belief that if the causes of many an unaccountable illness, ending too frequently in the death of the sufferer, of which one constantly hears as occurring in Tôkiô and elsewhere, were carefully traced, they would be found to proceed from the use of the villainous mixtures sold as foreign productions, and largely consumed by the natives during the summer months in the manufacture of cooling drinks. The other day at Asakusa we came across a bottle of which the shape immediately took our attention, as having an unpleasantly medicinal aspect. It was filled with an oily fluid of a brilliant magenta colour. It was labelled "Kummel" in a similarly striking hue. We asked if it was imported, and were answered in the affirmative with many asseverations as to the truth of the statement. But our trust was shaken when we saw on the reverse another label bearing this inscription in a well known hand: *The draught, one table spoonful three times a day, 'North, Thompson & Co.'* We were sorry that we did not purchase the stuff and submit it to those gentlemen for analyzation, but it seemed too much like encouraging fraud to pay three *bus*,—the price demanded. More recently at a Tôkiô restaurant, a bottle of beer was brought to us, which in appearance as to label and corking would have deceived the brewer whose name it bore. The contents were simply an active poison, as the consequences of swallowing about a wine glass full of the vile mess unfortunately proved to us. We have no doubt,—in fact we have positive proof in our own household—that most serious cases of illness, involving acute suffering, and attended by alarming symptoms, are caused by the consumption of these compounds. There is now we believe an inspectorate of drugs appointed by the Government. Would it be possible, we wonder, to extend the powers of the office and make it also an inspectorate of "drinks"? In all seriousness it is a matter that needs speedy consideration. It is a public evil and a growing one.

The *Cosmopolitan Press* states that some rascally contractors have availed themselves of the opportunities, afforded by the urgent need of hurrying forward army supplies, to make money by palming off bamboo root, coloured magenta, as *shoga*, while tubs purporting to contain the odoriferous and refreshing *daikon* were found to contain principally salted

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

shavings. We wish the commissariat department could get hold of these scamps, and hand them over to the tender mercies of the poor fellows who suffer by their dirty tricks. The man who labours at the bitter trade of war is certainly worthy of his hire, and wooden *daikon* is every whit as bad as rotten beef, brown paper boots, and sanded sugar. The power to swindle requires to be restrained as much as the power to indulge in any other vice. The Japanese are an advancing people, and if not controlled may come to rival some of our own army contractors.

"But these are the days of advance, the works of the men of mind,
"When who but a fool would have faith in a tradesman's ware or his word?"

The following table of approximate dates of departure from this port of steamers for San Francisco, for the next four months, may be of use to our readers:

Alaska	June 24.
Belgic	,, 28.
City of Tokio	July 10.
Gaelic	,, 22.
City of Peking	Aug. 3.
Oceanic	,, 16.
City of San Francisco	,, 29.
Belgic	Sept. 10.
City of Tokio	,, 24.

After September, when the bulk of the tea will have gone forward, a steamer for San Francisco will be despatched on or about the 10th and 24th of each month. The P. M. Co.'s steamer *Alaska* is advertised to leave for San Francisco on the 24th instant, and will probably never return to these shores again, her place being taken by the new screw steamer *City of San Francisco*. Although these old paddle-wheel boats make very indifferent—or even bad—time, they are undeniably comfortable, and many intending passengers across the Pacific will view with regret the departure from among us of the last of them. Besides we shall be deprived of one most fruitful source of small bets and of harmless jokes.

In speaking of the reinforcements of police arriving at that port, the *Nagasaki Express* gives the following amusing information:—

The men, in the event of their not being immediately supplied with rifles, are still ready with their staves, which they invariably carry with them; as for baggage, they do not for the most part consider it necessary to take much, evidently relying on being able to supply themselves from the well-filled stores of the insurgents; but each man has been thoughtfully supplied with that most necessary adjunct during a campaign, viz.—a silver watch and chain. Were there any fears of the men brooding over their absence from home, and thinking of the hardships they were about to undergo, it would naturally be dispelled at once by the sight and handling of a treasure which every boy is so anxious to possess. These watches are literally meat, drink, and library, to the recipients, and before they have well dissected the insides in comparing the merits of their respective property, they find themselves face-to-face with the insurgents, and have barely time to secure their valuables about them before they are engaged in deadly struggle.

The gifts can scarcely be so costly as at first reading they might seem. We remember that at a sale of a quantity of salvage from the wreck of the *Nil*, numbers of watches were purchased at three and four dollars a dozen. Probably they are somewhat defective in workmanship, but answer for dissecting purposes as well as a more expensive chronometer. It is nevertheless a grim thought that they may be warranted to 'go' correctly for the lifetime of many of these poor fellows, for whom shortly time must cease to be.

In all forty-one shooting licenses were issued by the Kanagawa *Kencho* during the season just closed, the various nationalities being represented as follows:—

British	27	Portuguese	1
American	6	Italian	1
French	4	German	1
Swiss	1		

These licenses were issued so late in the season that many sportsmen declined to avail themselves of the privilege they conferred, at the cost of the fee, ten *yen*, which had to be paid for them, so that it may fairly be expected that the number of licenses applied for in the autumn will far exceed those that were taken out at the commencement of this year. As yet nothing is known of the projected regulations for next season, though we may safely infer they will be based on those in force during the past year. One thing is certain,—no true sportsmen will grudge the payment of even a high fee, if the Japanese authorities will strictly enforce, as they certainly ought to do, a close season, and the necessity of this cannot be too strongly urged upon them. It would also be advisable that the terms of the convenant, which every applicant for a license is required to sign, should be printed on the license itself, in order that no doubt should exist in the mind of any holder as to the regulations he has bound himself under a penalty to observe.

From the "Japan Mail Daily Advertiser."

Monday, 28th.

A most disgraceful row took place in the settlement yesterday evening. It appears that a dozen English sailors and marines were in a grog shop in the Honmura road, when a much larger number of Russian sailors entered. Some quarrel seems soon to have arisen, with the result that the English sailors were ejected from the house. They attempted to enter again in order to obtain possession of sundry caps which they had left behind them, but were again overpowered, and the Russians shortly afterwards appeared in the street in a body with the intention of attacking their opponents, but one of their officers who happened to pass at the time induced them to disperse. Apparently the disturbance was finished; the the English sailors and marines, with the exception of three men who remained talking in the street, had gone into other drinking saloons in the neighbourhood, when without any warning or provocation the Russians, who had armed themselves with broken palings, stones, and any weapon which came handy, made a rush towards the Honmura road and an indiscriminate attack on all who came in their way. A general fight then seems to have taken place, people of all sorts in the neighbourhood, armed with cudgels, etc., rushing out to attack the Russians, who were soon overpowered and retreated to the hatoba, but during their course did not cease from assaulting inoffensive passers by. The Russians were eventually got off to their ship, but not before some of them had been very roughly handled, seven of those who were most severely injured having to be sent to the hospital.

From the *Mainichi Shimbun.*

Mr. Ogi, the Minister of Justice, will shortly start for Fukuoka in Chikuzen.

A telegram from Police Inspector Murata, at present in Owake *ken*, despatched at 7.25 p.m. on the 26th instant, says that the Imperialists at Hagiwara made an attack upon the rebels of Oku on the 26th instant. The police forces under Murata are stationed at the town of Owake.

A telegram from Lieut. General Kawaji at Midzumata, despatched at 1.30 p.m. on the 26th instant, announces that the Imperialists attacked the rebel fortress at Yakadzugatake on the morning of the same day and drove out the insurgents.

The departure of His Majesty the Mikado for Shimonoseki will perhaps take place this month, or at any rate not later than the 5th June.

It is said that the rebel Commanders are divided in opinion. Saigo wishes to post his troops in Bungo and Hiuga in order to check the advance of the Imperialists from the north, but Kirino, Murata and Fuchibe advocate the retaking of Kagoshima, so that there may be no danger of their supplies being cut off.

Two hundred and seventy men are confined in the jail attached to the special Court at Shimonoseki, waiting their trial for the part they have taken in the present rebellion.

From the *Hôchi Shimbun.*

A telegram despatched from Kumamoto at 5.30 p.m. on the 25th instant announces that on the 18th instant the Imperialists drove the rebels about 3 *ri* from Higo into Satsuma, as far as Matsu-o and Kanbara. The opposing forces have taken up positions facing each other but are quite inactive. It is expected that some of the Imperial troops forming this division will shortly reach Oguchi and Demidzu.

From the *Chôya Shimbun.*

A branch office of the Telegraph Department is to be established at Marakame in the province of Sanuki.

From the *Nichi Nichi Shimbun.*

Lieut. General Oyama left Kagoshima on the 20th instant by the *Kôun Maru* and proceeded to Kumamoto on business, but will return to Kagoshima so soon as it is accomplished.

From the *Akébono Shimbun.*

The rebels have four large guns situated on a hill called Daimiojin-ga-oka about a *ri* and a half from Kagoshima, and

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

frequently fire shots within the lines of the Imperialists, to their great annoyance. This hill has been bombarded from the sea by the *Nisshin Kan*, and it seems as if the rebels have been driven away from the place as they have since ceased all cannonading.

Tuesday, 29th.

GAIETY THEATRE.

It was lamentable to observe the wretchedly small audience assembled yesterday evening at the Gaiety Theatre to witness the performance of the Dramatic Club of H.M.S. *Audacious*, in aid of the *Thunderer* fund. We cannot help thinking that this was due to some mismanagement. The Yokohama public have at all times proved staunch supporters of dramatic representations, more especially so when given in aid of some charity, and we imagine, therefore, that had more publicity been given to the announcement of this performance, and had the officers of the *Audacious* made some endeavour to support the efforts of those who appeared on the stage by taking the trouble to secure for them a good house, we should doubtless have had the pleasure of recording a decided success where now we are reluctantly compelled to announce a failure. A failure, be it understood, only as regards the audience, and by no means as regards the acting, which was, on the whole, most creditable to all engaged. The performance was announced to be under the patronage of Admiral Ryder, the Captain and officers of the *Audacious*, who were represented by one lieutenant and a midshipman.

The entertainment opened with the farce of *A Dodge for a Dinner*, a piece of no particular merit, but which went off fairly well owing to the good acting of Sergeant Jones as *Tom Hopkins*. The Sergeant was easy and collected, showed a good knowledge of stage business and knew his part perfectly. The other characters were well supported. J. S. Dunlop made a pretty *Jenny Beeswing*, but was hardly at home in the management of his skirts, while W. Stanhope made a most ponderous hostess of the "Lion."

This piece was followed by Maddison Morton's farce of *To Paris and back for £5*, which was played with spirit from first to last and was certainly the success of the evening. The palm must be awarded to W. Feherty, who creditably sustained the burden of the piece as *Mr. Samuel Snozzle*. Sergeant Jones appeared again as *Lieut. Spike R.M.*, and no fault can be found with his rendering of the character, but his make up was hardly that of a testy old gentlemen. Sergeant Watling made an excellent *Charles Markham*, and excited some merriment where perhaps it was least expected by the peculiarities of his delivery. T. Armstrong as *Mr. Spriggins*, G. Gamble as *Pounce* the detective, and T. H. Nancarrow as the waiter, all helped to make the piece a success. D. T. Hull made a pretty *Fanny Spriggins*, but laboured under the disadvantage of having to whisper soft nothings in a deep bass voice.

The farce of *Sarah's Young Man* concluded the entertainment, and sufficed to display the talent of Sergeant Watling as *Sam Sloeleaf*, whose rendering of the part was worthy of commendation, but this actor should study how to dispose of his hands and avoid ungraceful gestures. The part of *Mr. Moggridge*, a victim to the green-eyed monster, was capitally done by W. Feherty. J. S. Dunlop again made his appearance as *Sarah Tibbs* and well seconded her young man in carrying the piece through. W. Stanhope took the part of *Mrs. Moggridge*, a sympathetic mamma, in the most unsympathetic manner, and if the prospect of such a solemn looking mother-in-law did not drive away every suitor from the feet of the lovely *Araminta* it ought to do so. D. T. Hull took this last character, but showed too much restlessness,—in fact he seemed as if he had discovered perpetual motion and was giving the audience an illustration of it.

Histrionically the performance was a success, and altogether deserving of much better support than was accorded to it. The band of the *Audacious*, under the leadership of Mr. Agius, occupied the orchestra, and by their excellent playing made the audience regret the conclusion of the intervals between the pieces, rather than consider them wearisome.

We regret to have to announce the death of H. E. Kido, which took place at Kiôto at half past six on the morning of the 26th instant. The loss of such a man would be deeply felt at any time, but his death is particularly unfortunate at this crisis, when the Empire is in danger not only on account of the rebellion at present raging in Kiushiu, but also on account of troubles which threaten to arise in other parts of the country. Kido held the office of Adviser to the Mikado, an appointment which was specially created for him, and just at the time when his council and advice is most needed, his Sovereign and country are unfortunately deprived of his services.

A base-ball match was played at the Cricket Ground yesterday afternoon, "The Fleet and Yokohama" *versus* "Tôkiô," which resulted in a victory for the latter. Eight innings only were played, leaving the score as follows :—

SCORE.

From the *Mainichi Shimbun.*

Although it may not be on account of any disturbance in Kôchi *ken*, yet one regiment of the Osaka garrison troops was sent to Sumoto, in the province of Awaji, on the 25th instant.

The rebels in the neighbourhood of Yashiro are posted from Onose through Hayashi and Ogata to Shiwohitashi, a distance of seventeen or eighteen *ri* north and west.

At Kurime-yama, to the south of Midzumata, a large earthwork has been constructed. Kirino is there with about two thousand men under his command. Kurime-yama is a high hill situated between Higo and Satsuma, and as its capture by the Imperialists would cut off all communication between Oguchi and Hitoyoshi, the rebels are making great efforts for its defence.

The Agent of the Great Northern Telegraph Company informs us that the Russian land lines are in order again.

From the *Hôchi Shimbun.*

On the 22nd a private meeting took place between Sanjô, Okubo, Ogi and Ito.

From the *Akébono Shimbun.*

A telegram despatched from Kokura on the 27th instant announces that it was feared that the rebels would make an attack on Owake *ken*, but the arrival of a large force of Imperial troops and police has restored confidence, as it is expected that they are sufficiently strong to cope with the rebels.

From the *Nichi Nichi Shimbun.*

Kataoka Kenkichi and several other prominent members of the *Risshisha* of Tosa arrived at the capital and presented a memorial to the Government, urging, it is said, the establishment of a Representative Assembly.

The police force is gradually being recruited from the *samurai* of the northern provinces. On the 21st 90 left Awomori *ken* for Tôkiô and 100 more will shortly be despatched to the capital from that place. On 22nd 100 left Sendai, and 150 who were enrolled at Takata in Echigo arrived in Tôkiô a few days ago.

Wednesday, 30th.

The steamer *Elgin* left Singapore for Hongkong on the 18th instant.

From the *Nichi Nichi Shimbun.*

On account of the rebels having entered the province of Bungo, and as this province is separated by only a narrow strait from Shikoku, the Ehime *ken* (Iyo) has collected a number of *samurai* of Matsuyama for defensive purposes, as the rebels are liable to cross over into the province at any time. A regiment of troops has also been sent there from Osaka.

From the *Akébono Shimbun.*

A telegram received at 1.20 p.m. on the 29th instant announces that the first division of the Imperialists drove out the rebels from Ozaka, Kudzuwara, and Iwato, and took possession of their batteries at those places.

The Imperialists, both men and officers, are eager to fight, but the Commander-in-Chief, his Advisers, and the Lieutenant Generals

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

are opposed to anything approaching recklesness, as they do not wish that many lives should be lost in desperate fighting.

From the *Hôchi Shimbun.*

The rebels at Beppu, in the province of Bungo, have advanced towards Saganoseki and Yawatahama, and seem as though they intend to cross over into the province of Iyo in Shikoku.

From the *Chôya Shimbun.*

A telegram received at 0.25 p.m. on the 26th instant states that no engagements of note had taken place up to the 23rd instant in the neighbourhood of Takeda in Bungo. But on the 27th instant at dawn the Imperialists commenced attacking the rebel stockades and took possession of several of them. In the course of the day the Imperialists advanced within four or five *chô* of the town of Takeda.

Thursday, 31*st.*

The *Thabor* leaves to-day for Kagoshima with Government stores, war material, etc.

The M. M. steamship *Tanais*, with French mails to the 21st April, is to leave Hongkong for this port at 10 o'clock this morning.

The Steamer *Candia* arrived at the anchorage from Yokoska this morning. She had to be docked in order to replace one blade of her propeller which she lost on her voyage out from London.

From the *Chôya Shimbun.*

A telegram despatched from Kiôto at 8.10 a.m. on the 29th instant announces that the Imperialists made a desperate attack upon Takeda, in Bungo, on the 28th instant, but were not able to carry the town by assault.

It is supposed that Kuroda, the Minister of the *Kaitakushi*, will take up his permanent residence in Yezo.

Mumaya Hara, a secretary of the temporary *Saibansho* at Nagasaki, has arrived at Kiôto in order to request that, as the *Saibansho* is desirous of examining Oyama Tsunayoshi, Nakahara Hisao and others, face to face, that all of them should be sent to Nagasaki.

[The assassination plot is evidently to be enquired into at last. —Ed. *J. M. D. A.*]

From the *Hôchi Shimbun.*

Shimadzu Saburo hitherto lived at Sakura-shima, an island about one *ri* from Kagoshima, but has now removed to a place called Bôdzu about eighteen or nineteen *ri* from the capital of Satsuma.

Friday, 1*st.*

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kiôto at 1.30 p.m. on the 28th instant announces that about three hundred men of the Satsuma army who were stationed in Hiuga marched into Bungo, attacked and took Saha and then continued their march towards Usuki, a seaport on the east coast of Bungo. A larger body of insurgents were following in the same direction. The Imperial military, naval and police forces are preparing to check this advance. Kirino is at Miyasaki in Hiuga, collecting recruits.

On the day of the death of Kido His Majesty the Mikado raised him to the rank of *Shô-ni-i*, and also presented five thousand *yen* to his family.

The following is a statement of the killed and wounded on the Imperial side from the commencement of hostilities on the 24th February to the month of April, taken from the records of the various hospitals and official returns :—

	Wounded.	*Killed on the field of battle.*	*Died in Hospital.*	*Remained in Hospital.*	*Convalescent.*
Officers.....	378	98	61	197	20
Non Commissioned Officers	1,179	262	121	743	53
Students	2	—	—	—	—
Police sergeants.....	38	9	2	23	4
Soldiers.....	6,580	1,498	598	4,384	105
Policemen.....	280	66	25	158	27
Coolies	162	43	13	79	27
Class not yet known.....	163	159	4	—	27
Total.	8,752	2,135	824	5,584	263

H. E. Arinori Mori, the Japanese Minister to Peking, returned by the *Saikio Maru* yesterday.

The *Candia* went down the bay yesterday on a trial trip, returning to the anchorage in the evening.

From the *Mainichi Shimbun.*

Oyama Tsunayoshi, and fifty-six other prisoners implicated in the rebellion, will be sent to the Nagasaki *Saibansho* by the *Hiroshima Maru* which leaves to-day. The same vessel will carry six guns and eighty artillery men for the seat of war.

The *Shinagawa Maru* has been ordered to make preparations for transporting one thousand troops to Kiushiu.

From the *Nichi Nichi Shimbun.*

A telegram despatched from Kumamoto on the 30th instant announces that an attack was made upon Takeda at 3 a.m. on the 29th instant. The rebels had posted themselves in favourable positions on the hills, but were driven away by 7 a.m., after four hours fighting, leaving their dead and wounded together with arms and ammunitions behind them. The defeated rebels fled towards the Ogata road, pursued by the Imperialists. The headquarters of the insurgents in Bungo were established at Takeda.

One thousand and five *samurai* of Wakayama (Kishiu), who have voluntarily offered to assist the Imperialists, arrived at Osaka on the 27th instant. These men were drilled according to the Prussian system during the time of the *Han.*

There are very few insurgent troops at Kajiki and Jofu in Ôsumi, most of them being recruits armed with swords, but at Ishiki there are about 1,500 under Kishima. The whereabouts of Saigo is still unkuown. The *samurai* of Taniyama, about three hundred in number, marched as far as Kagoshima, but have not as yet attacked the Imperialists.

From the *Chôya Shimbun.*

A telegram from Kumamoto despatched at 1.15 p.m. on the 30th instant announces that insurgents in the castle at Takeda and those at Kojiro have been put to flight, taking the Ogata road. The Imperialists are advancing into Hitoyoshi and have removed their camp to Otsuki-mura. There are a number of rebels defending Watari-mura, a village about two *ri* from Hitoyoshi.

From the *Akébono Shimbun.*

A telegram, despatched from Kiôto at 4.10 p.m. on the 29th instant, announces that the Imperalists attacked the Yahadzu mountain passes in Satsuma on the 25th instant, and took possession of several of the enemy's stockades. At dawn of the 26th the rebels attacked the Imperialists, but were repulsed, one of their officers and several men having been killed: On the 27th the Imperialists advanced to Terudaru-dori, and discovered that the rebels were strongly posted on Suyeno-yama, about 20 *chô* distant from the Imperial lines and one and a half *ri* from Hitoyoshi. This position completely commands Hitoyoshi.

Saturday, 2*nd.*

Owing to press of business occasioned by the war in the South, all Government officials will be deprived of their usual summer vacation this year.

From the *Nichi Nichi Shimbun*

A telegram despatched from Kiôto at 5 p.m. on the 30th instant announces that on the 28th an Imperial regiment of the line arrived at Tamarai, in Bungo, and made an attack on the rebels early on the 29th instant, in which they were completely successful. At seven o'clock the same evening the insurgents fled towards Shigeoka. The town of Takeda has been destroyed by fire.

From the *Akébono Shimbun.*

Mr. Kanagaki, of the *Kanayomi Shimbun*, was fined ten *yen* on the 31st ultimo for a libel on a singing girl, and Mr. Nagai, of the *Yomiuri Shimbun*, was also fined 5 *yen* for a similar offence.

SECOND NATIONAL BANK.

(Dai-Ni Koku-ritsu Ginko.)

Statement for the week ending 26th May, 1877 :—

Total Amount of notes (dollars) received by us from the *Shihei-rio*		$1,200,000
On hand	$90,285	
In circulation	309,715	
		$1,200,000
Reserve Fund		$309,715
In Foreign money :—		
In dollars	$167,318,570	
In Bank notes and cheques	8,987,530	
Deposited with Foreign Banks	52,408,900	
	228,715,000	
Do. in native currency	81,000,000	
	$309,715,000

KIDO.

JAPAN'S ablest statesman has gone to his final rest. It will be instructive to pass in review an outline of the career of a man who, in a higher degree than any of his contemporaries, was an embodiment of the ideas and forces that have brought about the latest and greatest national movement in the whole history of his country. For although not the most conspicuous figure, KIDO JUNICHIRO was unquestionably the most potent force among the men who were instrumental in guiding to a successful issue that struggle with a usurped authority and an effete feudalism which restored his rightful powers to the Sovereign, and started the Japanese nation afresh in the path of progress and freedom.

Institutions, like other organisms, have their periods of growth, fruition and decay; and the feudal organization known as the Shôgunate had visibly entered on its decline before either COMMODORE PERRY'S expedition was projected or the present generation of Japanese statesmen was born. The taint of its origin had always clung to it, and the more the annals of the past were studied the less justifiable did the perpetuation of its existence appear. It had emerged from the ruin wrought by the fierce tempests of civil strife that devastated the land in the middle ages, and it had wrongfully retained in its clutch the reins on which in an hour of weakness the Son of Heaven had involuntarily relaxed his hold. But that civil commotion had long since been stilled, and the representative of the Heavenly line had never ceased to pine for the resumption of the power which was his by right divine. For more than a century these sentiments had been seething in the minds of an ever increasing number of patriots and scholars.

But the tendency towards change was mightily re-inforced by the unwelcome intrusion of the foreigner. A seclusion of two centuries and a half from the outer world, while it had darkened the intellect and sapped the energy of the nation, had ensured to the Shôgunate an undisturbed enjoyment of its tenure of power. This long lull of security, however, was rudely broken in upon when ugly monsters of destruction in the shape of ships-of-war appeared upon the coast. The audacity of the foreign barbarians in coming uninvited was a presage of troubles in reserve; and the question that absorbed all others was that of national self-preservation. From this date political thought and action in Japan split into two hostile parties. On the one side, in Yedo, was the rich and powerful organization of the Shôgunate, sovereign in all but in name, with its ramifications of vassals, officials and spies spread in all directions over the country, and commanding the allegiance of the feudal lords. On the other, in Kiôto, was the poor and feeble shadow of a court fluttering round the person of a monarch, who was sovereign in nothing but in name, mewed up within the confines of his palace and possessed of nothing save his indefeasible title to the reverence and obedience of his subjects. Which of these two seemed the better adapted to rally the scattered forces of the nation and to face the new danger incident to the incursions of the detested foreigners? The Shôgun's party had, to all human appearance, every advantage on their side, yet in the short space of ten years from the signing of the treaties it utterly collapsed, and the victorious court party was firmly installed in power.

Amongst the foes of the Shôgunate were those of its own household. An unseemly quarrel between rival claimants for the succession to the family honours impaired the respect felt for the house of Tokugawa by the great barons whom it held in check. But foremost among those who took an active part in overthrowing it were the retainers of these same barons, the larger feudatories, who traced their pedigrees higher up, and whose ancestors had not received their fiefs by grant from the Tokugawa chief, but had retained them by consenting to do him homage. Most powerful amongst these were the lords of the three provinces of Satsuma, Chôshiu and Tosa, and it was from the united forces of this triple alliance that the military usurpation of the Shôgunate received its finishing stroke.

Two leading ideas had inspirited this party. One was to restore the reins of power to the hands of the sovereign. The other was to expel foreigners from the sacred soil of Japan. That the former was impracticable the adherents of the Shôgunate fondly hoped; that the latter was utterly impossible they were well aware. And two sharp lessons, the naval attacks on Kagoshima and Shimonoseki, soon showed the leaders of the court party the futility of trying to oppose the might of foreign states. But this conviction only intensified the desire to to see the Shôgunate swept away and the whole country united under the administration of the legitimate sovereign.

To SAIGO KICHINOSUKE, of Satsuma, the most unselfish patriot and the ablest general of the revolution, belongs the honour of having been the first to perceive and avow the desirability of abandoning the insensate hatred of foreigners, and his influence was sufficient to bring round the whole Satsuma clan to his views. Thenceforth the Chôshiu clan became the main-stay of the infatuated and ignorant court party in its anti-foreign policy, and in 1864 the three *karos* made their daring attempt to seize the person of the MIKADO and carry him off to Chôshiu; a scheme to which, it was well known, the MIKADO himself inclined. The attempt, however, failed, and the Shôgunate massed its forces with the intention of completely crushing the obnoxious feudatory. It was in this struggle with the Yedo Government that KIDO JUNICHIRO came to the front, and assumed the undisputed leadership of the Chôshiu clan. He was present at Shimonoseki when the foreign navies chastised the insults to their flags; and after that it required but little persuasion to win him over to the more enlightened views of the Satsuma leader. By the intermediation of the Tosa clan the union was firmly cemented, and in November 1867, in obedience to their dictation, Tokugawa Keiki surrendered his office and powers as Shôgun into the Mikado's hand. Two months afterwards this vacillating prince made a last convulsive effort to retain the suzerainty which was slipping from his grasp. It signally failed, and the three confederate clans became masters of the Empire. A rich harvest of spoil, the revenues of the Tokugawa house, rewarded their successful efforts, and they now prepared themselves for the next act in the drama.

Hitherto SAIGO had been the heart and sword of the revolution; henceforth KIDO became its brain and pen. The task of building up a new administration was an indefinitely more difficult one than that of throwing down the old,

and KIDO's sound judgment and capacity for affairs marked him out as the man most fitted to carry on the work to its completion. The fall of the Shôgun had unroofed the edifice of feudalism, but had left its walls, the Daimiates, standing. It was absolutely necessary that these should be demolished before a genuine imperial administration could be established. It was the true political genius which he displayed in his manner of setting about this enterprise that constitutes KIDO's surest title to fame. Society, he well knew, is controlled in the last resort by physical force, but that force, on the other hand, is ever directed and regulated by ideas: and great political ideas require time and space to work and spread. The cardinal idea of Japanese history and politics is the divine right of the MIKADO not only to reign but to govern. This doctrine KIDO set forth in all its naked simplicity and clearness in a short memorial to the throne; which bore the signatures of the four leading daimios; who then and there surrendered to the MIKADO their respective fiefs, acknowledging the defect in the title by which they and their ancestors had held them.

In those troubled days there prevailed among the revolutionary leaders a healthy faith in the collective wisdom of the majority and in the advantages of full and free discussion. This conviction remains embalmed for posterity in the solemn oath sworn by the MIKADO on his resumption of the power, whereby he pledged himself to the observance of certain principles which distinguish a constitutional from an absolute monarchy. This most momentous question of the surrender of the fiefs was referred by the Sovereign for discussion to those whom it most closely affected, and the result was that the Daimios of all classes followed the lead of the four memorialists. So fell, never to rise again, the feudal system in Japan.

The opening years of the present decade severely tested the political capacity of the new men at the head of affairs. The anti-foreign party, on whose shoulders they had risen to power, demanded the fulfilment of oft repeated pledges to purge the sacred soil from the presence of the haughty barbarians. The antipathies of the court nobles and the feudal barons had to be reconciled. The administration of the former fiefs on a new basis of centralization had to be set on foot; the imperial exchequer to be filled, and a new army to be enrolled and drilled. In the discussion and settlement of all these measures KIDO's was ever an authoritative voice, and henceforth to the day of his death his sound judgment and practical ability were the mainstay of the present ministry.

We have not space enough, and probably no foreigner has the requisite knowledge, to explain in detail the relations of KIDO to the leading politicians both in office and out of it who coöperated with him in the great work of national unification; but it is generally understood that he was profoundly opposed to the precipitate measures which within the last three years have converted the former popularity of the administration into odium. He resisted with all his might not only the project of invading Corea advocated by SAIGO and others, but also the despatch of that costly buccaneering raid, the expedition to Formosa. The spoliation of the *samurai* by the enforced capitalization of their pensions outraged his sense of historic justice, and it is bruited abroad that his indignation was deep and strong against the criminal blundering that has forced on the present bloody strife with the hero whose pre-eminent services to the state have repeatedly called forth the profuse acknowledgment of the Sovereign.

The death of KIDO is a serious loss to the nation, more especially at such a crisis of its fortunes as the present. Nearly four years ago he withdrew from active participation in the work of the Cabinet, and was immediately summoned to the palace to be the confidential adviser of the Sovereign. He leaves behind him a stainless record. Political animosity itself never dared to couple his name with connivance at assassination or suspect him of having enriched himself by the plunder of the public purse. By the unanimous verdict of his countrymen his name sheds an additional lustre on the national annals, and he takes his place in history among the few who, in a country where rank and birth are everything, have raised themselves by simple merit from low estate to fortune's crowning height "to mould the state's decrees and shape the whisper of the throne."

SPIRIT OF THE JAPANESE PRESS.

THE STATE OF BUNGO.

(Hochi Shimbun, 31st May.)

Over a hundred days have passed since the breaking out of hostilities in Kiushiu.

During the first period of the war, that is to say from the time that Kumamoto Castle was beseiged until it was relieved, the mind of the people was constantly agitated, and every item of fresh news from the seat of war was received with alarm. Since communication has been re-established with Kumamoto and the insurgents have fled towards Hiuga, this alarm has greatly decreased and the fears of the people have been to a great extent allayed.

But it appears that a part of the rebel army went to Satsuma, another body posted itself on the borders of Higo, while a third was stationed on the frontiers of Bungo. Thus the line of battle has been greatly extended, and the locality of the war has been greatly changed from what it was at the outbreak. As at that time the insurgents constituted one body, and it was therefore less difficult for the Imperialists to meet them, the only anxiety was lest they should not arrive in time to relieve Kumamoto.

The position is now very different, as the insurgents occupy three points. This manœuvre has been executed with the intention of dividing the strength of the Imperialists, and to enable them to secure supplies of provisions, army stores, money and the like. This is certainly the chief reason for the incursion of the insurgents into Bungo, and renders it extremely difficult for the Imperialists to check their progress. Although the ranks of the insurgents would appear to be weakened, yet their advance at any point must be opposed, and the Government must compensate the inhabitants of those provinces which are ravaged by the war. Thus as the scene of combat widens, so do expenses accumulate. The present position of the Government army cannot, therefore, be regarded as in any way more favourable that at the first, though, unless other *samurai* should raise the revolutionary standard, it cannot be considered alarming. Do the Satsuma folk actually believe that a single clan can stand against the power of the whole nation? Though their Commander be a genius, and the troops ready to dare the attempt of subjugating the country, yet shall they not obtain their desire. No doubt the Satsuma *samurai* imagined at the first that if they resisted the Government forces for some days, other clans would become excited and join in the rebellion against the Government. Confidant of this, they rose, and have for a hundred days successfully resisted the Imperial troops, but they have influenced none to their aid. Some few *samurai* may have joined their ranks, but such defection has been very slight.

They have now changed their minds, and giving up the idea of other *samurai* voluntarily flocking to their assistance, they are using all means in their power to incite them to rebellion, in hopes that they may thus procure supplies. It is this endeavour of the insurgents to enlist in their favour the sympathies of the *samurai* of other clans that is causing the

Digitized by Google
Original from UNIVERSITY OF CALIFORNIA

greatest anxiety to the Government at the present time. It is not at present so desirable to gain signal victories as to act in such a manner as shall produce the strongest moral effect on the minds of the people, so as to prevent their favouring the rebels. Kiushiu is our native province, and we are in a position to state that the minds of the people of Kiushiu are thoroughly loyal to the Government.

The rebels in Bungo are endeavouring to excite the *samurai* in that province to join them. But they will get no encouragement in that quarter. At the time of the Restoration, there were in Bungo seven *Han*—Oka, Usuki, Funai, Saiki, Tsukiki, Hinode and Mori, and it took but one day to journey from one castle to another. In each one of these seven districts different ideas, customs and prejudices prevailed, and to this day the people retain their distinctive peculiarities and divided opinions. It is thus absurd to suppose that any concerted action for general support of the rebel cause can be looked for. At Oka, there are about one thousand *samurai*, but all who are worth anything are in the service of the *Kencho*, and through a few may enter the rebel ranks, such men are merely good-for-nothings.

The *samurai* of Usuki are wealthy, and could not be induced to go out on any venture. Those of Saiki number about four hundred and are simple minded men who love peace and quiet and there is no fear that they will be roused to arms, mostly all of them being policemen or *Kocho*. At Funai their may be four or five hundred, but the *Kencho* is situated there, and their naturally mild disposition prevents any suspicion of their taking part with the rebels. In each of the districts of Hinode and Tsukiki there may be four or five hundred *samurai*, but they have no power to rise in arms. Mori is a very small *han* comprising not over ten thousand *koku*. In the event of the people here rising, their number is too small to render any material assistance. It is therefore only the *samurai* of Oka who are in the least likely to join in the rebellion. They are very poor and can be of no use to the cause of the insurgents.

The condition of Bungo is as we have stated it. With the exception of those of Oka, all the *samurai* have fled out of the way of the Satsuma men, and though the rebels enter the towns, they will find nothing to take possession of. The rice and money that they may force from the farmers will not suffice for their support. Bungo is, moreover, an extremely difficult country to defend, and the rebels can only advance by way of the sea. The rebels have no ships of war, and all private vessels have been prohibited from crossing from Tsurusaki to Saganosaki. The Satsuma people will certainly gain nothing by going to Bungo.

MESSRS. JOHN OAKEY & SONS, WELLINGTON MILLS.

In few branches of activity is British pre-eminence so unmistakably maintained as in that of the manufacture of emery in the numerous forms adapted to industrial and domestic application. This is greatly due to the enterprise and business capacity of one of those firms, whose energy and judgment have done so much to gain for our country its high reputation.

A few words about emery, in connection with which Messrs. John Oakey and Sons, have acquired their well-earned fame, may not be out of place. It would appear that crude emery-stone has never been found in any considerable quantity for consumption, except in countries bordering on the eastern part of the Mediterranean Sea, near Smyrna, on the Asiatic Continent, and on the contiguous island of Naros, where it is very abundant in the vicinity of Cape Emery, which is the property of the Greek Government. The Smyrna emery mines belong to the Turkish Government. The maximum production of crude emery does not exceed 5,000 tons yearly, and often falls below this figure. The Wellington Mills *consume nearly one-fourth of all the emery that is annually mined.* The mining of emery is not a very difficult matter, and the crude stone is usually exported in blocks, ranging in weight from 150 lbs. down to pieces the size of an egg. Large stone is preferred, as being most compact and hard. In quality, there is much diversity in the stone sent from the mines. Messrs. Oakey exercise the utmost care in their selection, and decline to touch any of the inferior stone which, however, finds a ready sale to others who are less scrupulous, and are tempted by the comparatively low price at which it is obtainable. One result of the pains taken in the selection of the crude stone, and the attention bestowed on all the subsequent processes is that the ground emergy produced at the Wellington Mills is always reliable; hence its steadily increasing sale, which is at present larger by far than that of any other firm in either hemisphere. They have, in consequence, been compelled to adopt precautions against dishonest traders, who have sought to vend their worthless and spurious productions under cover of the honourable name of Messrs. Oakey. To prevent improper practices, every package or can sent from the works has affixed to it a protective label, so that purchasers may at all times be certain that they have obtained a genuine article.

ON A NEGLECTED PRINCIPLE THAT MAY BE EMPLOYED IN EARTHQUAKE MEASUREMENTS.

By John Perry and W. E. Ayrton,

Professors in the Imperial College of Engineering, Tôkiô, Japan.

Read before the Asiatic Society of Japan, on the 23rd of May, 1877.

Speculations regarding the internal constitution of the earth have interested philosophers for many years. For a long time it was considered that our globe consisted of a thin solid shell containing a fluid core, but Hopkins, who was one of the first to investigate the subject on correct principles, showed that this shell must be from 800 to 1,000 miles in thickness; and still more recently Sir Wm. Thomson has proved that the apparent absence of elastic tides in the earth's surface leads to the conclusion that the average rigidity of the earth is greater than that of glass, and possibly even greater than that of steel. We do not on the present occasion propose to consider whether the state in which the internal part of the earth exists is like any state of matter with which we are acquainted; but this is, of course, a subject well worthy of very careful investigation.

It is probable that the earth was once in a molten condition and that it now is cooling, so that the shrinking resulting from this cooling must develope vast internal forces, producing strains, or deformations, of great magnitude. Other powerful forces, too, brought into existence by water being suddenly changed into steam, on entering a hot cavity; by the sudden chemical combinations of gases; or possibly by elastic tides in the earth's substance produced by the joint attractions of the sun and moon,—all tend to cause disturbances and ruptures which are brought vividly to our notice by volcanoes and earthquakes.

An earthquake has been defined by Mr. Mallet as "the "transit of a wave, or waves, of elastic compression in any "direction, from vertically upwards to horizontally, in any "azimuth, through the crust and surface of the earth, "from any centre of impulse or from more than one, and "which may be attended with sound and tidal waves "dependent upon the impulse and upon circumstances "of position as to sea and land." If we could only read the earthquake message rightly, we should learn all about the deformation going on in the earth's crust; for there is no doubt but that the nature of the stresses and strains, and every condition of the rocks at the origin of motion all give their character to the earthquake vibrations. It must be remembered, however, that the message before it reaches us is much modified by the media through which it has been transmitted; and, again, since there is a great want of continuity at the surface of the earth, very important modifications are introduced by surface conditions; for example, ranges of mountains are well known to reflect earthquake vibrations in a marked manner, and veins of good conducting rock by transmitting the vibrations more rapidly than less conducting veins set up transverse vibrations.

Professor Palmieri and others have invented instruments which record the date of the vibration, and give rough ideas of the direction of propagation of the earthquake waves, together with what is called the *strength* of the vibration. [Professor Palmieri's electro-magnetic seismographs were here described together with the other instruments employed by him, and others, as seismometers or seismoscopes.]

Mr. Mallet, whose wide experience on the subject of earthquakes has necessarily caused his writing to be regarded with great respect, describes the object of Professor Palmieri's instrument as follows:—"By means of this "apparatus the time of the first shock is recorded, as well "as the interval between the shocks, and the duration of "each; their direction whether vertical or horizontal "is given as also the maximum of intensity." He further says, however:—"It is not my intention here "to offer any criticism as to the construction or "performance of this instrument, the rather as I must "confess I do not quite share the high opinion of "its inventor as to the certainty or exactitude of its "indications." And this opinion of Mr. Mallet with regard to Professor Palmieri's instruments is ours with regard to all the seismoscopes of which we have read any des-

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

criptions. Indeed it is well known that the instruments hitherto invented have not satisfied even the modest hopes of their inventors, whereas, even if these hopes had been fulfilled, we should still hardly have made a step in this new science.

A simple form of seismoscope, but by no means a perfect one, would be a lamp suspended from a ceiling by a spiral spring, of such a strength that the period of vibration of the lamp in a vertical direction was nearly the same as that for its vibrations when swinging as a pendulum. The vibrations of such a lamp during an earthquake would contain motions due to the motion of its point of suspension, and an experienced observer would be able during a shock, or very soon after it, to tell the direction and strength of the shock with much more accuracy than with any of the instruments previously described. [Experiment of pendulum suspended by a spiral spring from a point to which a shock could be given, a scale being rigidly attached to the point of suspension, was here shown.] This lamp seismoscope, however, possesses the defects of all slowly vibrating bodies; the main vibration of the lamp is (as we shall presently show) executed in its ordinary periodic time, and the lengths of its swings depend on many other things besides the strength of the shocks which would show themselves as small perturbations in the motion of the lamp. If, however, instead of actually observing the lamp we merely get a record of its greatest swing, then very little information could be obtained of the strength of the shocks, for the great or small deflection of a slowly vibrating pendulum during an earthquake will depend on whether the period of the earthquake is or is not some submultiple of the period of the pendulum, so that a considerable mathematical knowledge and much time would be requisite to deduce from the comparatively small ripples on the larger vibrations the nature of the earthquake. In addition, as the length of the swings of the lamp will generally be much greater than the earthquake vibrations, they will, if recorded on paper, require a very large recording apparatus.

We now proceed to the principle which is to enable us to record an earthquake message. It must be evident that the message can only be correctly recorded when we have obtained the complete motion at every instant of time during the earthquake of a large portion of the rocky crust of the earth. Any point P in the solid earth has a certain position, a certain velocity and a certain acceleration in a certain direction at any instant of time during an earthquake, and if we know these elements we are said to know the motion of P. Now we have a complete record of an earthquake when we know the motions of all points P affected by the earthquake, and if the earth were rigid this could be derived from a knowledge of the motion of three of its points not in the same straight line. Still, although the earth is not rigid, and although the conditions of motions of different parts of an elastic non-homogeneous solid are very complicated, we may say that the important character of an earthquake, its origin and the media through which it has travelled as well as its rate of motion, are recorded and may perhaps be easily deduced from the known motions of three well affected points in the solid earth. Believing this to be the case, and seeing how important it is to the whole science of terrestrial physics that the earthquake message should be read, we have been led to investigate mathematically the motion during an earthquake of a body attached to the earth by springs. And we have come to the conclusion that the centre of mass of a body fastened by means of springs inside a metal box rigidly attached to the earth, has *in certain cases* motions with respect to the box itself which in miniature, with great exactitude, represent the motions of a point of the box during the earthquake; this result being truly obtained when the springs are exceedingly strong, so that the motion of the mass relatively to the box is exceedingly small, and practically obtained when the springs are so strong that the vibrations possible for the mass when there is no earthquake are several times quicker than the earthquake vibrations themselves; that when the springs, however, are weak the motion of the mass relatively to the box in no way represents the absolute motion of the box itself, but that the introduction of friction, although it diminishes the accuracy of observations of regular vibratory earthquakes made by means of very rapidly vibrating springs, makes it possible to get an approximation to accuracy even with slowly vibrating springs, and is always desirable when the earthquake vibration is irregular and intermittent. In fact, in order that the motion relatively to the box of the centre of mass of the body supported in it should accurately represent the real motion of a point of the box itself, it is necessary that the mass should be large and the springs supporting it so strong that its natural time of vibration should be about five times as fast that that of the earthquake itself, supposing no friction be employed beyond that necessarily introduced by the mechanism of the recording apparatus: or a much larger mass may be suspended by weaker springs if the chamber be filled with water, or some oily or tarry compound which will introduce the necessary amount of friction.

(To be continued.)

JAPANESE TALES.

HOW A CERTAIN FOX WAS MARRIED WHETHER HE WOULD OR NO.

In a part of Bungo, known as Hita, there was many years ago a road called Mameda, at the end of which these ran a small river crossed by two bridges. One of these was a solid wooden structure, and the other a flimsy rustic affair fashioned of bamboo. One morning it happened that two foxes passing along that way, unluckily for themselves, when they reached the river bank, instead of choosing the larger of the bridges, impelled by fate perhaps, or possibly because the bamboo bridge was nearest to hand, or it may be without either of these reasons, —or indeed for the matter of that, without any particular reason at all,—trotted over the smaller of the bridges aforesaid intending to continue their journey upon the opposite side.

That is to say—in order to be strictly accurate, and without a scrupulous accuracy what becomes of the value of this or any other history—*one* of them did; for the other having incautiously put his foot into a hole, found himself pulled up with a jerk, and, in spite of all his efforts to disengage himself, stuck fast. Stuck so fast, indeed, that for the life of him he could not budge an inch either way, but was just as truly a prisoner as if he had his leg in an iron trap put there for the very purpose with malice aforethought.

That this was a very unpleasant accident to have befallen a fox in a hurry there's no denying. And that it was a most unfortunate and fatal one speedily became apparent, as it happened in the vicinity of a knot of young urchins on the look out for mischief, and who no sooner saw the quandary the beast had got himself into, than arming themselves with cudgels they so belaboured and bewhacked him, that they very soon succeeded in chasing the little remnant of life which fright had left in out of his body, and sending it to traverse a much longer road than he had contemplated,—one in fact which has no ending and is known as death. Seeing which, the fox that had hitherto been its companion, that is to say until it had started upon the dark road just mentioned, incontinently fled, and the boys delighted with their achievment departed with the battered body of their victim, upon which, when they reached their home, they had a feast and enjoyed themselves amazingly.

Such was the end of the poor fox, and here too our story might have terminated, were it not that the survivor who had safely crossed the bridge, was the wife of him which had been slain, and as it turned out felt in no humour to be thus inopportunely left a sorrowing widow, if she knew what was what, or had any thing to say in the matter. So entering forthwith into the body of a young girl of sixteen who was living in the neighbourhood, she contrived by the mouth of this hostage, so to speak, to make her story known, and at the same time to ensure that no efforts would be spared by the girl's friends to procure her a second mate, and so relieve the one possessed of her inconvenient tenant.

Nor, having once made up her mind as to her line of action, did she—as the saying is—allow the grass to grow beneath her feet, for that very evening, whilst the carcase of her murdered husband lay hissing and spluttering

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

upon the glowing embers in the house adjoining, the astonished father of the girl bewitched was made acquainted by his daughter with what had happened, in the following words: "I am a fox. My husband and myself having lived together harmoniously for some years at a place in one of the central provinces, were lately obliged, for certain reasons too numerous to mention, to leave our home and come to Hita in search of a dwelling, but every available place being occupied by foxes who have long been here, our search has hitherto proved unsuccessful. To-day, after travelling hither and thither upon our quest we were returning to our lodgings very tired, when my husband's foot caught in a bamboo bridge and he was, whilst so imprisoned, killed. Whilst alive I had but him to depend on. Now that he is dead I am entirely desolate. For which reason I have entered into your daughter, but am ready to depart from her again if you will only provide me with another lord and a place to dwell in."

As luck would have it, whilst the fox thus recounted her piteous story three young fellows, neighbours, were present and heard the whole affair. When the fox had made an end of speaking one of them, who doubtless was quite disinterested in the regard which he manifested for the maid, stepped forward, and made a proposal which he said appeared to him to present a very promising exit from the difficulty. This was to the effect that in the garden of a certain temple called Daichô, there lived a solitary fox, who would be so much the better, in his opinion, of a helpmate, that independently of the convenience likely to result to every body else concerned, it would be a downright act of charity to marry him off hand to the homeless widow.

So wise and reasonable a proposition at once met with —as it was bound to do—the entire approbation of everybody present, one and all of whom declared it to be an admirable plan, and indeed it wanted only one ingredient in it, namely feasibility, to render it perfect. And even this ingredient was in time forthcoming, for much deliberation upon the subject resulted in a suggestion, once more from the disinterested young man, that the Priest of the temple should be entreated to use his influence on behalf of those interested, by summoning the fox from its hole, and laying the matter fairly and squarely before it. Nay, he even offered, with commendable zeal, did this disinterested young man, to go himself to the Priest and do his best to place matters in a train favourable to their project. It is scarcely necessary to say that if the first crude proposal was well received, this further development of it met with quite a storm of applause, insomuch indeed, that the young man could hear the noisy acclamations of his friends quite a long time after he had plunged out into the night upon his disinterested mission. Although fully sympathising with the anxieties of the friends and parents of the girl, the good Priest, when fully in possession of all the facts, hesistated to interfere from a not unnatural dislike to occupy the position of middleman in a fox's wedding. But the importunities of the envoy who had undertaken to persuade him at last so far succeeded, that His Reverence finally, with the best grace he could muster at so short a notice, consented to take the sentiments of his tenant upon the matter that very night, directing at the same time, that the young woman should be brought to the temple and left there until the following morning, when he hoped to have a favourable report to make to her friends.

At dawn of day upon the morrow, therefore, the parents of the girl, and as might have been expected, the young man, still very disinterested, waited upon the Priest, to learn, alas! that having summoned the bachelor fox upon whose peace they had the designs, and laid before him in the most attractive light he was capable of, the advantages of having a partner to lighten his solitude, the illnatured old hunk as he was, point blank refused to listen to the arrangement, upon the plea, forsooth, that the lady destined for him was not good looking enough. Did ever any one hear the like. Were ever afflicted maid and sorrowing parents, to say nothing of a disinterested young man, so illnaturedly treated, and all by a lonely old fox who would, there could be no doubt of that, be so much the better of a wife if he'd only listen to reason?

To questions on all sides as to what in her personal appearance the temple fox could possibly object to, the widow, although at first indignant at it being fancied for a moment that she was not perfection, in the end timidly confessed that she had a few white hairs in her face, and she supposed that it must be those that the fox regarded as a blemish.

And indeed it cannot be denied that an objection for such a cause was a very unreasonable one, and fully justified all the hard things which the girl's parents said against the crusty fox, and yielded a famous text for all the disinterested young man had to say upon the sin of pride and hyperfastidiousness. It was fully agreed in solemn conclave that a second application should be made to the Priest for his good offices, everybody being quite persuaded that an animal so clever as the fox was known to be, by high and low, could hardly be in earnest in maintaining a position at once so illnatured and ridiculous. "My word on it" said the ingenuous young man, "my word on it Master Fox is ready to bite off his tail with vexation for having so stupidly refused the goods offered to him, and would jump at a second chance."

The Priest consenting to make another assault upon the stony heart of the obdurate fox, night-fall once more saw the girl and her attendants upon the last occasion of the same kind, on their way to the temple. Having been introduced by the Priest into his sanctum the fox was again summoned, and on his appearance His Reverence, giving the girl a blow upon the back, shouted out to him "Mr. Fox I hand you over your comrade." At the Priest's touch the maid fell forward on her face, and although the others declared that they saw nothing, the Priest affirmed that he perceived the fox to leave her and scamper off in company with her new found mate, bidding them at the same time to be of good cheer for the cure was complete.

Soon after he had ceased speaking the girl got up with a dazed and frightened air and asked where she was. Her parents told her the whole story, whereupon she hid her face in her hands for shame, and was so overcome that it was some time before she could properly express her thanks to the good Priest. By and bye, having recovered herself, however, she made her acknowledgements and returned home accompanied by her friends, including the disinterested young man. So overjoyed was every body concerned at the happy termination of the affair, that a general jollification ensued, to which all the neighbours were invited, and the young man paid some remarkable compliments to the recovered lady, and quoted Chinese poetry, and altogether made himself very pleasant and agreeable like a disinterested young fellow as he was.

Correspondence

THE NEW COURT OF APPEALS.

To the Editor of the "Japan Weekly Mail."

Yokohama, May 31, 1877.

Sir,—The "Counsel for the Plaintiff" seems to have established a tribunal heretofore unknown to the law as an appellate Court in which to re-try his lost causes, or rather to re-state his arguments, as if repetition or republication would invest them with a power and influence they utterly failed to exercise in the Court in which they were first heard.

The first objection to this new Court seems to me to be that its decisions do not alter, change, modify, or set aside the judgments complained of. The clients of the counsel receive no benefit, while he ventilates his views of the law and his peculiar more of stating the evidence, and doubtless "smiles many a smole" of satisfaction at the fine display he makes in print.

Is it not, however, a little presumptuous to assume that the community is deeply interested in the professional woes and disappointments of the "Counsel for the Plaintiff"? and is it not trusting a little too much to the assumed simplicity of your readers for that gentleman to republish his arguments under the thin disguise of editorials and communication to newspapers. I think there will be no dispute as to their identity. "The hand is that of Esau, but the voice is Jacob's."

I do not propose to argue at length with the learned gentleman in this new Court, but I wish gently to remonstrate against the anomaly of pronouncing judgment without hearing both

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

sides. In his editorial of last week the "Counsel for the Plaintiff" demolishes in his favorite mode two judgments. That delivered in Her Majesty's Court has been pretty thoroughly vindicated in the *Japan Gazette* of the 28th instant. Concerning that of the U. S. Court a few words:

The "Counsel for the Plaintiff" referring to this case says: "The Consul-General lays it down, impliedly it is true, rather "than in terms, but still distinctly, that a party to a contract "has no remedy for its breach against the other party if the "latter is an agent, even though the names of the principals "remain undisclosed and they are resident ten thousand miles "away from the jurisdiction, and informs the plaintiff that he "must look for relief to the parties altogether out of his reach, "and whose very existence was unknown to him when he "entered into the contract."

Now what the Consul-General really does decide will appear from the following extract from the judgment; "I find also "that with regard to all the bags complained of, the defendants "were in fact simply acting as agents of the owners, which "fact was sufficiently communicated to the plaintiff, and that "the proceeds thereof were duly transmitted by defendants to "their principals *with the knowledge* of plaintiff before the "examination by him of the bulk of the bags." You will please observe no fault is found in the editorial of the "Counsel for the Plaintiff," or in his communication to the *Mail* with this finding of fact. He simply ignores it, and says the Consul General decides that "a party has no remedy against "another if the latter is an agent," &c., &c. Again he says: "It is odd that the judgment, after admitting that gross wrong "has been committed, finds the defendants, even if owners of "the goods would have been in no way responsible."

A simple reference to the judgment shows why the Court could not hold the defendants responsible to the plaintiff even had they been owners. It says: "The evidence shows "clearly that they (the defendants) had no knowledge what-"ever as to the bags, and sold them as described in the in-"voices, which descriptions were given to the plaintiff in writ-"ing together with the samples." And further: "The samples "do not vary the written description. The plaintiff was not "bound to pay for the goods until examined and found to "correspond with the samples. He chose to receive and pay "for the goods without such examination, and thereby depriv-"ed himself of the benefit of that right unless exercised within "a reasonable time after such payment, which was not done in "this case."

The evidence shows that the samples delivered to plaintiff were taken by a servant of the defendants, in the language of of the judgment "in the usual manner" from the different "bales," that they were not examined by the defendants, but handed to the plaintiff to be by him compared with the bulk; that he waived such examination and paid for the bags, after being informed that the proceeds were to be immediately transmitted to the owners in England, and not until months afterwards did he discover the gross wrong perpetrated, as says the learned judge, by "the shippers or packers of the goods."

It is difficult to conceive how a Court with these facts before it could have decided otherwise than has been done in this case.

In conclusion I beg to state it as my conviction that the mode adopted by the learned "Counsel for the Plaintiff" to retry his lost causes is not one which will meet the approval of his profession or of the community. "If I am not right," to use his own words, "I am sorry for" the profession and the community.

I am, Sir,
Your obedient Servant,
RECTUS IN CURIA.

[We publish the above, because we recognize the right of any of our readers to avail themselves of our columns for the full and free discussion of any subject which is before the public, and specially of such as we have ourselves expressed opinion upon.

But we utterly disapprove of the writer's method of argument, and confidently rest assured in the support of the public in our reprobation of his line of action. The "Counsel for the Plaintiff" in the case of Watson *vs* Walsh, Hall & Co. addressed us on the 26th May, pointing out what appeared to him an error in the facts, on which the Judge's decision was ostensibly based. This seems to us to be legitimately within a counsel's or correspondent's province. The whole case was subsequently reviewed in our leading columns, and, whether right or wrong in the conclusions, we certainly cannot be accused of travelling outside of the legitimate lines of journalistic duty. RECTUS IN CURIA, now addresses us, and, pretending to a knowledge of our affairs which he cannot possibly possess, assumes that the "Counsel for the Plaintiff" is also the author of our editorial, and on that assumption bases his reply. This, we submit, is totally illegitimate, and certainly in excess of the large license allowed to correspondents. It was open to RECTUS IN CURIA to criticise the review of Genl. Van Buren's decision, or to have disputed the statement of facts in the "Counsel for the Plaintiff's" letter. And—if his objections required rejoinder—they would doubtless have had to suffer it, either at the "Counsel's" hands or our own. But the line taken by our correspondent of to-day is not in accordance with the courtesies or traditions of journalism, and though we afford his arguments the publicity he asks for them, he must not expect that, under the form in which he has seen fit to couch them, they can receive any other attention.—ED. J. W. M.]

Law Reports.

IN THE KANAGAWA SAIBANSHO.

Before ASAINA KANSUI, Esq., Vice-President.

C. BRAUN *v.* KOJIRO SHOKITSU.

The defendant in this case was sued by the plaintiff for non fulfilment of two contracts for 9lb. and 7lb. shirtings, and the following decision has been rendered in the latter case.

JUDGMENT.

The Court, after duly considering the evidence adduced, and all the circumstances of the case, concludes as follows:

1.—Defendant, basing his objections upon the following grounds, refuses to take delivery. First, because Yamada Chionosuke and Mayeda Kanekichi asserted in their evidence that when the 5,000 pieces of *kana kin* in question are compared with the sample in his, defendant's, possession, they will be found vastly inferior. And secondly, Echizenya, a witness of plaintiff, also says that upon examining say 50 pieces of *kana-kin*, about five will be found inferior. Now, upon examining minutely the contract, it is clearly shown that the pieces must bear the mark of a red stag in a circle, and that the goods must be the same as those purchased on a former occasion. But nothing whatever is said of a sample; and, whereas, the mark, manufacture, weight, etc., of these 5,000 pieces are the same as those in the former contract,—defendant has no possible right to object to the execution of this transaction.

2.—For the reasons above-mentioned, defendant is hereby condemned to pay to plaintiff the sum of $10,093.75, being the amount of the contract dated 1st of 2nd month, 9th year of Meiji, with the interest agreed upon beforehand by both parties of 1½ per cent. per month, together with all expenses for insurance, godown rent, etc., and to take delivery of the said 4,750 pieces of *kana-kin*.

Suit expenses, conformably with arrangements existing between England and Japan, cannot be granted.

POPULAR ART.—II. DECORATIVE FURNISHING.

(The Spectator.)

Having made last week some general remarks upon the ignorant character of a great deal of the design which is at present held up to the public for admiration, and is blindly adopted by many of them, in default of knowing any better, I propose in this, and our next number, to try to give some few practical hints, by which those who wish to decorate their houses in a fairly artistic fashion, may be able to profit without the necessity of throwing themselves (bound hand and foot, so to speak) into the clutches of one of the great fashionable upholsters. If there are many harpies who take advantage of the ignorance of the poor, there are no less many who live upon the ignorance of the rich, or comparatively rich, and one of the principal tradesmen's swindles at the present day is charging exorbitantly for any work which they call "artistic." Not that the work really is artistic, on the other hand, it is frequently most inartistic, but it represents a certain fashion, and for this fashion it is charged. A relation of mine showed me his house the other day, and told me his bill for its furniture amounted to £5,000; it was a small house, not much beyond the dimensions of the usual villa residence. The furniture was thoroughly good, but quite unpretending, the only noticeable thing being crimson carpets of the same pattern throughout the house.

Well, £3,000 of this was the fashionable upholsterer's profit. The house might have been done in every respect as well as it was for £2,000, if—and here comes in the great qualifying clause—the owner of the house had known anything about it. But the owner did *not* know anything, except who was the best man in London (synonymous in his mind, unfortunately, with the dearest), and that he liked everything to be the best of its kind. Happily he was a rich man, and did not feel the expense. But, it may be said, where is the remedy for this? If the men who devote their lives to furnishing are not to be trusted to do it, how is it possible for men engaged in other occupations to know anything about it? If we cannot leave it to the upholsterer, who can we leave to? The answer to this is very simple. If you don't care whether your house is furnished in good taste or bad taste, by all means order the furniture, and pay the bill, and stop there; but if you do care, if it is an object to you that when your artistic friend comes to dinner, he should not be offended by gorgeously-inharmonious colour; if you care to have your rooms furnished so that they will be pleasant to sit in and look at, as well as a protection from the weather, then you must do it yourself, or in a great measure yourself. The one damning sin of the British tradesman (as far as you are concerned) is that his ideas of taste are governed by his ideas of price. If a man makes ten pounds by selling you one species of looking glass, and five pounds by selling you another, he would be scarcely human if he could resist the temptation to recommend the former. And there is another grievous mistake made by nine out of ten young couples when they set up a house, and this is that they attempt to furnish it all at once. Now houses are no more alike than people, and it requires time and experience to find out their little idiosyncrasies.

If your house is to be really well furnished, it must be done by degrees; the furniture must, as it were, grow up round you in the places where it is needed, till the whole becomes complete, like a well-fitting design in mosaic, every piece alike complete in itself and necessary to the harmony of all the rest. This is so simple a fact, that we should have thought it would have been apparent to every one, did we not know by painful experience, that houses are hardly ever furnished in this manner. It is a common thing, when speaking of old-fashioned houses, to say that no house really seems as if it had been inhabited till people had lived and died there. What is the meaning of this saying? It is quite easy to see. The house is bought and furnished, and the people live in it; gradually, as years go on, one useless, or cumbrous, or hideous piece of furniture after another falls into bad repute, and is replaced by one more suitable (because by this time the inhabitants have learnt to know what they want); and this process goes on from year to year, till the place gradually assumes that home-like look, which comes from everything in it being in harmony with the rest, and fulfilling some special function, be it useful or ornamental; and you have the large library book-case where it's wanted, and the card-table here, and the baby's chair there, and the mother's work-basket in the corner near the fire, and the ornaments Fred brought from India on the mantel-board, and each alike is entwined with some special service and affection, perhaps even with some sacred memory. The first rule, then, about furnishing is not to attempt to do it all at once, but to furnish well with few necessaries, and allow your abode to become gradually habitable, by supplying carefully every additional piece. I see a good many pamphlets now about *artistic* house-furnishing, but very few about *comfortable* house-furnishing, but there is not the slightest use in thinking about the first, till the latter has been thoroughly and successfully studied. Nay, I will venture to make what many people will think a very daring and paradoxical assertion, and to say that a house *cannot* be artistically furnished, unless it is comfortably furnished. The very idea of putting art (in furniture) into opposition to comfort, is a contradictory one and if examined will be found to be so at once. For what do we mean by artistic furniture? Do we mean furniture made in the most beautiful shapes we can imagine? Clearly not, for then all our chairs and tables would be carved in the forms of the lotus and the lily. Do we mean the most beautiful shades of colour worked in varied design? No, for these we must go back to the ancient embroideries in gold and crimson of Persia and India. But what we do mean, or should mean, by artistic furniture, is furniture best fitted to serve the end that it is designed for, and ornamental only in such a manner, or to such a degree, as will enhance its beauty without impairing its usefulness. So far, then, from comfort being inconsistent with art in house decoration, it is necessary to it and the first great maxim of decoration for any practical person to keep in his mind is this,—to reject without any hesitation any style of furniture which is not thoroughly comfortable. He will find his reward in many ways, not only by his own increased joy in living in a house whose furniture is adapted to its purposes, but in the increased enjoyment of his friends, who will admire his sense and taste far more from a substantial arm-chair, than from a ricketty, spindle-legged one.

We have, then, one maxim; let us try to procure another also of some practical service. There is nothing more common than to hear people allege, as an excuse for trusting everything to a tradesman, that if they do not do so they will be surely guilty of some solecism, and put a Queen-Anne table with a Georgian side-board, and so on. Now this is nonsense, this is an absurd idea, fostered and worked up by shopkeepers and idiots, and should be rejected at once by all sensible people. If you furnish a room to live in—say, in the Queen-Anne style—it is just as incongruous for you to sit there in a nineteenth century dress as it is for you put in a Georgian sideboard, and no more. You can't reproduce Queen Anne's time whatever else you reproduce, and however much money you spend in parodying her time, some modern element is sure to creep in. And this being so, it is much more sensible to frankly give up all attempt at absolute historical truth, and only to say, "I like this black wood and yellow damask and blue china," or whatever else it is, "and I will produce in this room that style of effect." But why, when you do that, should you think it necessary to have straight-backed and thin-legged chairs *et id genus omne?* Do you think that if the people who lived in that reign were allowed to revisit earth and furnish their houses once again, do you think they would not make use of every modern improvement they could lay their hands on, and chuckle at the increase of comfort since their time? The fact is that a dead age cannot be revived, and it is no good for nineteenth-century people to make their house a living lie, by pretending that it was furnished a hundred years ago. So when you are told that such and such a piece of furniture is wrong, not from any artistic deficiency, not because it does not agree in form or colour with the rest, but because it was made at a different time, all you have to say is, that it answers its purpose of decoration, or ornament, or both, and for the rest of it, the time of its creation has as little to do with its appropriateness as the time of your own. But remember that this will not apply, if you insist upon calling your room a Queen-Anne room; then your friends may rightly object to your anachronism, and you can say nothing. But in my opinion, all such labelling of rooms is for ordinary people quite out of the question; for an excessively rich man to indulge his taste creating Pompeian courts and Alhambra alcoves in his house is only to allow himself another mode of wasting money; but for those of moderate means, it requires not only a sacrifice of money, but often of the comfort of the whole house.

There are many other fallacies most rampant in the Decorative Furnishing Department, but I can only mention two or three before proceeding with the second part of my subject, the decoration and right use of china. I have frequently, while standing in old furniture-shops in Wardour Street and elsewhere, heard the shopkeeper reply to the objecting purchaser, "But, Sir, it's so old, I should think it's,—well, let me see. Ah! two hundred years old!" And then frequently the customer has paid the exorbitant price, and bought the article with perfect satisfaction. Now, we know by

Digitized by Google Original from UNIVERSITY OF CALIFORNIA

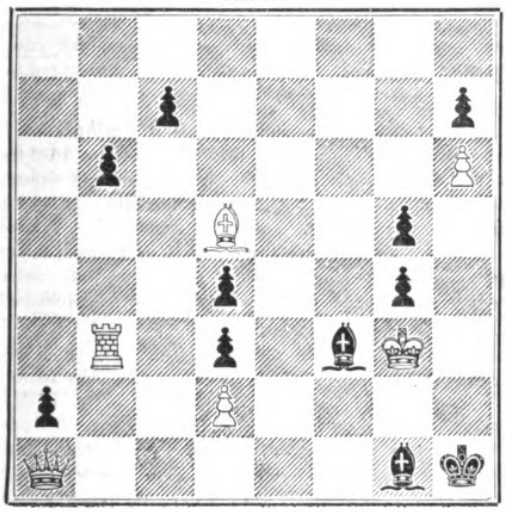
experience that that shopkeeper's lie will be repeated to all the customer's friends as an undoubted fact, and that they will be called upon to admire this chair, or whatever it is, because it's so old. Once for all, I beg my readers to lay home to their hearts the undoubted truth, that a thing being old is in itself no reason for admiring it. It may be a reason for the feelings of affection, reverence, interest, and many others, but no reason for admiration. That must depend upon whether there be any intrinsic merit is the thing itself, whether it has been skilfully fashioned for its purpose, or well wrought, or beautifully ornamented, but always up on something else than its age. This is so self-evident, that I should be ashamed of repeating it, were it not absolutely contrary to the usual practice. We should imagine, speaking in sober earnest, that at least a quarter of the articles *de vertu* sold in London are so sold without any recommendation save their supposed age. I put quite on one side the fact that the great majority of these things are not old at all, but manufactured at Birmingham and elsewhere by the cartload, and say that any one purchasing an article for such a reason has lost sight altogether of the most rudimentary canon of common-sense. This practice does nothing but increase the fortunes of the more unscrupulous tradesmen, and the number of ugly things in the world. Why, the manufacture of sham carved-oak furniture and imitation ancient *repoussé* work in London would be sufficient to support the population of a good-sized village. And every one who buys inch brass-work or wood-work, not knowing or caring to know whether it is true or false, is an accessory to the swindle. Then if a thing is not good because of its age, but only of its use, and its useful beauty, it follows that it is in nowise necessary to good room-decoration that you should fill your house with ancient upholsteries. The only reason why these have been preferred by person of taste and experience is because the workmen formerly were less hurried and (if the truth must be told) more honest in their execution, and that an oak sideboard, for instance, was really a sideboard made of oak, and not an article of veneer and polish. But a well-made plain wood sideboard, made by a working cabinetmaker now is a much better and truer thing to have in your room than an imitation ancient oak one, made up of scattered bits of old carvings glued together and thickly varnished. Try having plain pine or willow painted dead black, or, if you can afford it, ebonised, and have them made plain, useful shapes, and you will be surprised to see how little in the way of ornamentation, flourished scrollwork, or gilding they will require to set them off. Such are a few of the general principles of furnishing.

I will now enter into such particulars as space will allow concerning the choice of rooms and the most effective way of decorating them. The great majority of houses in London, offer great, if not insuperable, difficulties to the decorator being built upon what may be called the two-roomed principle This consists, as a rule, of a dining-room below, and behind it a dark, vault-like apartment, generally devoted to the master of the house, and called ironically his "study;" above this there are commonly a large drawing-room and a smaller one behind, separated by folding doors. The ordinary thing to do is to pull down the folding doors and make a curtained arch of the wall between the two rooms, thus converting them into one gigantic apartment. It is difficult to get any effect of distance worth having out of these rooms arranged in this manner, but a few things may be suggested as to some extent increasing the *coup d'œil*. The window of the smaller room should be considerably darker than those of the larger apartment, and it would be better to fill it with a case of ferns or flowering shrubs, and glaze it with some stained glass.* Looking into this green semi-obscurity from the lighted room will give in some measure the effect of distance required, and will in any case be a pleasant rest to the eye. Then in the central room, whatever style of decoration you adopt, there are some general principles to be observed. If there is more than one door, always use one, and have a *portière* over the other; nothing is more disturbing to people than to have two entrances, and not to know which a person is going to enter at; and besides, the lines of hanging drapery are the most graceful way of hiding the harsh, vertical and horizontal lines of the doorway. Speaking of doorways, I could never understand how it was that no one has ever of late years, revived the old arched door that used to be so common in postern gateways. Surely any arch would be preferable to the square lintel so universal at present, besides giving opportunities for infinite variation and adornment, whereas the present doorway hardly admits of any softening or decoration, except on the door itself. Again, as to the curtains. The usual way of hanging them is under a long scrolly abomination of gilt woodwork, hideously ugly and perfectly useless, invented probably by some exasperated gilder in a moment of unhallowed inspiration. This is quite inadmissible; hang your curtains on a plain, straight brass rod, with a simple knob at the end, and let this brass rod fall into plain brackets of the same. It is better to have a separate rod to each window, but not very material, if they are close together.

Then come the two great questions in every room,—What colour or paper are you to have on your walls, and what carpet? And here I may say at once, that in my opinion all false dados made of paper, and professing to represent the height of panelling, are in bad taste. If you have a panelling in your room, preserve it by all means, but don't try to pretend you have what you haven't, by putting up something which is in reality quite unlike it. First, as to the colour of the walls, dismiss from your mind all that you have ever heard about one colour being suitable for a dining, and one for a library, and one for a drawing-room; that's all spurious tradition (tradition of the shopkeeper). The colour must depend on a thousand things, *not* on whether you eat in the room or talk in it, one colour is as good as another for either purpose. And again, remember this, that if you are going to hang pictures on your walls (and in these days of photographs and engravings, it will be your own fault if you don't), you don't want to put on an elaborate paper which will attract the attention. What you want is a soft, dark-hued paper or tint, that will throw up the pictures and relieve the eye. What colour is best for this is a disputed question. I am disposed to think that for the old school of water-colour drawings the tint should be delicate and not too dark, perhaps a light olive-green would be as good as any. For a body-colour drawing, a photograph, or an oil-painting, nothing looks so well as red; but it is an excessively difficult colour to get the right shade of, and is not suitable to a very light room. Some shades of dead blue are very beautiful, and form, with dark-green hangings, one of the most pleasing harmonies of colour you can have; but whenever you put colours so nearly allied together, you must be very sure of having the right shade, or the effect will be hideous. As in everything else, if you once leave the beaten track of conventionality, you must be a law to yourself, and dare failure on your own responsibility. I think, as a rule, light blues and yellows are not advisable, unless the room is a very small one; they have a cold, cheerless look, in large quantities. For the same reason, French grey and salmon-colour are to be carefully avoided.

In conclusion, I must say a few words as to the arrangement and choice of the furniture There seems amongst the upper middle classes, of whom I have been speaking, to be a prejudice against having a book-case in the drawing-room, or allowing any books there, save such as are distinguished, not for their contents, but their bindings. This is essentially a mistake; there is nothing furnishes a room like a book-case, and plenty of books in it, not in mathematically precise order, but looking as if they were accustomed to be taken down and read constantly. Again, it is much better to have small tables about the room or against the wall, than to have one large table in the centre laden with ormolu foolishness and skeleton flowers. But the chief thing in the arrangement of the furniture is that things should be where they are likely to be wanted; chairs near tables, and music on the piano, and easy-chairs and sofas by the fire, and all that sort of thing; and above all, do not have a lot of pieces of furniture scattered about without any meaning, under the impression that their "ordered disarray" may be pleasing. And it is not necessary to put a clock exactly in the centre of the mantel-piece. and ormolu candelabra in glass shades on each side of it. It is quite unnecessary; a clock as at present made, particularly a drawing-room clock, is generally a monument of combined folly and bad taste, and is much better put away in some less conspicuous place. And if you have the good-fortune to possess a really good work of art, put it over the mantel-piece, and take away the eternal mirror, which is another instance of the blind, sheep-like manner in which we English follow one another, without having an idea of our own. And finally, have your carpet to harmonise with your walls, but a shade or two darker; and the less design there is on it, in these days of Manchester designs, the better it will probably be. Above all, in the general effect of your room, try to make it a place where people may sit and talk or work comfortably in any part of it. The more a large sitting-room is broken up into little nooks and corners, the pleasanter it is to its inhabitants. And try and get some special effect of colour or form in each recess.

In my next article I shall speak of modern china and pottery, and their place in Art Decoration.



* A very good imitation of stained glass may be easily made by the process known as "Vitremanie."

PRIZE PROBLEM.

By Dr. Novotny.

BLACK.

WHITE.

White to play and mate in 4 moves.

Solution of W. B. Mason's problem of 19th May.

White.	Black.
1.—Q. to K. R.'s 2nd.	1.—K. takes Kt.
2.—Q. to Q. B.'s 7th, ch.	2.—B. takes Q.
3.—R. to K. B.'s 8th, mate.	
A	
	1.—K. to Q.'s 2nd.
2.—Q. to Q.'s 6th, ch.	2.—Kt. takes Q.
3.—R. takes B., mate.	

As we supposed, a black pawn was omitted from Q. B.'s 5th. Correct answer received from W. H. S., Tôkiô.

Solution of J. G. Campbell's problem of last week.

White.	Black.
1.—R. to Q. B.'s sq.	1.—Kt. to Kt.'s 5th.
2.—Q. to Kt.'s 3rd.	2.—Anything.
3.—P., Q. or Kt. mates.	

Corrected answer received from W. B. M., Tôkiô.

PHILADELPHIA EXHIBITION.—It is satisfactory to find that English manufacturers more than hold their own in America. We notice that at the Philadelphia Exhibition, Messrs. Crosse & Blackwell have secured fresh triumphs for their celebrated specialities, and have obtained no fewer than four awards, besides the Medal for pickles, sauces, &c., they have also received one for preserved fruits, one for malt vinegar, and another for preserved fish, soups and meats.

"Berkeley, Sept. 1869.—Gentlemen, I feel it a duty I owe to you to express my gratitude for the great benefit I have derived by taking 'Norton's Camomile Pills.' I applied to your agent, Mr. Bell, Berkeley, for the abovenamed Pills, for wind in the stomach, from which I suffered excruciating pain for a length of time, having tried nearly every remedy prescribed, but without deriving any benefit at all. After taking two bottles of your valuable Pills I was quite restored to my usual state of health. Please give this publicity for the benefit of those who may thus be afflicted.—I am, Sir, yours truly, Henry Allpass.—To the Proprietors of Norton's Camomile Pills."

January 13, 1877. 13ins.

Shipping Intelligence.

PASSENGERS.

Per Steam-ship *Malaca*, from Hongkong.—Fleet Surgeon, G. F. A. Drew, Messrs. T. Davis, W. H. Sandersen, C. F. Sandersen; and 16 Chinese in the steerage.

Per Steam-ship *Tibre*, for Hongkong.—Madame Aymés, Messrs. Vittore Theophile, Robert Johnston Kalis, Harada, Tomi, A. Imaizumi.

Per Steam-ship *Saikio Maru*, from Shanghai and ports.—H. E. Arinori Mori, Japanese Minister to Peking, Rev. L. C. Gulick, Paymaster Burnside, U.S.N., Lieut. Noel, U.S.N., Mrs. Drummond, Captain Bonger, Messrs. Tuck Chew, Laurie, J. Gray, Takuchi, Oye, Lambard, Chadwick, Mackenzie, Von Fischer, Kojima, Araki, Tzuki, Nakashima, Yamahashi, Tomikawa, Ono, Inouye, Kikutai, Abe, Hori, Gilbert, Beddoes, Akao, Goldsmith, O. Smith, Suwa, H. Andersen, Gillet, Woodall, and A. Robertson. For America: Rev. C. Hartwell, wife and child, Paymaster C. P. Thompson, U.S.N., and E. S. Harris, U.S.N.

Per Steam-ship *Teviot* from Hongkong: Captain Percy.

Per Steam-ship *Alaska*, from San Francisco.—For Yokohama: Paymaster W. W. Woodhull, U.S.N., wife and 2 children, Chief Engineer C. H. Loring, U.S.N., Messrs. H. Midzu-no-hima, Yoshida Djiro, Jossoss Sampson, Wm. G. Sands and wife, Alex. E. Philippaes and B. Stahl in the cabin. Messrs. G. Musagami, Sugaki, M. Widse, C. F. Gooding wife and child, J. W. Milsted and 6 Chinese in the steerage. For Hongkong: Mr. F. Gillming and wife in the cabin. Steerage: 150 Chinese.

Per Steam-ship *Menzaleh*, for Shanghai.—Mr. Kraetzer.

Per Steam-ship *Hiroshima Maru*, for Shanghai and ports.—Paymaster Woodhull, wife and 2 children, Mrs. Kami and child, Mr. and Mrs. Sands, Mr. and Mrs. Penney and child, Lieut. Kato, Dr. Novikoff, Mrs. McNett, Messrs. Van der Pot, Winslow, U.S.N., Kobayashi, Masuda, Endo, O. Keil, Schmeitz, Rostchke, Midzuhara, A. Shinjo, T. Shinjo, Uchida, Ketairi, Yamaguchi, Kusuda, Nakayama, Imaidzumi, Ebell, Ono, Kodama, Tsutsumi, Hanabusa, Shiraishi, Nakao, Yoshizawa, Mackenzie, Karutami, Yamauchi, Touno, Kagawa, Nomoto, Ida, Yamane, Tsuda, Hashimoto and J. Sampson in the cabin; and 1,000 troops.

CARGO.

Per Steam-ship *Malacca* from Hongkong:—	
Overland	143 pkgs.
Sugar	4,469 bags.
Do. Candy	345 ,,
Wood	180 pls.
Oil	104 pkgs.
Sundries	303 pkgs.
Total ...	5,544 pkgs.
Per Steam-ship *Tibre*, for Hongkong:—	
Silk for France	215 bales.
England	92 ,,
Total	307 bales.
Waste Silk	9 bales.
Per Steam-ship *Saikio Maru*, Shanghai and ports:—	
Treasure	$11,075
Per Steam-ship *Hiroshima Maru* for Shanghai and ports—	
Treasure	$504,060.00

REPORTS.

The Steam-ship *Alaska* reports: At noon of the 26th of May Lat. 35° 12" N. Lon. 158° 48" E. barometer very low and falling fast, there was every indication of a cyclone. At 12.40 barometer 29.10, wind blowing a moderate gale from the South. Let the ship come to, heading to South West, barometer 28.94 Storm path N.N.E. At 5 o'clock barometer began to rise; at 6 o'clock to 10 wind veering from W. to N. W. blowing very heavily; from 10 o'clock to midnight wind changing N.W. to N. and moderating, barometer rising rapidly—ship on her course heading W. At midnight to 6 a.m. of the 27th wind moderated to a strong breeze from the N., barometer 29.86, with a very heavy swell running from the N.E.

The above barometrical deductions are the mean of two barometers and one sympiesometer. With this exception experienced fine weather and moderate winds from the westward during the entire passage.

The *Anna Cecilia* reports light and baffling winds throughout the passage.

COMMERCIAL INTELLIGENCE.

IMPORTS.

Cotton Fabrics & Yarns.—With the exception of a few articles only a limited business can be reported; prices in many instances are weaker and nominal. *Yarns*: There is a fair demand for 16/24 and 28/32 mockwater at firm rates; 28/32 water twist attract more attention, but offers are still proportionately low, while 38/42 are neglected. In *Shirtings* there has been only a small business at declining prices. Of *Velvets* some sales are reported, whereas for other articles no interest is shown.

Grey Shirtings:—						White Shirtings:—	
7 lbs.	38½ yds.	39 in.	per pce.	$1.45 to $1.80		60 to 64 reed 40 yds. 35 in.	per pce. 2.20 to 2.40
8 lbs.	38½ yds.	44 in.	,,	1.65 to 2.25		Turkey Reds 24 yds. 30 in. 2—3 lb.	per lb. 0.67½ to 0.82½
8 lbs. 4 to 8½ lbs.	38½ ,,	39 in.	,,	1.60 to 2.35		Black Velvets	7.25 to 8.25
9 lbs.	38½ ,,	44 in.	,,	2.00 to 2.52½		English Drills 15 lbs. 40 yds, 30 in.	2.60 to 2.85
T. Cloth 7lbs.	24 ,,	32 in.	,,	1.40 to 1.60		Taffachelass 12 yds, 43 in.	1.70 to 2.15
,, 6lbs.	24 ,,	32 in.	,,	1.10 to 1.25			

Yarns.—

No. 16 to 24	per picul	$29.00 to 32.50	No. 38 to 42 per picul	$34.00 to 38.00
No. 28 to 32	per picul	$30.50 to 34.50	Reverse Twist 16-24 ,,	$33.75 to 34.00

Woollens.—The same dullness prevails in our market and quotations remain nominally the same.

Plain Orleans	40—42 yds. 32 in.	5.50 to 7.00	Figured Mousselines de Laine 30 yds. 30 in.	0.24 to 0.28
Figured Orleans	29—30 yds. 31 in.	4.25 to 5.25	Multicolored ,, 30 yds. 30 in.	0.28 to 0.36
Shimagoro	30 yds. 30 in.	4.00 to 5.25	Cloth, all wool plain or fancy 48 in. to 52 in.	0.80 to 1.20
Italian Cloth	—30 yds. 32 in.	0.24 to 0.31	Presidents 54 in. to 56 in.	0.60 to 0.65
Camlet Cords	29—30 yds. 32 in.	5.75 to 6.00	Pilots 54 in. to 56 in.	0.45 to 0.55
Camlets Asstd.	56—58 yds. 31 in.	16.50 to 17.50	Union 54 in. to 56 in.	0.60 to 0.75
Lastings, Japan	22—30 yds. 32 in.	12.00 to 13.00	Blankets, scarlet & green 6 to 8 lbs.	per lb 0.40 to 0.48
Plain Mousselines de Laine	—30 yds. 30 in	0.16½ to 0.19		

Sugar.—Prices have still further advanced but the market is quiet and only a small business has been done. Stocks 40,000 piculs.

Sugar:—Takao in bag	per picul	$5.25	China No. 4 Kook-fah	per picul	$7.50 to $7.90
,, in basket	,,	$5.10	,, No. 5 Kong-fun	,,	$6.50 to $7.20
Taiwanfoo in bag	,,	$5.15	,, No. 6 E-pak	,,	$5.50 to $6.00
do. in basket	,,	$5.05	Swatow Brown	,,	None.
China No 1 Ping-fah	,,	$8.80 to $9.20	Daitong	,,	$4.80 to $5.00
,, No. 2 Ching-pak	,,	$8.50 to $9.10	Japan Rice	,,	$1.90 to $2.05
,, No. 3 Ke-pak	,,	$8.00 to $8.60	Kerosene Oil	,,	$4.50

Kerosene Oil remains firm at $4.50, with few sellers. Stocks are very small.

EXPORTS.

Silk.—The receipt of discouraging news from Europe has caused depression in our market and a consequent fall in prices. The quotations given below are to a great extent nominal, as dealers are unwilling to accept the still lower rates at which foreign buyers are disposed to operate. Settlements for the week amount to 80 bales of Hanks and 50 bales of Filatures. Stocks consist of 1,000 bales.

		In London at 4s. 2d.	*In Lyons at 5 25.*
Hanks, Best No. 1 & 2	$600 to 630	22/4 to 23/5	62 to 65
,, Good No. 2	$560 to 590	20/11 to 22/	58 to 61
,, Good all round No. 2½	$520 to 550	19/7 to 20/7	54 to 57
,, Medium No 3	$490 to 510	18/6 to 19/3	51 to 53
,, Common to Inferior No 4 & 5	$450 to 480	17/2 to 18/2	47 to 50
Oshiu, Good to Medium	$480 to 530	18/2 to 19/11	50 to 55
Hamatski, Medium to Common	$410 to 440	15/9 to 16/8	43 to 46
Kakeda, Good	$570 to 600	21/4 to 22/4	59 to 62
,, Medium to Common	$530 to 560	19/11 to 20/11	55 to 58
Filature Silks	$650 to 750	24/1 to 27/7	67 to 76

Tea.—An exceedingly extensive business has been done during the course of the past week, settlements amounting to the large figure of 8,300 piculs. This has principally been brought about by the willingness of native dealers to meet purchasers, in order to avoid heavy accumulations of stock.

Prices show a decline of $3 to $4 on last week's quotations and close as under, the market still betraying signs of weakness.

Medium	$19.00 to $21.00	Finest	$29.00 to $34.00
Good Medium	$22.00 to $24.00	Choice	$35.00 to $40.00
Fine	$25.00 to $28.00		

EXCHANGE AND BULLION.

Exchange.—There has been a pretty large business doing during the past week at fluctuating rates, ranging from 4s. 1⅜d. to 4s. 1⅞d. for Credits. The demand for Bank Bills continues small.

Rates close as follows:—

STERLING—Bank 6 months' sight	4s. 1¼d.	ON SHANGHAI—Bank sight	75
,, Bank Bills on demand	4s. 0⅞d.	,, Private 10 days sight	76
,, Private 6 months' sight	4s. 1⅜d.	ON NEW YORK—Bank Bills on demand	97
ON PARIS—Bank Sight	5.05	,, 30 days sight Private	99
Bank 6 months' sight	5.12½	ON SAN FRANCISCO—Bank Bills on demand	97½
,, Private 6 ms. sight	5.23	,, 30 days sight Private	99½
ON HONGKONG—Bank sight	1¼ % dis.	Kinsatz	405½
,, Private 10 days' sight	2¼ ,,	Gold Yen	404

MISCELLANEOUS.

In the U. S. Consular General Court at Kanagawa, Japan.

J. M. BATCHELDER,

Against

THE PROCEEDS OF THE SALE OF THE BARQUE

"CAYALTI."

TO THE FORMER OWNER OR OWNERS OF THE SAID BARQUE AND ALL OTHERS WHOM IT MAY CONCERN. GREETING.

WHEREAS an action has been brought in this Court by the above-named Plaintiff against the proceeds of the sale of the Barque "*CAYALTI*," now in the hands of the UNITED STATES CONSUL-GENERAL for Japan, praying that the said proceeds may be paid to him on account of monies advanced and transportation and supplies furnished to the crew and coolies belonging to the said Barque "*CAYALTI*."

Now therefore take notice, that unless answer be filed therein within three months from the date hereof, judgment will be taken by the said Plaintiff according to the prayer of his Petition.

Given under my hand with the Seal of said Court affixed, this 28th day of May, A.D. 1877.

(Signed) THOS. B. VAN BUREN,
[Seal.] U. S. Consul-General.

J. 1. 3ms.
